From Wikipedia, the free encyclopedia

The **Kingdom of Denmark** (Danish: *Kongeriget Danmark*, pronounced ['kɔŋəʁiːəð 'danmɑǧ] (listen)) is a constitutional monarchy and sovereign state consisting of the country of **Denmark** (English /'dɛnmɑːk/; Danish *Danmark*) in northern Europe and two autonomous constituent countries, the Faroe Islands in the North Atlantic and Greenland in North America. The kingdom is a unitary state with some power being devolved from Denmark proper to Greenland and the Faroe Islands; this federacy is referred to as the *Danish Realm*. Denmark proper is the hegemonial area, where judicial, executive, and legislative power resides.[5] The Faroe Islands are defined to be a community of people within the kingdom, and the Greenlandic people are defined as a separate people with the right to self-determination.[6][7]

Kingdom of Denmark
Kongeriget Danmark

Flag

Coat of arms

Motto: (Royal) "*Guds hjælp, Folkets kærlighed, Danmarks styrke*"[a]
"God's Help, the People's Love, Denmark's Strength"

Anthem: *Der er et yndigt land* (national)
Royal anthem: *Kong Christian stod ved højen mast* (royal and national)

Location of **Denmark** (dark green)
– in Europe (green & dark grey)
– in the European Union (green) — [Legend]

Denmark itself is the southernmost of the Nordic countries, located southwest of Sweden and south of Norway, and bordered to the south by Germany. The country consists of a large peninsula, Jutland and many islands, most notably Zealand, Funen, Lolland, Falster and Bornholm, as well as hundreds of minor islands often referred to as the Danish Archipelago.

Denmark's history has particularly been influenced by its geographical location between the North and Baltic seas. This meant that it was between Sweden and Germany and thus at the center of the mutual struggle for control of the Baltic Sea; before the digging of the Kiel Canal, water passage to the Baltic Sea was possible only through the three channels known as the "Danish straits". Denmark was long in disputes with Sweden over control of Skånelandene (Scanian War) and Norway, and in disputes with the Hanseatic League over the duchies of Schleswig (a Danish fief) and Holstein (a German fief). Eventually Denmark lost the conflicts and ended up ceding first Skånelandene to Sweden and later Schleswig-Holstein to the German Empire.

Denmark became a member of the European Union in 1973 but remains outside the Eurozone, while both Greenland and the Faroe Islands have opted to remain outside the EU entirely. A founding member of NATO and the OECD, Denmark is also a member of the Organisation for Security and Co-operation in Europe (OSCE). With a mixed market economy and a large welfare state, Denmark ranks as having the world's highest level of income equality. The country has the world's seventh highest per capita income. It has frequently ranked as the happiest and least corrupt country in the world. In 2011, Denmark was listed 16th on the Human Development Index and 2nd on the

Corruption Perceptions Index. The national language, Danish, is closely related to Swedish and Norwegian, with which it shares strong cultural and historical ties. Denmark, along with Sweden and Norway, is part of the cultural region known as "Scandinavia" and is also a member of the Nordic Council.

^ Denmark has no civil national motto, however the motto "Guds hjælp, Folkets kærlighed, Danmarks styrke" was adopted by Queen Margrethe II as her personal, royal motto.[4]
^ b. Danish is official in Denmark proper and co-official in the Faroe Islands, but not in Greenland; Greenlandic is the sole official language in Greenland. German is recognised as a protected minority language in the South Jutland area of Denmark.
^ c. This data is for **Denmark proper** only. For data pertaining to Greenland and the Faroe Islands see the respective articles.
^ d. The TLD .eu is shared with other European Union countries. Greenland (.gl) and the Faroe Islands (.fo) have their own TLDs.
^ e. In the Faroes this is called the króna and has a separate design, but is not a separate currency.

The etymology of the word Denmark, and especially the relationship between Danes and Denmark and the unifying of Denmark as a single kingdom, is a subject which attracts some debate.[8][9] This is centred primarily around the prefix *"Dan"* and whether it refers to the Dani or a historical person Dan and the exact meaning of the *-"mark"* ending. The issue is further complicated by a number of references to various Dani people in Scandinavia or other places in Europe in Greek and Roman accounts (like Ptolemy, Jordanes, and Gregory of Tours), as well as some mediaeval literature (like Adam of Bremen, Beowulf, Widsith and Poetic Edda).

Most handbooks derive[10] the first part of the word, and the name of the people, from a word meaning "flat land", related to German *Tenne* "threshing floor", English *den* "cave", Sanskrit *dhánuṣ-* (धनुस्; "desert"). The *-mark* is believed to mean woodland or borderland (see marches), with probable references to the border forests in south Schleswig,[11]

Some of the earliest descriptions of the origin of the word 'Denmark', describing a territory, are found in the *Chronicon Lethrense* (12th century), Svend Aagesen (late 12th century), Saxo Grammaticus (early 13th century) and the Ballad of Eric (mid-15th century). There are, however, many more Danish annuals and yearbooks containing various other details, similar tales in other variations, other names or spelling variations.

The Jelling Stones, commonly referred to as Denmark's "birth certificate", seen from the north with "Gorm's Mound" in the background

In Norse, the land was called *Danmǫrk*.[12]

The earliest mention of a territory called "Denmark" is found in King Alfred the Great's modified translation into Old English of Paulus Orosius' *Seven Books of History Against The Pagans* ("Historiarum adversum Paganos Libri Septem"), written by Alfred when king of Wessex in the years 871–899. In a passage introduced to the text by Alfred, we read about Ohthere of Hålogaland's travels in the Nordic region, during which 'Denmark [*Denamearc*] was on his port side... And then for two days he had on his (port side) the islands which belong to Denmark'.[13]

The first recorded use of the word "Denmark" within Denmark itself is found on the two Jelling stones, which are rune stones believed to have been erected by Gorm the Old (c. 955) and Harald Bluetooth (c. 965). The larger stone of the two is often cited as Denmark's birth certificate ("dåbsattest" [trans:babtismal certificate]), though both use the word "Denmark", in the form of accusative ᛏᛅᚿᛘᛅᚢᚱᚴ "tanmaurk" ([danmɒrk]) on the large stone, and genitive "tanmarkar" (pronounced [danmarkaʀ]) on the small stone.[14] The inhabitants of Denmark are there called "tani" ([danɪ]), or "Danes", in the accusative. In the Song of Roland, estimated to have been written between 1040 and 1115, the first mention of the legendary Danish hero Holger Danske appears; he is mentioned several times as "Ogier the Dane" (Ogier de Denemarche).

History

Main article: History of Denmark

See also: History of Greenland and History of the Faroe Islands

Prehistory

The earliest archaeological findings in Denmark date back to the Eem interglacial period from 130,000–110,000 BC.[15] Denmark has been inhabited since around 12,500 BC and agriculture has been evident since 3900 BC.[16] The Nordic Bronze Age (1800–600 BC) in Denmark was marked by burial mounds, which left an abundance of findings including lurs and the Sun Chariot.

During the Pre-Roman Iron Age (500 BC – 1 AD), native groups began migrating south, although[16] the first Danish people came to the country between the Pre-Roman and the Germanic Iron Age,[17] in the Roman Iron Age (1–400 AD). The Roman provinces maintained trade routes and relations with native tribes in Denmark, and Roman coins have been found in Denmark. Evidence of strong Celtic cultural influence dates from this period in Denmark and much of North-West Europe and is among other things reflected in the finding of the Gundestrup cauldron.

The gilded side of the Trundholm sun chariot

Historians believe that before the arrival of the precursors to the Danes, who came from the east Danish islands (Zealand) and Skåne and spoke an early form of North Germanic, most of Jutland and some islands were settled by Jutes. They were later invited to Great Britain as mercenaries by Brythonic King Vortigern and were granted the southeastern territories of Kent, the Isle of Wight among other areas, where they settled. They were later absorbed or ethnically cleansed by the invading Angles and Saxons, who formed the Anglo-Saxons. The remaining population in Jutland assimilated in with the Danes.

A short note[18] about the *Dani* in "Getica" by historian Jordanes is believed by some to be an early mention of the Danes,[19] one of the ethnic groups from whom the modern Danish people are descended. The Danevirke defence structures were built in phases from the 3rd century forward,[20] and the sheer size of the construction efforts in 737 are attributed to the emergence of a Danish king.[20] The new runic alphabet was first used around the same time, and Ribe, the oldest town of Denmark, was founded about 700.

Viking Age

Main article: Viking Age

From the 8th to the 10th century, the Danes were known as Vikings. Together with Norwegians and Swedes, they colonised, raided and traded in all parts of Europe. Viking explorers first discovered Iceland by accident in the 9th century, on the way towards the Faroe Islands and eventually came across "Vinland" (Land of wine) also known today as Newfoundland, in Canada. The Danish Vikings were most active in British Isles and Western Europe. They temporarily conquered and settled parts of England (known as the Danelaw), Ireland, France and founded Normandy. More Anglo-Saxon pence of this period have been found in Denmark than in England. As attested by the Jelling stones, the Danes were united and Christianised about 965 by Harald Bluetooth. It is believed that Denmark became Christian for

The Ladby ship, the largest ship burial found in Denmark

political reasons so as not to get invaded by the rising Christian power in Europe, Germania, which was an important trading area for the Danes. In that case Harald built six fortresses around Denmark called Trelleborg and built a further Danevirke. In the early 11th century Canute the Great won and united Denmark, England and Norway for almost 30 years.[21]

Medieval Denmark

Throughout the High and Late Middle Ages, Denmark also included Skåneland (Skåne, Halland and Blekinge) and Danish kings ruled Danish Estonia, as well as the duchies of Schleswig and Holstein. Most of the latter two now form part of northern Germany.

In 1397, Denmark entered the Kalmar Union with Norway and Sweden, united under Queen Margaret I. The three countries were to be treated as equals in the union. However, even from the start Margaret may not have been so idealistic—treating Denmark as the clear "senior" partner of the union.[22] Thus, much of the next 125 years of Scandinavian history revolves around this union, with Sweden breaking off and being re-conquered repeatedly. The issue was for practical purposes resolved on 17 June 1523, as Swedish King Gustav Vasa conquered the city of Stockholm.

The Protestant Reformation came to Scandinavia in the 1530s, and following the Count's Feud civil war, Denmark converted to Lutheranism in 1536. Later that year, Denmark entered into a union with Norway.

Early modern history

After Sweden permanently broke away from the Kalmar Union in 1523, Denmark tried on two occasions to reassert control over Sweden. The first was in the Northern Seven Years War which lasted from 1563 until 1570. The second occasion was the Kalmar War when King Christian IV attacked Sweden in 1611 but failed to accomplish his main objective of forcing Sweden to return to the union with Denmark. The war led to no territorial changes, but Sweden was forced to pay a war indemnity of 1 million silver riksdaler to Denmark, an amount known as the *Älvsborg ransom*.[23]

Battle of Öland between an allied Dano-Norwegian-Dutch fleet and the Swedish navy, 1 June 1676.

King Christian used this money to found several towns and fortresses, most notably Glückstadt (founded as a rival to Hamburg), Christiania (following a fire destroying the original city of Oslo), Christianshavn, Christianstad and Christiansand. Christian also constructed a number of buildings, most notably Børsen, Rundetårn, Nyboder, Rosenborg, a silver mine and a copper mill. Inspired by the Dutch East India Company, he founded a similar Danish company and planned to claim Ceylon as a colony, but the company only managed to acquire Tranquebar on India's Coromandel Coast. Denmark's large colonial aspirations were limited to a few key trading posts in Africa and India.

In the Thirty Years' War, Christian tried to become the leader of the Lutheran states in Germany but suffered a crushing defeat at the Battle of Lutter.[24] The result was that the Catholic army under Albrecht von Wallenstein was able to invade, occupy and pillage Jutland,[25] forcing Denmark to withdraw from the war. Denmark managed to avoid territorial concessions, but Gustavus Adolphus' intervention in Germany was seen as a sign that the military power of Sweden was on the rise while Denmark's influence in the region was declining. Swedish armies invaded Jutland in 1643 and claimed Skåne in 1644. According to Geoffrey Parker, "The Swedish occupation caused a drop in agricultural production and a shortage of capital; harvest failure and plague ravaged the land between 1647 and 1651; Denmark's population fell by 20 per cent."[26]

In the 1645 Treaty of Brømsebro, Denmark surrendered Halland, Gotland, the last parts of Danish Estonia, and several provinces in Norway. In 1657, king Frederick III declared war on Sweden and marched on Bremen-Verden.

This led to a massive Danish defeat and the armies of King Charles X Gustav of Sweden conquered both Jutland, Funen and much of Zealand before signing the Peace of Roskilde in February 1658 which gave Sweden control of Skåne, Blekinge, Trøndelag and the island of Bornholm. Charles X Gustav quickly regretted not having destroyed Denmark completely and in August 1658 he began a two-year long siege of Copenhagen but failed to take the capital. In the following peace settlement, Denmark managed to maintain its independence and regain control of Trøndelag and Bornholm.

Denmark tried to regain control of Skåne in the Scanian War (1675–79) but this attempt was a failure. Following the Great Northern War (1700–21), Denmark managed to restore control of the parts of Schleswig and Holstein ruled by the house of Holstein-Gottorp in 1721 and 1773, respectively. In the Napoleonic Wars, Denmark originally tried to pursue a policy of neutrality and trade with both France and the United Kingdom and joined the League of Armed Neutrality with Russia, Sweden and Prussia. The British considered this a hostile act and attacked Copenhagen in both 1801 and 1807, in one case carrying off the Danish fleet, in the other, burning large parts of the Danish capital. This led to the so-called Danish-British Gunboat War, but the British control of the waterways between Denmark and Norway proved disastrous to the union's economy and in 1813, Denmark-Norway went bankrupt. The Danish-Norwegian union was dissolved by the Treaty of Kiel in 1814. Norway entered a new union with Sweden which lasted until 1905. Denmark kept the colonies of Iceland, Faroe Islands and Greenland. Apart from the Nordic colonies, Denmark ruled over Danish India (Tranquebar in India) from 1620 to 1869, the Danish Gold Coast (Ghana) from 1658 to 1850, and the Danish West Indies (the U.S. Virgin Islands) from 1671 to 1917.

Constitutional monarchy

Den Grundlovsgivende Rigsforsamling (The founding fathers of the Danish constitution), 1860–1864 painting by Constantin Hansen.

The Danish liberal and national movement gained momentum in the 1830s, and after the European Revolutions of 1848 Denmark peacefully became a constitutional monarchy on 5 June 1849. After the Second War of Schleswig (Danish: *Slesvig*) in 1864, Denmark was forced to cede Schleswig and Holstein to Prussia, in a defeat that left deep marks on the Danish national identity. After these events, Denmark returned to its traditional policy of neutrality.

After the defeat of Germany in World War I, the Versailles powers offered to return the then-German region of Schleswig-Holstein to Denmark. Fearing German irredentism, Denmark refused to consider the return of the area and insisted on a plebiscite concerning the return of Schleswig. The two Schleswig Plebiscites took place on 10 February and 14 March, respectively. On 10 July 1920, after the plebiscite and the King's signature (9 July) on the reunion document, Northern Schleswig (Sønderjylland) was recovered by Denmark, thereby adding 163,600 inhabitants and 3,984 km². The reunion day (Genforeningsdag) is celebrated every year 15 June on Valdemarsdag.

Denmark became a member of the European Union in 1973 and signed the Lisbon Treaty in 2007.

Germany's invasion of Denmark on 9 April 1940 – code named Operation Weserübung – met only two hours of military resistance before the Danish government surrendered. Economic co-operation between Germany and Denmark continued until 1943, when the Danish government refused further co-operation and its navy sank most of its ships and sent as many of their officers as they could to Sweden. During the war, the government was helpful towards the Danish Jewish minority, and the Danish resistance performed a rescue operation that managed to get most of them to Sweden and safety shortly before the Germans planned to round up the Danish Jews. Denmark led many "inside operations" or sabotage against the German facilities. Iceland severed ties to Denmark and became an

independent republic, and in 1948, the Faroe Islands gained home rule.

After the war, Denmark became one of the founding members of the United Nations and NATO, and in 1973, along with Britain and Ireland, joined the European Economic Community (now the European Union) after a public referendum. The Maastricht treaty was ratified after a further referendum in 1993 and the subsequent addition of concessions for Denmark under the Edinburgh Agreement. Greenland gained home rule in 1979 and was awarded self-determination in 2009. Neither Greenland nor the Faroe Islands are members of the European Union, the Faroese declining membership in EEC from 1973 and Greenland from 1986, in both cases because of fisheries policies.

Despite its modest size, Denmark has been participating in major UN sanctioned, and often NATO led, military and humanitarian operations notably including: Cyprus, Bosnia and Herzegovina, Korea, Egypt, Croatia, Kosovo, Ethiopia, Afghanistan, Iraq, Somalia and recently Libya. In 2009 Anders Fogh Rasmussen resigned as Prime Minister of Denmark to become the Secretary General of NATO.

Geography

Main article: Geography of Denmark

Copenhagen, the capital of Denmark

Denmark shares a border of 68 kilometres with Germany to the south and is otherwise surrounded by 7,314 kilometres of tidal shoreline (including small bays and inlets). It occupies 43,094 square kilometres. Since 2000 Denmark has been connected by the Øresund Bridge to southern Sweden.

Denmark's northernmost point is Skagens point (the north beach of the Skaw) at 57° 45' 7" northern latitude; the southernmost is Gedser point (the southern tip of Falster) at 54° 33' 35" northern latitude; the westernmost point is Blåvandshuk at 8° 4' 22" eastern longitude; and the easternmost point is Østerskær at 15° 11' 55" eastern longitude. This is in the archipelago Ertholmene 18 kilometres northeast of Bornholm. The distance from east to west is 452 kilometres (281 mi), from north to south 368 kilometres (229 mi).

Map of Denmark

Denmark consists of the peninsula of Jutland and 443 named islands (1,419 islands above 100 m² in total).[27] Of these, 72 are inhabited,[28] with the largest being Zealand and Funen. The island of Bornholm is located east of the rest of the country, in the Baltic Sea. Many of the larger islands are connected by bridges; the Øresund Bridge connects Zealand with Sweden; the Great Belt Bridge connects Funen with Zealand; and the Little Belt Bridge connects Jutland with Funen. Ferries or small aircraft connect to the smaller islands. The largest cities with populations over 100,000 are the capital Copenhagen on Zealand; Århus, Aalborg in Jutland; and Odense on Funen.

The country is flat with little elevation; having an average height above sea level of 31 metres (102 ft). The highest natural point is Møllehøj, at 170.86 metres (560.56 ft). The area of inland water is 700 km^2 (270 sq mi).

Denmark's tidal shoreline is 7,314 km (4,545 mi).[29] No location in Denmark is further from the coast than 52 km (32 mi). The size of the land area of Denmark cannot be stated exactly since the ocean constantly erodes and adds material to the coastline, and because of human land reclamation projects (to counter erosion). On the southwest

coast of Jutland, the tide is between 1 and 2 m (3.28 and 6.56 ft), and the tideline moves outward and inward on a 10 km (6.2 mi) stretch.[30]

Phytogeographically, Denmark (including Greenland and the Faroe Islands) belongs to the Boreal Kingdom and is shared between the Arctic, Atlantic European and Central European provinces of the Circumboreal Region. According to the World Wide Fund for Nature, the territory of Denmark can be subdivided into two ecoregions: the Atlantic mixed forests and Baltic mixed forests. The Faroe Islands are covered by the Faroe Islands boreal grasslands, while Greenland hosts the ecoregions of Kalaallit Nunaat high arctic tundra and Kalaallit Nunaat low arctic tundra.

Climate

Denmark seen from space

The climate in Denmark is temperate, characterised by mild winters, with mean temperatures in January and February of 0.0 °C, and the summers are cool, with a mean temperature in August of 15.7 °C.[31] Denmark has an average of 121 days per year with precipitation, on average receiving a total of 712 mm per year; autumn is the wettest season and spring the driest.[31]

Because of Denmark's northern location, the length of the day with sunlight varies greatly. There are short days during the winter with sunrise coming around 8:45 am and sunset 3:45 pm, as well as long summer days with sunrise at 4:30 am and sunset at 10 pm[32]

Grenen near Skagen, Denmark's northmost point

Environment

Denmark has historically taken a progressive stance on environmental preservation; in 1971 Denmark established a Ministry of Environment and was the first country in the world to implement an environmental law in 1973.[33] To mitigate environmental degradation and global warming the Danish Government has signed the following international agreements: Antarctic Treaty; Climate Change-Kyoto Protocol; Endangered Species Act[1]

Copenhagen is the spearhead of the bright green environmental movement in Denmark. In 2008, Copenhagen was mentioned by Clean Edge as one of the key cleantech clusters to watch in the book *The Cleantech Revolution*.[34] The city is the focal point for more than half of Denmark's 700 cleantech companies and draws on some 46 research institutions. The cluster employs more than 60,000 people and is characterised by a close collaboration between universities, business and governing institutions. The capital's most important cleantech research institutions are the University of Copenhagen, Copenhagen Business School,[35] Risø DTU National Laboratory for Sustainable Energy and the Technical University of Denmark which Risø is now part of. Leading up to the 2009 United Nations Climate Change Conference the University of Copenhagen held the Climate Change: Global Risks, Challenges and Decisions conference where the need for comprehensive action to mitigate climate change was stressed by the international scientific community. Notable figures such as Rajendra K. Pachauri, Chairman of the IPCC, Professor Nicholas Stern, author of the Stern Report and Professor Daniel Kammen all emphasised the good example set by Copenhagen and Denmark in capitalising on cleantech and achieving economic growth while stabilising carbon emissions.

Denmark's green house gas emissions per dollar of value produced has been for the most part unstable since 1990, seeing sudden growths and falls. Overall though, there has been a reduction in gas emissions per dollar value added

to its market.[36] It lags behind other Scandinavian countries such as Norway[37] and Sweden.[38]

Politics

Main articles: Politics of Denmark and Government of Denmark

Queen Margrethe II of Denmark.

The Kingdom of Denmark is a constitutional monarchy. The current and reigning monarch is Queen Margrethe II. As stipulated in the Danish Constitution, the monarch is not answerable for their actions, and their person is sacrosanct.[39] The monarch formally appoints and dismisses the prime minister and other ministers. The prime minister is customarily chosen through negotiation between the parliament party leaders.

Christiansborg Palace, where the Folketing and the courts meet.

The Folketing is the national legislature. In theory it has the ultimate legislative authority according to the doctrine of parliamentary sovereignty, it is able to legislate on any matter and not bound by decisions of its predecessors. However questions over sovereignty have been brought forward because of Denmark's entry into the European Union. Parliament consists of 175 members elected by proportional majority, plus two members each from Greenland and the Faroe Islands.[40] Parliamentary elections are held at least every four years, but it is within the powers of the prime minister to ask the monarch to call for an election before the term has elapsed. On a vote of no confidence, the parliament may force a single minister or the entire government to resign.[41]

The Danish political system has traditionally generated coalitions. Most Danish post-war governments have been minority coalitions ruling with the support of non-government parties.[42]

Executive authority is exercised on behalf of the monarch by the prime minister and other cabinet ministers who head departments. The cabinet, prime minister and other ministers collectively make up the government.

Legislative authority is vested in the executive and the legislature conjointly, although as noted the legislature remains supreme. Judicial authority lies with the courts of justice.[43]

Prime Minister of Denmark, Helle Thorning-Schmidt.

Anders Fogh Rasmussen from the Venstre party, a center-right liberal party was prime minister from November 2001 to April 2009. His government was a coalition consisting of Venstre and the Conservative People's Party, with parliamentary support from the national-conservative Danish People's Party (Dansk Folkeparti). The three parties obtained a parliamentary majority in the 2001 election and maintained it virtually unchanged in the 2005 election. On 24 October 2007, an early election was called by the Prime Minister for 13 November. Following the election the Danish People's Party was strengthened while Anders Fogh Rasmussen's Venstre lost 6 seats and the Conservative People's Party retained the same number of seats in Parliament as prior to the election. The result ensured that Anders Fogh Rasmussen could continue as prime minister for a third term.

With the parliamentary election held September 2011 the right wing, led by Lars Løkke Rasmussen, lost by a small margin to the opposing coalition, led by Helle Thorning-Schmidt who on 3 October 2011 formed a new government

consisting of the Social Democratic Party, Danish Social Liberal Party and Socialist People's Party.

Foreign relations

Main article: Foreign relations of Denmark

Danish foreign policy is based on its identity as a sovereign nation in Europe. As such its primary foreign policy focus is on its relations with other nations as a sovereign independent nation. Denmark has long had good relations with other nations. It has been involved in coordinating Western assistance to the Baltic states (Estonia,[44] Latvia, and Lithuania).[45] The country is a strong supporter of international peacekeeping.

Denmark is today pursuing an active foreign policy, where human rights, democracy and other crucial values are to be defended actively. In recent years Greenland and The Faroe Islands have been guaranteed a say in foreign policy issues such as fishing, whaling, and geopolitical concerns.

Military

Main articles: Danish Defence and Military history of Denmark

Group of Danish MP-soldiers.

Denmark's armed forces are known as the Danish Defence (Danish: *Forsvaret*). During peacetime, the Ministry of Defence in Denmark employs around 33,000 in total. The main military branches employ almost 27,000: 15,460 in the Royal Danish Army, 5,300 in the Royal Danish Navy and 6,050 in the Royal Danish Air Force (all including conscripts).

HDMS Absalon.

The Danish Emergency Management Agency (Danish: *Beredskabsstyrelsen*) employs 2,000 (including conscripts), and about 4,000 are in non-branch-specific services like the Danish Defence Command, the Danish Defence Research Establishment and the Danish Defence Intelligence Service. Furthermore around 55,000 serve as volunteers in the Danish Home Guard (Danish: *Hjemmeværnet*).

The Danish Defence has around 1,400[46] staff in international missions, not including standing contributions to NATO SNMCMG1. The three largest contributions are in Afghanistan (ISAF), Kosovo (KFOR) and Lebanon (UNIFIL). Between 2003 and 2007, there were approximately 450 Danish soldiers in Iraq.[47]

Administrative divisions

Main articles: Regions of Denmark and Municipalities of Denmark

Denmark proper is divided into five regions (Danish: *regioner*, singular: *region*) and a total of 98 municipalities. The regions were created on 1 January 2007 to replace the former counties. At the same time, smaller municipalities were merged into larger units, cutting the number of municipalities from 270 to 98. Most municipalities have a population of at least 20,000 people to give them financial and professional sustainability, although a few exceptions were made to this rule.[48] The most important

area of responsibility for regions is the national health service. Unlike the former counties, the regions are not allowed to levy taxes, and the health service is primarily financed by a national health care contribution of 8% (Danish: *sundhedsbidrag*) combined with funds from both government and municipalities.[49] Municipalities and regions are led by directly elected councils, elected every four years. The last Danish local elections were held on 17 November 2009.

The Ertholmene archipelago, with a population of 96 (2008), is neither part of a municipality nor a region but belongs to the Ministry of Defence.[50]

Regions							Municipalities
English name	**Denmark name**	**Seat of administration**	**Largest city**	**Population (1 January 2008)**	**Area (km²)**	**Density (pop. per km²)**	**No. of municipalities**
Capital Region of Denmark	Region Hovedstaden	Hillerød	Copenhagen	1,645,825	2,561	642.6	29 (list)
Central Denmark Region	Region Midtjylland	Viborg	Århus	1,237,041	13,142	94.2	19 (list)
North Denmark Region	Region Nordjylland	Aalborg	Aalborg	578,839	7,927	73.2	11 (list)

Greenland and the Faroe Islands

Further information: Danish Realm

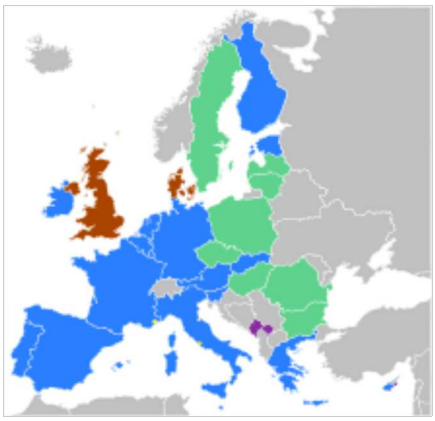
The Kingdom of Denmark is a unitary state, however Greenland and the Faroe Islands were granted autonomy in 1948 and 1979 respectively, having previously had the status of counties.[51][52] Extensive powers have been devolved to Greenland and the Faroe Islands which have their own governments and legislatures and are effectively self-governing in regards to domestic affairs.[52] However, the devolved legislatures are subordinate to the Folketing where the two territories are represented by two seats each. High Commissioners (Danish: *Rigsombudsmand*) act as representatives of the Danish government.[52]

Country	Legislature	Population (2011 estimate)	Area (km²)	Density (pop per km²)

Denmark	Folketing	5,564,219	43,075	129
Faroe Islands	Løgting	49,267	1,399	35
Greenland	Landsting	56,615	2,166,086	0.027
Total Danish Realm	Folketing	5,670,101	2,220,097	2.6

The Kingdom of Denmark (Denmark, Greenland and the Faroe Islands).

Economy



Main article: Economy of Denmark

Denmark's mixed economy features high amount of free trade. Denmark ranks 16th in the world in terms of GDP (PPP) per capita and ranks 5th in nominal GDP per capita.

According to World Bank Group, Denmark has the most flexible labour market in Europe; the policy is called flexicurity. It is easy to hire and fire (flexibility), and between jobs, unemployment compensation is very high (security). Denmark has a labour force of about 2.9 million. Denmark has the fourth highest ratio of tertiary degree holders in the world.[53] GDP per hour worked was the 13th highest in 2009. Denmark has the world's lowest level of income inequality, according to the UN, and the world's highest minimum wage, according to the IMF. As of June 2010 the unemployment rate is at 7.4%, which is below the EU average of 9.6%.[54]

Denmark is one of the most competitive economies in the world according to World Economic Forum 2008 report, IMD and The Economist.[55] According to rankings by OECD, Denmark has the most free financial markets in EU-15 and also one of the most free product markets.

Denmark has a company tax rate of 25% and a special time limited tax regime for expatriates.[56] The Danish taxation system is broad based, with a 25% VAT, in addition to excise taxes, income taxes and other fees. The overall tax burden (sum of all taxes, as a percentage of GDP) is estimated to be 46% in 2011.[57]

Denmark is part of the Schengen Area and the EU single market.

Denmark's currency, the *krone*, is pegged at approximately 7.46 kroner per euro through the ERM. The exchange rate. Although a September 2000 referendum rejected adopting the euro,[58] the country in practice follows the policies set forth in the Economic and Monetary Union of the European Union and meets the economic convergence criteria needed to adopt the euro. The majority of the political parties in the parliament are for the euro, but as yet a new referendum has not been held, despite plans;[59] skepticism of the EU among Danish voters has historically been strong.

Denmark is known for the Danish cooperative movement within among others farming, the food industry (Danish Crown), dairy production (Arla Foods), retailing (Brugsen), wind turbine cooperatives and co-housing associations.

Support for free trade is high – in a 2007 poll 76% responded that globalisation is a good thing.[60] 70% of trade flows are inside the European Union. Denmark has the 9th highest export per capita in the world. Denmark's main exports are: industrial production/manufactured goods 73.3% (of which machinery and instruments were 21.4%, and fuels, chemicals, etc. 26%); agricultural products and others for consumption 18.7% (in 2009 meat and meat products were 5.5% of total export; fish and fish products 2.9%).[1] Denmark is a net exporter of food and energy and has for a number of years had a balance of payments surplus while battling an equivalent of approximately 39%

of GNP foreign debt or more than 300 billion DKK.[61]

Denmark has ranked as the world's 11th most free economy, of 162 countries, in an index created by the Wall Street Journal and Heritage Foundation, the Index of Economic Freedom 2008. The Index has been categorised as using inappropriately weighted indicators for economic freedom, leading to wealthy and/or conservative countries with barriers to trade placing high on the list, while poor and/or socialist countries with fewer restrictions on trade place low.[62] The Index has only a 10% statistical correlation with a standard measure of economic growth at GDP per capita.[63] Neither does the Index account for the actions of governments to nurture business[64] in the manner of the Japanese Zaibatsus during the late 20th century that helped lead to the Japanese economic miracle. After rising to eighth place in 2011, Denmark fell back to the 11th place in the 2012 Index of Economic Freedom.[65]

StatBank is the name of a large statistical database maintained by the central authority of statistics in Denmark. Online distribution of statistics has been a part of the dissemination strategy in Denmark since 1985. By this service, Denmark is a leading country in the world regarding electronic dissemination of statistics. There are about 2 million hits every year.

Energy

Main article: Energy in Denmark

Offshore wind turbines near Copenhagen

Denmark has considerable sources of oil and natural gas in the North Sea and ranks as number 32 in the world among net exporters of crude oil.[66] Most electricity is produced from coal, but 16–19% of electricity demand is supplied through wind turbines.[67] Denmark is a long time leader in wind energy, and as of May 2011 Denmark derives 3.1% of its gross domestic product from renewable (clean) energy technology and energy efficiency, or around €6.5 billion ($9.4 billion).[68] Denmark is connected by transmission lines to other European countries.

Transport

Main article: Transport in Denmark

Copenhagen Airport is the 15th busiest airport in Europe.

Significant investment has been made in building road and rail links between regions in Denmark, most notably the Great Belt Fixed Link, which connects Zealand and Funen. It is now possible to drive from Frederikshavn in northern Jutland to Copenhagen on eastern Zealand without leaving the motorway. The main railway operator is DSB for passenger services and DB Schenker Rail for freight trains. The railway tracks are maintained by Banedanmark. Copenhagen has a small Metro system, the Copenhagen Metro, and the greater Copenhagen area has an extensive electrified suburban railway network, the S-train. Denmark's national airline (together with Norway and Sweden) is Scandinavian Airlines (SAS), and Copenhagen Airport is the largest in Scandinavia. A ferry link to the Faroe Islands is maintained by Smyril Line. Other international ferry services are mainly operated by DFDS (to Norway and the UK), Scandlines (to Germany and Sweden), Stena Line (to Norway, Sweden, and Poland), Color Line (to Norway), and FjordLine (to Norway).

Private vehicles are increasingly used as a means of transport. Because of the high registration tax (180%), VAT (25%), and the world's highest income tax rate, new cars are very expensive. The purpose of the tax is to discourage car ownership. The car fleet has increased by 45% over the last 30 years. In 2007 an attempt was made by the government to favor environmentally-friendly cars by slightly reducing taxes on high mileage vehicles. However,

this has had little effect, and in 2008 Denmark experienced an increase in the import of fuel inefficient old cars (mostly older than 10 years),[69] primarily from Germany, as the cost for older cars—including taxes—keeps them within the budget of many Danes.

Copenhagen Central Station with S-Trains

Bicycling in Denmark is a common form of transportation, particularly for the young and for city dwellers. With a network of bicycle routes extending more than 12,000 km[70] and an estimated 7,000 km[71] of segregated dedicated bicycle paths and lanes, Denmark has a solid bicycle infrastructure.

Denmark has integrated fluctuating and unpredictable energy sources such as wind power into the grid. Denmark now aims to focus on intelligent battery systems (V2G) and plug-in vehicles in the transport sector.[72][73]

Public policy

See also: Nordic model and Flexicurity

After deregulating the labour market in the 1990s, Denmark has one of the most free labour markets in European countries. According to World Bank labour market rankings, the labour market flexibility is at the same levels as the United States. Around 80% of employees belong to unions and the unemployment funds that are attached to them. Labour market policies are mainly determined in negotiations between the workers' unions and employers' unions, and the government only interferes if labour strikes extend for too long.

Despite the success of the trade unions, a growing number of people make contracts individually rather than collectively, and many (four out of ten employees) are contemplating dropping especially unemployment fund but occasionally even union membership altogether. The average employee receives a benefit at 47% of their wage level if they have to claim benefits when unemployed. With low unemployment, very few expect to be claiming benefits at all. The only reason then to pay the earmarked money to the unemployment fund would be to retire early and receive early retirement pay (*efterløn*), which is possible from the age of 60 provided an additional earmarked contribution is paid to the unemployment fund.[74]

The unemployment rate for December 2007 was 2.7%, for a total of 74,900 persons, a reduction by 112,800 persons—2,400 per month—or 60% since December 2003.[75] The Eurostat unemployment number for August 2008 is 2.9%. This has been achieved by employing more than 38% (800,000 people)[76] of the total workforce in public sector jobs. Another measure of the situation on the labour market is the employment rate, that is the percentage of people aged 15 to 64 in employment out of the total number of people aged 15 to 64. The employment rate for Denmark in 2007 was 77.1% according to Eurostat. Of all countries in the world, only Switzerland with 78.% and Iceland with 85.1% had a higher employment rate.

In December 2008, Statistics Denmark reported that 100,000 Danes were affected by unemployment in the third quarter of 2008. Of these, 62% received a job within two months, and 6% had been unemployed for two years or more.

The number of unemployed is forecast to be 65,000 in 2015. The number of people in the working age group, less disability pensioners etc., will grow by 10,000 to 2,860,000, and jobs by 70,000 to 2,790,000;[77] part time jobs are included.[78] Because of the present high demand and short supply of skilled labour, for instance for factory and service jobs, including hospital nurses and physicians, the annual average working hours have risen, especially compared with the recession 1987–1993.[79] Increasingly, service workers of all kinds are in demand, i.e. in the

postal services and as bus drivers, and academics.[80] In the fall of 2007, more than 250,000 foreigners are working in the country, of which 23,000 still reside in Germany or Sweden.[81] According to a sampling survey of over 14,000 enterprises from December 2007 to April 2008 39,000 jobs were not filled, a number much lower than earlier surveys, confirming a downturn in the economic cycle.[82]

The level of unemployment benefits is dependent on former employment (the maximum benefit is at 90% of the wage) and at times also on membership of an unemployment fund, which is almost always—but need not be—administered by a trade union, and the previous payment of contributions. However, the largest share of the financing is still carried by the central government and is financed by general taxation, and only to a minor degree from earmarked contributions. There is no taxation, however, on proceeds gained from selling one´s home (provided there *was* any home equity (da:*friværdi*)), as the marginal tax rate on capital income from housing savings is around 0%.[83]

The Danish welfare model is accompanied by a taxation system that is both broad based (25% VAT, not including excise, duty and tax) and with a progressive income tax model, meaning the more money that is earned, the higher income tax percentage that gets paid (minimum tax rate for adults is 42% scaling to over 60%, except for the residents of Ertholmene that escape the otherwise ubiquitous 8% healthcare tax fraction of the income taxes[84][85]). Other taxes include the registration tax on private vehicles, at a rate of 180%, on top of VAT. Lately (July 2007) this has been changed slightly in an attempt to favor more fuel efficient cars but maintaining the average taxation level more or less unchanged.[86]

Demographics

Main articles: Demographics of Denmark and Languages of Denmark

Ærøskøbing, a traditional Danish town

According to 2012 figures from Statistics Denmark, 89.6% of Denmark's population of over 5,580,516 was of Danish descent.[87] Many of the remaining 10.6% were immigrants—or descendants of recent immigrants—from Bosnia and Herzegovina, neighboring countries, South Asia, and Western Asia. Many have arrived since the "Alien law" (*Udlændingeloven*) was enacted in 1983, which allows for the immigration of family members of those who had already arrived. There are also small groups of Inuit from Greenland and Faroese. During recent years, anti mass-immigration sentiment has resulted in some of the toughest immigration laws in the European Union.[88][89] The number of residence permits granted related to labour and to people from within the EU/EEA has increased since implementation of new immigration laws in 2001. The number of immigrants allowed into Denmark for family reunification decreased 70% between 2001 and 2006 to 4,198. During the same period the number of asylum permits granted has decreased by 82.5% to 1,095, reflecting a 84% decrease in asylum seekers to 1,960.[90]

Denmark's population is 5,475,791, giving Denmark a population density of 129.16 inhabitants per km² (334.53 per sq mi).[91] As in most countries, the population is not distributed evenly. Although the land area east of the Great Belt only makes up 9,622 km^2 (3,715 sq mi), 22.7% of Denmark's land area, it has 45% (2,465,348) of the population. The average population density of this area is 256.2 inhabitants per km² (663.6 per sq mi). The average density in the west of the country (32,772 km²/12,653 sq mi) is 91.86/km² (237.91 per sq mi) (3,010,443 people) (2008).

The median age is 39.8 years, with 0.98 males per female. 98.2% of the population (age 15 and up) is literate. The birth rate is 1.74 children born per woman (2006 est.). Despite the low birth rate, the population is still growing at

an average annual rate of 0.33%.[1] An international study conducted by Adrian White at Leicester University in 2006 showed that the population of Denmark had the highest life satisfaction in the world.[92]

Danish is the official language and is spoken throughout the country. English and German are the most widely-spoken foreign languages.

A total of 1,516,126 Americans reported Danish ancestry in the 2006 American Community Survey.[93] According to the 2006 census, there were 200,035 Canadians with Danish background.[94]

Religion

Main article: Religion in Denmark

A typical Danish church built c. 1200

According to official statistics from January 2011, 80.4%[98] of the population of Denmark are members of the Danish National Church (*Den Danske Folkekirke*), a Lutheran church that was made the official state religion by the Constitution of Denmark. This is down 0.6% compared to the year earlier and 1.2% down compared to two years earlier. Article 6 of the Constitution states that the Royal Family must belong to this Church, though the rest of the population is free to adhere to other faiths. About 15% of the Danes do not belong to any denomination.

Church of Denmark

year	population	members	percentage
1984	5,113,500	4,684,060	91.6%
1990	5,135,409	4,584,450	89.3%
2000	5,330,500	4,536,422	85.1%
2005	5,413,600	4,498,703	83.3%
2007	5,447,100	4,499,343	82.6%
2008	5,475,791	4,494,589	82.1%
2009	5,511,451	4,492,121	81.5%
2010	5,534,738	4,479,214	80.9%
2011	5,560.628	4,469,109	80.4%

statistical data 1984–2002,[95] 1990–2009[96] and 2010–2011.[97] Source Kirkeministeriet

Denmark's Muslims make up less than 2% of the population and form the country's second largest religious community. As per an overview of various religions and denominations by the Danish Foreign Ministry, other groups comprise less than 1% of the population individually and approximately 2% when taken all together.[99]

According to the most recent Eurobarometer Poll 2005,[100] 31% of Danish citizens responded that "they believe there is a God", whereas 49% answered that "they believe there is some sort of spirit or life force" and 19% that "they do not believe there is any sort of spirit, God or life force".

For more than a hundred years after the Reformation, Lutheranism was the only legal religion in Denmark, but in 1682 the state granted limited recognition to three other faiths: Roman Catholicism, the Reformed Church and Judaism[*citation needed*]. Until the recent immigration of Muslims, these three were practically the only non-Lutheran religions practiced in Denmark. As of 2005, 19 Muslim communities have been officially recognised. Forn Siðr (English: Old Custom), based on the much older, native pagan religion, gained official recognition in November 2003.[101]

Religious societies and churches do not need official government recognition in Denmark. They can be granted the right to perform weddings and other ceremonies without this recognition.

Education

Main article: Education in Denmark

Rundetårn (Round Tower), an old observatory in the University of Copenhagen, Denmark's oldest and largest university

The Danish education system provides access to primary school, secondary school and most kinds of higher education. Attendance at "Folkeskole" or equivalent education is compulsory for a minimum of 10 years (aged 6 to 16). Equivalent education could be in private schools or classes attended at home. About 99% of students attend primary school, 86% attend secondary school, and 41% pursue further education. All college education in Denmark is free; there are no tuition fees to enroll in courses. Students in secondary school or higher and aged 18 or above may apply for student support which provides fixed financial support, disbursed monthly.

Primary school in Denmark is called "den Danske Folkeskole" ("Danish Public School"). It runs from the introductory "kindergarten class"/0'th grade ("børnehaveklasse"/ "0. Klasse") to 10th grade, though 10th grade is optional. Pupils can alternatively attend "free schools" ("Friskole"), or private schools ("Privatskole"), i.e. schools that are not under the administration of the municipalities, such as Christian schools or Waldorf schools. The Programme for International Student Assessment, coordinated by the OECD, ranked Denmark's education as the 24th best in the world in 2006, being neither significantly higher nor lower than the OECD average.[102]

Following graduation from *Folkeskolen*, there are several other educational opportunities, including *Gymnasium* (academically oriented upper secondary education), Higher Preparatory Examination (HF) (similar to *Gymnasium*, but one year shorter), Higher Technical Examination Programme (HTX) (with focus on mathematics and engineering), and Higher Commercial Examination Programme (HHX) (with a focus on trade and business), as well as vocational education, training young people for work in specific trades by a combination of teaching and apprenticeship.

Gymnasium (STX), HF, HTX and HHX aim at qualifying pupils for higher education in universities and colleges. Denmark also teaches the IB Diploma.

Denmark has several universities; the largest and oldest are the University of Copenhagen (founded 1479) and Aarhus University (founded 1928). There are thirteen Danish Nobel laureates.[103]

Danish universities and other Danish higher education institutions also offer international students a range of opportunities for obtaining an internationally recognised qualification in Denmark. Many programmes are taught in English, including Bachelor´s, Master´s, PhD, exchange and summer school programmes [104]

Folkehøjskolerne, ("Folk high schools") introduced by politician, clergyman and poet N.F.S. Grundtvig in the 19th century, are social, informal education structures without tests or grades but with an emphasis on communal learning, self-discovery, enlightenment and learning how to develop your own opinions through open debate. Grundtvig helped to develop an understanding of the relationship between individual and society, and he has had a significant influence on the didactic ideas underlying Danish education.[105]

Culture

Main article: Culture of Denmark

See also: List of Danes

Hans Christian Andersen is known beyond Denmark for his fairy tales, such as *The Emperor's New Clothes*, *The Little Mermaid* and *The Ugly Duckling*. Karen Blixen (pen name: *Isak Dinesen*), Nobel laureate author Henrik Pontoppidan, Nobel laureate physicist Niels Bohr, comedy pianist Victor Borge and philosopher Søren Kierkegaard

have also made a name for themselves outside Denmark.

"Summer Evening on the Skagen Southern Beach with Anna Ancher and Marie Krøyer, P.S. Krøyer, 1893

Copenhagen is home to many famous sites and attractions, including Tivoli Gardens, Amalienborg Palace (home of the Danish monarchy), Christiansborg Palace, Copenhagen Cathedral, Rosenborg Castle, Opera House, Frederik's Church (Marble Church), Thorvaldsens Museum, Rundetårn, Nyhavn and the Little Mermaid sculpture.[106] Copenhagen was ranked the most liveable city in the world in 2008 by *Monocle* magazine, (currently it is their third most liveable city).[107]

The second largest city in Denmark is Aarhus. Aarhus is an old Viking Age city and one of the oldest cities in the country. The largest cathedral in Denmark and the second largest cathedral in Northern Europe is Aarhus Cathedral.

Historically, Denmark, like its Scandinavian neighbors, has been one of the most socially progressive cultures in the world. For example, in 1969, Denmark was the first country to legalise pornography.[108] And in 1989, Denmark enacted a registered partnership law, becoming the first country in the world to grant same-sex couples nearly all of the rights and responsibilities of marriage.[109]

Architecture

Main article: Architecture of Denmark

St Peter's Church in Næstved (1375)

Denmark's architecture became firmly established in the Middle Ages when first Romanesque, then Gothic churches and cathedrals sprang up throughout the country. From the 16th century, Dutch and Flemish designers were brought to Denmark, initially to improve the country's fortifications, but increasingly to build magnificent royal castles and palaces in the Renaissance style. During the 17th century, many impressive buildings were built in the Baroque style, both in the capital and the provinces. Neoclassicism from France was slowly adopted by native Danish architects who increasingly participated in defining architectural style. A productive period of Historicism ultimately merged into the 19th century National Romantic style.[110]

It was not, however, until the 1960s that Danish architects such as Arne Jacobsen entered the world scene with their highly successful Functionalism. This, in turn, has evolved into more recent world-class masterpieces including Jørn Utzon's Sydney Opera House and Johann Otto von Spreckelsen's Grande Arche de la Défense in Paris, paving the way for a number of contemporary Danish designers such as Bjarke Ingels to be rewarded for excellence both at home and abroad.[111]

Art

Main article: Danish art

While Danish art was influenced over the centuries by trends in Germany and the Netherlands, the 15th and 16th century church frescos which can be seen in many of the country's older churches are of particular interest as they were painted in a style typical of native Danish painters.[112]

The Danish Golden Age, which began in the first half of the 19th century, was inspired by a new feeling of nationalism and romanticism. Christoffer Wilhelm Eckersberg was not only a productive artist in his own right but

taught at the Royal Danish Academy of Fine Arts where his students included notable painters such as Wilhelm Bendz, Christen Købke, Martinus Rørbye, Constantin Hansen, and Wilhelm Marstrand. The sculpture of Bertel Thorvaldsen was also significant during this period.[113]

Christoffer Wilhelm Eckersberg, *Woman in front of a Mirror* (1841)

In 1871, Holger Drachmann and Karl Madsen visited Skagen in the far north of Jutland where they quickly built up one of Scandinavia's most successful artists' colonies specializing in Naturalism and Realism rather than in the traditional approach favored by the Academy. Hosted by Michael and his wife Anna, they were soon joined by P.S. Krøyer, Carl Locher and Laurits Tuxen. All participated in painting the natural surroundings and local people.[114] Similar trends developed on Funen with the *Fynboerne* who included Johannes Larsen, Fritz Syberg and Peter Hansen,[115] and on the island of Bornholm with the Bornholm school of painters icluduing Niels Lergaard, Kræsten Iversen and Oluf Høst.[116]

Collections of modern art enjoy unusually attractive settings at the Louisiana Museum of Modern Art north of Copenhagen and at the North Jutland Art Museum in Aalborg. Notable artists include the Neo-Expressionist Per Kirkeby,[117] Tal R with his wild and colorful paintings,[118] Olafur Eliasson's space exhibitions[119] and Jeppe Hein's installations.[120]

Cinema

Main article: Cinema of Denmark

The three big internationally important waves of Danish cinema have been the erotic melodrama of the silent era, the increasingly explicit sex films of the 1960s and 1970s, and lastly, the Dogme95-movement of the late 1990s.

Danish filmmakers of note include Benjamin Christensen, Carl Th. Dreyer, Erik Balling, Gabriel Axel, Bille August, Lars von Trier, Nicolas Winding Refn, Thomas Vinterberg, Anders Thomas Jensen and Susanne Bier.

A locally popular film genre is the charmingly good-natured "folkekomedie" (folk comedy), which originated in the 1930s and gained widespread dominance from the 1950s until the 1970s, usually scorned by critics and loved by the audience. Notable folkekomedie-films include *Barken Margrethe* (1934), *De røde heste* (1950), *Far til fire* (1953) and *Olsen-banden* (1968).

Since the 1980s, Danish filmmaking has been important to changing governments. The National Film School of Denmark has educated a generation of new award-winning directors. The funds for film project has been administrated by the Danish Film Institute, but their focus on movies that would achieve high tickets sales locally has been criticised for being both too populist and too narrow-minded, by directors wishing to be artistic or international.

Design

Main article: Danish design

Danish applied art and industrial design have won many international awards. Georg Jensen (1866–1935) is noted for his modern design in silver. The Danish Porcelain Factory ("Royal Copenhagen") is famous for the quality of its ceramics and export products worldwide. Danish design is also a well-known brand, often associated with world-famous designers and architects such as Børge Mogensen, Poul Kjærholm, Hans Wegner, Poul Henningsen and Arne Jacobsen.[121]

The Danish Museum of Art & Design in Copenhagen exhibits the best in Danish design.

Arne Jacobsen's The Swan and the Egg

Literature

Main article: Danish literature

The world-famous Danish poet, Hans Christian Andersen

The first known Danish literature is myths and folk stories from the 10th and 11th century. Saxo Grammaticus, normally considered the first Danish writer, worked for bishop Absalon on a chronicle of Danish history (Gesta Danorum). Very little is known of other Danish literature from the Middle Ages. With the Age of Enlightenment came Ludvig Holberg whose comedy plays are still being performed.

Romanticism influenced world famous writer Hans Christian Andersen known for his stories and fairy tales, e.g. The Ugly Duckling, and contemporary philosopher Søren Kierkegaard greatly influenced existentialism. In the late 19th century, literature was seen as a way to influence society. Known as the Modern Breakthrough, this movement was championed by Georg Brandes, Henrik Pontoppidan (awarded the Nobel Prize in Literature) and J. P. Jacobsen. In recent history Johannes Vilhelm Jensen was also awarded the Nobel Prize for Literature. Karen Blixen is famous for her novels and short stories. Other Danish writers of importance are Grundtvig, Gustav Wied, William Heinesen, Martin Andersen Nexø, Hans Scherfig, Tom Kristensen, Klaus Rifbjerg, Dan Turéll, Tove Ditlevsen, Inger Christensen and Peter Høeg.

Media

Main article: Media of Denmark

Danish media is dominated by a few large corporations. In printed media JP/Politikens Hus and Berlingske Media, between them, control the largest news papers Politiken, Berlingske Tidende and Jyllands Posten and major tabloids BT and Ekstrabladet. In television publicly owned stations Danmarks Radio (DR) and TV2 have large shares of the viewers. In radio DR has a near monopoly, currently broadcasting on all 4 nationally available FM channels, competing only with local stations. The share of Danish people that go online for news and entertainment is growing, however the newspapers and TV stations are still dominant.

Music

Main article: Music of Denmark

Denmark has long been a center of cultural innovation. Copenhagen and its multiple outlying islands have a wide range of folk traditions. The Royal Danish Orchestra is among the world's oldest orchestras. Carl Nielsen, with his six imposing symphonies, was the first Danish composer to gain international recognition, while an extensive recording industry has produced pop stars and a host of performers from a multitude of genres. Internationally only a few artists have gained significant success. Lars Ulrich from Metallica is from Denmark, along with Raveonettes, D-A-D, Volbeat, Mercyful Fate, Medina, Junior Senior, King Diamond, Goodiepal, Whigfield, Michael Learns to Rock, Alphabeat, Infernal, Oh Land, the 1990s pop band Aqua and the alternative rock bands Kashmir and Mew. In recent years, the best selling Danish artist abroad has been Rune RK with the number 1 iTunes hit[122] Calabria

Philosophy

Danish philosophy has a long tradition as part of Western philosophy. Perhaps the most influential Danish philosopher was Søren Kierkegaard, the creator of Christian existentialism, which inspired the philosophical movement of Existentialism. Kierkegaard had a few Danish followers, including Harald Høffding, who later in his life moved on to join the movement of positivism. Among Kierkegaard's other followers include Jean-Paul Sartre who was impressed with Kierkegaard's views on the individual, and Rollo May, who helped create humanistic psychology.

Photography

Main article: Photography in Denmark

Pioneers such as Mads Alstrup and Georg Emil Hansen paved the way for a rapidly growing profession during the last half of the 19th century while both artistic and press photographers have since made internationally recognised contributions. Today Astrid Kruse Jensen and Jacob Aue Sobol participate in key exhibitions around the world.[123]

Cuisine

Main article: Danish cuisine

Danish open sandwich (smørrebrød) on dark rye bread

The cuisine of Denmark, like that in the other Nordic countries as well as that of Northern Germany, consists mainly of meat and fish. This stems from the country's agricultural past, as well as its geography and climate of long, cold winters.

Danish food includes a variety of open rugbrød (Rye-bread) sandwiches or smørrebrød traditionally served for the mid-day meal or *frokost* (lunch). An ordinary *frokost* consists just of 2 to 6 pieces of simple smørrebrød prepared during breakfast and packed in a lunch box. A luxury *frokost* usually starts with fish such as pickled herring, smoked eel or hot fried plaice. Then come meat sandwiches such as cold roast beef with remoulade and fried onions, roast pork and crackling with red cabbage, hot veal medallions, Danish meat balls (*frikadeller*) or liver paté with bacon and mushrooms.

Some typically Danish items are *Sol over Gudhjem*, literally "sun over God's home" (Gudhjem is a town on Bornholm where a lot of herring is landed and smoked), consisting of smoked herring, chives and with raw egg yolk (the "sun") on top; or *Dyrlægens natmad*, 'vet's late-night bite', with liver paté, saltmeat (corned veal), sliced onions and jellied consommé. Finally cheese is served with crackers, radishes, or grapes. Lager beer accompanied by small glasses of *snaps* or aquavit are the preferred drinks for a Danish frokost. Another Danish meal is Danish pastry. It is not made in other places than Denmark. In Danish it is called 'Wienerbrød'.

The large hot meal of the day is called *middag* and is usually served in the evening. It normally consists of meat (pork, beef, lamb or fish) with gravy and a source of starch (non-sugar carbohydrates) such as boiled potatoes, rice or pasta, sometimes supplemented by salad and/or cabbage. This may be followed by a dessert such as ice cream, mousse or rødgrød. The meal may be preceded by soup or hot porridge.

Popular meat dishes include pork steak with crispy skin, frikadeller (fried pork and veal meatballs), fried meat patties made from minced beef, beef tenderloin, "million-beef" (minced beef in gravy), karbonader/krebinetter

Æbleskiver, Small Danish dessert dumplings cooked in a special pan, mostly served during the Christmas season.

(breaded and fried minced meat, typically pork), all kinds of roast etc. Popular combined meat and starch dishes include Spaghetti alla Bolognese, hash etc.

Fish is traditionally more widely eaten on the west coast of Jutland, where fishing is a major industry. Smoked fish dishes (herring, mackerel, eel) from local smoking houses or *røgerier*, especially on the island of Bornholm, are increasingly popular.

In recent years, Copenhagen restaurants like Noma, Geranium and MR has played an important role in re-inventing the Danish and Nordic cuisine, making Copenhagen a centre of gourmet dining with a Nordic twist.

Sports

Main article: Sports in Denmark

Many sports are popular in Denmark. Football (soccer) is the country's most popular sport, with a rich history of international competition. Denmark's numerous beaches and resorts are popular locations for fishing, canoeing, kayaking and a broad-range of other water-themed sports. Other popular sports include golf, tennis, cycling and indoor sports such as badminton, handball and various forms of gymnastics. In speedway racing Denmark has won several world championships, including the Speedway World Cup in 2006 and 2008.

In 1992, the national football team won the European championship. The team finished second in their qualifying group behind Yugoslavia and as a result had failed to qualify for the final tournament. They gained their place in the tournament at the last moment when the Yugoslavia national team and local clubs were banned from all international/continental competitions because of the ongoing Yugoslav Wars. The Danes won the final by defeating reigning 1990 FIFA World Cup champions Germany 2-0 on goals by John Jensen and Kim Vilfort.

As of January 2012, the national handball team are the current reigning European champions and the team with most medals won in European championship history on the men's side with a total of five medals, those being two gold medals (2008, 2012), and three bronze medals (2002, 2004 & 2006).

History of Denmark

From Wikipedia, the free encyclopedia

The **history of Denmark** dates back about 12,000 years, to the end of the last ice age, with the earliest evidence of human inhabitation. The Danes were first documented in written sources around 500 AD, including in the writings of Jordanes and Procopius. With the Christianization of the Danes c. 960 AD, it is clear that there existed a kingship in Scandinavia which controlled roughly the current Danish territory. Queen Margrethe II can trace her lineage back to the Viking kings Gorm the Old and Harald Bluetooth from this time, making the Danish Royal Family the oldest in the world.

Denmark's history has particularly been influenced by its geographical location between the North and Baltic seas. This meant that it was between Sweden and Germany and thus at the center of the mutual struggle for control of the Baltic Sea (*dominium maris baltici*). Denmark was long in disputes with Sweden over control of Skånelandene (Scanian War) and Norway, and in disputes with the Hanseatic League over the duchies of Schleswig (a Danish fief) and Holstein (a German fief). Eventually Denmark lost the conflicts and ended up ceding first Skånelandene to Sweden and later Schleswig-Holstein to the German Empire. After the eventual cession of Norway in 1814, Denmark retained control of the old Norwegian colonies of the Faroe Islands, Greenland and Iceland. During the 20th century Iceland gained independence, Greenland and the Faroese became integral parts of the Kingdom of Denmark and North Schleswig reunited with Denmark 1920 after a referendum. During World War II Denmark was occupied by Nazi Germany and liberated in 1945, after which it joined the United Nations.

The Dejbjerg wagon, National Museum of Denmark

The Nydam oak boat at Gottorp Castle, Schleswig, Germany

The Weichsel glaciation covered all of Denmark, except the western coasts of Jutland. It ended around 13,000 years ago allowing humans to move back into the previously ice-covered territories and establish permanent habitation. During the first post-glacial millennia the landscape gradually changed from tundra to light forest and

a varied fauna including now extinct Megafauna appeared. The first inhabitants of this early post-glacial landscape in the so-called Boreal period, were very small and scattered populations living from hunting of reindeer and other land mammals and gathering whatever fruits the climate was able to offer. Around 8300 BC the temperature rose drastically, now with summer temperatures around 15 degrees, and the landscape changed into dense forests of aspen, birch and pine and the reindeer moved north, while aurochs and elk arrived from the south. With a continuing rise in temperature the oak, elm and hazel arrived in Denmark around 7000 BC. Now boar, red deer, and roe also began to abound.[1] A burial from Bøgebakken at Vedbæk dates to ca. 6000 BC and contains 22 persons - including four newborns and one toddler. Eight of the 22 had died before reaching 20 years of age - testifying to the hardness of hunter-gatherer life in the cold north.[2] Based on estimates of the amount of game animals scholars estimate the population of Denmark to have been between 3300-8000 persons in the time around 7000 BC.[3] It is believed that the early hunter-gatherers lived nomadically, exploiting different environments at different times of the year, gradually shifting to the use of semi permanent base camps.[4]

With the rising temperatures sea levels also rose, so that in the Atlantic period Denmark, which had been a contiguous landmass around 11000 BC, by 4500 BC was a series of islands. Humans then shifted to a seafood based diet, which allowed the population to increase.

The famous Trundholm sun chariot (called *Solvognen* in Danish), a sculpture of the sun pulled by a mare. Scholars have dated it to some time in the 15th century BC and believe that it illustrates an important concept expressed in Nordic Bronze Age mythology

Agricultural settlers made inroads around 3000 BC. The Nordic Bronze Age period in Denmark featured a culture which buried its dead, with their worldly goods, beneath burial mounds. Many dolmens and rock tombs (especially "passage graves") date from this period. The many finds of bronze from this era include beautiful religious artifacts and musical instruments, and provide the earliest evidence of social classes and stratification.

During the Pre-Roman Iron Age (from the 4th to the 1st century BC), the climate in Denmark and southern Scandinavia became cooler and wetter, limiting agriculture and setting the stage for local groups to migrate southward into Germania. At around this time people began to extract iron from the ore in peat-bogs. Evidence of strong Celtic cultural influence dates from this period in Denmark and in much of northwest Europe, and survives in some of the older place-names.

The Roman provinces, whose frontiers stopped short of Denmark, nevertheless maintained trade-routes and relations with Danish or proto-Danish peoples, as attested by finds of Roman coins. The earliest-known runic inscription dates back to *ca.* 200 — literacy as well probably came from the south. Depletion of cultivated land in the last century BC seems to have contributed to increasing migrations in northern Europe and increasing conflict between Teutonic tribes and Roman settlements in Gaul. Roman artifacts are especially common in finds from the 1st century. It seems clear that some part of the Danish warrior-aristocracy served in the Roman army.[5]

Occasionally during this time, killings occurred and bodies were thrown into bogs. In recent times some of these bog bodies have emerged very well-preserved, providing valuable information about the people who lived in Denmark during this period.

The Germanic Iron Age

Historians refer to the material culture of northern Europe during the mass-migrations of the 5th to the 7th

centuries as the Germanic Iron Age. Some of the best-known remains from the period include the "peat bog corpses", among them the well-preserved bodies of two people deliberately strangled: Tollund Man and Haraldskær Woman.

Middle Ages

Earliest literary sources

Further information: Danes (Germanic tribe)

In his description of Scandza (from the 6th century work, *Getica*), the ancient writer Jordanes says that the **Dani** were of the same stock as the *Suetidi* (Swedes, *Suithiod*?) and expelled the Heruli and took their lands.[6]

The Old English poems *Widsith* and *Beowulf*, as well as works by later Scandinavian writers — notably by Saxo Grammaticus (c. 1200) — provide some of the earliest references to Danes.

Viking Age

Main article: Viking Age

The Ladby ship, the largest ship burial found in Denmark

With the beginning of the Viking Age in the 9th century, the prehistoric period in Denmark ends. The Danish people were amongst those known as the Vikings during the 8th–11th centuries. Viking explorers first discovered and settled in Iceland in the 9th century, on their way from the Faroe Islands. From there, Greenland and Vinland (probably Newfoundland) were also settled. Utilizing their great skills in shipbuilding and navigation they raided and conquered parts of France and the British Isles. But they also excelled in trading along the coasts and rivers of Europe, running trade routes from Greenland in the north to Constantinople in the south via Russian rivers. The Danish Vikings were most active in Britain, Ireland, France, Spain, Portugal and Italy where they raided, conquered and settled (their earliest settlements included sites in the Danelaw, Ireland and Normandy). The Danelaw resulted when Alfred the Great was forced to cede half his kingdom to the Vikings, who then settled there for a time and engaged in peaceful trade, but attacks eventually resumed and the English kings had to pay tribute (Danegeld).

In the early 9th century, Charlemagne's Christian empire had expanded to the southern border of the Danes, and Frankish sources (e.g. Notker of St Gall) provide the earliest historical evidence of the Danes. These report a King Gudfred, who appeared in present day Holstein with a navy in 804 where diplomacy took place with the Franks; In 808, King Gudfred attacked the Obotrite and conquered the city of Reric whose population was displaced or abducted to Hedeby. In 809, King Godfred and emissaries of Charlemagne failed to negotiate peace, despite the sister of Godfred being a concubine of Charlemagne, and the next year King Godfred attacked the Frisians with 200 ships.

Viking raids along the coast of France and the Netherlands were large-scale. Paris was besieged and the Loire Valley devastated during the 10th century. One group of Danes were granted permission to settle in northwestern France under the condition that they defend the place from future attacks. As a result, the region became known as "Normandy" and it was the descendants of these settlers who conquered England in 1066.

In addition, the Danes and Norwegians moved west into the Atlantic Ocean, settling on Iceland, Greenland, and

the Shetland Isles. Brief Vikings expeditions to North America around 1000 did not result in any settlements and they were soon driven off by natives. Other Viking raids into Germany and the Mediterranean were short-lived and had no lasting effect.

The oldest parts of the defensive works of Danevirke near Hedeby at least date from the summer of 755 and were expanded with large works in the 10th century. The size and amount of troops needed to man it indicates a quite powerful ruler in the area, which might be consistent with the kings of the Frankish sources. In 815 AD, Emperor Louis the Pious attacked Jutland apparently in support of a contender to the throne, perhaps Harald Klak, but was turned back by the sons of Godfred, who most likely were the sons of the above mentioned Godfred. At the same time St. Ansgar travelled to Hedeby and started the Catholic Christianisation of Scandinavia.

Map showing Danevirke and Hærvejen

The Danes were united and officially Christianized in 965 AD by Harald Bluetooth (see below), the story of which is recorded on the Jelling stones. The extent of Harald's Danish Kingdom is unknown, although it is reasonable to believe that it stretched from the defensive line of Dannevirke, including the Viking city of Hedeby, across Jutland, the Danish isles and into southern present day Sweden; Scania and perhaps Halland and Blekinge. Furthermore, the Jelling stones attest that Harald had also "won" Norway. In retaliation for the St. Brice's Day massacre of Danes in England, the son of Harald, Sweyn Forkbeard mounted a series of wars of conquest against England. By 1014, England had completely submitted to the Danes. However, distance and a lack of common interests prevented a lasting union, and Harald's son Cnut the Great barely maintained the link between the two countries, which completely broke up during the reign of his son Hardecanute. A final attempt by the Norwegians to reconquer England failed, but did pave the way for William the Conqueror's takeover in 1066.[7]

fortified Viking Town Aros (Aarhus) 950 AD

Following the death of Canute the Great, Denmark and England were left divided and despite some attempts (see below) were never reunited.

Canute thanked the Norwegians for their patience and then went from assembly to assembly (Danish:landsting) outlawing any sailor, captain or soldier who refused to pay a fine which amounted to more than a years harvest for most farmers. Canute and his housecarls fled south with a growing army of rebels on his heels. Canute fled to the royal property outside the town of Odense on Funen with his two brothers. After several attempts to break in and then bloody hand to hand fighting in the church, Benedict was cut down and Canute struck in the head by a large stone and then speared from the front. He died at the base of the main altar 10 July 1086, where he was buried by the Benedictines. When Queen Edele came to take Canute's body to Flanders, a light allegedly shone around the church and it was taken as a sign that Canute should remain where he was.

The death of St. Canute marks the end of the Viking Age. Never again would massive flotillas of Scandinavians meet each year to ravage the rest of Christian Europe.

Christianity, expansion and the establishment of the Kingdom of Denmark

Often regarded as Denmark's "birth certificate", the large Jelling Stone announces the unification and Christinization of Denmark by Harald Bluetooth c. 980

The history of Christianity in Denmark overlaps with that of the Viking Age. Various petty kingdoms existed throughout the area now known as Denmark for many years. Between c. 960 and the early 980s, Harald Bluetooth appears to have established a kingdom in the lands of the Danes which stretched from Jutland to Skåne. Around the same time, he received a visit from a German missionary who, according to legend,[8] survived an ordeal by fire, which convinced Harold to convert to Christianity. The new religion, which replaced the old Norse religious practices, had many advantages for the king. Christianity brought with it some support from the Holy Roman Empire. It also allowed the king to dismiss many of his opponents who adhered to the old mythology. At this early stage there is no evidence that the Danish Church was able to create a stable administration that Harald could use to exercise more effective control over his kingdom, but it may have contributed to the development of a centralising political and religious ideology among the social elite which sustained and enhanced an increasingly powerful kingship.

England broke away from Danish control in 1035 and Denmark fell into disarray for some time. Sweyn Estridsen's son, Canute IV, raided England for the last time in 1085. He planned another invasion to take the throne of England from an aging William I. He called up a fleet of 1,000 Danish ships, 60 Norwegian long boats, with plans to meet with another 600 ships under Duke Robert of Flanders in the summer of 1086. Canute, however, was beginning to realise that the imposition of the tithe on Danish peasants and nobles to fund the expansion of monasteries and churches and a new head tax (Danish:nefgjald) had brought his people to the verge of rebellion. Canute took weeks to arrive at Struer where the fleet had assembled, but he found only the Norwegians still there. Canute's nephew Sweyn Estridson (1020–74) re-established strong royal Danish authority and built a good relationship with Archbishop Adalbert of Hamburg-Bremen — at that time the Archbishop of all of Scandinavia.

In the early 12th century Denmark became the seat of an independent church province of Scandinavia. Not long after that, Sweden and Norway established their own archbishoprics, free of Danish control. The mid-12th century proved a difficult time for the kingdom of Denmark. Violent civil wars rocked the land. Eventually, Valdemar the Great (1131–82), gained control of the kingdom, stabilizing it and reorganizing the administration. King Valdemar and Absalon (*ca* 1128–1201), the bishop of Roskilde, rebuilt the country. During Valdemar's reign construction began of a castle in the village of Havn, leading eventually to the foundation of Copenhagen, the modern capital of Denmark. Valdemar and Absalon built Denmark into a major power in the Baltic Sea, a power which later competed with the Hanseatic League, the counts of Holstein, and the Teutonic Knights for trade, territory, and influence throughout the Baltic. In 1168, Valdemar and Absalon gained a foothold on the southern

shore of the Baltic, when they subdued the Principality of Rügen.

In the 1180s, Mecklenburg and the Duchy of Pomerania came under Danish control, too. In the new southern provinces, the Danes promoted Christianity (mission of the Rani, monasteries like Eldena Abbey) and settlement (Danish participation in the *Ostsiedlung*). The Danes lost most of their southern gains after the Battle of Bornhöved (1227), but the Rugian principality stayed with Denmark until 1325.

In 1202, Valdemar II became king and launched various "crusades" to claim territories, notably modern Estonia. Legend has it that the Danish flag, the Dannebrog fell from the sky during the Battle of Lyndanisse in Estonia in 1219. A series of Danish defeats culminating in the Battle of Bornhöved on 22 July 1227 cemented the loss of Denmark's north German territories. Valdemar himself was saved only by the courageous actions of a German knight who carried Valdemar to safety on his horse.

From that time on Valdemar focused his efforts on domestic affairs. One of the changes he instituted was the feudal system where he gave properties to men with the understanding that they owed him service. This increased the power of the noble families (Danish: *højadelen*) and gave rise to the lesser nobles (Danish: *lavadelen*) who controlled most of Denmark. Free peasants lost the traditional rights and privileges they had enjoyed since Viking times.[3]

The king of Denmark had difficulty maintaining control of the kingdom in the face of opposition from the nobility and from the Church. An extended period of strained relations between the crown and the Popes of Rome took place, known as the "archiepiscopal conflicts".

By the late 13th century, royal power had waned, and the nobility forced the king to grant a charter, considered Denmark's first constitution. Following the Battle of Bornhöved in 1227, a weakened Denmark provided windows of opportunity to both the Hanseatic League and the Counts of Holstein. The Holstein Counts gained control of large portions of Denmark because the king would grant them fiefs in exchange for money to finance royal operations.

Valdemar spent the remainder of his life putting together a code of laws for Jutland, Zealand and Skåne. These codes were used as Denmark's legal code until 1683. This was a significant change from the local law making at the regional assemblies (Danish: *landting*) had been the long-standing tradition. Several methods of determining guilt or innocence were outlawed including trial by ordeal and trial by combat. The Code of Jutland (Danish: *Jyske Lov*) was approved at meeting of the nobility at Vordingborg in 1241 just prior to Valdemar's death. Because of his position as "the king of Dannebrog" and as a legislator, Valdemar enjoys a central position in Danish history. To posterity the civil wars and dissolution that followed his death made him appear to be the last king of a golden age.

The Middle Ages saw a period of close cooperation between the Crown and the Roman Catholic Church. Thousands of church buildings sprang up throughout the country during this time. The economy expanded during the 12th century, based mostly on the lucrative herring-trade, but the 13th century turned into a period of difficulty and saw the temporary collapse of royal authority.

Difficulties for the kings

During the disastrous reign of Christopher II (1319–1332), most of the country was pawned off to the counts (except Skåne, which went to Sweden) after peasant revolts and conflicts with the Church. For eight years after Christopher's death, Denmark had no king, and was instead controlled by the counts. But after one of them was assassinated in 1340, Christopher's son Valdemar was chosen as king, and gradually began to recover the pawned territories, which was completed in 1360. The Black Death, which came to Denmark during these years, also aided his campaign. His continued efforts to expand the kingdom after 1360 brought him into open conflict with

the Hanseatic League. He conquered Gotland, much to the displeasure of the League, which lost Visby, an important trading town located there.

The Hanseatic alliance with Sweden to attack Denmark initially proved a fiasco since Danish forces captured a large Hanseatic fleet, and ransomed it back for an enormous sum. Luckily for the League, the Jutland nobles revolted against the heavy taxes levied to fight the expansionist war in the Baltic; the two forces worked against the king, forcing him into exile in 1370. For several years, the Hanseatic League controlled the fortresses on "the sound" between Skåne and Zealand.

Margaret and the Kalmar Union

Main article: Kalmar Union

Margaret I, the daughter of Valdemar Atterdag, found herself married off to Håkon VI of Norway in an attempt to join the two kingdoms, along with Sweden, since Håkon had kinship ties to the Swedish royal family. The dynastic plans called for her son, Olaf II to rule the three kingdoms, but after his early death in 1387 she took on the role herself (1387–1412). During her lifetime (1353–1412) the three kingdoms of Denmark, Norway, and Sweden (including the Faroe Islands, as well as Iceland, Greenland, and present-day Finland) became linked under her capable rule, in what became known as the Kalmar Union, made official in 1397.

The tomb of Margaret I in Roskilde Cathedral

Her successor, Eric of Pomerania (King of Denmark from 1396 to 1439), lacked Margaret's skill and thus directly caused the breakup of the Kalmar Union. Eric's foreign policy engulfed Denmark in a succession of wars with the Holstein counts and the city of Lubeck. When the Hanseatic League imposed a trade embargo on Scandinavia, the Swedes (who saw their mining industry adversely affected) rose up in revolt. The three countries of the Kalmar Union all declared Eric deposed in 1439. However, support for the idea of regionalism continued, so when Eric's nephew Christopher of Bavaria came to the throne in 1440, he managed to get himself elected in all three kingdoms, briefly reuniting Scandinavia (1442–1448). The Swedish nobility grew increasingly unhappy with Danish rule and the union soon became merely a legal concept with little practical application. During the subsequent reigns of Christian I (1450–1481) and Hans (1481–1513), tensions grew, and several wars between Sweden and Denmark erupted.

In the early 16th century, Christian II (reigned 1513–1523) came to power. He allegedly declared, "If the hat on my head knew what I was thinking, I would pull it off and throw it away." This quotation apparently refers to his devious and machiavellian political dealings. He conquered Sweden in an attempt to reinforce the union, and had about 100 leaders of the Swedish anti-unionist forces killed in what came to be known as the Stockholm Bloodbath of November 1520. The bloodbath destroyed any lingering hope of Scandinavian union.

In the aftermath of Sweden's definitive secession from the Kalmar Union in 1521, civil war and the Protestant Reformation followed in Denmark and Norway. When things settled down, the Privy Council of Denmark had lost some of its influence, and that of Norway no longer existed. The two kingdoms, known as Denmark–Norway, operated in a personal union under a single monarch. Norway kept its separate laws and some institutions, such as a royal chancellor, separate coinage and a separate army. As an hereditary kingdom, Norway's status as separate from Denmark remained important to the royal dynasty in its struggles to win elections as kings of Denmark. The two kingdoms remained tied until 1814.

Early Modern Denmark

The Reformation

Main article: Reformation in Denmark–Norway and Holstein

The Reformation, which originated in the German lands in the early 16th century from the ideas of Martin Luther (1483–1546), had a considerable impact on Denmark. The Danish Reformation started in the mid-1520s. Some Danes wanted access to the Bible in their own language. In 1524 Hans Mikkelsen and Christiern Pedersen translated the New Testament into Danish; it became an instant best-seller. Those who had traveled to Wittenberg in Saxony and come under the influence of the teachings of Luther and his associates included Hans Tausen, a Danish monk in the Order of St John Hospitallers. On Good Friday in 1525, Tausen used the pulpit at Antvorskov Abbey Church to proclaim Luther's reforms. His scandalized superiors ordered him out of Zealand and held him in the priory at Viborg under close confinement until he should come to his senses.[9] Townspeople came to see the troublesome monk, and Tausen preached to them from the window of his cell. Within days Tausen's ideas swept through the town. The then radical ideas of Luther found a receptive audience. Tausen's preaching converted ordinary people, merchants, nobles, and monks and even the Prior grew to appreciate Tausen and ordered his release. Tausen preached openly: much to the consternation of Bishop Jøn Friis, who lost his ability to do anything about the Lutherans and retreated to Hald Castle. After preaching in the open air, Tausen gained the use of a small chapel, which soon proved too small for the crowds who attended services in Danish. His followers broke open a Franciscan Abbey so they could listen to Tausen, who packed the church daily for services. The town leaders protected Tausen from the Bishop of Viborg.[9] Viborg became the center for the Danish Reformation for a time. Lutheranism spread quickly to Aarhus and Aalborg.

Hans Tausen was one of the first Lutheran preachers, and later a bishop, in Denmark.

Within months King Frederick appointed Tausen as one of his personal chaplains (October 1526) in order to protect him from Catholics. Tausen's version of Luther's ideas spread throughout Denmark. Copenhagen became a hotbed of reformist activity and Tausen moved there to continue his work. His reputation preceded him and the excitement of hearing the liturgy in Danish brought thousands of people out to hear him. With the kings' permission, churches in Copenhagen opened their doors to the Lutherans and held services for Catholics and for Lutherans at different times of the day. But at Our Lady Church, the main church of Copenhagen, Bishop Ronnow refused to admit the "heretics". In December 1531 a mob stormed the Church of Our Lady in Copenhagen, encouraged by Copenhagen's fiery mayor, Ambrosius Bogbinder. They tore down statues and side-altars and destroyed artwork and reliquaries. Frederick I's policy of toleration insisted that the two competing groups share churches and pulpits peacefully, but this satisfied neither Lutherans nor Catholics.

Luther's ideas spread rapidly as a consequence of a powerful combination of popular enthusiasm for church reform and a royal eagerness to secure greater wealth through the seizure of church lands and property. In Denmark the reformation increased the crown's revenues by 300%.

Dissatisfaction with the established Catholic Church had already been widespread in Denmark. Many people viewed the tithes and fees — a constant source of irritation for farmers and merchants — as unjust. This became

apparent once word got out that King Frederick and his son, Duke Christian had no sympathy with Franciscans who persistently made the rounds of the parishes to collect food, money, and clothing in addition to the tithes. Between 1527 and 1536 many towns petitioned the king to close the Franciscan houses. Frederick obliged by sending letters authorizing the closure of the monasteries, often offering a small sum of money to help the brothers on their way. With the royal letter in hand, mobs forcibly closed Franciscan abbeys all over Denmark. They beat up monks, two of whom died.[10] The closure of Franciscan houses occurred systematically in Copenhagen, Viborg, Aalborg, Randers, Malmo and ten other cities; in all, 28 monasteries or houses closed. People literally hounded Franciscan monks out of the towns.[10] No other order faced such harsh treatment. Considering how strongly many people felt about removing all traces of Catholic traditions from Danish churches, surprisingly little violence took place. Luther's teaching had become so overwhelmingly popular that Danes systematically cleared churches of statues, paintings, wall-hangings, reliquaries and other Catholic elements without interference. The only exceptions came in individual churches where the local churchmen refused to permit reform.

Frederick I died in 1533; the Viborg Assembly (Danish:landsting) proclaimed his son, Duke Christian of Schleswig, King Christian III. The State Council (Danish: Rigsråd) on Zealand, led by the Catholic bishops took control of the country and refused to recognize the election of Christian III, a staunch Lutheran. The regents feared Christian's zeal for Luther's ideas would tip the balance and disenfranchise Catholics — both peasants and nobles. The State Council encouraged Count Christopher of Oldenburg to become Regent of Denmark. Christian III quickly raised an army to enforce his election, including mercenary troops from Germany. Count Christopher raised an army (including troops from Mecklenburg and Oldenburg and the Hanseatic League, especially Lűbeck) to restore his Catholic uncle King Christian II (deposed in 1523). This resulted in a three-year civil war called the Count's Feud (Danish: *Grevens Fejde*).

Armed rebellion by Catholic peasants led by Skipper Clement started in northern Jutland. Rebellion swept across Funen, Zealand and Skåne. Christian III's army soundly defeated an army of Catholic nobles at Svenstrup on 16 October 1534. Christian forced a truce with the Hanseatic League, which had sent troops to help Count Christopher. Christian III's army, under Johan Rantzau, chased the rebels all the way back to Aalborg and then massacred over two thousand of them inside the city in December 1534. The Protestants captured Skipper Clement (1534), and later executed him in 1536. Christian III's mercenary troops put an end to Catholic hopes on Zealand and then Funen. Skåne rebels went as far as proclaiming Christian II king again. King Gustav Vasa of Sweden sent two separate armies to ravage Halland and Skåne into submission. Besiegers finally starved the last hold-outs in the rebellion, Copenhagen and Malmø, into surrender in July 1536. By the spring of 1536 Christian III had taken firm control.

Denmark became officially Lutheran on 30 October 1536 by decree of King Christian III, and in 1537 the reconstituted State Council approved the Lutheran Ordinances which was worked out by Danish theologians and Johannes Bugenhagen, based on Luther's Augsburg Confession and Luther's Little Catechism. The government established the Danish National Church (Danish: *Folkekirken*) as the state church. All of Denmark's Catholic bishops went to prison until such time as they accepted Luther's reforms. The authorities released them when they promised to marry and to support the reforms. If they agreed, they received property and spent the rest of their lives as wealthy landowners. If they refused, they died in prison. The State confiscated Church lands to pay for the armies that had enforced Christian III's election. Priests swore allegiance to Lutheranism or found new employment. The new owners turned monks out of their monasteries and abbeys. Nuns in a few places gained permission to live out their lives in nunneries, though without governmental financial support. The Crown closed churches, abbeys, priories and cathedrals, giving their property to local nobles or selling it. The King appointed Danish superintendents (later bishops) to oversee Lutheran orthodoxy in the church. Denmark became part of a Lutheran heartland extending through Scandinavia and northern Germany. The Catholic Church everywhere in Scandinavia had sealed its fate by supporting hopeless causes: Christian II and the emperor Charles V in Denmark, Norwegian independence in that country, and in Sweden the Kalmar Union. Geographical distance

also prevented them from receiving anything more than a sympathetic ear from Rome.

The 17th century saw a period of strict Lutheran orthodoxy in Denmark, with harsh punishments visited on suspected followers of either Calvinism or Huldrych Zwingli. Lutheran authorities treated Catholics harshly — in the fear that they might undermine the king, government, and national church. In a delayed result of the Reformation, Denmark became involved in the Thirty Years' War (1618–1648) on the Protestant side. As a result Denmark lost its position as a major power.

The loss of Eastern Denmark

See also: Dominium maris baltici

The Dano-Norwegian Kingdom grew wealthy during the 16th century, largely because of the increased traffic through the Øresund, which Danes could tax because Denmark controlled both sides of the Sound. The trade in grain exports from Poland to the Netherlands and to the rest of Europe grew enormously at this time, and the Danish kings did not hesitate to cash in on it. The Sound duty was only repealed in the 1840s.

The Danish economy benefited from the Eighty Years' War (1568–1648) in the Netherlands because a large number of skilled refugees from that area (the most economically advanced in Europe) came to Denmark. This helped to modernize many aspects of society and to establish trading links between Denmark and the Netherlands.

Denmark–Norway had a reputation as a relatively powerful kingdom at this time. European politics of the 16th century revolved largely around the struggle between Catholic and Protestant forces, so it seemed almost inevitable that Denmark, a strong, unified Lutheran kingdom, would get drawn into the larger war when it came. The Thirty Years' War went badly for the Protestant states in the early 1620s, and a call went out to Denmark–Norway to "save the Protestant cause". Christian IV, who was also a duke of the Holy Roman Empire for his possessions in Holstein, decided to intervene. The campaign ended in defeat and the occupation of Jutland by the imperial army of Albrecht von Wallenstein. In the Treaty of Lübeck, Christian made peace and agreed to not intervene in Germany again. The war in Germany had been very expensive and Christian IV saw no other way than to raise the Sound duty. Unfortunately, this pushed the Netherlands away from Denmark and into the arms of Sweden. In 1643, Sweden's armies, under the command of Lennart Torstenson, then suddenly invaded Denmark without declaring war, this war became known as the Torstenson War. The Netherlands, wishing to end the Danish stranglehold on the Baltic, joined the Swedes in their war against Denmark–Norway. In October 1644 a combined Dutch-Swedish fleet destroyed 80 percent of the Danish fleet in the Battle of Femern. The result of this defeat proved disastrous for Denmark–Norway: in the Second treaty of Brömsebro (1645) Denmark ceded to Sweden the Norwegian provinces Jemtland, Herjedalen and Älvdalen as well as the Danish islands of Gotland and Øsel. Halland went to Sweden for a period of 30 years and the Netherlands were exempt from paying the Sound Duty.

Nevertheless, Danes remember Christian IV as one of the great kings of Denmark. He had a very long reign, from 1588 to 1648, and has become known as "the architect on the Danish throne" because of the large number of building projects he undertook. Many of the great buildings of Denmark date from his reign.

After the death of Christian IV in 1648, his son Frederick succeeded him. In 1657, during the Second Northern War, Denmark–Norway launched a war of revenge against Sweden (then distracted in Poland) which turned into a complete disaster. The war became a disaster for two reasons: Primarily, because Denmark's new powerful ally, the Netherlands, remained neutral as Denmark was the aggressor and Sweden the defender. Secondly, the Belts froze over in a rare occurrence during the winter of 1657-1658, allowing Charles X Gustav of Sweden to lead his armies across the ice to invade Zealand. In the Treaty of Roskilde, Denmark–Norway capitulated and gave up all of Eastern Denmark (Danish: Skåne, Halland, Blekinge and Bornholm), in addition to the counties of Bahusia

(Norwegian: Båhuslen) and Trøndelag in Norway. Holstein-Gottorp was also tied to Sweden, providing a gateway for future invasions from the south. But the Second Northern War was not yet over. Three months after the peace treaty was signed, Charles X Gustav of Sweden held a council of war where he decided to simply wipe Denmark from the map and unite all of Scandinavia under his rule. Once again the Swedish army arrived outside Copenhagen. However, this time the Danes did not panic nor surrender, instead they decided to fight and prepared to defend Copenhagen. Frederick III of Denmark had stayed in his capital and now encouraged the citizens of Copenhagen to resist the Swedes, by saying he would die in his nest. Furthermore, this unprovoked declaration of war by Sweden finally triggered the alliance that Denmark–Norway had with the Netherlands. A powerful Dutch fleet was sent to Copenhagen with vital supplies and reinforcements, which saved the city from being captured during the Swedish attack. Furthermore, Brandenburg-Prussia, the Polish–Lithuanian Commonwealth and the Habsburg monarchy had gathered large forces to aid Denmark–Norway and fighting continued into 1659. Charles X Gustav of Sweden suddenly died of an illness in early 1660, while planning an invasion of Norway. Following his death, Sweden made peace in the Treaty of Copenhagen, returning only Trøndelag to Norway and Bornholm to Denmark, but keeping both Bahusia and Terra Scania, mainly because the Netherlands and other European powers didn't want both sides of the Sound controlled by the Danish King again. Thus establishing the boundaries between Norway, Denmark, and Sweden that still exist today.

Treaty of Roskilde, 1658.
Halland, previously occupied by Sweden for a 30-year period under the terms of the Peace of Brömsebro negotiated in 1645, was now ceded
the Scanian lands and Bohus County were ceded
Trøndelag and Bornholm provinces, which were ceded in 1658, but rebelled against Sweden and returned to Danish rule in 1660.

Absolutism

As a result of the disaster in the war against Sweden, King Frederick III (reigned 1648–1670) succeeded in convincing the nobles to give up some of their powers and their exemption from taxes, leading to the era of absolutism in Denmark. The country's main objective in the following decades was the recovery of its lost provinces from Sweden. In the 1670s Denmark–Norway had regained enough strength to start a war with Sweden to recover its lost provinces. However, in spite of Denmark's outside support, naval dominance and initial support from the population of the former eastern provinces, the war ended in a bitter stalemate. A renewed attack during the Third Northern War (1700–1721) first resulted in the unfavourable Peace of Travendal, but after Denmark's re-entrance in the war and Sweden's ultimate defeat by a large alliance, meant that Sweden no longer was a threat to Denmark. However, the great powers opposed any Danish territorial gains, which meant the Treaty of Frederiksborg did not return the former eastern provinces to Denmark. Furthermore, Denmark was even forced to return Swedish Pomerania held by Danish forces since 1715 to Sweden. Denmark now had no hope of recovering its lost provinces from Sweden. As noted earlier, the rest of Europe was simply against the Sound being controlled by a single nation again.

For most of the 18th century, Denmark was at peace. The only time when war threatened was in 1762 when the Duke of Gottorp became Tsar Peter III of Russia and declared war on Denmark. But he was soon deposed, and the threat ended.

With the suspension of the Danish diet, that body disappeared for a couple of centuries. During this time power became increasingly centralized in Copenhagen. Frederick's government reorganized itself in a much more hierarchical manner, built around the king as a focal point of administration. Crown officials dominated the administration, as well as a new group of bureaucrats, much to the dismay of the traditional aristocracy, who saw

their own influence curtailed even further. The absolutist kings of Denmark were quite weak compared to their Swedish counterparts, and non-noble landlords became the real rulers of the country. They used their influence to pass laws that favored themselves.

The administration and laws underwent "modernization" during this period. In 1683 the *Danske lov 1683* (Danish Code) standardized and collected all the old provincial laws.

Other initiatives included the standardization of all weights and measures throughout the kingdom, and an agricultural survey and registry. This survey allowed the government to begin taxing landowners directly, moving it beyond dependence on revenue from crown lands.

The population of Denmark rose steadily through this period, from 600,000 in 1660 (after the loss of territory to Sweden) to 700,000 in 1720. By 1807 it had risen to 978,000.

Attempts to diversify the economy away from agriculture failed. During this period little industry existed, except for a very small amount in Copenhagen (population: 30,000). In the late 17th century a small amount of industry did develop, catering to the military. Denmark suffered in part because of its lack of natural resources. It had nothing much to export except agricultural products. The Netherlands bought the largest share of Denmark's exports. The landlords, only about 300 in number, nevertheless owned 90% of the land in the country.

Rural administration remained primarily the preserve of the large landholders and of a few law-enforcement officials. In 1733, low crop prices caused the introduction of adscription, an effort by the landlords to obtain cheap labor. The effect of this was to turn the previously free Danish peasantry into serfs. The adscription system tied rural laborers to their place of birth and required them to rent farms on the estates. As rent, they were required to work the landlords' plots and could not negotiate contracts or demand payment for improvements made to the farm. Peasants who refused to rent a farm were subject to six years of military service. Danish agriculture was very inefficient and unproductive as a result, since the peasants had no motivation to perform anything more than the absolute minimum of work. Attempts to sell Danish grain in Norway failed because of its low quality compared to grain from the Baltic.

In the late 18th century, extensive agricultural reforms took place, involving the abolition of the old open-field system and the amalgamation of many smaller farms into larger ones. With the abolition of the adscription system, the military could now only obtain manpower through conscription. These reforms were possible because agricultural prices steadily rose in the second half of the century.

Throughout the 18th century the Danish economy did very well, largely on the basis of expanded agricultural output to meet growing demand across Europe. Danish merchant ships also traded around Europe and the North Atlantic, venturing to new Danish colonies in the Caribbean and North Atlantic.

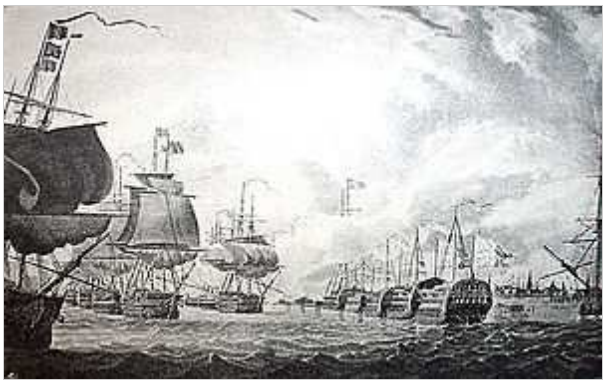
New propriety and Enlightenment ideas became popular among the middle classes of Denmark, arousing increased interest in personal liberty. In the last 15 years of the 18th century the authorities relaxed the censorship which had existed since the beginning of the 17th century. At the same time, a sense of Danish nationalism began to develop. Hostility increased against Germans and Norwegians present at the royal court. Pride in the Danish language and culture increased, and eventually a law banned "foreigners" from holding posts in the government. Antagonism between Germans and Danes increased from the mid-18th century on. In the 1770s, during the reign of the mentally unstable Christian VII (1766–1808), the queen's lover, a German doctor named Johann Friedrich Struensee, became the real ruler of the country. Filled with the ideas of the Enlightenment, he attempted a number of radical reforms including freedom of the press and religion. But it was short-lived. The landlords feared that the reforms were a threat to their power, while the commoners believed that religious freedom was an invitation to atheism. In 1772, Struensee was arrested, tried, and convicted of crimes against the majesty, his right hand was cut off following his beheading, his remains were quartered and

put on display on top of spikes on the commons west of Copenhagen. The next 12 years were a period of unmitigated reaction until a group of reformers gained power in 1784.

Denmark became the model of enlightened despotism, partially influenced by the outbreak of the French Revolution. Between 1784 and 1815, the abolition of serfdom made the majority of the peasants into landowners. The government also introduced free trade and universal education.

Colonialism

Main articles: Danish colonization of the Americas and Danish Colonial Empire



Map showing Denmark–Norway's colonial possessions c. 1800

Denmark maintained a number of colonies outside Scandinavia, starting in the 17th century and lasting until the 20th century. Denmark also controlled traditional colonies in Greenland and Iceland in the north Atlantic — held through the union with Norway. Christian IV (reigned 1588–1648) first initiated the policy of expanding Denmark's overseas trade, as part of the mercantilist trend then popular in European governing circles. Denmark established its own first colony at Tranquebar, or Trankebar, on India's south coast, in 1620. In the Caribbean Denmark started a colony on St Thomas in 1671, St John in 1718, and purchased Saint Croix from France in 1733. Denmark maintained its Indian colony, Tranquebar, as well as several other smaller colonies there, for about two hundred years. The Danish East India Company operated out of Tranquebar. During its heyday, the Danish company and the Swedish East India Company imported more tea than the British East India Company — and smuggled 90% of it into Britain, where it sold at a huge profit. Both of the Scandinavia-based East India Companies folded during the course of the Napoleonic Wars. Danes also maintained other colonies, forts, and bases in West Africa, primarily for the purpose of slave-trading.

The 19th century

The Napoleonic Wars

The Battle of Copenhagen, 1801.

The long decades of peace came to an abrupt end during the Napoleonic Wars. Britain felt threatened by the Armed Neutrality Treaty of 1794, which originally involved Denmark and Sweden, and later Prussia and Russia. The British fleet attacked Copenhagen in 1801 (Battle of Copenhagen (1801)), destroying much of Denmark's navy. Denmark nonetheless managed to remain uninvolved in the Napoleonic Wars until 1807. The British fleet bombarded Copenhagen again that year, causing considerable destruction to the city. They then captured the entire Danish fleet so that it couldn't be used by France to invade Britain (as the French had lost their own fleet at Trafalgar in 1805), leading to the Gunboat War (1807–1814). The confiscation of the Danish navy was widely criticised in Britain.

In 1809 Danish forces fighting on the French side participated in defeating the anti-Bonapartist German rebellion

led by Ferdinand von Schill, at the Battle of Stralsund. By 1813, Denmark could no longer bear the war costs, and the state was bankrupt. When in the same year the Sixth Coalition isolated Denmark by clearing Northern Germany of French forces, Frederick IV had to make peace. Accordingly, the unfavourable Treaty of Kiel was concluded in January 1814 with Sweden and Great Britain, and another peace was signed with Russia in February.

The Treaty of Kiel transferred Heligoland to Great Britain and Norway from the Danish to the Swedish crown, Denmark was to be satisfied with Swedish Pomerania. But the Norwegians revolted, declared their independence, and elected crown-prince Christian Frederick (the future Christian VIII) as their king. However, the Norwegian independence movement failed to attract any support from the European powers. After a brief war with Sweden, Christian had to abdicate in order to preserve Norwegian autonomy, established in a personal union with Sweden. In favour of the Kingdom of Prussia, Denmark renounced her claims to Swedish Pomerania at the Congress of Vienna (1815), and instead was satisfied with the Duchy of Lauenburg and a Prussian payment of 3.5 million talers, also, Prussia took over a Danish 600,000 talers debt to Sweden.

Interestingly, this period also counts as "the Golden Age" of Danish intellectual history. A sign of renewed intellectual vigor was the introduction of compulsory schooling in 1814. Literature, painting, sculpture, and philosophy all experienced an unusually vibrant period. The stories of Hans Christian Andersen (1805–1875) became popular not only in Denmark, but all over Europe and in the United States of America[*citation needed*]. The ideas of the philosopher Søren Kierkegaard (1813–1855) spread far beyond Denmark, influencing not only his own era, but proving instrumental in the development of new philosophical systems after him. The sculptures of Thorvaldsen (1770–1834) grace public buildings all over Denmark and other artists appreciated and copied his style. Grundtvig (1783–1872) tried to reinvigorate the Danish National Church and contributed to the hymns used by the church in Denmark.

Nationalism and liberalism

See also: History of Schleswig-Holstein

The Danish liberal and national movements gained momentum in the 1830s, and after the European revolutions of 1848 Denmark became a constitutional monarchy on June 5, 1849. The growing bourgeoisie had demanded a share in government, and in an attempt to avert the sort of bloody revolution occurring elsewhere in Europe, Frederick VII gave in to the demands of the citizens. A new constitution emerged, separating the powers and granting the franchise to all adult males, as well as freedom of the press, religion, and association. The king became head of the executive branch. The legislative branch consisted of two parliamentary chambers; the Folketing, comprising members elected by the general population, and the Landsting, elected by landowners. Denmark also gained an independent judiciary.

Den Grundlovgivende Rigsforsamling The Constitutional Assembly created The Danish constitution, 1860–1864 painting by Constantin Hansen

Another significant result of the revolution was the Abolition of Slavery in the Danish West Indies, the Danish colony in the Caribbean, which at an earlier parts of its history witnessed the biggest slave auctions in the world. In 1845 Denmark's other tropical colony, Tranquebar in India, had already in 1845 been sold to Britain.

The Danish king's realm still consisted of the islands, the northern half of the Jutland peninsula, and the Duchy of Schleswig in real union with the Duchy of Holstein

The islands and Jutland together constituted the kingdom, whereas the monarch held the duchies in personal

Danish Infantry regiment in a fight with regiment "Martini". Contemporary illustration of the 1864 Second Schleswig War.

union with the kingdom. The duchy of Schleswig constituted a Danish fief, while the Duchy of Holstein remained a part of the German Confederation.

Since the early 18th century, and even more so from the early 19th century, the Danes had become used to viewing the duchies and the kingdom as increasingly unified in one state. This view, however, clashed with that of the German majority in the duchies, also enthused by liberal and national trends, which lead to a movement known as Schleswig-Holsteinism. Schleswig-Holsteinists aimed for independence from Denmark. The First Schleswig War (1848–1851) broke out after constitutional change in 1849 and ended with the *status quo* only thanks to the intervention of Britain and other Great Powers.

Much debate took place in Denmark as to how to deal with the question of Schleswig-Holstein. National-Liberals demanded permanent ties between Schleswig and Denmark, but stated that Holstein could do as it pleased. However, international events overtook domestic Danish politics, and Denmark faced war against both Prussia and Austria in what became known as the Second Schleswig War (1864). The war lasted from February to October 1864. Denmark was easily beaten by Prussia and Austria, and obliged to relinquish Schleswig-Holstein.

The war caused Denmark as a nation severe trauma, forcing it to reconsider its place in the world. The loss of Schleswig-Holstein came as the latest in the long series of defeats and territorial loss that had begun in the 17th century. The Danish state had now lost some of the richest areas of the kingdom: Skåne to Sweden and Schleswig to Germany, so the nation focused on developing the poorer areas of the country. Extensive agricultural improvements took place in Jutland, and a new form of nationalism, which emphasized the "small" people, the decency of rural Denmark, and the shunning of wider aspirations, developed.

Industrialization came to Denmark in the second half of the 19th century. The nation's first railroads were constructed in the 1850s, and improved communications and overseas trade allowed industry to develop in spite of Denmark's lack of natural resources. Trade unions developed starting in the 1870s. There was a considerable migration of people from the countryside to the cities, and Danish agriculture became centered around the export of dairy and meat products.

The two concepts of internationalism and nationalism have become very much part of the history of the Danish Labour movement.

The Labour movement gathered momentum when social issues became associated with internationalism. Socialist theory and organisational contact with the First International, which linked labour movements in various countries, paved the way. Louis Pio emerged as the driving force. In 1871, following the bloody defeat of the Paris Commune, he started publishing socialist journalism. He campaigned strongly for an independent organisation of the workers under their own management, and organised a Danish branch of the First International. This became the foundation stone for the Social Democratic Party under the name of Den Internationale Arbejderforening for Danmark (The International Labour Association for Denmark). As a combination of union and political party, it adroitly brought together national and international elements.

Pio saw internationalism as vital for the success of the workers' struggle: without internationalism, no progress. He pointed out that the middle classes cooperated across national frontiers and used nationalistic rhetoric as a weapon against the workers and their liberation.

The Danish section started organising strikes and demonstrations for higher wages and social reforms. Moderate

demands, but enough to provoke the employers and the forces of law and order. Things came to a head in the Battle of Fælleden on 5 May 1872. The authorities arrested the three leaders, Louis Pio, Poul Geleff and Harald Brix, charged them and convicted them of high treason. The three left Denmark for the United States to set up the ill-starred and short-lived socialist colony near Hays City, in Ellis County, Kansas.

Back in Denmark, the emerging political situation made possible by the new constitution alarmed many of the existing elites, since it inevitably empowered the peasantry. Simple men with little education replaced professors and professionals in positions of power. The peasants, in coalition with liberal and radical elements from the cities, eventually won a majority of seats in the Folketing. Even though constitutional changes had taken place to boost the power of the Landsting, the Left *Venstre* Party demanded to form the government, but the king, still the head of the executive branch, refused. However in 1901, king Christian IX gave in and asked Johan Henrik Deuntzer, a member of Venstre, to form a government, the Cabinet of Deuntzer. This began a tradition of parliamentary government, and with the exception of the Easter Crisis of 1920, no government since 1901 has ruled against a parliamentary majority in the Folketing.

Monetary union

Main article: Scandinavian Monetary Union

The Scandinavian Monetary Union, a monetary union formed by Sweden and Denmark on May 5, 1873, fixed both their currencies against gold at par to each other. Norway, governed in union with Sweden, entered the monetary union two years later in 1875 by pegging its currency to gold at the same level as Denmark and Sweden (.403 grams).[11] The monetary union proved one of the few tangible results of the Scandinavist political movement of the 19th century.

Scandinavism; A 19th-century propaganda image of Norwegian, Danish and Swedish soldiers joining hands

The union provided fixed exchange-rates and stability in monetary terms, but the member-countries continued to issue their own separate currencies. In an outcome not initially foreseen, the perceived security led to a situation where the formally separate currencies circulated on a basis of "as good as" the legal tender virtually throughout the entire area.

The outbreak of World War I in 1914 brought an end to the monetary union. Sweden abandoned the tie to gold on August 2, 1914, and without a fixed exchange rate the free circulation came to an end.

The 20th century

1901-1939

In the early decades of the 20th century the new Radical Party and the older Venstre Party shared government. During this time women gained the right to vote (1915), and the United States of America purchased some of Denmark's colonial holdings: the three islands of St. John, St. Croix, and St. Thomas in the West Indies. The period also saw Denmark inaugurating important social and labour-market reforms, laying the basis for the present welfare state.

Denmark remained neutral during World War I, but the conflict affected the country to a considerable extent. As its economy was heavily based on exports, the unrestricted German submarine warfare was a serious problem. Denmark had no choice but to sell many of its exports to Germany instead of overseas nations. Widespread

profiteering took place, but commerce also suffered great disruption because of the conflict and because of the ensuing financial instability in Europe. Rationing was instituted, and there were food and fuel shortages. Following the defeat of Germany in the war (1918), the Treaty of Versailles (1919) mandated the Schleswig Plebiscites, which resulted in the return of Northern Schleswig (now South Jutland) to Denmark. The king and parts of the opposition grumbled that Prime Minister Carl Theodor Zahle (in office 1909-1910 and 1913–1920) did not use Germany's defeat to take back a bigger portion of the province, which Denmark had lost in the Second Schleswig War in 1864. The king and the opposition wanted to take over the city of Flensburg, while the cabinet insisted on only claiming areas where a majority of Danes lived, which led to a plebiscite in the affected areas over whether they wanted to become a part of Denmark or remain within Germany. Believing that he had the support of the people, King Christian X used his reserve power to dismiss Zahle's cabinet, sparking the Easter Crisis of 1920. As a result of the Easter Crisis, the king promised to no longer interfere in politics. Although the Danish Constitution remained un-amended, Danish monarchs have stayed out of politics since then. The end of the war also prompted the Danish government to finish negotiating with Iceland, resulting in Iceland becoming a sovereign Kingdom on December 1, 1918 while retaining the Danish monarch as Head of State.

In the 1924 Folketing election the Social Democrats, under the charismatic Thorvald Stauning, became Denmark's largest parliamentary political party, a position they maintained until 2001. Since the opposition still held a majority of the seats in the Landsting, Stauning had to co-operate with some of the right-wing parties, making the Social Democrats a more mainstream party. He succeeded in brokering an important deal in the 1930s which brought an end to the Great Depression in Denmark, and also laid the foundation for a welfare state.

World War II

Main article: Occupation of Denmark

During the German occupation, King Christian X became a powerful symbol of national sovereignty. This image dates from the King's birthday, 26 September 1940. Note the lack of a guard

Denmark declared its neutrality at the beginning of World War II and signed a non-aggression agreement with Nazi Germany. Nevertheless, Germany (so as to secure communications for its invasion of Norway) occupied Denmark on April 9, 1940, meeting limited resistance. British forces, however, occupied the Faroe Islands (12 April 1940) and invaded Iceland (10 May 1940) in pre-emptive moves to prevent German occupation. Following a plebiscite, Iceland declared its independence on June 17, 1944 and became a republic, dissolving its union with Denmark.

The Nazi occupation of Denmark unfolded in a unique manner. The conditions of occupation started off very leniently (although the authorities banned Danmarks Kommunistiske Parti (the Communist party) when the Wehrmacht invaded the Soviet Union in June 1941), and Denmark retained its own government. The new coalition government tried to protect the population from Nazi rule through compromise. The Germans allowed the Folketing to remain in session, the police remained under Danish control, and the German authorities stayed one step removed from the population. However, the Nazi demands eventually became intolerable for the Danish government, so in 1943 it resigned and Germany assumed full control of Denmark. After that point, an armed resistance movement grew against the occupying forces. Toward the end of the war, Denmark grew increasingly difficult for Germany to control, but the country remained under occupation until near the end of the war in May 1945. On 4 May 1945 German forces in Denmark, North West

Germany, and the Netherlands surrendered to the Allies. On 5 May 1945 British troops liberated Copenhagen. Three days later the war ended.

Denmark succeeded in smuggling most of its Jewish population to Sweden in 1943 when the Nazis threatened deportation; see Rescue of the Danish Jews.

Post-war

In 1948 Denmark granted home rule to the Faroe Islands. 1953 saw further political reform in Denmark, abolishing the Landsting (the elected upper house), colonial status for Greenland and allowing female rights of succession to the throne with the signing of a new constitution.

After the war, with the perceived threat posed by the USSR and the lessons of World War II still fresh in Danish minds, the country abandoned its policy of neutrality. Denmark became a charter-member of the United Nations in 1945 and one of the original members of the North Atlantic Treaty Organisation in 1949 (though Denmark had originally tried to form an alliance only with Norway and Sweden). A Nordic Council later emerged with the aim of co-ordinating Nordic policy. Later, in a referendum in 1972, Danes voted in favour of joining the European Community, the predecessor of the European Union, and Denmark became a member on 1 January 1973. Since then, Denmark has proven a hesitant member of the European community, opting out of many proposals, including the Euro which it rejected in a referendum in 2000. During recent years, however, traditionally eurosceptical attitudes have mellowed.

Monarchy of Denmark

From Wikipedia, the free encyclopedia

This article is about the history and function of the Danish monarchy as an institution. For the kingdom of Denmark itself, see Denmark.

The **monarchy in Denmark** is the constitutional monarchy of the Kingdom of Denmark, which includes Denmark, Greenland and the Faroe Islands.

As a constitutional monarch, the Queen is limited to non-partisan, ceremonial functions. The ultimate executive authority over the government of Denmark is still by and through the monarch's royal reserve powers; in practice these powers are only used according to laws enacted in Parliament or within the constraints of convention.

The Danish Royal Family can trace their lineage back to the Viking kings Gorm the Old and Harald Bluetooth from the 10th century, making the monarchy of Denmark the oldest in Europe. The current Royal House is a branch of the princely family of Glücksburg, originally from Schleswig-Holstein in Germany, the same royal house as the Norwegian and former Greek royal families.

Constitutional role

Main article: Politics of Denmark

According to the Danish Constitution the Danish Monarch, as head of state, is the source of executive and,

cojointly with the Folketing or Parliament, legislative power.[1] The Monarch retains the ability to deny giving a bill royal assent as well as choosing and dismissing the Prime Minister, although in modern times this becomes increasingly more unlikely, as it would cause a constitutional crisis. As Head of State, the monarch participates in the formation of a new government. Bills are required to be countersigned by one or more cabinet ministers to become law (Constitution, III,14) King Christian X was the last Monarch to exercise the power of dismissal on his own will, which he did on March 28, 1920 sparking the 1920 Easter Crisis. All royal powers called Royal Prerogative, such as patronage to appoint ministers and the ability to declare war and make peace, are exercised by the Prime Minister and the Cabinet, with the formal consent of the Queen. After consultation with representatives of the political parties, the Party Leader who has the support of the largest number of seats in the Danish Parliament is invited to form a government. Once it has been formed, the monarch will formally appoint it.[2]

Today the Sovereign has an essentially ceremonial role restricted in exercise of power by convention and public opinion. As a figurehead the monarch opens exhibitions, attends anniversaries, inaugurates bridges etc. However the monarch does continue to exercise three essential rights: the right to be consulted, the right to advise and the right to warn. As a consequence of these ideals, the Prime Minister and Cabinet attends the regular meeting of the Council of State. The Prime Minister and the Minister of Foreign Affairs report regularly to The Queen to advise her of the latest political developments. The Queen hosts official visits by foreign Heads of State and pays State Visits abroad.

History

Main article: List of Danish monarchs

The Danish monarchy is over 1000 years old, making it the fourth oldest continual monarchy in the world still existing today, the oldest being the Imperial House of Japan. The first monarch the monarchy can be traced back to is Gorm the Old (d. 958). Originally the monarchy was elective, but in practice the eldest son of the reigning monarch was elected. Later a Coronation Charter was signed by the king to restrict the powers of the Danish monarch. Absolutism was introduced in 1660–1661, when the elective monarchy was transformed into a hereditary monarchy. Male primogeniture succession was laid down in law in the Royal Decree of 1665. On 5 June 1849 the constitution was altered to create a constitutional monarchy for Denmark.[3] The Act of Succession of 27 March 1953 introduced the possibility of female succession, which enabled the current reigning Queen, Margrethe II, to accede the throne.

The last monarch of the ancient Danish ruling dynasty Christopher III of Denmark died in 1448. Duke Christian of Oldenborg was chosen as his successor and became the next monarch of Denmark, ruling under the name Christian I. The last Danish monarch of that royal dynasty, Frederik VII, died without issue. In accordance with the act of succession, Prince Christian of Glücksborg acceded the throne, being the first Danish monarch of the house of Glücksborg. Christian eventually became known as 'the Father-in-law of Europe' due to his family ties with most other ruling dynasties of Europe: His daughter Princess Alexandra married Edward VII of the United Kingdom, another daughter Princess Dagmar married Alexander III of Russia and Princess Thyra married Crown Prince Ernst August of Hanover, Duke of Cumberland who was also a British prince. His son Vilhelm went on to become George I of Greece. Further, his grandson Carl became Haakon VII of Norway. To this day the Danish Royal Family are related to most other reigning European dynasties.[3]

Danish Royal Family

Main article: Danish Royal Family

In the Kingdom of Denmark all members of the ruling dynasty that hold the title Prince or Princess of Denmark are said to be members of the Danish Royal Family. As with other European monarchies, distinguishing who is a member of the national Royal Family is difficult due to lack of strict legal or formal definition of who is or is not a member. The Queen and her siblings belong to the House of Glücksburg, a branch of the House of Oldenburg. The Queen's children and male-line descendants belong agnatically to the family *de Laborde de Monpezat*.[4]

Main members

The Danish Royal Family includes:

The Royal Family of Denmark during Queen Margrethe II's 70th birthday, 16 April 2010.

- The Queen
- The Prince Consort (The Queen's husband)
- The Crown Prince and Crown Princess (The Queen's son and daughter-in-law)
  - Prince Christian (The Crown Prince and Crown Princess's son)
  - Princess Isabella (The Crown Prince and Crown Princess's daughter)
  - Prince Vincent (The Crown Prince and Crown Princess's son born 8 January 2011)
  - Princess Josephine (The Crown Prince and Crown Princess's daughter born 8 January 2011)[5][6]
- Prince Joachim and Princess Marie (The Queen's son and daughter-in-law)
  - Prince Nikolai (Prince Joachim's elder son)
  - Prince Felix (Prince Joachim's middle son)
  - Prince Henrik of Denmark (Prince Joachim's and Princess Marie's son together)
- Princess Benedikte (The Queen's sister)
- The Queen of the Hellenes (The Queen's sister)
- Princess Elisabeth (The Queen's first cousin)

Extended members

The extended Danish Royal Family which includes people who do not hold the title of *Prince* or *Princess of Denmark* but have close connections to the Queen could be said to include:

- The Prince of Sayn-Wittgenstein-Berleburg (Princess Benedikte's husband)
  - The Hereditary Prince of Sayn-Wittgenstein-Berleburg (Princess Benedikte's son)
  - Princess Alexandra of Sayn-Wittgenstein-Berleburg (Princess Benedikte's elder daughter)
  - Count Jefferson von Pfeil und Klein-Ellguth (Princess Alexandra's husband)
    - Count Richard von Pfeil und Klein-Ellguth (Princess Alexandra's son)
    - Countess Ingrid von Pfeil und Klein-Ellguth (Princess Alexandra's daughter)
  - Princess Nathalie of Sayn-Wittgenstein-Berleburg (Princess Benedikte's younger daughter)
  - Alexander Johannsmann, Princess Nathalie's husband
    - Konstantin Johannsmann. Princess Nathalie's son

Greek Royal Family

With the exception of Marina, Consort of Prince Michael, and Princesses Alexandra and Olga, all members of the Greek Royal Family are members of the Danish Royal Family and bears the title of Prince or Princess of

Greece and Denmark.

- HM King Constantine II of Greece, Prince of Denmark
  - Princess Alexia of Greece and Denmark (King Constantine and Queen Anne Marie's daughter)
  - Pavlos, Crown Prince of Greece, Prince of Denmark (King Constantine and Queen Anne Marie's son)
  - Crown Princess Pavlos of Greece, Princess of Denmark (Prince Pavlos' wife)
    - Princess Maria-Olympia of Greece and Denmark (Crown prince and princess's daughter)
    - Prince Constantine Alexios of Greece and Denmark (Crown prince and princess's son)
    - Prince Achileas-Andreas of Greece and Denmark (Crown prince and princess's son)
    - Prince Odysseas-Kimon of Greece and Denmark (Crown prince and princess's son)
    - Prince Aristide Stavros of Greece and Denmark (Crown prince and princess's son)
  - Prince Nikolaos of Greece and Denmark (King Constantine and Queen Anne Marie's son)
  - Princess Tatiana of Greece and Denmark (Prince Nikolaos' wife)
  - Princess Theodora of Greece and Denmark (King Constantine and Queen Anne Marie's daughter)
  - Prince Philippos of Greece and Denmark (King Constantine and Queen Anne Marie's son)

- Princess Irene of Greece and Denmark (King Constantine's younger sister)
- Prince Michael of Greece and Denmark (King Constantine's cousin)

Succession

Main article: Line of succession to the Danish throne

Denmark has had equal primogeniture since 2009. The Danish Act of Succession[7] adopted on 27 March 1953 restricts the throne to those descended from King Christian X and his wife, Alexandrine of Mecklenburg-Schwerin, through approved marriages.

Crown Prince Frederik of Denmark

Dynasts lose their right to the throne if they marry without the permission of the monarch given in the Council of State. Individuals born to unmarried dynasts or to former dynasts that married without royal permission, and their descendants, are excluded from the throne. Further, when approving a marriage, the monarch can impose conditions that must be met in order for any resulting offspring to have succession rights. Part II, Section 9 of the Danish Constitution of 5 June 1953 (http://www.oefre.unibe.ch/law/icl/da00000_.html) provides that the parliament will elect a king and determine a new line of succession should a situation arise where there are no eligible descendants of King Christian X and Queen Alexandrine.

The monarch of Denmark must be a member of the Danish National Church, or Evangelical Lutheran Church of Denmark (Danish Constitution, II,6). The National Church is by law the State Church, though the monarch is not its head (unlike in England, where the Supreme Governor of the Church of England is the Monarch of the United Kingdom, currently Queen Elizabeth II)(Const, I,4)).[8]

Residences

Main article: List of Danish royal residences

The royal palaces of Denmark became property of the state with the introduction of the constitutional monarchy in 1849. Since then, a varying number of these has been put at the disposal of the monarchy. The agreement on which is renewed at the accesion of every new monarch.

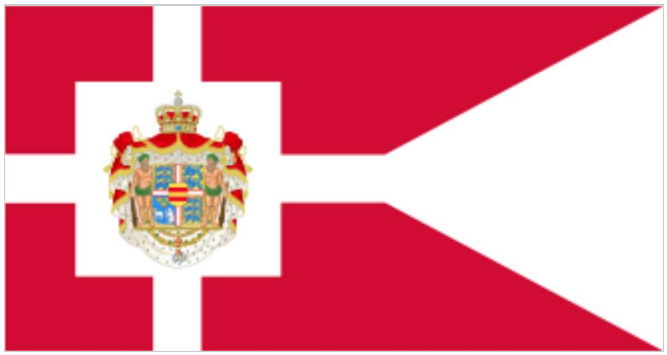
Amalienborg Palace, the monarch's principal residence

The monarch has the use of the four palaces at Amalienborg in Copenhagen as a residence and work palace. Currently, the Queen herself resides in *Christian IX's Palace* and the Crown Prince in *Frederik VIII's Palace*. *Christian VIII's Palace* has apartments for other members of the royal family, whereas *Christian VII's Palace* is used for official events and to accomodate guests.

In addition, parts of Christiansborg Palace in Copenhagen is also at the disposal of the monarch. It is the site of official functions such as banquets, state dinners, diplomatic accreditations, public audiences, meetings of the Council of State, receptions, royal christenings, lyings-in-state and other ceremonies. The royal parts of the palace are open to the public when not in use.

Another residence is Fredensborg Palace north of Copenhagen which is used principally in Spring and Autumn. It is often the site of state visits and ceremonial events in the royal family.

In Jutland, Graasten Palace is at the disposal of the monarch. It was used as the summer residence of King Frederick IX and Queen Ingrid. Since the death of Queen Ingrid in 2000, the Queen has stayed at Graasten for a yearly vacation in summer.



The hunting lodge the Eremitage Palace in Dyrehaven north of Copenhagen is used during royal hunts in Dyrehaven.

Finally, Sorgenfri Palace is at the disposal of the monarch. It was the residence of Hereditary Prince Knud and Hereditary Princess Caroline Mathilde and is not in official use at all at this time.

Apart from these state-owned palaces, Marselisborg Palace in Aarhus is privately owned by the Queen. It functions as the summer residence of the Queen, as well as during the Easter and Christmas holidays.

Style

The monarchs of Denmark have a long history of royal and noble titles. Historically Danish monarchs also used the titles 'King of the Wends' and 'King of the Goths'. Upon her ascension to the throne in 1972 Queen Margrethe II abandoned all titles except the title 'Queen of Denmark'. The monarch of Denmark and his or her spouse are addressed as 'Your Majesty', whereas Princes and Princesses are referred to as *His* or *Her Royal Highness* (*Hans* or *Hendes Kongelige Højhed*), or *His* or *Her Highness* (*Hans* or *Hendes Højhed*).

Royal Standard of Denmark.

- Eric of Pomerania: *By the Grace of God, King of Denmark, Sweden and Norway, the Wends and the Goths, Duke of Pomerania*.

- Christopher of Bavaria: *By the Grace of God, King of Denmark, Sweden and Norway, the Wends and the Goths, Count Palatine of the Rhine, Duke of Bavaria*.
- The full title of the Danish sovereigns from Christian I to Christian II was: *By the Grace of God, King of Denmark, Sweden and Norway, the Wends and the Goths, Duke of Schleswig, Holstein, Stormarn and Dithmarschen, Count of Oldenburg and Delmenhorst*.
- The full title of the Danish sovereigns from Frederick I to Christian VII was: *By the Grace of God, King of Denmark and Norway, the Wends and the Goths, Duke of Schleswig, Holstein, Stormarn and Dithmarschen, Count of Oldenburg and Delmenhorst*.
- Oldenburg was elevated to a duchy during the reign of Christian VII, and the style was changed accordingly: *By the Grace of God, King of Denmark, Sweden and Norway, the Wends and the Goths, Duke of Schleswig, Holstein, Stormarn, Dithmarschen and Oldenburg*. This style was used until his son, Frederick VI, lost control of Norway by the 1814 Treaty of Kiel.
- Frederick VI gained control over Rügen 1814–1815 leading to the style: *By the Grace of God, King of Denmark, the Wends and the Goths, Prince of Rügen, Duke of Schleswig, Holstein, Stormarn, Dithmarschen and Oldenburg*.
- In 1815, Frederick VI relinquished Rügen in favour of the Prussian king, and instead gained the Duchy of Lauenburg from the British-Hanoveran king leading to the style: *By the Grace of God, King of Denmark, the Wends and the Goths, Duke of Schleswig, Holstein, Stormarn, Dithmarschen, Lauenburg and Oldenburg*. This style was used until 1918 when Iceland was elevated to an independent state in union with Denmark.
- The full title of Christian X from 1918 to 1944: *By the Grace of God, King of Denmark, Iceland, the Wends and the Goths, Duke of Schleswig, Holstein, Stormarn, Dithmarschen, Lauenburg and Oldenburg*.
- The full title of Christian X following the 1944 dissolution of the Dano-Icelandic union: *By the Grace of God, King of Denmark, the Wends and the Goths, Duke of Schleswig, Holstein, Stormarn, Dithmarschen, Lauenburg and Oldenburg*. The same style was used by his son, Frederick IX, until his death in 1972
- When ascending the throne in 1972, Queen Margrethe II abandoned all the monarch's traditional titles except the title to Denmark, hence her style *By the Grace of God, Queen of Denmark*.

Greenland and the Faroe Islands

These two dependencies enjoy home rule and their head of state is the monarch of Denmark, in accordance with the Danish Constitution.[9]

Margrethe II of Denmark

From Wikipedia, the free encyclopedia

Margrethe II (Danish pronunciation: [mɑˈg̊ʁæːˀd̥ə]; *Margrethe Alexandrine Þórhildur Ingrid*; sometimes anglicised as **Margaret II**) (born 16 April 1940) is the Queen regnant of the Kingdom of Denmark. She is the eldest daughter of King Frederick IX and Queen Ingrid of Denmark. In 1967, she married Henri de Laborde de Monpezat, with whom she has two sons: Crown Prince Frederik (born 1968) and Prince Joachim (born 1969). When her father, Frederick IX, died in 1972, Margrethe succeeded him as Queen of Denmark and became the first female monarch of Denmark since Margaret I, ruler of the Scandinavian countries in 1375–1412 during the Kalmar Union.

Early life

Princess Margrethe was born on 16 April 1940 at Amalienborg Palace in Copenhagen as the first child of Crown Prince Frederick and Crown Princess Ingrid of Denmark. Her father was the eldest son of King Christian X and Queen Alexandrine of Denmark, and her mother was the only daughter of Crown Prince Gustav Adolf and Crown Princess Margaret of Sweden. Her birth took place just one week after Nazi Germany's invasion of Denmark on 9 April 1940.

Born	16 April 1940 Amalienborg Palace, Denmark
Religion	Church of Denmark Lutheranism

Monarchical styles of

Queen Margrethe II of Denmark

She was baptised on 14 May 1940 in the Church of Holmen in Copenhagen. The princess's godparents were King Christian X of Denmark, Prince Knud of Denmark, Prince Axel of Denmark, King Gustaf V of Sweden, Crown Prince Gustaf Adolf of Sweden, Prince Gustaf Adolf of Sweden and Prince Arthur, Duke of Connaught and Strathearn.

Reference style	Her Majesty
Spoken style	Your Majesty
Alternative style	Ma'am

She was named Margrethe after her maternal grandmother, Princess Margaret of Connaught, Alexandrine after her paternal grandmother, Duchess Alexandrine of Mecklenburg-Schwerin, and Ingrid after her mother. Since her paternal grandfather, the then-reigning King Christian X, was also the King of Iceland at the time, and Margrethe until 1944 was an Icelandic princess, the Princess was as a tribute to the people of Iceland given an Icelandic name, *Þórhildur*, consisting of "Thor" and the word for "battle" or "fight". The name is spelled with the thorn letter, which is a surviving rune, and is equivalent to "th". It is sometimes anglicized as *Thorhildur*.[2]

When Margrethe was four years old, in 1944, her first sister Princess Benedikte was born. She later married Prince Richard of Sayn-Wittgenstein-Berleburg and lives in Germany. Her third sister Princess Anne Marie was born in 1946. She later married Constantine II of Greece and now lives in London.

On 20 April 1947, King Christian X died and Margrethe's father ascended the throne as King Frederick IX.

Heiress presumptive

At the time of her birth, only males could ascend the throne of Denmark, owing to the changes in succession laws enacted in the 1850s when the Glücksburg branch was chosen to succeed. As she had no brothers, it was assumed that her uncle Prince Knud would one day assume the throne.

The process of changing the constitution started in 1947, not long after her father ascended the throne and it became clear that Queen Ingrid would have no more children. The popularity of Frederik and his daughters and the more prominent role of women in Danish life started the complicated process of altering the constitution. That proposal had to be passed by two Parliaments in succession and then by a referendum, which was held on 27 March 1953. The new Act of Succession permitted female succession to the throne of Denmark, according to male-preference primogeniture, where a female can ascend to the throne only if she does not have a brother. Princess Margrethe therefore became the Heiress presumptive.

On her eighteenth birthday, 16 April 1958, the Heiress Presumptive was given a seat in the Council of State, and the Princess subsequently chaired the meetings of the Council in the absence of the King.

In mid-1960, together with the Princesses of Sweden and Norway, she traveled to the United States, which included a visit to Los Angeles, California, and to the Paramount Studios, where they were met by several celebrities, including Dean Martin, Jerry Lewis and Elvis Presley.

Princess Margrethe in 1962 with Egyptian president Gamal Abdel Nasser in

Education

She studied prehistoric archaeology at Girton College, Cambridge during 1960–61, political science at Aarhus University between 1961–1962, at the Sorbonne in 1963, and at the London School of Economics in 1965, and is a Fellow of the Society of Antiquaries of London.

Queen Margrethe is fluent in her native tongue, Danish; the native tongue of her husband, French; as well as English, Swedish and German.[3]

Abdeen Palace in Cairo.

Marriage

On 10 June 1967, Princess Margrethe married a French diplomat, Count Henri de Laborde de Monpezat, at the Church of Holmen in Copenhagen. Laborde de Monpezat received the style and title of "His Royal Highness Prince Henrik of Denmark" because of his new position as the spouse of the Heiress Presumptive to the Danish throne.

Margrethe gave birth to her first child, Prince Frederik, on 26 May 1968. A second child, Prince Joachim, was born on 7 June 1969.

Reign

Queen Margrethe II and her consort, Prince Henrik, in 2010.

Succession

Shortly after King Frederick IX had delivered his New Year's Address to the Nation at the 1971/72 turn of the year, he fell ill. At his death 14 days later on 14 January 1972, Margrethe succeeded to the throne as Queen Margrethe II of Denmark, becoming the first female Danish sovereign under the new Act of Succession. She was proclaimed Queen from the balcony of Christiansborg Palace by Prime Minister Jens Otto Krag on 15 January 1972. The Queen chose the motto: *God's help, the love of The People, Denmark's strength.*[3]

Ruby Jubilee

On 14 January 2012, Queen Margrethe II celebrated her 40th year on the throne. This was marked by a carriage procession, and numerous TV interviews.

Constitutional role

The Queen's main tasks are to represent the Kingdom abroad and to be a unifying figurehead at home. She receives foreign ambassadors and awards honours and medals. The queen performs the latter task by accepting invitations to open exhibitions, attending anniversaries, inaugurating bridges, etc.

As an unelected public official, the Queen takes no part in party politics and does not express any political opinions. Although she has the right to vote, she opts not to do so to avoid even the appearance of partisanship.

After an election where the incumbent Prime Minister does not have a majority behind him, a “Dronningerunde” (Queen's meeting) between the chairmen of each of the Danish political parties attends a meeting with the monarch.[4]

Each party has the choice of selecting a Royal Investigator to lead these

Danish Royal Family

HM The Queen
HRH The Prince Consort

- HRH The Crown Prince
  HRH The Crown Princess

negotiations or alternatively, give the incumbent Prime Minister the mandate to continue his government as is. In theory each party could choose its own leader as Royal Investigator, the globalistic party Det Radikale Venstre did so in 2006, but often only one Royal Investigator is chosen plus the Prime Minister, before each election. The leader who, at that meeting succeeds in securing a majority of the seats in the Folketing, is by royal decree charged with the task of forming a new government. (It has never happened in more modern history that any party has held a majority on its own.)

Once the government has been formed, it is formally appointed by the Queen. Officially, it is the Queen who is the head of government, and she therefore presides over the Council of State, where the acts of legislation which have been passed by the parliament are signed into law. In practice, however, nearly all of the Queen's formal powers are exercised by the Council of State, and she is required by convention to act on its advice.

In addition to her roles in her own country, the queen is also the Colonel-in-Chief of the Princess of Wales's Royal Regiment (Queen's and Royal Hampshires), an infantry regiment of the British Army, following a tradition in her family.

Personal life and interests

The official residences of the Queen and the Prince Consort are Amalienborg Palace and Fredensborg Palace in Copenhagen. Their summer residence is Gråsten Palace near Sønderborg, the former home of the Queen's mother, Queen Ingrid, who died in 2000.

The Queen is an accomplished painter, and has held many art shows over the years.[5] Her illustrations—under the pseudonym Ingahild Grathmer—were used for the Danish edition of *The Lord of the Rings* published in 1977 and the re-issue in 2002.[6] In 2000 she illustrated Henrik, the Prince Consort's poetry collection *Cantabile*.

She is also an accomplished translator and is said to have participated in the Danish translation of *The Lord of the Rings*.[5]

She is also a costume designer, having designed the costumes for the 2009 Peter Flinth film, "De vilde svaner" (the Wild Swans).[7] Margrethe also designs some of her own clothes.

She is known for her colourful and sometimes eccentric clothing choices: as well as designing some of her own clothes, Queen Margrethe wears designs by Pierre Balmain, Jorgen Bender, and Birgitte Taulow. [8]

Margrethe is a chain smoker, and she is famous for her tobacco habit.[9] However, on 23 November 2006 the Danish newspaper B.T. reported an announcement from the Royal Court stating that the Queen would never again be seen smoking in public. Still, she does continue to smoke but in the future she will do so only privately. The announcement may be due to the fact that the Danish parliament recently has decided on strict rules concerning smoking.[10]

She suffers from arthritis and has had both her knees replaced as a result.

A statement in a 2005 authorized biography about the Queen (entitled *Margrethe*) focused on her views of Islam: "We are being challenged by Islam these years. Globally as well as locally. There is something impressive about people for whom religion imbues their existence, from dusk to dawn, from cradle to grave. There are also Christians who feel this way. There is something endearing about people who give themselves up completely to their faith. But there is likewise something frightening about such a totality, which also is a feature of Islam. A counterbalance has to be found, and one has to, at times, run the risk of having unflattering labels placed on you. For there are some things for which one should display no tolerance. And when we are tolerant, we must know whether it is because of convenience or conviction."[11]

Family

Main article: Danish Royal Family

Her Majesty surrounded by her family waving to crowds on her 70th birthday in April 2010. From left to right: the Crown Princess, Prince Felix, the Crown Prince, Prince Christian, the Queen, Prince Nikolai, the Prince Consort, Prince Joachim and Princess Isabella

The Queen and The Prince Consort have two children and eight grandchildren:

- *His Royal Highness* **Frederik** André Henrik Christian, Crown Prince of Denmark, Count of Monpezat, born on 26 May 1968. He was married on 14 May 2004 to Mary Elizabeth Donaldson, who was born on 5 February 1972. They have four children:
  - *His Royal Highness* Prince **Christian** Valdemar Henri John of Denmark, Count of Monpezat, born on 15 October 2005.
  - *Her Royal Highness* Princess **Isabella** Henrietta Ingrid Margrethe of Denmark, Countess of Monpezat, born on 21 April 2007.

    - *His Royal Highness* Prince **Vincent** Frederik Minik Alexander of Denmark, Count of Monpezat, born on 8 January 2011.
    - *Her Royal Highness* Princess **Josephine** Sophia Ivalo Mathilda of Denmark, Countess of Monpezat, born on 8 January 2011.
- *His Royal Highness* Prince **Joachim** Holger Waldemar Christian of Denmark, Count of Monpezat, born on 7 June 1969. He was married on 18 November 1995 to Alexandra Christina Manley, who was born on 30 June 1964. They divorced on 8 April 2005. He was married on 24 May 2008 to Marie Agathe Odile Cavallier, who was born on 6 February 1976. He has four children:
    - *His Highness* Prince **Nikolai** William Alexander Frederik of Denmark, Count of Monpezat, born on 28 August 1999.
    - *His Highness* Prince **Felix** Henrik Valdemar Christian of Denmark, Count of Monpezat, born on 22 July 2002.
    - *His Highness* Prince **Henrik** Carl Joachim Alain of Denmark, Count of Monpezat, born on 4 May 2009.
    - *Her Highness* as yet unnamed, born on 24 January 2012.

In 2008 the Queen announced that her male-line descendants would bear the additional title of Count of Monpezat,[12] which they inherit from the Queen's husband and consort, Henri-Marie-Jean André *Count de Laborde de Monpezat*.[13]

Patrilineal descent

Patrilineal descent
Margrethe's patriline is the line from which she is descended father to son. Patrilineal descent is the principle behind membership in royal houses, as it can be traced back through the generations—which means that if Margrethe II were to choose an historically accurate house name it would be Oldenburg. 1. Egilmar I of Lerigau, dates unknown 2. Egilmar II of Lerigau, d. 1142 3. Christian I of Oldenburg, d. 1167 4. Moritz of Oldenburg, d. 1209 5. Christian II of Oldenburg, d. 1233 6. John I, Count of Oldenburg, d. 1275 7. Christian III, Count of Oldenburg, d. 1285 8. John II, Count of Oldenburg, d. 1314 9. Conrad I, Count of Oldenburg, 1300–1347 10. Christian V, Count of Oldenburg, 1340–1423 11. Dietrich, Count of Oldenburg, 1398–1440

12. Christian I of Denmark, 1426–1481
13. Frederick I of Denmark, 1471–1533
14. Christian III of Denmark, 1503–1559

House of Glücksburg

From Wikipedia, the free encyclopedia
(Redirected from House of Schleswig-Holstein-Sonderburg-Glücksburg)

The **House of Schleswig-Holstein-Sonderburg-Glücksburg** (Danish: *Slesvig-Holsten-Sønderborg-Lyksborg*, the latter name is also spelled *Glücksborg*), known as the **House of Glücksburg** (or *House of Glücksborg*) for short, is a German ducal house, junior branches of which include the royal houses of Denmark and Norway, the deposed royal house of Greece, and the heir to the thrones of the Commonwealth realms[1][2] (although in the latter case, they are, by royal proclamation, declared to be members of the House of Windsor[3]). The family is named after Glücksburg in northernmost Germany, and is a cadet branch of the House of Oldenburg that is descended from King Christian III of Denmark. However, as the elder line of the House of Oldenburg and the line of the House of Schleswig-Holstein-Sonderburg-Augustenburg became extinct in 1863 and 1931, respectively, the House of Glücksburg is now the senior surviving branch of the House of Oldenburg.

House of Schleswig-Holstein-Sonderburg-Glücksburg

Country	Germany, Denmark, Norway, Greece and Iceland
Ancestral house	House of Oldenburg
Titles	Duke of Schleswig-Holstein, King of Denmark, King of Norway, King of the Hellenes, and King of Iceland
Founder	Friedrich Wilhelm, Duke of Glücksburg
Current head	Christopher, Duke of Schleswig-Holstein
Founding	1825

This particular line comes from the Dukes of Schleswig-Holstein-Sonderburg-Beck. The last of them became Duke of Glücksburg and changed his title accordingly to Friedrich Wilhelm, Duke of Schleswig-Holstein-Sonderburg-Glücksburg. He was married to Princess Louise Caroline of Hesse-Kassel, a granddaughter of King Frederick V of Denmark.

The family's ancestral castle, Glücksburg Castle, in Glücksburg, Schleswig-Holstein

Neither the Dukes of Beck nor of Glücksburg were sovereign rulers - they held their lands in fief to the sovereign dukes of Schleswig and Holstein (who were also the Kings of Denmark in personal union) and, before 1773, the Dukes of Holstein-Gottorp.

Christian IX of Denmark, the fourth son of Friedrich Wilhelm, was chosen by the childless King Frederick VII of Denmark to be his heir, as Christian was married to Frederick's first cousin, Luise of Hesse-Kassel. Wilhelm, the second son of Crown Prince Christian and Crown Princess Luise, was elected King of the Hellenes on March 30, 1863 to succeed the deposed Wittelsbach Otto of Greece and took the name George I of Greece. His father became King of Denmark as Christian IX on November 15, 1863. Prince Carl, the second son of Frederick VIII of Denmark, Christian IX's eldest son, became King of Norway on November 18, 1905 as Haakon VII of Norway. Christian IX's daughters, Alexandra of Denmark and Dagmar of Denmark (who became Maria Feodorovna), married Edward VII of the United Kingdom and Alexander III of Russia, respectively. As a result, by 1914, descendants of King Christian IX were nearly as prevalent on European thrones as those of Queen Victoria; Christian IX became known as the Father-in-law of Europe.

Senior line, Dukes of Schleswig-Holstein-Sonderburg-Glücksburg (1825–*present*)

Ducal Family of Schleswig-Holstein

The Dukes of Schleswig-Holstein-Sonderburg-Glücksburg constitute the senior male line of the family, who hold the headship of both the House of Glücksburg and the entire House of Oldenburg.

- 1816–31 Friedrich Wilhelm, Duke of Schleswig-Holstein-Sonderburg-Glücksburg
- 1831–78 Karl, Duke of Schleswig-Holstein-Sonderburg-Glücksburg
- 1878–85 Friedrich, Duke of Schleswig-Holstein-Sonderburg-

Glücksburg
- 1885–1934 Friedrich Ferdinand, Duke of Schleswig-Holstein-Sonderburg-Glücksburg, from 1931 Duke of Schleswig-Holstein
- 1934–65 Wilhelm Friedrich, Duke of Schleswig-Holstein
- 1965–80 Peter, Duke of Schleswig-Holstein
- 1980 – present Christoph, Duke of Schleswig-Holstein (b. 1949)
- Heir: Friedrich Ferdinand, Hereditary Prince of Schleswig-Holstein (b. 1985)
- Present line of succession

Junior branches

Junior branches of the House of Glücksburg are descended notably from Duke Friedrich Wilhelm's younger son, who became Christian IX of Denmark.

Monarchs of Denmark, 1863–*present*

The agnatic lineage is *continued* from Friedrich Wilhelm, Duke of Schleswig-Holstein-Sonderburg-Glücksburg.

- Christian IX of Denmark (1818–1906, reigned 1863–1906)
- Frederick VIII of Denmark (1843–1912, reigned 1906–12)
- Christian X of Denmark (1870–1947, reigned 1912–47), also king of Iceland 1918–1944
- Frederick IX of Denmark (1899–1972, reigned 1947–72)
- Margrethe II of Denmark (b. 1940, incumbent since 1972)

  - The Greek Royal Family
    - The British Royal Family
  - The Norwegian Royal Family
- The Oldenburger Grand Ducal Family

Kings of the Hellenes (Greece), 1863–1973

The Greek line is descended from Prince Vilhelm, a son of Prince Christian of Schleswig-Holstein-Sonderburg-Glücksburg (the later Christian IX of Denmark), who became King of the Hellenes as George I. The agnatic lineage is continued from Christian IX of Denmark.

- George I of Greece (1845–1913, reigned 1863–1913)
- Constantine I of Greece (1868–1923, reigned 1913–17, 1920–22)
- Alexander of Greece (1893–1920, reigned 1917–20)
- George II of Greece (1890–1947, reigned 1922–24, 1935–47)
- Paul of Greece (1901–1964, reigned 1947–64)
- Constantine II of Greece (b. 1940, reigned 1964–73)
- Present line of succession

Thirty-drachma coin of 1963, commemorating the centennial of

Heirs to the Commonwealth realms and their ancestors

The heirs to the Commonwealth realms are descended from Prince Philip of Greece and Denmark, a paternal grandson of George I of Greece. However, by Letters Patent of 8 February 1960, Queen Elizabeth II declared that her children with Prince Philip would belong to the House of Windsor, as would

any agnatic descendants who enjoy the style of Royal Highness, and the title of Prince or Princess. (Those who do not have that style and title would bear the surname Mountbatten-Windsor.)[3]

The agnatic lineage is *continued* from Friedrich Wilhelm, Duke of Schleswig-Holstein-Sonderburg-Glücksburg.

the reign of the House of Glücksburg in Greece. Clockwise from the top: Paul, George II, Alexander, Constantine I and George I.

- Christian IX of Denmark
- George I of Greece
- Prince Andrew of Greece and Denmark
- Prince Philip of Greece and Denmark[2]
- Charles, Prince of Wales[2]
- Prince William, Duke of Cambridge[2]

Kings of Norway, 1905–*present*

The Norwegian branch is descended from Prince Carl of Glücksburg, a younger son of Frederick VIII of Denmark. He took the name Haakon as king.

- Haakon VII of Norway (1872–1957, reigned 1905–57)
- Olav V of Norway (1903–1991, reigned 1957–91)
- Harald V of Norway (b. 1937, incumbent since 1991)
- Heir: Crown Prince Haakon of Norway (b. 1973)
- Present line of succession

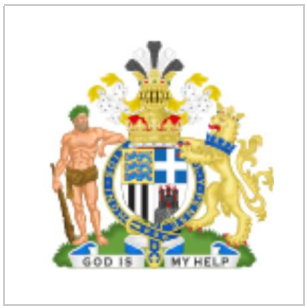
Other notable members

Main article: List of members of the House of Schleswig-Holstein-Sonderburg-Glücksburg

- Princess Ingeborg of Denmark (1878–1958). Daughter of Frederick VIII of Denmark, wife of Prince Carl, Duke of Västergötland, mother of Princess Margaretha of Sweden, Märtha of Sweden and Astrid of Sweden and Prince Carl, Duke of Östergötland (who themselves are not members of this house, but of that of Bernadotte).
- Princess Elena of Greece and Denmark (1896–1982). Wife of Carol II of Romania and mother of Michael I of Romania.
- Princess Olga of Greece and Denmark (1903–1997). Wife of the Regent Prince Paul of Yugoslavia.
- Princess Irene of Greece and Denmark, Duchess of Aosta (1904–1974). Wife of Aimone of Savoy, Duke of Spoleto.
- Princess Marina, Duchess of Kent (1906–1968). Wife of Prince George, Duke of Kent.
- Princess Cecilie of Greece and Denmark (1911–1937). Wife of Georg Donatus, Hereditary Grand Duke of Hesse and sister of Philip, later the Duke of Edinburgh. She died with her husband and two sons in the crash of Sabena Airlines Junkers JU52 (OO-AUB) at Ostend.
- Alexandra of Greece and Denmark (1921–1993). Wife of Peter II of Yugoslavia.
- Prince Philip, Duke of Edinburgh (b. 1921), grandson to George I of Greece, son to Prince Andrew of Greece, consort to Elizabeth II of the United Kingdom.
- Queen Sofia of Spain (b. 1938). Wife of King Juan Carlos I of Spain, sister of King Constantine II of Greece.
- Prince Michael of Greece and Denmark (b. 1939). Son of Prince Christopher of Greece and Denmark and Princess Françoise of Orléans (1902–1953); grandson of King George I of the Hellenes.

Coat of arms

Schleswig-Holstein



Kingdom of Denmark

Kingdom of Greece

Kingdom of Norway (note: This is the state coat of arms of Norway, as used by any ruler irrespective of family since the middle ages, not the family coat of arms of the House of Glücksburg)

Philip, Duke of Edinburgh

The coat of arms of Norway is the coat of arms of Norway as a state, in use since the 11th century and used by all ruling houses since then, and not the family coat of arms of Schleswig-Holstein-Sonderburg-Glücksburg.

Luxembourg

From Wikipedia, the free encyclopedia

Luxembourg (/ˈlʌksəmbɜrg/ *LUKS-əm-burg*), officially the **Grand Duchy of Luxembourg** (Luxembourgish: *Groussherzogtum Lëtzebuerg*, French: *Grand-Duché de Luxembourg*, German: *Großherzogtum Luxemburg*, Dutch: *Groothertogdom Luxemburg*), is a landlocked country in western Europe, bordered by Belgium, France, and Germany. It has two principal regions: the Oesling in the North as part of the Ardennes massif, and the Gutland ("good country") in the south.[4] Luxembourg has a population of over half a million people in an area of approximately 2,586 square kilometres (998 sq mi).[5] A representative democracy with a constitutional monarch, it is ruled by a grand duke. It is now the world's only remaining sovereign grand duchy. The country has a highly developed economy, with the world's highest GDP (nominal) per capita according to the IMF. Its historic and strategic importance dates back to its founding as a Roman era fortress site and Frankish count's castle site in the Early Middle Ages. It was an important bastion along the Spanish Road when Spain was the principal European power influencing the whole western hemisphere and beyond in the 16th–17th centuries.

Luxembourg is a member of the European Union, NATO, OECD, the United Nations, and Benelux, reflecting the political consensus in favour of economic, political, and military integration. The city of Luxembourg, the largest and capital city, is the seat of several institutions and agencies of the EU.

Luxembourg culture is a mix of Romance Europe and Germanic Europe, borrowing customs from each of the distinct traditions. Luxembourg is a trilingual country; German, French and Luxembourgish are official languages. Although a secular state, Luxembourg is predominantly Roman Catholic.

History

Main article: History of Luxembourg

Charles IV, the 14th century Holy Roman Emperor and king of Bohemia from the House of Luxembourg.[6]

The recorded history of Luxembourg begins with the acquisition of Lucilinburhuc [7] (today Luxembourg Castle) situated on the Bock rock by Siegfried, Count of Ardennes in 963 through an exchange act with the abbey of St Maximin in Trier.[8] Around this fort, a town gradually developed, which became the centre of a small state of great strategic value. In the 14th and early 15th centuries three members of the House of Luxembourg reigned as Holy Roman Emperors. In 1437, the House of Luxembourg suffered a succession crisis, precipitated by the lack of a male heir to assume the throne, which led to the territory being sold by Duchess Elisabeth to Philip

1 Not the same as the *Het Wilhelmus* of the Netherlands.

The three Partitions of Luxembourg have greatly reduced Luxembourg's territory.

2 Before 1999: Luxembourgish franc.
3 The .eu domain is also used, as it is shared with other European Union member states.

the Good of Burgundy.[9]

In the following centuries, Luxembourg's fortress was steadily enlarged and strengthened by its successive occupants, the Bourbons, Habsburgs, Hohenzollerns, and the French, among others. After the defeat of Napoleon in 1815, Luxembourg was disputed between Prussia and the Netherlands. The Congress of Vienna formed Luxembourg as a Grand Duchy in personal union with the Netherlands. Luxembourg also became a member of the German Confederation, with a Confederate fortress manned by Prussian troops.[10]

The Belgian Revolution of 1830–1839 reduced Luxembourg's territory by more than half, as the predominantly francophone western part of the country was transferred to Belgium. Luxembourg's independence was reaffirmed by the 1839 First Treaty of London. In the same year, Luxembourg joined the Zollverein.[11] Luxembourg's independence and neutrality were again affirmed by the 1867 Second Treaty of London, after the Luxembourg Crisis nearly led to war between Prussia and France.[12] After the latter conflict, the Confederate fortress was dismantled.[13]

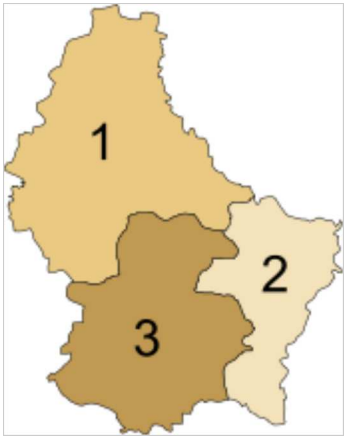
The King of the Netherlands remained Head of State as Grand Duke of Luxembourg, maintaining personal union between the two countries until 1890. At the death of William III, the Dutch throne passed to his daughter Wilhelmina, while Luxembourg (at that time restricted to male heirs by the Nassau Family Pact) passed to Adolph of Nassau-Weilburg.[14]

During World War I Luxembourg was invaded and occupied by Germany, but was allowed to maintain its independence and political mechanisms.

During World War II, Luxembourg was unable to maintain its policy of neutrality when in 1940 Nazi Germany invaded and occupied the country, due to its strategic location on the invasion route into France. In contrast to the First World War experience, Luxembourg was treated as a Germanic territory and informally annexed to an adjacent province of the Third Reich in 1940. A government in exile based in London fought alongside the Allies, sending a small group of volunteers who participated in the Normandy invasion. Luxembourg was liberated in September 1944. It became a founding member of the United Nations in 1946, and of NATO in 1949.

In 1957, Luxembourg became one of the six founding countries of the European Economic Community (later the European Union), and, in 1999, it joined the euro currency era. In 2005, a referendum on the EU treaty establishing a constitution for Europe was held in Luxembourg.[15]

Politics



Main article: Politics of Luxembourg

Luxembourg is a parliamentary democracy headed by a constitutional monarch. Under the constitution of 1868, executive power is exercised by the Grand Duke and the cabinet, which consists of several other ministers.[16] The Governor has the power to dissolve the legislature and reinstate a new one, as long as the Grand Duke has judicial approval. However, since 1919, sovereignty has resided with the Supreme Court.[17]

Legislative power is vested in the Chamber of Deputies, a unicameral legislature of sixty members, who are

directly elected to five-year terms from four constituencies. A second body, the Council of State (*Conseil d'État*), composed of twenty-one ordinary citizens appointed by the Grand Duke, advises the Chamber of Deputies in the drafting of legislation.[18]

The Grand Duchy has three lower tribunals (*justices de paix*; in Esch-sur-Alzette, the city of Luxembourg, and Diekirch), two district tribunals (Luxembourg and Diekirch) and a Superior Court of Justice (Luxembourg), which includes the Court of Appeal and the Court of Cassation. There is also an Administrative Tribunal and an Administrative Court, as well as a Constitutional Court, all of which are located in the capital.

Districts of Luxembourg

Administrative divisions

Main articles: Districts of Luxembourg, Cantons of Luxembourg, and Communes of Luxembourg

Further information: Administrative divisions of Luxembourg

Luxembourg is divided into 3 districts, which are further divided into 12 cantons and then 116 communes. Twelve of the communes have city status, of which the city of Luxembourg is the largest.

The districts are Diekirch, Grevenmacher, and Luxembourg.

Foreign relations

Main article: Foreign relations of Luxembourg

Signing of the Rome Treaty on 25 March 1957. Luxembourg is a founding member of the EEC and the European Union in 1993.

Luxembourg has long been a prominent supporter of European political and economic integration. In efforts foreshadowing European integration, Luxembourg and Belgium in 1921 formed the Belgium-Luxembourg Economic Union (BLEU) to create an inter-exchangeable currency and a common customs regime. Luxembourg is a member of the Benelux Economic Union and was one of the founding members of the European Economic Community (now the European Union). It also participates in the Schengen Group (named after the Luxembourg village of Schengen where the agreements were signed), whose goal is the free movement of citizens among member states. At the same time, the majority of Luxembourgers have consistently believed that European unity makes sense only in the context of a dynamic transatlantic relationship, and thus have traditionally pursued a pro-NATO, pro-US foreign policy.

Luxembourg is the site of the European Court of Justice, the European Court of Auditors, the Statistical Office of the European Communities ("Eurostat") and other vital EU organs. The Secretariat of the European Parliament is located in Luxembourg, but the Parliament usually meets in nearby Strasbourg.

Military

Main article: Military of Luxembourg

The contribution Luxembourg makes to its defense and to NATO consists of a small army (currently consisting

of around 800 people). As a landlocked country, it has no navy.

Luxembourg also lacks an air force, though the seventeen NATO AWACS aeroplanes are for convenience registered as aircraft of Luxembourg.[19] In accordance with a joint agreement with Belgium, both countries have put forth funding for one A400M military cargo plane, currently on order. Luxembourg still jointly maintains three NATO Boeing 707 model TCAs (for cargo and training purposes) based at NATO Air Base Geilenkirchen.[19]

Geography

Main article: Geography of Luxembourg

Luxembourg is one of the smallest countries in Europe, and ranked 170th in size of all the 194 independent countries of the world; the country is about 2,586 square kilometres (998 sq mi) in size, and measures 82 km (51 mi) long and 57 km (35 mi) wide. It lies between latitudes 49° and 51° N, and longitudes 5° and 7° E.

The largest towns are Luxembourg, Esch-sur-Alzette, Dudelange, and Differdange.

To the east, Luxembourg borders the German *Bundesländer* of Rhineland-Palatinate and Saarland, and, to the south, it borders the French *région* of Lorraine. The Grand Duchy borders the Belgian Walloon Region, in particular the latter's provinces of Luxembourg and Liège, part of which comprises the German-speaking Community of Belgium, to the west and to the north respectively.

The northern third of the country is known as the 'Oesling', and forms part of the Ardennes. It is dominated by hills and low mountains, including the Kneiff near Wilwerdange,[20] which is the highest point, at 560 metres (1,837 ft). Other mountains are the 'Buurgplaaz' at 559 metres near Huldange and the 'Napoléonsgaard' at 548 metres near Rambrouch. The region is sparsely populated, with only one town (Wiltz) with a population of more than four thousand people.

Countryside of Alscheid.

The southern two-thirds of the country is called the "Gutland", and is more densely populated than the Oesling. It is also more diverse, and can be divided into five geographic sub-regions. The Luxembourg plateau, in south-central Luxembourg, is a large, flat, sandstone formation, and the site of the city of Luxembourg. Little Switzerland, in the east of Luxembourg, has craggy terrain and thick forests. The Moselle valley is the lowest-lying region, running along the southeastern border. The Red Lands, in the far south and southwest, are Luxembourg's industrial heartland and home to many of Luxembourg's largest towns.

The border between Luxembourg and Germany is formed by three rivers: the Moselle, the Sauer, and the Our. Other major rivers are the Alzette, the Attert, the Clerve, and the Wiltz. The valleys of the mid-Sauer and Attert form the border between the Gutland and the Oesling.

Climate

Luxembourg has an oceanic climate (Köppen: Cfb), marked by high precipitation, particularly in late

summer.[21]

Economy

Main article: Economy of Luxembourg

Luxembourg has been part of the eurozone since 1999.

Luxembourg's stable, high-income economy features moderate growth, low inflation, and low unemployment. It is ranked second richest country in the world with a per capita GDP on a purchasing-power parity (PPP) basis of $81,466 (in a new list compiled by US-based *Forbes* magazine). [*citation needed*]

The industrial sector, which was dominated until the 1960s by steel, has diversified to include chemicals, rubber, and other products. During the past decades, growth in the financial sector has more than compensated for the decline in steel. Services, especially banking and other financial exports, account for the majority of economic output. Luxembourg is the world's second largest investment fund center (after the United States), the most important private banking center in the Eurozone and Europe's leading center for reinsurance companies. Moreover, the Luxembourgish government has tried to attract internet start-ups. Skype and Amazon are two of the many internet companies that have shifted their regional headquarters to Luxembourg.

Concern about Luxembourg's banking secrecy laws, and its reputation as a tax haven, led in April 2009 to it being added to a "grey list" of nations with questionable banking arrangements by the G20. Luxembourg adapted some months later the OECD standards on exchange of information and moved into the category of 'Jurisdictions that have substantially implemented the internationally agreed tax standard.'[22][23] In March 2010, the *Sunday Telegraph* reported that most of Kim Jong-Il's $4bn in secret accounts is in Luxembourg banks.[24]

Agriculture is based on small, family-owned farms.

Luxembourg has especially close trade and financial ties to Belgium and the Netherlands (see *Benelux*), and as a member of the EU it enjoys the advantages of the open European market.

Luxembourg possesses the highest GDP per capita in the world (US$87,995 as of 2006),[25] the 24th highest Human Development Index, and the 4th highest rated in the quality of life index.[26]

As of March 2006, unemployment is 4.8% of the labor force.[27]

In the fiscal year of 2005 and 2006, Luxembourg ran a budget deficit for the first time in many years, mostly because of slower international economic growth.[28]

With $80 billion (November 2010), the country ranks twelfth in the world in holdings of U.S. Treasury securities.[29] The ranking is however imperfect as some foreign owners entrust the safekeeping of their securities to institutions that are neither in the United States nor in the owner's country of residence.[30]

Luxembourg is promoting economic relations with foreign firms and countries.[31][32][33]

The Economist forecasts negligible GDP growth for 2012.[34]

Transport

Main article: Transport in Luxembourg

Luxembourg has efficient road, rail and air transport facilities and services. The road network has been significantly modernized in recent years with 147 km of motorways connecting the capital to adjacent countries. The advent of the high-speed TGV link to Paris has led to renovation of the city's railway station while a new passenger terminal at Luxembourg Airport has opened some years ago. There are plans to introduce trams in the capital and light-rail lines in adjacent areas within the next few years.

The number of cars per 1000 persons amount to 680.1 in Luxembourg — only British overseas territory Gibraltar and the Principality of Monaco scoring higher.[35]

Communications

The telecommunications industry in Luxembourg is liberalized and the electronic communications networks are significantly developed. Competition between the different operators is guaranteed by the legislative framework Paquet Telecom[36] of the Government of 2005 which transposes the European Telecom Directives into Luxembourgean law. This encourages the investment in networks and services. The regulator ILR – Institut Luxembourgeois de Régulation[37] ensures the compliance to these legal rules

Luxembourg has modern and widely deployed optical fibre and cable networks throughout the country. With its central position in Europe, stable economy and low taxes, Luxembourg is an ideal gateway to the European telecommunication markets.[38][39][40]

It ranks 2nd in the world in the development of the Information and Communication Technologies in the ITU ICT Development Index and 8th in the Global Broadband Quality Study 2009 by the University of Oxford and the University of Oviedo.[41][42][43][44]

Luxembourg is connected to all major European Internet Exchanges (AMS-IX Amsterdam (http://www.ams-ix.net/) , DE-CIX Frankfurt (http://www.de-cix.net/) , LINX London (https://www.linx.net/)), datacenters and POPs through redundant optical networks.[45][46][47][48][49] In addition, the country is connected to the virtual meetme room services (vmmr)[50] of the international data hub operator Ancotel.[51] This enables Luxembourg to interconnect with all major telecommunication operators[52] and data carriers worldwide. The interconnection points are in Frankfurt, London, New York and Hong Kong.[53]

Several providers interconnect Luxembourg to the major European data hubs

- Teralink[54] (P&TLuxembourg, also called EPT Luxembourg: incumbent operator)[55]
- LuxConnect[56] (shareholder : Government) LuxConnect tested in June 2011 the 100G coherent transmission of data signals between Luxembourg and Amsterdam.[57]
- Artelis/Cegecom[58] (alternative telecommunications provider in Luxembourg and Saarland)
- Satellite connectivity – Teleports (SES),[59] Broadcasting Center Europe[60] and P&T Luxembourg Teleport.[61] [62] [63]

Luxembourg is connected through an optical DWDM network, called Teralink[64] to several Tier 1 upstream providers like Level3 and Global Crossing. Teralink offers connectivities up to 100 Gbit/s. P&TLuxembourg has established in 2011 a coherent 100Gbit/s IP connection between Frankfurt and Luxembourg with live traffic.[65][66][67][68]

The Internet IPV6 protocol has been introduced to the country by Restena and P&T Luxembourg.[69]

Luxembourg has two Internet exchange points and one Carrier Ethernet Exchange points.

- LIX is a neutral Internet exchange operated by the RESTENA Foundation. Its aim is to easily interconnect the different Internet Service Providers (ISPs) within Luxembourg.[70]
- LUX-CIX is Luxembourg's neutral and commercial Internet Exchange Point which was founded in 2009 by Cegecom, Datacenter Luxembourg, Global Media Systems, INEXIO, LuxConnect, P&T Luxemboug and Root eSolutions. It offers a short, fast and efficient route to the major European Internet networks. [71][72]
- LEX is the Luxembourg Ethernet Exchange located in the Tier IV certified ebrc datacenter [73]

The online portal De Guichet[74] of the Grand Duchy of Luxembourg is a single one-stop online shop for citizens and companies to realize different sorts of administrative steps (procedures, online forms, downloadable forms and advices) by Internet.[75]

PSA Peugeot Citroën, with P&T Luxembourg as its partner, has introduced an integrated mobile telecommunication solution for the development of its telematic services in Europe.[76][77]

Datacenters

More than 17 data centers[78][79][80] are operating in Luxembourg. The number is constantly growing. Two of the ebrc data centers are Tier IV classified & certificated.[81]

Demographics

Main article: Demographics of Luxembourg

Ethnicity

The people of Luxembourg are called Luxembourgers.[82] The immigrant population increased in the 20th century due to the arrival of immigrants from Belgium, France, Italy, Germany, and Portugal, with the majority coming from this latter. In the 2001 census, there were 58,657 inhabitants with Portuguese nationality.[83]

Since the beginning of the Yugoslav wars, Luxembourg has seen many immigrants from Bosnia and Herzegovina, Montenegro, and Serbia. Annually, over 10,000 new immigrants arrive in Luxembourg, mostly from the EU states, as well and Eastern Europe. As of 2000, there were 162,000 immigrants in Luxembourg, accounting for 37% of the total population. There were an estimated 5,000 illegal immigrants, including asylum seekers, in Luxembourg as of 1999.[84]

Language

Main articles: Languages of Luxembourg and Literature of Luxembourg

Three languages are recognised as official in Luxembourg: French, German, and Luxembourgish, a Franconian language of the Moselle region that is also spoken in neighbouring parts of France and Germany. Though Luxembourgish is part of the West Central German group of High German languages, more than 5,000 words in the Luxembourgish have their origin in the French language.[85][86] The first printed sentences in

Luxembourgish were released by the weekly journal the 'Luxemburger Wochenblatt' in the second edition of the 14. April 1821.

Apart from being one of the three official languages, Luxembourgish is also considered the national language of the Grand Duchy; it is the mother tongue or "language of the heart" for nearly all Luxembourgers.[*citation needed*]

Each of the three languages is used as the primary language in certain spheres. Luxembourgish is the language that Luxembourgers generally use to speak to each other, but it is not often used as the written language. Since the 1980s, an increasing number of novels have however been written in Luxembourgish. Most official (written) business is carried out in French. German is usually the first language taught in school and is the language of much of the media and of the church.[87]

Luxembourg's education system is trilingual: the first years of primary school are in Luxembourgish, before changing to German, while in secondary school, the language of instruction changes to French.[88] Proficiency in all three languages is required for graduation from secondary school, but half the students leave school without a certified qualification, with the children of immigrants being particularly disadvantaged.[89]

In addition to the three official languages, English is taught in the compulsory schooling and much of the population of Luxembourg can speak English, at any rate in Luxembourg City. Portuguese, the language of the largest immigrant community, is also spoken by large parts of the population, but by relatively few from outside their community.[90]

Religion

Main article: Religion in Luxembourg

Notre-Dame Cathedral, Luxembourg.

Luxembourg is a secular state, but the state recognises certain religions as officially mandated religions. This gives the state a hand in religious administration and appointment of clergy, in exchange for which the state pays certain running costs and wages. Currently, religions covered by such arrangements are Roman Catholicism, Judaism, Greek Orthodoxy, Anglicanism, Russian Orthodoxy, Lutheranism, Mennonitism and Islam.[91]

Since 1980 it has been illegal for the government to collect statistics on religious beliefs or practices.[92] An estimation by the CIA Factbook for the year 2000 is that 87% of Luxembourgers are Catholics, including the royal family, the remaining 13% being made up of Muslims, Protestants, Orthodox Christians, Jews, and those of other or no religion.[25]

According to a 2005 Eurobarometer poll,[93] 44% of Luxembourg citizens responded that "they believe there is a God", whereas 28% answered that "they believe there is some sort of spirit or life force" and 22% that "they do not believe there is any sort of spirit, god, or life force".

Education

The University of Luxembourg is the only university in Luxembourg.

Health

Luxembourg sells the most alcohol in Europe per capita.[94] However, the large proportion of alcohol purchased by customers from neighbouring countries contributes to the statistically high level of alcohol sales per capita; this level of alcohol sales is thus not representative of the actual alcohol consumption of the Luxembourg population.[95]

Culture

Main articles: Culture of Luxembourg, Sport in Luxembourg, and Cuisine of Luxembourg

Luxembourg has been overshadowed by the culture of its neighbours, although, having been for much of its history a profoundly rural country, it retains a number of folk traditions. There are several notable museums, mostly located in the capital; these include the National Museum of History and Art (MNHA), the Luxembourg City History Museum, and the new Grand Duke Jean Museum of Modern Art (Mudam). The National Museum of Military History (MNHM) in Diekirch is especially known for its representations of the Battle of the Bulge. The city of Luxembourg itself is on the UNESCO World Heritage List, on account of the historical importance of its fortifications.[96]

Edward Steichen, Luxembourgish photographer and painter

The country has produced some internationally known artists, including the painters Théo Kerg, Joseph Kutter and Michel Majerus, as well as the photographer Edward Steichen. Steichen's *The Family of Man* exhibition is now permanently housed in Clervaux, and it has been placed on UNESCO's Memory of the World register. Movie star Loretta Young was of Luxembourgish descent.

Luxembourg was the first city to be named European Capital of Culture twice. The first time was in 1995. In 2007, the European Capital of Culture[97] was to be a cross-border area consisting of the Grand Duchy of Luxembourg, the Rheinland-Pfalz and Saarland in Germany, the Walloon Region and the German-speaking part of Belgium, and the Lorraine area in France. The event was an attempt to promote mobility and the exchange of ideas, crossing borders in all areas, physical, psychological, artistic and emotional.

Luxembourg was represented at the World Expo 2010 in Shanghai, China from 1 May to 31 October 2010 with its own pavilion.[98][99] The pavilion was based on the translation of the word Luxembourg into Chinese, which means ‘Lu Sen Bao’: Forest and Fortress. It represented Luxembourg as the ‘Green Heart in Europe'.[100]

Sport in Luxembourg

Unlike in most countries in Europe, **sport in Luxembourg** is not concentrated upon a particular national sport, but encompasses a number of sports, both team and individual. Despite the lack of a central sporting focus, over 100,000 people in Luxembourg, which has a total population of only 460,000, are licensed members of one sports federation or another.[101] The largest sports venue in the country is d'Coque, an indoor arena and Olympic swimming pool in Kirchberg, north-eastern Luxembourg City, which has a capacity of 8,300. The arena is used for basketball, handball, gymnastics, and volleyball, including the final of the 2007 Women's European Volleyball Championship. The largest, and national, stadium is the Stade Josy Barthel, in western Luxembourg City; named after the country's only official Olympic gold medallist, the stadium has a capacity of 8,054.

Andy Schleck and Frank Schleck are two famous professional cyclists for RadioShack-Nissan-Trek. They are

best known as climbers who excel in the mountain stages of Grand Tours like the Tour de France.

Gilles Müller is a professional tennis player, Ranked No. 42 as of (3 October 2011), competing in the fourth round of the 2011 US Open.

Mandy Minella is a professional tennis player.

Luxembourg cuisine

Luxembourg cuisine reflects Luxembourg's position on the border between the Latin and Germanic worlds, being heavily influenced by the cuisines of neighbouring France and Germany. More recently, it has had influence from its many Italian and Portuguese immigrants.

Judd mat Gaardebounen served with boiled potatoes and Diekirch beer

Most particularly native Luxembourgish dishes, consumed as the traditional daily fare, share roots in the Luxembourgish peasantry, similarly to German cuisine and in marked contrast to more sophisticated French.

Media

Luxembourg is known in Europe for its radio and television stations (Radio Luxembourg, RTL Group). It is also the uplink home of SES, carrier of major European satellite services for Germany and Britain. An English language news service is also available from the Luxemburger Wort on the website: wort.lu (http://www.wort.lu/en)

Due to the audiovisual law of 1988, which established a special tax regime for audiovisual investment, the film and co-production in Luxembourg has grown steadily.[102] There exists approximately 30 by agreed production companies in Luxembourg.[103]

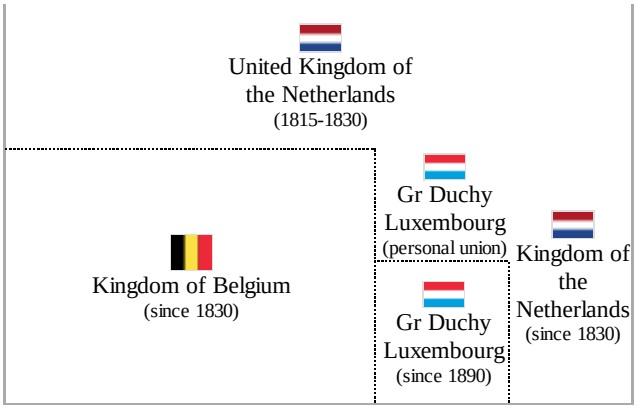
History of Luxembourg

From Wikipedia, the free encyclopedia

The **history of Luxembourg** is inherently entwined with the histories of surrounding countries, peoples, and ruling dynasties. Over time, the territory of Luxembourg has been eroded, whilst its ownership has changed repeatedly, and its political independence has grown "'***gradually.***' Although recorded Luxembourgian history dates back to Roman times, the history of Luxembourg proper is considered to begin in 963. Over the following five centuries, the powerful House of Luxembourg emerged. Its extinction put an end to Luxembourgian independence. After a brief spell of Burgundian rule, Luxembourg fell into the hands of the Habsburgs in 1477.

After the Eighty Years' War, Luxembourg became a part of the Southern Netherlands, which passed to the Austrian line of the Habsburg dynasty in 1713. After occupation by Revolutionary France, the 1815 Treaty of Paris transformed Luxembourg into a Grand Duchy in personal union with the Netherlands. The treaty also resulted in the second partition of Luxembourg, the first being in 1659 and the third in 1839. Although these treaties greatly reduced Luxembourg's territory, they increased Luxembourg's independence, which was confirmed after the Luxembourg Crisis in 1867.



In the following decades, Luxembourg fell further into Germany's sphere of influence, particularly after the creation of a separate ruling house in 1890. Luxembourg was occupied by Germany from 1914 until 1918 and again from 1940 until 1944. Since the Second World War, Luxembourg has become one of the world's richest countries, buoyed by a booming financial services sector, political stability, and European integration.

Ancient Luxembourg (before 963)

See also: Celtic Luxembourg

In the territory now covered by the Grand Duchy of Luxembourg, there is evidence of primitive inhabitants right back to the Paleolithic or old stone age over 35,000 years ago. The oldest artifacts from this period are decorated bones found at Oetrange.[2]

However, the first real evidence of civilization is from the Neolithic or 5th millennium BC when houses began to appear. Traces have been found in the south of Luxembourg at Grevenmacher, Diekirch, Aspelt and Weiler-la-Tour. The dwellings were made of a combination of tree trunks for the basic structure, mud-clad wickerwork walls, and roofs of thatched reeds or straw.[3] Pottery from this period has been found near Remerschen.[4]

While there is not much evidence of communities in Luxembourg at the beginning of the Bronze Age, a number of sites dating back to the period between the 13th and the 8th century BC provide evidence of dwellings and reveal artifacts such as pottery, knives and jewelry. These include Nospelt, Dalheim, Mompach and Remerschen.

The Celts inhabited what is now Luxembourg from roughly 600 BC until 100 AD. The Celts inhabited large areas of Europe from the Danube to the Rhine and Rhône during this time. It was around 100 BC that the Treveri, one of the Celtic tribes, entered a period of prosperity. They constructed a number of fortified settlements or oppida near the Moselle valley in what is now southern Luxembourg, western Germany and eastern France.[1]

The Celtic civilization reached its height in the 1st century BC, prior to the Roman conquest in 54 BC. Most of the evidence from that period has been discovered in tombs, many closely associated with Titelberg, a 50 ha site which reveals much about the dwellings and handicrafts of the period.

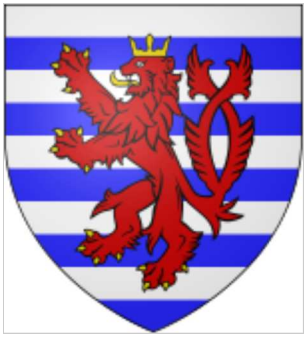
The first known reference to the territory in modern Luxembourg was by Julius Caesar in his *Commentaries on the Gallic War*.[1]

The Celtic tribe in what is now Luxembourg during and after the La Tène period was known as the Treveri. By and large, the Treveri were more co-operative with the Romans, who completed their occupation in 53 BC under Julius Caesar, than most Gallic tribes. Two 1st-century AD revolts did not permanently damage their cordial relations with Rome, and the Treveri adapted readily to Roman civilization.

Medieval Luxembourg (963 – 1477)

The history of Luxembourg properly began with the construction of Luxembourg Castle in the Middle Ages. It was Siegfried I, Count of Ardennes who traded some of his ancestral lands with the monks of the Abbey of St. Maximin in Trier in 963 for an ancient, supposedly Roman, fort named *Lucilinburhuc*. Modern historians explain the etymology of the word with *Letze*, meaning fortification which might have referred to either the remains of a Roman watchtower or to a primitive refuge of the early Middle Ages.

Around this fort a town gradually developed, which became the centre of a small but important state of great strategic value to France, Germany and the Netherlands. Luxembourg's fortress, located on a rocky outcrop known as the Bock, was steadily enlarged and strengthened over the years by successive owners, among others the Bourbons, Habsburgs and Hohenzollerns, which made it one of the strongest fortresses on the European continent. Its formidable defences and strategic location caused it to become known as the 'Gibraltar of the North'.



Early settlements in the area of present-day Luxembourg City before the 10th century with the church Saint-Saveur, today St.Micheal, built in 987

The Luxembourgish dynasty provided several Holy Roman Emperors, Kings of Bohemia, and Archbishops of Trier and Mainz. From the Early Middle Ages to the Renaissance, Luxembourg bore multiple names, depending on the author. These include *Lucilinburhuc*, *Lutzburg*, *Lützelburg*, *Luccelemburc*, *Lichtburg*, among others.

Luxembourg remained an independent fief (county) of the Holy Roman Empire until 1354, when the emperor Charles IV elevated it to the status of a duchy. At that time the Luxembourg family held the Crown of Bohemia, but the duchy was usually possessed as appanage by a separate branch of the family. In 1437 the imperial Luxembourg family became extinct in the male line. At that time, the duchy and castle were held by the Bohemian princess Elisabeth of Gorlitz, Duchess of Luxembourg, a cadet granddaughter of emperor Charles IV. Elisabeth was childless, and in 1440 made a treaty with her powerful neighbour Philip III, Duke of Burgundy that Philip would administer the duchy and inherit it after the Duchess Elisabeth's death. Elisabeth died in 1451, but Philip accelerated things by expelling Elisabeth in 1443. The heirs of the main Luxembourg dynasty were not happy with the arrangement the Burgundians had made, and managed at times to wrest the possession from Burgundy. The Habsburg prince Ladislas the Posthumous, king of Bohemia and Hungary (d. 1457), held the title in the 1450s. After his death, his brother-in-law William of Thuringia (1425 to 1482) held (or at least claimed) it from 1457 to 1469. In 1467, Elisabeth, Queen of Poland, the last surviving sister of Ladislas, renounced her right in favour of Burgundy by treaty and some concessions, since the possession was next to impossible to hold against Burgundian actions. After being captured by Philip of Burgundy in 1443 and ultimately from 1467 to 1469, the duchy became one of the Seventeen Provinces of the Netherlands. With the marriage of Mary of Burgundy in 1477 all the Netherlands provinces, including Luxembourg, came under Habsburg rule in the person of her husband Maximilian, and later their son Philip the Handsome.

Habsburg rule (1477–1815)

In these centuries the electors of Brandenburg, later kings of Prussia (Borussia), advanced their claim to the Luxembourg patrimony as heirs-general to William of Thuringia and his wife Anna of Bohemia, the disputed dukes of Luxembourg of the 1460s – Anna was the eldest daughter of the last Luxembourg heiress. From 1609 onwards, they had a territorial base in the vicinity, the Duchy of Cleves, the starting-point of the future Prussian Rhineland. This Brandenburger claim ultimately produced some results when some districts of Luxembourg were united with Prussia in 1813.

Coat of arms of the Counts, Dukes and Grand

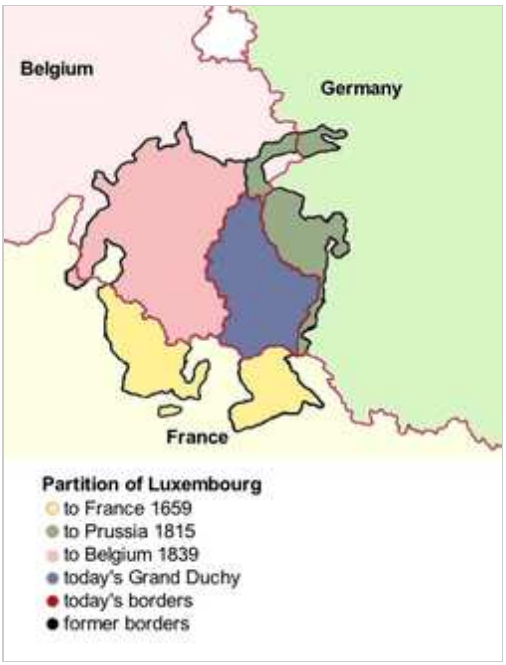
The first Hohenzollern claimant to descend from both Anna and her younger sister Elisabeth, was John George, Elector of Brandenburg (1525–98), his maternal grandmother having been Barbara Jagiellon. In the late 18th century, the younger

line of Orange-Nassau (the princes who held sway in the neighbouring Dutch oligarchy) also became related to the Brandenburgers.

Dukes of Luxembourg

In 1598, the then possessor, Philip II of Spain, bequeathed Luxembourg and the other Low Countries to his daughter the Infanta Isabella Clara Eugenia and her husband Albert VII, Archduke of Austria. Albert was an heir and descendant of Elisabeth of Austria (d. 1505), queen of Poland, the youngest granddaughter of Sigismund of Luxembourg, the Holy Roman Emperor. Thus, Luxembourg returned to the heirs of the old Luxembourg dynasty – at least those of the line of Elisabeth. The Low Countries were a separate political entity during the couple's reign. After Albert's childless death in 1621, Luxembourg passed to his great-nephew and heir Philip IV of Spain, who through his paternal grandmother Anna of Austria, queen of Spain, Albert's sister, was the primogenitural heir to the Queen Elisabeth of Poland.

Luxembourg was invaded by Louis XIV of France (husband of Maria Theresa, daughter of Philip IV) in 1684, an action that caused alarm among France's neighbours and resulted in the formation of the League of Augsburg in 1686. In the ensuing War of the Grand Alliance, France was forced to give up the duchy, which was returned to the Habsburgs by the Treaty of Ryswick in 1697. During this period of French rule, the defences of the fortress were strengthened by the famous siege engineer Vauban. The French king's great-grandson Louis (1710–74) was, from 1712, the first heir-general of Albert VII. Albert VII was a descendant of Anna of Bohemia and William of Thuringia, having that blood through his mother's Danish great-great-grandmother, but was not the heir-general of that line. Louis was the first real claimant of Luxembourg to descend from both sisters, the daughters of Elisabeth of Bohemia, the last Luxembourg empress.



Habsburg rule was confirmed in 1715 by the Treaty of Utrecht, and Luxembourg was integrated into the Austrian Netherlands. Emperor Joseph and his successor Emperor Charles VI were descendants of Spanish kings who were heirs of Albert VII. Joseph and Charles VI were also descendants of Anna of Bohemia and William of Thuringia, having that blood through their mother, although they were heirs-general of neither line. Charles was the first ruler of Luxembourg to descend from both sisters, daughters of Elisabeth of Bohemia, the last Luxembourg empress.

Austrian rulers were more or less ready to exchange Luxembourg and other territories in the Low Countries. Their purpose was to round out and enlarge their power base, which in geographical terms was centered around Vienna. Thus, Bavarian candidate(s) emerged to take over the Duchy of Luxembourg, but this plan led to nothing permanent. Emperor Joseph II however made a preliminary pact to make a neighbour of Luxembourg, Charles Theodore, Elector Palatine, as Duke of Luxembourg and king in the Low Countries, in exchange of his possessions in Bavaria and Franconia. However, this scheme was aborted. Charles Theodore, who would thus have become Duke of Luxembourg, was genealogically a junior descendant of both Anna and Elisabeth, but main heir of neither.

During the War of the First Coalition, Luxembourg was conquered and annexed by Revolutionary France, becoming part of the *département* of the Forêts[2] in 1795. The annexation was formalised at Campo Formio in 1797. In 1798 Luxembourgish peasants rebelled against the French but the Rebellion was rapidly oppressed.This short Rebellion is called the Peasant's War.

Developing independence (1815–1890)

Luxembourg remained more or less under French rule until the defeat of Napoleon in 1815, when the Congress of Vienna gave formal autonomy to Luxembourg. The Prussians had already in 1813 managed to wrest lands from Luxembourg, to strengthen the Prussian-possessed Duchy of Julich. The Bourbons of France held a strong claim to Luxembourg, the Emperor of Austria on the other hand had controlled the duchy until the revolutionary forces had joined it to the French republic (he reportedly was not enthusiastic about regaining Luxembourg and

The three Partitions of Luxembourg

the Low Countries, being more interested in the Balkans). The King of Prussia held the claim of the senior heiress, Anna. An additional claimant emerged, William VI, Prince of Orange who now ruled the Netherlands, and whose mother and wife were descendants of the Prussian royal family and thus also descendants of both daughters of the last Luxembourg heiress. Prussia and Orange-Nassau made the following exchange deal: Prussia received the Principality of Orange-Nassau, which included the ancestral lands of Nassau in Central Germany; the Prince of Orange in turn received Luxembourg.

Luxembourg, somewhat diminished in size (as the medieval lands had been slightly reduced by the French and Prussian heirs), was augmented in another way through the elevation to the status of grand duchy and placed under the rule of William I of the Netherlands. This was the first time that the duchy had a monarch who had no claim to inheritance of the medieval patrimony (as lineages through his mother and wife had a better entitled claimant, the Prussian king himself). However, Luxembourg's military value to Prussia prevented it from becoming a part of the Dutch kingdom. The fortress, ancestral seat of the medieval Luxembourgers, was taken over by Prussian forces, following Napoleon's defeat, and Luxembourg became a member of the German Confederation with Prussia responsible for its defense.

In July 1819 a contemporary from Britain visited Luxembourg: his journal offers some insights. Norwich Duff writes that "Luxembourg is considered one of the strongest fortifications in Europe, and … it appears so. It is situated in Holland (then as now used by English speakers as shorthand for the Netherlands) but by treaty is garrisoned by Prussians and 5,000 of their troops occupy it under a Prince of Hesse. The civil government is under the Dutch and the duties collected by them. The town is not very large but the streets are broader than [in] the French towns and clean ands the houses are good.... [I] got the cheapest of hot baths here at the principal house I ever had in my life: one franc."

Much of the Luxembourgish population joined the Belgian revolution against Dutch rule. Except for the fortress and its immediate vicinity Luxembourg was considered a province of the new Belgian state from 1830 to 1839. By the Treaty of London in 1839 the status of the grand duchy was confirmed as sovereign and in personal union to the king of the Netherlands. In turn, the predominantly French speaking part of the duchy was ceded to Belgium as the province de Luxembourg. This loss left the Grand Duchy of Luxembourg a predominantly German state, although French cultural influence remained strong. The loss of Belgian markets also caused painful economic problems for the state. Recognizing this, the grand duke integrated it into the German *Zollverein* in 1842. Nevertheless, Luxembourg remained an underdeveloped agrarian country for most of the century. As a result of this about one in five of the inhabitants emigrated to the United States between 1841 and 1891.

Crisis of 1867

It was not until 1867 that Luxembourg's independence was formally ratified, after a turbulent period which even included a brief time of civil unrest against plans to annex Luxembourg to Belgium, Germany or France. The crisis of 1867 almost resulted in war between France and Prussia over the status of Luxembourg. It involved competition between France and Prussia over control of Luxembourg, which had become free of German control when the German Confederation was abolished at the end of the Seven Weeks War in 1866.

William III, king of the Netherlands, which still had sovereignty over Luxembourg, was willing to sell the grand duchy to France's Emperor Napoleon III in order to retain Limbourg but backed out when Prussian chancellor Otto von Bismarck expressed opposition. The growing tension brought about a conference in London from March to May 1867 in which the British served as mediators between the two rivals. Bismarck manipulated public opinion, resulting in the denial of sale to France and the continued suzerainty of Holland, a member of the customs union with close ties to Prussia. The issue was resolved by the second Treaty of London which guaranteed the perpetual independence and neutrality of the state. The fortress walls were pulled down and the Prussian garrison was withdrawn.[3][4]

Famous visitors to Luxembourg in the 18th and 19th centuries included the German poet Johann Wolfgang von Goethe, the French writers Emile Zola and Victor Hugo, the composer Franz Liszt, and the English painter Joseph Mallord William Turner.

Separation and the World Wars (1890–1945)

Luxembourg remained a possession of the kings of the Netherlands until the death of William III in 1890, when the grand duchy passed to the House of Nassau-Weilburg due to a Nassau inheritance pact of 1783.

First World War

World War I affected Luxembourg at a time when the nation-building process was far from complete. The small grand duchy (about 260,000 inhabitants in 1914) opted for an ambiguous policy between 1914 and 1918. With the country occupied by Germans troops, the government, led by Paul Eyschen, chose to remain neutral. This strategy had been elaborated with the approval of Marie-Adélaïde, Grand Duchess of Luxembourg. Although continuity prevailed on the political level, the war caused social upheaval, which laid the foundation for the first trades union in Luxembourg.

Interwar period

The end of the occupation in November 1918 squared with a time of uncertainty on the international and national levels. The victorious Allies disapproved of the choices made by the local élites, and some Belgian politicians even demanded the integration of the country into a greater Belgium. Within Luxembourg a strong minority asked for the creation of a republic. In the end, the grand duchy remained a monarchy but was led by a new head of state, Charlotte. In 1921 it entered into an economic and monetary union with Belgium, the Union Économique Belgo-Luxembourgeoise (UEBL). During most of the 20th century, however, Germany remained its most important economic partner.

The introduction of universal suffrage for men and women favored the Rechtspartei (party of the Right), which played the dominant role in the government throughout the 20th century, with the exception of 1925–26 and 1974–79, when the two other important parties, the Liberal and the Social-Democratic parties, formed a coalition. The success of the resulting party was due partly to the support of the church — the population was more than 90 percent Catholic — and of its newspaper, the *Luxemburger Wort*.

On the international level, the interwar period was characterized by an attempt to put Luxembourg on the map. Especially under Joseph Bech, head of the Department of Foreign Affairs, the country participated more actively in several international organizations, in order to ensure its autonomy. On December 16, 1920, Luxemburg became a member of the League of Nations. On the economic level in the 1920s and the 1930s, the agricultural sector declined in favor of industry, but even more so for the service sector. The proportion of the active population in this last sector rose from 18 percent in 1907 to 31 percent in 1935.

In the 1930s the internal situation deteriorated, as Luxembourgish politics were influenced by European left- and right-wing politics. The government tried to counter communist-led unrest in the industrial areas and continued friendly policies towards Nazi Germany, which led to much criticism. The attempts to quell unrest peaked with the *Maulkuerfgesetz*, the "muzzle" Law, which was an attempt to outlaw the Communist Party. The law was turned down in a 1937 referendum.

Second World War

Upon the outbreak of the Second World War in September 1939, the government of Luxembourg observed its neutrality and issued an official proclamation to that effect on September 6, 1939.[5] On May 10, 1940, the Luxembourgish government and monarchy was swept away into exile by the German invasion of that date. The German invasion, made up of the 1st, 2nd, and 10th Panzer Divisions began at 04:35. They did not encounter any significant resistance save for some bridges destroyed and some land mines, since the majority of the Luxembourgish Volunteer Corps stayed in their barracks. Luxembourgish police resisted the German troops, however, to little avail; the capital city was occupied before noon. Total Luxembourgish casualties amounted to 75 police and soldiers captured, six police wounded, and one soldier wounded.[6] Throughout the war, Grand Duchess Charlotte broadcast via on BBC to Luxembourg to give hope to the people.

The state was placed under military occupation until August 1942, when it was formally annexed by the Third Reich as part of the *Gau Moselland*. Luxembourgers were declared to be German citizens and 13,000 were called up for military service. 2,848 Luxembourgers eventually died fighting in the German army.

Luxembourgish opposition to this annexation took the form of passive resistance at first, as in the *Spéngelskrich* (lit. "War of the Pins"), and by the refusal to speak German. As French was forbidden, many Luxembourgers resorted to resuscitating old Luxembourgish words, which led to a renaissance of the language. Other measures included deportation, forced labour, forced conscription and, more drastically, internment, deportation to concentration camps and execution.

The latter measure was applied after the so-called general strike from 1 September to 3 September 1942, which paralyzed the administration, agriculture, industry and education as response to the declaration of forced conscription by the German administration on 30 August 1942. It was violently suppressed: 21 strikers were executed and hundreds more deported to concentration camps. The then civilian administrator of Luxembourg, Gauleiter Gustav Simon had declared conscription necessary to support the German war effort. It was to remain one of the few mass strikes against the German war machinery in Western Europe.

U.S. forces liberated most of the country in September 1944, they entered the capital city on 10 September 1944. During the Ardennes Offensive (Battle of the Bulge) German troops took back most of northern Luxembourg for a few weeks. The Germans were finally expelled in January 1945. Altogether, of a pre-war population of 293,000, 5,259 Luxembourgers lost their lives during the hostilities.

Modern history (since 1945)

After World War II Luxembourg abandoned its politics of neutrality, when it became a founding member of the North Atlantic Treaty Organization (1949) and the United Nations. It is a signatory of the Treaty of Rome, and constituted a monetary union with Belgium (Benelux Customs Union in 1948), and an economic union with Belgium and the Netherlands, the so-called BeNeLux.

Between 1945 and 2005, the economic structure of Luxembourg changed significantly. The crisis of the metallurgy sector, which began in the mid-1970s and lasted till the late 1980s, nearly pushed the country into economic recession, given the monolithic dominance of that sector. The Tripartite Coordination Committee,

consisting of members of the government, management representatives, and trade union leaders, succeeded in preventing major social unrest during those years, thus creating the myth of a “Luxembourg model” characterized by social peace. Although in the early years of the 21st century Luxembourg enjoyed one of the highest GNP per capita in the world, this was mainly due to the strength of its financial sector, which gained importance at the end of the 1960s. Thirty-five years later, one-third of the tax proceeds originated from that sector. The harmonization of the tax system across Europe could, however, seriously undermine the financial situation of the grand duchy.

Luxembourg has been one of the strongest advocates of the European Union in the tradition of Robert Schuman. In 1957, Luxembourg became one of the six founding countries of the European Economic Community (later the European Union) and in 1999 it joined the euro currency area.

Encouraged by the contacts established with the Dutch and Belgian governments in exile, Luxembourg pursued a policy of presence in international organizations. It was one of the six founding members of the European Coal and Steel Community (ECSC) in 1952 and of the European Economic Community (EEC) in 1957. In the context of the Cold War, Luxembourg clearly opted for the West by joining the North Atlantic Treaty Organization (NATO) in 1949, thus renouncing its traditional neutrality, which had determined its international policy since the founding of the state. Engagement in European construction was rarely questioned subsequently, either by politicians or by the greater population. Despite its small proportions, Luxembourg often played an intermediary role between larger countries. This role of mediator, especially between the two large and often bellicose nations of Germany and France, was considered one of the main characteristics of national identity, allowing the Luxembourger not to have to choose between one of these two neighbours. The country also hosted a large number of European institutions such as the European Court of Justice. Luxembourg’s small size no longer seemed to be a challenge to the existence of the country, and the creation of the Banque Centrale du Luxembourg (1998) and of the University of Luxembourg (2003) was evidence of the continuing desire to become a “real” nation. The decision in 1985 to declare Lëtzebuergesch (Luxembourgian) the national language was also a step in the affirmation of the country’s independence. In fact, the linguistic situation in Luxembourg was characterized by trilinguilism: Lëtzebuergesch was the spoken vernacular language, German the written language, in which Luxembourgers were most fluent, and French the language of official letters and law.

In 1985, the country became victim to a mysterious bombing spree, which was targeted mostly at electrical masts and other installations.

In 1995 Luxembourg provided the President of the European Commission, former Prime Minister Jacques Santer who later had to resign over corruption accusations against other commission members.

The current Prime Minister, Jean-Claude Juncker follows this European tradition. On 10 September 2004, Mr Juncker became the semi-permanent President of the group of finance ministers from the 12 countries that share the euro, a role dubbed "Mr Euro".

The present sovereign is Grand Duke Henri. Henri's father, Jean, succeeded his mother, Charlotte, on 12 November 1964. Jean's eldest son, Prince Henri, was appointed "Lieutenant Représentant" (Hereditary Grand Duke) on 4 March 1998. On 24 December 1999, Prime Minister Juncker announced Grand Duke Jean's decision to abdicate the throne on 7 October 2000, in favour of Prince Henri who assumed the title and constitutional duties of Grand Duke.

On 10 July 2005, after threats of resignation by Prime Minister Juncker, the proposed European Constitution was approved by 56.52% of voters.

Grand Duke of Luxembourg

From Wikipedia, the free encyclopedia

The **Grand Duke of Luxembourg** is the sovereign monarch and head of state of Luxembourg. Luxembourg has been a grand duchy since 15 March 1815, when it was elevated from a duchy when placed in personal union with the United Kingdom of the Netherlands. Since then, there have been nine monarchs of Luxembourg, including the current incumbent, Henri.

Constitutional role

The Constitution of Luxembourg defines the Grand Duke's position:

> “The Grand Duke is the head of state, symbol of its unity, and guarantor of national independence. He exercises executive power in accordance with the Constitution and the laws of the country.[1]”

Car Flag

After a constitutional change in December 2008 resulting from Henri's refusal to sign a law legalizing euthanasia, laws now take effect without the grand duke's approval[2] As a result, the grand duke is no longer even the *nominal* chief executive.

Succession

Main article: Line of succession to the throne of Luxembourg

Succession to the throne is governed by Salic law, as dictated by the Nassau Family Pact, first adopted on 30 June 1783.[1] A change in the succession laws introduced equal primogeniture beginning with the descendants of

Grand Duke Henri. The right to reign over Luxembourg was until June 2011 passed by agnatic-cognatic primogeniture within the House of Nassau, as stipulated under the 1815 Final Act of the Congress of Vienna and as confirmed by the 1867 Treaty of London.[1] The Nassau Family Pact itself can be amended by the usual legislative process, having been so on 10 July 1907 to exclude the Count of Merenberg branch of the House, which was descended from a morganatic marriage.[3]

If there is a male heir apparent, he may be granted the style 'Hereditary Grand Duke'. The current heir is Hereditary Grand Duke Guillaume. In June 2011, the agnatic-cognatic primogeniture was dropped in favor of equal primogeniture, allowing any legitimate female descendants within the House of Nassau to be included in the line of succession.[4]

Full titles

The current Grand Duke, Henri, bears the full style "*His Royal Highness by the Grace of God, Grand Duke of Luxembourg, Duke of Nassau, Count Palatine of the Rhine, Count of Sayn, Königstein, Katzenelnbogen and Diez, Burgrave of Hammerstein, Lord of Mahlberg, Wiesbaden, Idstein, Merenberg, Limburg and Eppstein*." It should, however, be noted that many of the titles are held without regard to the strict rules of Salic inheritance.

The Grand Ducal Standard is the official flag of the Sovereign.

List of Grand Dukes

Main article: List of monarchs of Luxembourg

Since 1815, there have been seven Grand Dukes of Luxembourg and two Grand Duchesses regnant of Luxembourg:

- William I (1815–1840)
- William II (1840–1849)
- William III (1849–1890)
- Adolphe (1890–1905)
- William IV (1905–1912)
- Marie-Adélaïde (1912–1919)
- Charlotte (1919–1964)
- Jean (1964–2000)
- Henri (2000–present)

Childhood and education

Grand Duke Henri has four siblings: Archduchess Marie Astrid of Austria (b. 1954), Prince Jean of Luxembourg (b. 1957), Princess Margaretha of Liechtenstein (b. 1957) and Prince Guillaume of Luxembourg (b. 1963).

Henri became Hereditary Grand Duke of Luxembourg on 12 November 1964 and was educated in Luxembourg and in France, where he obtained his baccalaureate in 1974. He then studied political sciences at University of Geneva, graduating in 1980. The Grand Duke also undertook military officer training at the Royal Military Academy Sandhurst, England.

Marriage and family

Henri

Grand Duke of Luxembourg

Reign	7 October 2000 – present
Predecessor	Jean
Heir apparent	Guillaume, Hereditary Grand Duke of Luxembourg
Prime Ministers	*See list*
Spouse	Maria Teresa Mestre y Batista-Falla
Issue	***Detail***
Prince Guillaume Prince Felix Prince Louis Princess Alexandra Prince Sébastien	
Full name	
Henri Albert Gabriel Félix Marie Guillaume	
House	House of Bourbon-Parma
Father	Jean, Grand Duke of Luxembourg
Mother	Princess Joséphine Charlotte of Belgium
Born	16 April 1955 Betzdorf Castle, Luxembourg
Religion	Roman Catholicism

While studying in Geneva, Henri met the former María Teresa Mestre y Batista, who was also a political sciences student. They married in Luxembourg on 4 February/14 February 1981 with the previous consent of the Grand Duke, dated 7 November 1980.

The couple has five children:

1. Prince **Guillaume** Jean Joseph Marie, Hereditary Grand Duke of Luxembourg (b. 11 November 1981)
2. Prince **Félix** Léopold Marie Guillaume (b. 3 June 1984)
3. Prince **Louis** Xavier Marie Guillaume (b. 3 August 1986), married to Princess Tessy
4. Princess **Alexandra** Joséphine Teresa Charlotte Marie Wilhelmine (b. 16 February 1991)
5. Prince **Sébastien** Henri Marie Guillaume (b. 16 April 1992)

and two grandsons:

1. Prince **Gabriel** Michael Louis Ronny of Nassau (born 12 March 2006), son of Prince Louis and Princess Tessy
2. Prince **Noah** Guillaume of Nassau (born 21 September 2007), son of Prince Louis and Princess Tessy

Constitutional position

Prince Henri became heir apparent to the Luxembourg throne on the abdication of his paternal grandmother, Grand Duchess Charlotte of Luxembourg, on 12 November 1964. From 1980 to 1998, he was a member of the Council of State.

Royal Standard

On 4 March 1998, Prince Henri was appointed as Lieutenant Representative by his father, Grand Duke Jean, meaning that he assumed most of his father's constitutional powers. On 7 October 2000, immediately following the abdication of his father, Henri acceded as Grand Duke of Luxembourg and took the constitutional oath before the Chamber of Deputies later that day.

Henri's full name, style and title is: *His Royal Highness Henri, by the Grace of God, Grand Duke of Luxembourg, Duke of Nassau, Count Palatine of the Rhine, Count of Sayn, Königstein, Katzenelnbogen and Diez, Burgrave of Hammerstein, Lord of Mahlberg, Wiesbaden, Idstein, Merenberg, Limburg and Eppstein*.

However, on ascending the throne, Grand Duke Henri relinquished the styling "by the Grace of God", and in the laws, decrees, and official documents his name and title is: "Henri, Grand Duke of Luxembourg, Duke of Nassau".

Euthanasia controversy

On 2 December 2008 it was announced that Grand Duke Henri had stated he would refuse to sign into law the act on euthanasia that had been voted on earlier in the year by the Chamber of Deputies. A second and final vote has yet to take place, at which point signature of the Grand Duke would be necessary to approve and enact the law. Whilst the long-term implications for the constitutional position of the Grand Duke are unclear, it was announced by Minister of State Jean-Claude Juncker that a Constitutional Amendment would be proposed, whereby the signature of the Monarch would no longer be necessary for a law to take effect. This would remove one of the

legislative roles of the Grand Duke, namely approving new legislation. The Luxembourg royal house has tried to block a decision by parliament only once before, when the Grand Duchess Marie-Adelaide refused to sign an education bill in 1912.

Role and interests

As the head of a constitutional monarchy, Grand Duke Henri's duties are primarily representative. However, he retains the constitutional power to appoint the Prime Minister and Government, to dissolve the Chamber of Deputies, to promulgate laws and to accredit ambassadors.

The Grand Duke Henri, his wife Maria Teresa and his son Guillaume, hereditary Grand Duke

Grand Duke Henri is Commander-in-Chief of the Luxembourg Army, in which he holds the rank of General. He is also an Honorary Major in the British Parachute Regiment.

One of the Grand Duke's main functions is to represent Luxembourg in the field of foreign affairs. In May 2001, Grand Duke Henri and Grand Duchess Maria Teresa undertook their first foreign state visit to Spain, at the invitation of King Juan Carlos and Queen Sofia.

Grand Duke Henri is a member of the International Olympic Committee, a member of The Mentor Foundation (established by the World Health Organisation) and a Director of the Charles Darwin Trust for the Galapagos Islands.

The Grand Duke lives with his family at Berg Castle in Luxembourg. He also has a holiday home at Cabasson, near Bormes-les-Mimosas in the south of France.

Media and publicity

Since the accession of Henri to the Grand Ducal Throne in 2000, the Court's approach to media and publicity has varied markedly. In 2002, Grand Duke Henri expressly identified himself with a press conference called by Grand Duchess Maria Teresa with a view to discussing with journalists the shortcomings of her personal relations with her mother-in-law, the former Grand Duchess Joséphine-Charlotte of Belgium.

In contrast, when the Grand Ducal Couple's first grandchild was born in 2006, the Court Circular pointedly omitted to mention the event, probably as the father Prince Louis was not married at the time. However, the pregnancy was announced on 2005, so the country was informed that the prince and his girlfriend were going to be parents. The press also had access to the child's baptism.

The Grand Ducal Family's approach to media and publicity issues has itself given rise to media comment regarding the quality of communications advice which has been sought and followed. As well as the public airing of the difficulties between the Grand Duchess and her mother-in-law, several other events have resulted in adverse publicity, most notably: in 2004, the opening

of Parliament by the Grand Duke in person, the first time in over 100 years the Monarch had done so; in 2005, the Grand Duke announced he intended to vote in favour of the European Constitution in the impending referendum, only to be reminded by senior politicians that he had no such right; the proposed sale of large tracts of the Gruenewald in the summer of 2006 shortly followed by the proposed sale (cancelled shortly afterwards) at Sotheby's of recently-deceased Grand Duchess Joséphine-Charlotte's effects.[1]

Health

On February 3, 2011, Henri was admitted to the Centre Hospitalier de Luxembourg after becoming ill. Shortly after, the Grand Ducal Court issued a statement saying that he was to undergo an angioplasty. The day after, the Communications Chief announced that the surgery had been a success. “The state of His Royal Highness’ health is not disturbing,” the statement read, before stating the Grand Duke may leave hospital within the next few days. Although the reason has not formally been disclosed, it is reported that the Grand Duke felt ill after waking on the third, and the Court Physician noticed circulation problems. It was then that he was rushed to hospital, to the cardiac unit, and was discharged the following day. As of February 5, he is currently believed to be spending time at Berg Castle in Colmar-Berg.

Ancestors

Patrilineal descent

Patrilineal descent
Henri's patriline is the line from which he is descended father to son. Patrilineal descent is the principle behind membership in royal houses, as it can be traced back through the generations - which means that if Duke Henri were to choose an historically accurate house name it would be Robert, as all his male-line ancestors have been of that house. Henri is a member of the House of Bourbon-Parma, a sub-branch of the House of Bourbon-Spain, itself originally a branch of the House of Bourbon, and thus of the Capetian dynasty and of the Robertians. Henri's patriline is the line from which he is descended father to son. It follows the Dukes of Parma as well as the Kings of Spain, France, and Navarre. The line can be traced back more than 1,400 years and is one of the oldest in Europe. 1. Robert or Radon, Mayor of the Palace of Austrasia in 613 2. Robert, Referendary in 629 and Duke in 631 3. Erlebert, Noble of Therouanne 4. Robert, Mayor of the Palace of Neustria in 653, Referendary in 658 and Count in Alsace in 673 5. Robert I of Worms and Rheingau, d. 764 6. Thuringbert of Worms and Rheingau 7. Robert II of Worms and Rheingau (Robert of Hesbaye), 770 - 807 8. Robert III of Worms and Rheingau, 808 - 834 9. Robert IV the Strong, 820 - 866 10. Robert I of France, 866 - 923 11. Hugh the Great, 895 - 956 12. Hugh Capet, 941 - 996 13. Robert II of France, 972 - 1031 14. Henry I of France, 1008–1060 15. Philip I of France, 1053–1108 16. Louis VI of France, 1081–1137

17. Louis VII of France, 1120–1180
18. Philip II of France, 1165–1223
19. Louis VIII of France, 1187–1226
20. Louis IX of France, 1215–1270
21. Robert, Count of Clermont, 1256–1317
22. Louis I, Duke of Bourbon, 1279–1342
23. James I, Count of La Marche, 1319–1362
24. John I, Count of La Marche, 1344–1393
25. Louis, Count of Vendôme, 1376–1446
26. Jean VIII, Count of Vendôme, 1428–1478
27. François, Count of Vendôme, 1470–1495
28. Charles de Bourbon, Duke of Vendôme, 1489–1537
29. Antoine of Navarre, 1518–1562

House of Bourbon-Parma

From Wikipedia, the free encyclopedia

The **House of Bourbon-Parma** (Italian: *Casa di Borbone di Parma*) is an Italian cadet branch of the House of Bourbon. It is thus descended from the Capetian dynasty in male line. The name of Bourbon-Parma comes from the main name (Bourbon) and the other (Parma) from the title of Duke of Parma. The title was held by the Spanish Bourbons as the founder was the great-grandson of Duke Ranuccio II Farnese, Duke of Parma.

House of Bourbon-Parma

Country	Etruria Lucca Parma
Ancestral house	House of Bourbon
Titles	Duke of Parma Duke of Guastalla Duke of Lucca King of Etruria Count of Bardi Grand Duke of Luxembourg
Founder	Philip
Final sovereign	Robert I
Current head	Carlos
Founding	18 October 1748
Deposition	9 June 1859

Duchy of Parma

The **Duchy of Parma** was created in 1545 from that part of the Duchy of Milan south of the Po River, as a fief for Pope Paul III's illegitimate son, Pier Luigi Farnese, centered on the city of Parma. In 1556, the second Duke, Ottavio Farnese, was given the city of Piacenza, becoming thus also **Duke of Piacenza**, and so the state was thereafter properly known as the **Duchies of Parma and Piacenza**.

The Farnese family continued to rule until their extinction in 1731, at which point the duchy was inherited by the young son of the King of Spain, Charles, whose mother Elisabeth was a member of the Farnese family. He ruled until the end of the War of the Polish Succession in 1735, when Parma was ceded to Emperor Charles VI in exchange for the Two Sicilies.

Temporary Habsburg rule

The Habsburgs only ruled until the conclusion of the Treaty of Aix-la-Chapelle in 1748, when it was ceded back to the Bourbons in the person of Philip, Charles's younger brother. As duke Philip, he became the founder of the House of Bourbon-Parma.

In 1796, the duchy was occupied by French troops under Napoleon Bonaparte. In the Treaty of Aranjuez of 1801, duke Ferdinand formally agreed to cede the duchy to Napoleon. The territories were integrated into the Cisalpine Republic until 1802, the Italian Republic, from 1802 until 1805, and the Kingdom of Italy, from 1805 until 1808, until in 1808 the French Empire annexed them and formed out of them the *Département* of Taro.

In 1814, the duchies were restored under Napoleon's Habsburg wife, Marie Louise, who was to rule them for her lifetime. The duchy was renamed **duchy of Parma, Piacenza and Guastalla**, the name that it retained until the end.

Charles III of Spain, the first Bourbon Duke of Parma. It was his younger brother who founded the house properly

Return to the Bourbons

After Marie Louise's death in 1847, the Duchy was restored to the Bourbon-Parma line, which had been ruling the tiny duchy of Lucca. The Bourbons ruled until 1859, when they were driven out by a revolution following the Sardinian victory in their war against Austria.

The duchies of Parma, Piacenza and Guastalla and the duchy of Lucca joined with the Grand Duchy of Tuscany and the duchy of Modena to form the United Provinces of Central Italy in December 1859, and were annexed to the Kingdom of Sardinia in March 1860. The House of Bourbon continues to claim the title of duke of Parma to this day. Carlos-Hugo (Carlist pretender to the Spanish throne in the 1970s) has held the title since 1977.

Since 1964, the House of Bourbon-Parma has reigned agnatically in Luxembourg when Jean, Grand Duke of Luxembourg, son of Prince Felix of Bourbon-Parma and Charlotte, Grand Duchess of Luxembourg, ascended the throne, followed by Felix's grandson Henri, Grand Duke of Luxembourg.

Ferdinand, Duke of Parma 1765–1802 *nominal since 1796*		20 January 1751 Parma son of Philip, Duke of Parma and Louise-Elisabeth de Bourbon	Archduchess Marie Amalie of Austria 19 July 1769 7 children	9 October 1802 Fontevivo aged 51

During the French ownership of the Duchy of Parma, the title of *Duke of Parma* was used as an honorary form and style. From 1808, the title was used by Jean Jacques Régis de Cambacérès. He kept the style of **Duc de Parme** till 1814. Only in 1847 the actual title was restored to the Bourbons after a period of being held by Marie Louise of Austria, wife of Napoleon I who was a Habsburg.

Netherlands

From Wikipedia, the free encyclopedia

The **Netherlands** (/ˈnɛðərləndz/; Dutch: *Nederland* [ˈneːdə(r)lɑnt] or [ˈneɪ̯də(r)lɑnt] (listen); West Frisian: *Nederlân*; Papiamento: *Hulanda*) is a constituent country of the Kingdom of the Netherlands, located mainly in North-West Europe and with several islands in the Caribbean. Mainland Netherlands borders the North Sea to the north and west, Belgium to the south, and Germany to the east, and shares maritime borders[7] with Belgium, Germany and the United Kingdom. It is a parliamentary democracy organised as a unitary state. The country capital is Amsterdam and the seat of government is The Hague.[8] The *Netherlands* in its entirety is often referred to as Holland, although North and South Holland are actually only two of its twelve provinces (a case of *pars pro toto*; see terminology of "the Netherlands").

The Netherlands is a geographically low-lying country, with about 25% of its area and 21% of its population located below sea level,[9] and 50% of its land lying less than one metre above sea level.[10] This distinct feature contributes to the country's name: in Dutch (*Nederland*), English, and in many other European languages (e.g. German: *Niederlande*, Croatian: *Nizozemska*, French: *Les Pays-Bas*, Italian: *Paesi Bassi* and Spanish: *Países Bajos*), its name literally means "(The) Low Countries" or "Low Country". Significant land area has been gained through land reclamation and preserved through an elaborate system of polders and dikes. Much of the Netherlands is formed by the estuary of three important European rivers, which together with their distributaries form the Rhine-Meuse-Scheldt delta. Most of the country is very flat, with the exception of foothills in the far southeast and several low-hill ranges in the central parts.

The Netherlands was one of the first countries to have an elected parliament. Among other affiliations the country is a founding member of the EU, NATO, OECD and WTO. With Belgium and Luxembourg it forms the Benelux economic union. The country is host to the Organization for the Prohibition of Chemical Weapons and five international courts: the Permanent Court of Arbitration, the International Court of Justice, the International Criminal Tribunal for the Former Yugoslavia, the International Criminal Court and the Special Tribunal for Lebanon. The first four are situated in The Hague as is the EU's criminal intelligence agency Europol and judicial co-operation agency Eurojust. This has led to the city being dubbed "the world's legal capital".[11] The

Netherlands has a capitalist market-based economy, ranking 13th of 157 countries according to the Index of Economic Freedom.[12] In May 2011, the Netherlands was ranked as the "happiest" country according to results published by the Organisation for Economic Co-operation and Development.[13]

Under Charles V, Holy Roman Emperor and King of Spain,

Daily life during the Dutch Golden Age captured in a painting by Jan Steen.

William I, Prince of Orange also called Willem de Zwijger (*William the Silent*), leader of the Netherlands during the Dutch Revolt.

the Netherlands region was part of the Seventeen Provinces, which also included most of present-day Belgium, Luxembourg, and some land in France and Germany.

The Eighty Years' War between the provinces and Spain began in 1568. In 1579, the northern half of the Seventeen Provinces formed the Union of Utrecht, a treaty in which they promised to support each other in their defence against the Spanish army.[14] The Union of Utrecht is seen as the foundation of the modern Netherlands. In 1581 the northern provinces adopted the Act of Abjuration, the declaration of independence in which the provinces officially deposed Philip II of Spain as reigning monarch in the northern provinces.[15]

1 ^ The official motto is French; the literal translation to English is "I will maintain" (namely, the integrity and independence of the territory)[*citation needed*]

2 ^ While Amsterdam is the constitutional capital, The Hague is the seat of the government.

3 ^ Frisian (Friesland),[5] Papiamento (Bonaire)[6] and English (Sint Eustatius and Saba)[6] have a formal status in certain parts of the country. Yiddish and the Romani language are recognised as non-territorial languages.[*citation needed*] Dutch Low Saxon and Limburgish are recognised as regional languages by the European Charter for Regional or Minority Languages.

4 ^ Peace of Westphalia

5 ^ Before 2002: Dutch guilder.

6 ^ The United States dollar is the sole legal tender within the Caribbean Netherlands. Before 2011: Netherlands Antillean guilder.

7 ^ The .eu domain is also used, as it is shared with other European Union member states.

8 ^ 599 was the country code designated for the now dissolved Netherlands Antilles. The Caribbean Netherlands still use 599-7 (Bonaire), 599-3 (Sint Eustatius) and 599-4 (Saba).

Queen Elizabeth I of England sympathised with the Dutch struggle against the Spanish, and in 1585 she concluded a treaty with the Dutch whereby she promised to send an English army to the Netherlands to aid the Dutch in their war with the Spanish.[16] In December 1585, 7,600 soldiers were sent to the Netherlands from England under the command of Robert Dudley, 1st Earl of Leicester. However, the English army was of no real benefit to the Dutch rebellion.[17]

Although Robert Dudley returned to the Netherlands in November 1586 with another army, the army still had little effect in the rebellion.[18] Philip II, the son of Charles V, was not prepared to let them go easily, and

war continued until 1648, when Spain under King Philip IV finally recognised the independence of the seven northwestern provinces in the Peace of Münster. Parts of the southern provinces became *de facto* colonies of the new republican-mercantile empire.

Dutch Republic 1581–1795

Main article: Dutch Republic

After independence, the provinces of Holland, Zeeland, Groningen, Friesland, Utrecht, Overijssel, and Gelre formed a confederation known as the Republic of the Seven United Netherlands. All these provinces were autonomous and had their own government, the "States of the Province". The States-General, the confederal government, were seated in The Hague and consisted of representatives from each of the seven provinces. The sparsely populated region of Drenthe, mainly consisting of poor peatland, was part of the republic too, although Drenthe was not considered one of the provinces; it had its own States, but the landdrost of Drenthe was appointed by the States-General. Moreover, the Republic had come to occupy during the Eighty Years' War a number of so-called Generality Lands (*Generaliteitslanden* in Dutch). These territories were governed directly by the States-General. They did not have a government of their own and did not have representatives in the States-General. Their population was mainly Roman Catholic, and these areas were used as a buffer zone between the Republic and the Southern Netherlands. [*citation needed*]

The Dutch Empire grew to become one of the major seafaring and economic powers of the 17th century. In the Dutch Golden Age ("Gouden Eeuw"), colonies and trading posts were established all over the world. Dutch settlement in North America began with the founding of New Amsterdam, on the southern tip of Manhattan in 1614. In South Africa, the Dutch settled the Cape Colony in 1652. By 1650, the Dutch owned 16,000 merchant ships.[19] During the 17th century, the Dutch population increased from an estimated 1.5 million to almost 2 million.[20]

Many economic historians regard the Netherlands as the first thoroughly capitalist country in the world. In early modern Europe it featured the wealthiest trading city (Amsterdam) and the first full-time stock exchange. The inventiveness of the traders led to insurance and retirement funds as well as phenomena such as the boom-bust cycle, the world's first

An anachronous map of the Dutch colonial Empire. Light green: territories administered by or originating from territories administered by the Dutch East India Company; dark green: the

Great Britain for Suriname. Under British rule it became known as New York.

Dutch West India Company.

asset-inflation bubble, the tulip mania of 1636–1637, and, according to Murray Sayle, the world's first bear raider, Isaac le Maire, who forced prices down by dumping stock and then buying it back at a discount.[21] The republic went into a state of general decline in the later 18th century, with economic competition from England and long standing rivalries between the two main factions in Dutch society, the *Staatsgezinden* (Republicans) and the *Prinsgezinden* (Royalists or Orangists) as main factors.[*citation needed*]

In the 17th century, plantation colonies were established by the Dutch and English along the many rivers in the fertile Guyana plains. The earliest documented colony in Guiana was along the Suriname River and called Marshall's Creek. The area was named after an Englishman.[22] Disputes arose between the Dutch and the English. In 1667, the Dutch decided to keep the nascent plantation colony of Suriname conquered from the English, resulting from the Treaty of Breda. The English were left with New Amsterdam, a small trading post in North America, which is now known as New York City.[*citation needed*]

French domination 1795–1814

Further information: Batavian Republic and Kingdom of Holland

On 19 January 1795, one day after stadtholder William V of Orange fled to England, the *Bataafse Republiek* (Batavian Republic) was proclaimed, rendering the Netherlands a unitary state. From 1795 to 1806, the Batavian Republic designated the Netherlands as a republic modelled after the French Republic.

From 1806 to 1810, the *Koninkrijk Holland* (Kingdom of Holland) was set up by Napoleon Bonaparte as a puppet kingdom governed by his brother Louis Bonaparte in order to control the Netherlands more effectively. The name of the leading province, Holland, was used for the whole country. The Kingdom of Holland covered the area of the present day Netherlands, with the exception of Limburg and parts of Zeeland, which were French territory. In 1807, Prussian East Frisia and Jever were added to the kingdom. In 1809, however, after a failed British invasion, Holland had to give over all territories south of the Rhine to France.

King Louis Bonaparte did not meet Napoleon's expectations – he tried to serve Dutch interests instead of his brother's, allowed trade with the British in spite of the Continental System and even tried to learn Dutch – and he was forced to abdicate on 1 July 1810. He was succeeded by his five-year-old son Napoleon Louis Bonaparte. Napoleon Louis reigned as Louis II for just ten days as Napoleon ignored his young nephew’s accession to the throne. The Emperor sent in an army to invade the country and dissolved the Kingdom of Holland. The Netherlands then became part of the French Empire.

The Netherlands remained part of the French Empire until the autumn of 1813, when Napoleon was defeated in the Battle of Leipzig and forced to withdraw his troops from the country.

Kingdom of the Netherlands 1815–1940

Main articles: United Kingdom of the Netherlands and Kingdom of the Netherlands

William I of the Netherlands, son of the last stadtholder William V van Oranje, returned to the Netherlands in 1813 and became Sovereign Prince of the Netherlands. On 16 March 1815, the Sovereign Prince became King of the Netherlands.

In 1815, the Congress of Vienna formed the United Kingdom of the Netherlands by expanding the Netherlands

with Belgium in order to create a strong country on the northern border of France. In addition, William became hereditary Grand Duke of Luxembourg. The Congress of Vienna gave Luxembourg to William as personal property in exchange for his German possessions, Nassau-Dillenburg, Siegen, Hadamar, and Diez.

Belgium rebelled and gained independence in 1830, while the personal union between Luxembourg and the Netherlands was severed in 1890, when King William III of the Netherlands died with no surviving male heirs. Ascendancy laws prevented his daughter Queen Wilhelmina from becoming the next Grand Duchess. Therefore the throne of Luxembourg passed over from the House of Orange-Nassau to the House of Nassau-Weilburg, a junior branch of the House of Nassau.

The largest Dutch settlement abroad was the Cape Colony. It was established by Jan van Riebeeck on behalf of the Dutch East India Company at Cape Town (Dutch: *Kaapstad*) in 1652. The Prince of Orange acquiesced to British occupation and control of the Cape Colony in 1788. The Netherlands also possessed several other colonies, but Dutch settlement in these lands was limited. Most notable were the vast Dutch East Indies (now Indonesia) and Dutch Guiana (now Suriname). These 'colonies' were first administered by the Dutch East India Company and the Dutch West India Company, both collective private enterprises. Three centuries later these companies got into financial trouble, and the territories in which they operated were taken over by the Dutch government (in 1815 and 1791 respectively). Only then did they become official colonies.

During its colonial period the Netherlands was heavily involved in the slave trade. The Dutch planters relied heavily on African slaves to cultivate the coffee, cocoa, sugar cane and cotton plantations along the rivers. Treatment of the slaves by their owners was notoriously bad, and many slaves escaped the plantations. Slavery was abolished by the Netherlands in Dutch Guiana in 1863, but the slaves were not fully released until 1873, after a mandatory 10 year transition period during which time they were required to work on the plantations for minimal pay and without state sanctioned torture. As soon as they became truly free, the slaves largely abandoned the plantations where they had suffered for several generations in favor of the city Paramaribo. Every year this is remembered during Keti Koti, 1 July, Emancipation Day (end of slavery).

During the 19th century, the Netherlands was slow to industrialize compared to neighbouring countries, mainly because of the great complexity involved in modernizing the infrastructure, consisting largely of waterways, and the great reliance its industry had on windpower.

Although the Netherlands remained neutral during World War I, it was heavily involved in the war.[23] German general Count Schlieffen, who was Chief of the Imperial German General Staff had originally planned to invade the Netherlands while advancing into France in the original Schlieffen Plan. This was changed by Schlieffen's successor Helmuth von Moltke the Younger in order to maintain Dutch neutrality. Later during the war Dutch neutrality proved essential to German survival until the blockade by Great Britain in 1916, when the import of goods through the Netherlands was no longer possible. However, the Dutch were able to continue to remain neutral during the war using their diplomacy and their ability to trade.[23]

Second World War 1940–1945

Main article: History of the Netherlands (1939–1945)

The Netherlands intended to remain neutral during the Second World War, although contingency plans involving the armies of Belgium, France and the United Kingdom were drawn up in case of German aggression. Despite this neutrality, Nazi Germany invaded the Netherlands on 10 May 1940 as part of their campaign against the Allied forces. French forces in the south and British ships in the west came to help but turned around quickly, evacuating many civilians and several thousand German prisoners of war from the German elite airborne divisions.

The country was overrun in five days. Only after (but not because of) the bombing of Rotterdam, the main element of the Dutch army surrendered on 14 May 1940, although a Dutch and French force held the western part of Zeeland for some time after the surrender. The Kingdom as such, continued the war from the colonial empire; the government in exile resided in London.

Rotterdam after German air raids in 1940.

During the occupation, over 100,000 Dutch Jews[24] were rounded up to be transported to Nazi German concentration camps in Germany, German-occupied Poland and German-occupied Czechoslovakia. By the time these camps were liberated, only 876 Dutch Jews survived. Dutch workers were conscripted for forced labour in German factories, civilians were killed in reprisal for attacks on German soldiers, and the countryside was plundered for food for German soldiers in the Netherlands and for shipment to Germany. Although there were thousands of Dutch who risked their lives by hiding Jews from the Germans, as recounted in *The Hiding Place* by Corrie ten Boom and *The Heart Has Reasons* by Mark Klempner,[25] there were also Dutch who collaborated with the occupying force in hunting down hiding Jews.[26] Local fascists and anti-Bolsheviks joined the Waffen-SS in the 4th SS Volunteer Panzergrenadier Brigade Netherlands, fighting on the Eastern Front as well as other units. Racial restrictions were relaxed to the extent that even Asians from Dutch East Indies (Indonesia) units were recruited.[27]

Dutch resistance members with troops of the US 101st Airborne in Eindhoven during Operation Market Garden in September 1944.

On 8 December 1941, the Netherlands declared war on Japan.[28] The government-in-exile then lost control of its major colonial stronghold, the Netherlands East Indies (Indonesia), to Japanese forces in March 1942. "American-British-Dutch-Australian" (ABDA) forces fought hard in some instances but were overwhelmed. During the Japanese occupation of Indonesia, the Japanese interned Dutch civilians and used Dutch and Indos (Eurasians of Dutch and Indonesian descent) alike as forced labour, both in the Netherlands East Indies and in neighbouring countries.[29] This included forcing women to work as "comfort women" (sex slaves) for Japanese personnel.

The Dutch Red Cross reported the deaths in Japanese custody of 14,800 European civilians out of 80,000 interned and 12,500 of the 34,000 POW captured.[30] A later UN report stated that 4 million people died in Indonesia as a result of famine and forced labour (known as romusha) during the Japanese occupation.[31] Some military personnel escaped to Australia and other Allied countries from where they carried on the fight against Japan. The Japanese furthered the cause of independence for the colony, so that after VE day many young Dutchmen found themselves fighting a colonial war against the new republic of Indonesia.

Liberation of Eindhoven, September 1944.

Princess Juliana of the Netherlands, the only child of Queen Wilhelmina and heir to the throne, sought refuge in Ottawa, Canada, with her two daughters, Beatrix and Irene, during the war. During Princess Juliana’s stay in Canada, preparations were made for the birth of her third child. To ensure the Dutch citizenship of this royal baby, the Canadian Parliament passed a special law declaring Princess Juliana's suite at the Ottawa Civic

Hospital “extraterritorial”.

On 19 January 1943, Princess Margriet was born. The day after Princess Margriet's birth, the Dutch flag was flown on the Peace Tower. This was the only time in history a foreign flag has waved above Canada’s Parliament Buildings. In 1944–45, the First Canadian Army, which included Canadian, British and Polish troops, was responsible for liberating much of the Netherlands[32] from German occupation. The joyous "Canadian summer" that ensued after the liberation, forged deep and long-lasting bonds of friendship between the Netherlands and Canada[33] (See Canada–Netherlands relations). In 1949, Dutch troops occupied an area of 69 km^2 (27 sq mi) of the British zone of occupied Germany and annexed it. At that time, these areas were inhabited by almost 10,000 people.[*citation needed*]

Recent history 1945–present

After the war, the Dutch economy prospered by leaving behind an era of neutrality and gaining closer ties with neighbouring states. The Netherlands was one of the founding members of the Benelux (**Be**lgium, the **Ne**therlands and **Lux**embourg) grouping, was among the twelve founding members of the North Atlantic Treaty Organisation (NATO), and was among the six founding members of the European Coal and Steel Community, which would later evolve, via the EEC (Common Market), into the European Union.

The Netherlands became a founding member of the EEC in 1957 and the European Union in 1993.

The 1960s and 1970s were a time of great social and cultural change, such as rapid *ontzuiling* (literally: depillarisation), a term that describes the decay of the old divisions along class and religious lines. Youths, and students in particular, rejected traditional mores and pushed for change in matters like women's rights, sexuality, disarmament and environmental issues.

Today, the Netherlands is regarded as a liberal country, considering its drugs policy and its legalisation of euthanasia. On 1 April 2001, the Netherlands became the first nation to recognize same-sex marriage.

On 10 October 2010 the Netherlands Antilles—a former country of the Kingdom of the Netherlands in the Caribbean—was dissolved. Referendums were held on each island of the Netherlands Antilles between June 2000 and April 2005 to determine their future status. As a result the islands of Bonaire, Sint Eustatius and Saba (the BES islands) were to obtain closer ties with the Netherlands. This led to the incorporation of these three islands into the country of the Netherlands as *special municipalities* upon the dissolution of the Netherlands Antilles. The special municipalities are collectively known as the Caribbean Netherlands.

Geography

Main article: Geography of the Netherlands

The European area of the Netherlands lies between latitudes 50° and 54° N, and longitudes 3° and 8° E.

The country is divided into two main parts by three large rivers, the Rhine (*Rijn*) and its main distributaries, the Waal and the Meuse (*Maas*). These rivers functioned as a natural barrier between earlier fiefdoms and hence created traditionally a cultural divide, as is evident in some phonetic traits that are recognizable north and south of these "Large Rivers" (*de Grote Rivieren*).

The southwestern part of the Netherlands is a river delta and two tributaries of the Scheldt (*Westerschelde and*

Oosterschelde). Only one significant branch of the Rhine flows northeastward, the IJssel river, discharging into the IJsselmeer, the former Zuiderzee ('southern sea'). This river also forms a linguistic divide: people to the east of this river speak Dutch Low Saxon dialects (except for the province of Friesland, which has its own language).[34]

Satellite overview of the Netherlands

Floods

Main articles: Flood control in the Netherlands, Floods in the Netherlands, and Storm tides of the North Sea

Over the centuries, the Dutch coastline has changed considerably as a result of human intervention and natural disasters. Most notable in terms of land loss is the 1134 storm, which created the archipelago of Zeeland in the southwest.

On 14 December 1287, St. Lucia's flood affected the Netherlands and Germany killing more than 50,000 people in one of the most destructive floods in recorded history.[35] The St. Elizabeth flood of 1421 and the mismanagement in its aftermath destroyed a newly reclaimed polder, replacing it with the 72-square-kilometre (28 sq mi) *Biesbosch* tidal floodplains in the south-centre. The last major flood in the Netherlands took place in early February 1953, when a huge storm caused the collapse of several dikes in the southwest of the Netherlands. More than 1,800 people drowned in the ensuing inundations. The Dutch government subsequently decided on a large-scale program of public works (the "Delta Works") to protect the country against future flooding. The project took more than thirty years to complete.

The disasters were partially increased in severity through human influence. People had drained relatively high lying swampland to use it as farmland. This drainage caused the fertile peat to compress and the ground level to drop, whereby they would lower the water level to compensate for the drop in ground level, causing the underlying peat to compress even more. Due to the flooding, farming was difficult, which encouraged foreign trade, the result of which was that the Dutch were involved in world affairs since the early 14th/15th century.[36] The flooding problem remains unsolvable to this day. Also, up until the 19th century peat was mined, dried, and used for fuel, further adding to the problem.

To guard against floods, a series of defences against the water were contrived. In the first millennium AD, villages and farmhouses were built on man-made hills called *terps*. Later, these terps were connected by dikes. In the 12th century, local government agencies called *"waterschappen"* (English "water bodies") or *"hoogheemraadschappen"* ("high home councils") started to appear, whose job it was to maintain the water level and to protect a region from floods. (These agencies exist to this day, performing the same function.) As the ground level dropped, the dikes by necessity grew and merged into an integrated system. By the 13th century, windmills had come into use in order to pump water out of areas below sea level. The windmills were later used to drain lakes, creating the famous polders.[*citation needed*]

In 1932, the *Afsluitdijk* (English "Closure Dike") was completed, blocking the former *Zuiderzee* (Southern Sea) from the North Sea and thus creating the IJsselmeer (IJssel Lake). It became part of the larger Zuiderzee Works in which four polders totalling 2,500 square kilometres (965 sq mi) were reclaimed from the sea.[37][38]

Additionally, the Netherlands is one of the countries that may suffer most from climate change. Not only is the rising sea a problem, but also erratic weather patterns may cause the rivers to overflow.[39][40][41]

Delta Works

Main article: Delta Works

After the 1953 disaster, the Delta Works were constructed, a comprehensive set of civil works throughout the Dutch coast. The project started in 1958 and was largely completed in 1997 with the completion of the Maeslantkering. A main goal of the Delta project was to reduce the risk of flooding in South Holland and Zeeland to once per 10,000 years (compared to1 per 4000 years for the rest of the country). This was achieved by raising 3,000 kilometers (1,864 mi) of outer sea-dykes and 10,000 kilometers (6,214 mi) of inner, canal, and river dikes, and by closing off the sea estuaries of the Zeeland province. New risk assessments occasionally show problems requiring additional Delta project dyke reinforcements. The Delta project is one of the largest construction efforts in human history[*citation needed*] and is considered by the American Society of Civil Engineers as one of the seven wonders of the modern world.[42]

The Delta Works are located in the provinces of South Holland and Zeeland.

Climate

The predominant wind direction in the Netherlands is southwest, which causes a moderate maritime climate, with cool summers and mild winters. This is especially the case with places within direct proximity of the Dutch coastline, which sometimes are over 10 °C (18 °F) warmer (in winter) or cooler (in summer) than places in the (south)east of the country.

The following tables are based on mean measurements by the KNMI weather station in De Bilt between 1981 and 2010:

Ice days (maximum temperature below 0 °C) usually occur from December until February, with the occasional rare ice day prior to or after that period. Freezing days (minimum temperature below 0 °C) occur much more often, usually ranging from mid November to late March, but not rarely measured as early as mid October and as

late as mid May. If one chooses the height of measurement to be 10 cm. above ground instead of 150 cm., one may even find such temperatures in the middle of the summer.

Warm days (maximum temperature above 20 °C) in De Bilt are usually measured in the time span of April until September, but in some parts of the country such temperatures can also occur in March and October (this is usually not in De Bilt, however). Summer days (maximum temperature above 25 °C) are usually measured in De Bilt from May until August, tropical days (maximum temperature above 30 °C) are rare and usually occur only from June until August.

Precipitation throughout the year is relatively equally shared by each month. Summer and autumn months tend to gather a little bit more precipitation than other months, mainly because of the intensity of the rainfall rather than the frequency of rain days (this is especially the case in summer, when lightning too is much more frequent than otherwise).

The number of sunshine hours is affected by the fact that due to the geographical latitude the length of the days varies between barely eight hours in December and nearly 17 hours in June.

Environment

Further information: List of national parks of the Netherlands and List of extinct animals of the Netherlands

The Netherlands has 20 national parks and hundreds of other nature reserves. Most are owned by Staatsbosbeheer and Natuurmonumenten and include lakes, heathland, woods, dunes and other habitats.

Phytogeographically, the Netherlands is shared between the Atlantic European and Central European provinces of the Circumboreal Region within the Boreal Kingdom. According to the World Wide Fund for Nature, the territory of the Netherlands belongs to the ecoregion of Atlantic mixed forests.

In 1871 the last old original natural woods (Beekbergerwoud) were cut down, and most woods today are planted monocultures of trees like Scots Pine and trees that are not native to the Netherlands.[*citation needed*] These woods were planted on anthropogenic heaths and sand-drifts (overgrazed heaths) (Veluwe).

Politics

Main article: Politics of the Netherlands

The Netherlands has been a constitutional monarchy since 1815 and a parliamentary democracy since 1848. The Netherlands is described as a consociational state. Dutch politics and governance are characterised by an effort to achieve broad consensus on important issues, within both the political community and society as a whole. In 2010, *The Economist* ranked the Netherlands as the 10th most democratic country in the world.

Beatrix of the Netherlands.

The monarch is the head of state, at present Queen Beatrix. Constitutionally, the position is equipped with limited powers. The monarch can exert some influence during the formation of a new cabinet, where they serve as neutral arbiter between the political parties. Additionally, the king (the title queen has no constitutional significance) has the right to be informed and consulted. Depending on the personality

and qualities of the king and the ministers, the king might have *influence* beyond the *power* granted by the constitution.

The Binnenhof, where the lower and upper houses of the States-General meet.

In practice, the executive power is formed by the ministerraad, the deliberative council of the Dutch cabinet. The cabinet consists usually of 13 to 16 ministers and a varying number of state secretaries. One to three ministers are ministers without portfolio. The head of government is the Prime Minister of the Netherlands, who often is the leader of the largest party of the coalition. In fact, this has been continuously the case since 1973. The Prime Minister is a *primus inter pares*, meaning he has no explicit powers beyond those of the other ministers. Currently, the Prime Minister is Mark Rutte.

The cabinet is responsible to the bicameral parliament, the States-General, which also has legislative powers. The 150 members of the House of Representatives, the Lower House, are elected in direct elections, which are held every four years or after the fall of the cabinet (by example: when one of the chambers carries a motion of no-confidence, the cabinet offers its resignation to the monarch). The States-Provincial are directly elected every four years as well. The members of the provincial assemblies elect the 75 members of the Senate, the upper house, which has less legislative powers, as it can merely reject laws, not propose or amend them.

Mark Rutte of the VVD has been the Prime Minister of the Netherlands since October 2010.

Both trade unions and employers organisations are consulted beforehand in policymaking in the financial, economic and social areas. They meet regularly with government in the Social-Economic Council. This body advises government and its advice cannot be put aside easily.

The Netherlands has a long tradition of social tolerance. In the 18th century, while the Dutch Reformed Church was the state religion, Catholicism, other forms of Protestantism, such as Baptists and Lutherans, and Judaism were tolerated. In the late 19th century this Dutch tradition of religious tolerance transformed into a system of pillarisation, in which religious groups coexisted separately and only interacted at the level of government. This tradition of tolerance is linked to Dutch criminal justice policies on recreational drugs, prostitution, LGBT rights, euthanasia, and abortion, which are among the most liberal in the world.

Political parties

Main article: Political parties of the Netherlands

Due to the multi-party system, no single party has held a majority in parliament since the 19th century, and coalition cabinets had to be formed. Since suffrage became universal in 1919, the Dutch political system has been dominated by three families of political parties: the strongest family were the Christian democrats, currently represented by the Christian Democratic Appeal (CDA), second were the social democrats, of which the Labour Party (PvdA), and third were the liberals, of which the People's Party for Freedom and Democracy (VVD) is the main representative.

These parties cooperated in coalition cabinets in which the Christian democrats had always been a partner: so

either a centre left coalition of the Christian democrats and social democrats was ruling or a centre right coalition of Christian democrats and liberals. In the 1970s, the party system became more volatile: the Christian democratic parties lost seats, while new parties became successful, such as the radical democrat and progressive liberal D66.

In the 1994 election, the CDA lost its dominant position. A "purple" cabinet was formed by VVD, D66, and PvdA. In the 2002 elections, this cabinet lost its majority, due to an increased support for the CDA and the rise of the LPF, a new political party around Pim Fortuyn, who was assassinated a week before the elections. A short-lived cabinet was formed by CDA, VVD, and LPF, which was led by CDA leader Jan Peter Balkenende. After the 2003 elections in which the LPF lost most of its seats, a cabinet was formed by CDA, VVD, and D66. The cabinet initiated an ambitious program of reforming the welfare state, the health care system, and the immigration policies.

In June 2006, the cabinet fell after D66 voted in favour of a motion of no confidence against minister of immigration and integration Rita Verdonk, who had instigated an investigation of the asylum procedure of VVD MP Ayaan Hirsi Ali. A caretaker cabinet was formed by CDA and VVD, and general elections were held on 22 November 2006. In these elections, the CDA remained the largest party and the SP made the largest gains. The formation of a new cabinet took three months, resulting in a coalition of CDA, PvdA, and ChristianUnion.

On 20 February 2010, the cabinet fell when the PvdA refused to prolong the involvement of the Dutch Army in Uruzgan, Afghanistan.[44] Snap elections were held on 9 June 2010, with devastating results for the previously largest party, the CDA, which lost about half of its seats, resulting in 21 seats. The VVD became the largest party with 31 seats, closely followed by the PvdA with 30 seats. The big winner of the 2010 elections was Geert Wilders whose PVV more than doubled in number of seats.[45] Negotiation talks for a new government have resulted in a VVD-led minority government in coalition with CDA as of 14 October 2010. This minority government is supported by PVV.[46]

Administrative divisions

Main articles: Provinces of the Netherlands, Municipalities of the Netherlands, Water board (Netherlands), Public body (Netherlands), and Caribbean Netherlands

The Netherlands is divided into twelve administrative regions, called provinces, each under a Governor, who is called *Commissaris van de Koningin* (Commissioner of the Queen), except for the province Limburg where the commissioner is called Gouverneur (Governor). All provinces are divided into municipalities (*gemeenten*), 430 in total (13 March 2010).

Provinces and special municipalities of the Netherlands.

The country is also subdivided in water districts, governed by a water board (*waterschap* or *hoogheemraadschap*), each having authority in matters concerning water management. As of 1 January 2005 there are 27. The creation of water boards actually pre-dates that of the nation itself, the first appearing in 1196. In fact, the Dutch water boards are one of the oldest democratic entities in the world still in existence.

The administrative structure on the 3 BES islands, also known as the Caribbean Netherlands, is different. These islands have the status of *openbare lichamen (public bodies)* and are generally referred to as *special municipalities*. They are not part of a province.[47]

Provinces of the Netherlands

Flag	Province	Capital	Largest city	Area[48] (km²)	Population[49] 1-1-2010	Density (per km²)

Foreign relations

Main article: Foreign relations of the Netherlands

Historically the Dutch foreign policy was characterised by neutrality, since the Second World War the Netherlands became a member of a large number of international organisations, most prominently the UN, NATO and the EU. The Dutch economy is very open and relies on international trade.

The foreign policy of the Netherlands is based on four basic commitments: to the atlantic cooperation, to European integration, to

The Peace Palace (*Vredespaleis*), The

international development and to international law. One of the more controversial international issues surrounding the Netherlands is its liberal policy towards soft drugs.

Hague.

During and after its golden age, the Dutch built up a commercial and colonial empire, which fell apart quickly after the Second World War; the historical ties inherited from its colonial past still influence the foreign relations of the Netherlands.

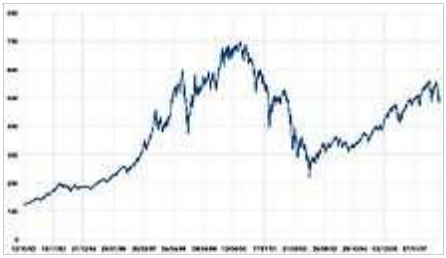
Military

Main article: Military of the Netherlands

The Netherlands has one of the oldest standing armies in Europe; it was first established as such by Maurice of Nassau. The Dutch army was used throughout the Dutch Empire. After the defeat of Napoleon, the Dutch army was transformed into a conscription army. The army was unsuccessfully deployed during the Belgian revolution in 1830. After 1830, it was deployed mainly in the Dutch colonies, as the Netherlands remained neutral in European wars (including WWI), until the Netherlands was invaded in WWII and quickly defeated by the Wehrmacht in May 1940.

After WWII, the Netherlands dropped their neutrality, and the Dutch army became part of the NATO army strength in Cold War Europe; holding several bases in Germany. In 1996 conscription was suspended, and the Dutch army was once again transformed into a professional army. Since the 1990s the Dutch army has been involved in the Bosnian War, the Kosovo War, has been holding a province in Iraq after the defeat of Saddam Hussein, and was engaged in Afghanistan.

HNLMS *Evertsen*, a Royal Dutch Navy frigate



The military is composed of four branches, all of which carry the prefix *Koninklijke* (Royal):

- *Koninklijke Landmacht* (KL), the Royal Netherlands Army
- *Koninklijke Marine* (KM), the Royal Netherlands Navy, including the Naval Air Service and Marine Corps
- *Koninklijke Luchtmacht* (KLu), the Royal Netherlands Air Force
- *Koninklijke Marechaussee* (KMar), the Royal Military Police, tasks include military police and border control

General Peter van Uhm is the current Commander of the Netherlands armed forces. All military specialities except the submarine service and the Royal Netherlands Marine Corps (*Korps Mariniers*) are open to women. The Korps Commandotroepen, the Special Operations Force of the Netherlands Army, is open to women, but because of the extremely high physical demands for initial training, it is almost impossible for women to become a commando.[52] The Dutch Ministry of Defence employs more than 70,000 personnel, including over 20,000 civilian and over 50,000 military personnel.[53] In April 2011 the government decided to decrease the amount of top officials and vehicles considerably, including all tanks, due to a cutback in governmental expenses. These cutbacks held in that the tanks are no longer used for training, but are only on standby.[54]

Economy

Main articles: Economy of the Netherlands and List of Dutch companies

Amsterdam Stock Exchange performance

The Netherlands has a very strong economy and has been playing a special role in the European economy for many centuries. Since the 16th century, shipping, fishing, trade, and banking have been leading sectors of the Dutch economy. The Netherlands is one of the world's 10 leading exporting countries. Foodstuffs form the largest industrial sector. Other major industries include chemicals, metallurgy, machinery, electrical goods, and tourism. Examples include Unilever, Heineken, financial services (ING), chemicals (DSM), petroleum refining (Shell), electronical machinery (Philips, ASML) and car navigation TomTom.

The Netherlands has the 16th largest economy in the world, and ranks 7th in GDP (nominal) per capita. Between 1997 and 2000 annual economic growth (GDP) averaged nearly 4%, well above the European average. Growth slowed considerably from 2001 to 2005 with the global economic slowdown, but accelerated to 4.1% in the third quarter of 2007. Inflation is 1.3%, and unemployment is at 4.0% of the labour force. By Eurostat standards, unemployment in the Netherlands is at 4.1% (April 2010) – the lowest rate of all European Union member states.[55] But in Q3 and Q4 2011, the Dutch economy contracted 0.4 percent and 0.7 percent, respectively due to European Debt Crisis, while in Q4 the Eurozone economy shrunk by 0.3 percent.[56] The Netherlands also has a relatively low GINI coefficient of 0.326. Despite ranking only 7th in GDP per capita, UNICEF ranked the Netherlands 1st in child well-being.[57] On the Index of Economic Freedom Netherlands is the 13th most free market capitalist economy out of 157 surveyed countries.

Amsterdam is the financial and business capital of the Netherlands.[58] The Amsterdam Stock Exchange (AEX), part of Euronext, is the world's oldest stock exchange and is one of Europe's largest bourses. It is situated near Dam Square in the city's centre. As a founding member of the euro, the Netherlands replaced (for accounting purposes) its former currency, the "Gulden" (guilder), on 1 January 1999, along with 15 other adopters of the Euro. Actual euro coins and banknotes followed on 1 January 2002. One euro was equivalent to 2.20371 Dutch guilders.

The Netherlands introduced the euro in 2002. It is one of 17 countries that make up the Eurozone.

The Netherlands' location gives it prime access to markets in the UK and Germany, with the port of Rotterdam being the largest port in Europe. Other important parts of the economy are international trade (Dutch colonialism started with cooperative private enterprises such as the VOC), banking and transport. The Netherlands successfully addressed the issue of public finances and stagnating job growth long before its European partners. Amsterdam is the 5th busiest tourist destination in Europe with more than 4.2 million international visitors.[59] Since the enlargement of the EU large numbers of migrant workers have arrived in the Netherlands from central and eastern Europe.[60]

The country continues to be one of the leading European nations for attracting foreign direct investment and is one of the five largest investors in the United States. The economy experienced a slowdown in 2005, but in 2006 recovered to the fastest pace in six years on the back of increased exports and strong investment. The pace of job growth reached 10-year highs in 2007. The Netherlands moved up from the 11th position in the Global Competitiveness Index[61] to the 9th position in 2007.

One of the largest natural gas fields in the world is situated near Slochteren. Exploitation of this field resulted in a total revenue of €159 billion since the mid 1970s. With just over half of the reserves used up and an expected continued rise in oil prices, the revenues over the next few decades are expected to be at least that much.[62]

Agriculture

A highly mechanised agricultural sector employs 4% of the labour force but provides large surpluses for the food-processing industry and for exports. The Dutch rank third worldwide in value of agricultural exports, behind the United States and France, with exports earning $55 billion annually. A significant portion of Dutch agricultural exports are derived from fresh-cut plants, flowers, and bulbs, with the Netherlands exporting two-thirds of the world's total. The Netherlands also exports a quarter of all world tomatoes, and trade of one-third of the world's exports of chilis, tomatoes and cucumbers goes through the country. The Netherlands also exports one-fifteenth of the world's apples.[63]

Transport

See also: Transport in the Netherlands and Rail transport in the Netherlands

Rotterdam has the largest port in Europe, with the rivers Meuse and Rhine providing excellent access to the hinterland upstream reaching to Basel, Switzerland, and into France. In 2006, Rotterdam was the world's seventh largest container port in terms of Twenty-foot equivalent units (TEU) handled.[64] The port's main activities are petrochemical industries and general cargo handling and transshipment. The harbour functions as an important transit point for bulk materials and between the European continent and overseas. From Rotterdam goods are transported by ship, river barge, train or road. In 2007, the *Betuweroute*, a new fast freight railway from Rotterdam to Germany, was completed.

Demographics

Main article: Demographics of the Netherlands

Dutch people in orange celebrating Queen's Day in Amsterdam.

The Netherlands has an estimated population of 16,735,100 (as of 5 November 2011).[65] It is the 11th most populous country in Europe and the 61st most populous country in the world. Between 1900 and 1950, the country's population almost doubled from 5.1 to 10.0 million people. From 1950 to 2000, the population further increased from 10.0 to 15.9 million people, but the population growth decreased compared to the previous fifty years.[66] The estimated growth rate is currently 0.436% (as of 2008).[2]

The fertility rate in the Netherlands is 1.82 children per woman (as of 2011),[2] which is high compared to many other European countries, but below the 2.1-rate required for natural population replacement. Life expectancy is high in the Netherlands: 79 years for newborn girls and 78 for boys (2007). The country has a migration rate of 2.55 migrants per 1,000 inhabitants.

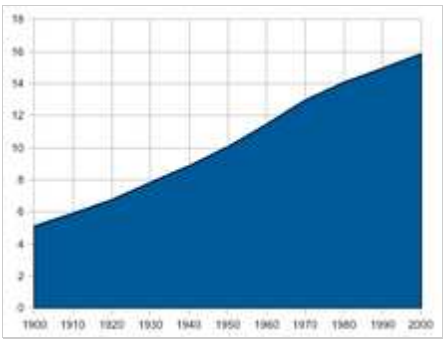
The majority of the population of the Netherlands are ethnically Dutch. A 2005 estimate counted: 80.9% Dutch, 2.4% Indonesian, 2.4% German, 2.2% Turkish, 2.0% Surinamese, 2.0% Moroccan, 0.8% Antillean and Aruban, and 6.0% others.[67] The Dutch are the tallest people in the world, with an average height of 1.81 metres (5 ft 11 in) for adult males and 1.67 metres (5 ft 6 in) for adult females. People in the south are on average about 2 cm shorter than those in the north.[68]

Dutch people, or descendants of Dutch people, are also found in migrant communities worldwide, notably in Canada, Australia, South Africa and the United States. According to the 2006 US Census, more than 5 million

Americans claim total or partial Dutch ancestry.[69] There are close to 3 million Dutch-descended Afrikaners living in South Africa.[70] In 1940, there were 290,000 Europeans and Eurasians in Indonesia,[71] but most have since left the country.[72] According to Eurostat, in 2010 there were 1.8 million foreign-born residents in the Netherlands, corresponding to 11.1% of the total population. Of these, 1.4 million (8.5%) were born outside the EU and 0.428 million (2.6%) were born in another EU Member State.[73]

The Netherlands is the 30th most densely populated country in the world, with 395 inhabitants per square kilometre (1,023 /sq mi)—or 484 inhabitants per square kilometre (1,254 /sq mi) if only the land area is counted. It is the 8th most densely populated country in Europe with a population density of 393/km^2. The Randstad is the country's largest conurbation located in the west of the country and contains the four largest cities: Amsterdam in the province North Holland, Rotterdam and The Hague in the province South Holland, and Utrecht in the province Utrecht. The Randstad has a population of 7 million inhabitants and is the 6th largest metropolitan area in Europe.

Cities by population



Population density in the Netherlands by neighbourhood as of 2007[74]

Rank	City	Province	Population (Urban Area)
1	**Amsterdam**	North Holland	2,788,276 (2,871,870)

2008 estimate[75][76]

Language

Main article: Languages of the Netherlands

Population of the Netherlands from 1900 to 2000

The official language is Dutch, which is spoken by the vast majority of the inhabitants. Another official language is Frisian, which is spoken in the northern province of Friesland, called *Fryslân* in that language. A dialect of Frisian and Dutch is spoken in most villages in the west of the province of Groningen.[77] Frisian is co-official only in the province of Friesland, although with a few restrictions. Several dialects of Low Saxon (*Nedersaksisch* in Dutch) are spoken in much of the north and east, like the Twents in the Twente region, and Drents in the province Drenthe. They are recognised by the Netherlands as *regional languages* according to the European Charter for Regional or Minority Languages, as well as the Meuse-Rhenish Franconian varieties in the southeastern province of Limburg, here called Limburgish language.[34] English is an official language in the special municipalities of Saba and Sint Eustatius. It is widely spoken on these islands. Papiamento is an official language in the special municipality of Bonaire. The three islands are known as the BES islands. Yiddish and the Romani language were recognised in 1996 as non-territorial languages.[78]

There is a tradition of learning foreign languages in the Netherlands: about 70% of the total population have good knowledge of conversational English, 55– 59% of German, and 19% of French. The children start with English courses at primary schools when they are about nine years old. English is a mandatory course in all secondary schools.[79] In most lower level secondary school educations (*vmbo*), one additional modern foreign language is mandatory during the first two years. In higher level secondary schools(*havo* and *vwo*), two additional modern foreign languages are mandatory during the first three years. Only during the last three years in *vwo* one foreign language is mandatory. The standard modern languages are French and German, although schools can change one of these modern languages with Spanish, Turkish, Arabic, or Russian.[80] Additionally, schools in the Frisia region teach and have exams in Frisian, and schools across the country teach and have exams in classical Greek and Latin for vwo.

Religion

Main article: Religion in the Netherlands

The Netherlands is one of the most secular countries in Western Europe, with only 39% being religiously affiliated (31% for those aged under 35), and fewer than 20% visiting church regularly.[81] According to the most recent Eurobarometer poll 2005,[82] 34% of the Dutch citizens responded that "they believe there is a God", whereas 37% answered that "they believe there is some sort of spirit or life force", and 27% that "they do not believe there is any sort of spirit, god, or life force".

Currently, Roman Catholicism is the single largest religion of the Netherlands, forming the religious home of some 28% of the Dutch population in 2011.[83] The Protestant Church of the Netherlands follows with 16% of the population.[83] It was formed in 2004 as a merger of the two major strands of Calvinism: the Dutch Reformed Church (which represented roughly 8.5% of the population), the Reformed Churches in the Netherlands (3.7% of the population), and a smaller Lutheran Church. Other Protestant churches, mostly orthodox Calvinist splits, represent 6% of the population. In 1947, 44.3% belonged to Protestant denominations, 38.7% belonged to the Roman Catholic Church, and

17.1% were unaffiliated.[84]

Dom Tower of Utrecht.

In 2006, there were 850,000 Muslims (5% of the total Dutch population).[85] The Netherlands has an estimated 250,000 Buddhists or people who feel strongly attracted by this religion, largely ethnic Dutch people. There are approximately 200,000 Hindus, most of them are of Surinamese origin. Sikhs are another religious minority numbering around 12,000, mainly located in or around Amsterdam. There are five gurudwaras in the Netherlands. The Association of Religion Data Archives (relying on World Christian Encyclopedia) estimated some 6,400 Bahá'ís in 2005.[86]

Although the Holocaust deeply affected the Jewish community (killing about 75% of its 140,000 members at the time[87]), it has managed to rebuild a vibrant and lively Jewish life for its approximately 45,000 current members. Before World War II, 10% of the Amsterdam population was Jewish.[88]

Freedom of education has been guaranteed by the Dutch constitution since 1917, and schools run by religious groups (especially Catholic and Protestant) are funded by the government. All schools must meet strict quality criteria.

Three political parties in the Dutch parliament (CDA, ChristianUnion, and SGP) base their policy on Christian belief in varying degrees. Although the Netherlands is a secular state, in some municipalities where the Christian parties have the majority, the council meetings are opened by prayer.

Municipalities in general also give civil servants a day off on Christian religious holidays, such as Easter and the Ascension of Jesus.[89]

Education

Main article: Education in the Netherlands

Education in the Netherlands is compulsory between the ages of 4 and 16, and partially compulsory between the ages of 16 and 18.

All children in the Netherlands usually attend elementary school from (on average) ages 4 to 12. It comprises eight grades, the first of which is facultative. Based on an aptitude test, the 8th grade teacher's recommendation and the opinion of the pupil's parents or caretakers, a choice is made for one of the three main streams of secondary education (after completing a particular stream, a pupil may still continue in the penultimate year of the next stream):

- The vmbo has 4 grades and is subdivided over several levels. Successfully completing the vmbo results in a low-level vocational degree that grants access to the mbo ("middle-level applied education"). This form of education primarily focuses on teaching a practical trade. With the mbo certification, a student can apply for the hbo.
- The havo has 5 grades and allows for admission to the hbo ("higher professional education"), which are universities of professional education (or applied sciences) that award professional bachelor degrees that gives access to the university system.
- The vwo (including atheneum and gymnasium) has 6 grades and prepares for studying at a research university. The university consists of a three year bachelor's degree, followed by a one, two or three year master's degree, and finally a four year doctoral degree. Doctoral candidates in the Netherlands are temporary employees of a university.

Culture

Main article: Culture of the Netherlands

Symbols and icons of Dutch culture

The Netherlands has had many well-known painters. The 17th century, when the Dutch republic was prosperous, was the age of the "Dutch Masters", such as Rembrandt van Rijn, Johannes Vermeer, Jan Steen, Jacob van Ruysdael and many others. Famous Dutch painters of the 19th and 20th century were Vincent van Gogh and Piet Mondriaan. M. C. Escher is a well-known graphics artist. Willem de Kooning was born and trained in Rotterdam, although he is considered to have reached acclaim as an American artist. The Netherlands is the country of philosophers Erasmus of Rotterdam and Spinoza. All of Descartes' major work was done in the Netherlands. The Dutch scientist Christiaan Huygens (1629–1695) discovered Saturn's moon Titan and invented the pendulum clock. Antonie van Leeuwenhoek was the first to observe and describe single-celled organisms with a microscope.

In the Dutch Golden Age, literature flourished as well, with Joost van den Vondel and P.C. Hooft as the two most famous writers. In the 19th century, Multatuli wrote about the poor treatment of the natives in Dutch colonies. Important 20th century authors include Harry Mulisch, Jan Wolkers, Simon Vestdijk, Hella S. Haasse, Cees Nooteboom, Gerard (van het) Reve and Willem Frederik Hermans. Anne Frank's *Diary of a Young Girl* was published after she died in the Holocaust and translated from Dutch to all major languages.

Replicas of Dutch buildings can be found in Huis Ten Bosch, Nagasaki, Japan. A similar Holland Village is being built in Shenyang, China. Windmills, tulips, wooden shoes, cheese, Delftware pottery, and cannabis are among the items associated with the Netherlands by tourists.

Sport

Main article: Sport in the Netherlands

Johan Cruyff with Roberto Perfumo at the 1974 World Cup

Approximately 4.5 million of the 16 million people in the Netherlands are registered to one of the 35,000 sports clubs in the country. About two thirds of the population older than 15 years participates in sports weekly.[90]

In the Netherlands, football, speed skating, korfball, handball, swimming, rowing, cycling, field hockey, volleyball, equestrian sports, sailing, and tennis are popular sports. A lot of amateurs practice them, and the Netherlands is a strong competitor in international tournaments for these sports. In the Dutch Caribbean, baseball is a popular sport, with the islands frequently sending teams to the annual Little League World Series.

Organization of sports began at the end of the 19th century and the beginning of the 20th century. Federations for sports were established (such as the speed skating federation in 1882), rules were unified and sports clubs came into existence. A Dutch National Olympic Committee was established in 1912. Thus far, the nation has won 246 medals at the Summer Olympic Games and another 86 medals at the Winter Olympic Games.

Cuisine

Main article: Dutch Cuisine

Traditional Dutch cuisine consists of working class meals. Many traditional dishes are mashed dishes, for instance potatoes mashed with kale (*boerenkool*), sauerkraut (*zuurkool*), or endive (*andijvie*). These dishes are served with greasy, smoked sausage (*rookworst*) and gravy. Another traditional dish is split pea soup (*erwtensoep*).

As the Netherlands always had strong ties with (former) colonies Indonesia and Suriname, dishes from those countries have mixed with Dutch cuisine. Common Asian dishes in the Netherlands include noodles (*bami*) and rice (*nasi*) dishes.

History of the Netherlands

From Wikipedia, the free encyclopedia

The **history of the Netherlands** is the history of a seafaring people thriving on a watery lowland river delta flowing into the North Sea at the edge of northwestern Europe. When the Romans and written history arrived in 57 BC, the country was sparsely populated by various tribal groups at the periphery of the empire. Over four centuries of Roman rule had profound demographic effects, resulting eventually in the establishment of three primary Germanic peoples in the area: Frisians, Low Saxons and the Franks. Hiberno-Scottish and Anglo-Saxon missionaries led them to adopt Christianity by the 8th century. The descendants of the Salian Franks eventually came to dominate the area, and from their speech the Dutch language arose.

Carolingian rule, loose integration into the Holy Roman Empire and Viking depredation followed, the local noblemen being left relatively free to carve out highly independent duchies and counties. For several centuries, Brabant, Holland, Zeeland, Friesland, Gelre and the others fought intermittently amongst themselves, but at the same time trade continued and grew, land was reclaimed, and cities prospered. Forced by nature to work together, over the centuries they built and maintained a network of polders and dikes that kept out the sea and the floods, in the process transforming their desolate landscape, mastering the North Sea and the high seas beyond, and emerging out of the struggle as one of the most urban and enterprising nations in Europe.

Leo Belgicus by Claes Jansz. Visscher (II), 1609

By 1433, as a result of the defeat of the last countess of Holland in the Hook and Cod Wars, the Duke of Burgundy had assumed control over most of the Dutch-speaking territories and the concept of a nation of Dutch-speaking people was conceived. Eventually, however, under Charles V and then Philip II, the Burgundian Netherlands became part of the Habsburg empire ruled from Spain. The Reformation inflamed passions. In 1566 William of Orange, a convert to Calvinism and the father of his people, started the Eighty Years' War to liberate the Dutch from the Catholic Spaniards and the brutality of the Duke of Alba. There followed an epic struggle against the Spanish that did not end until the Peace of Westphalia in 1648. The Dutch Republic was born, a nation with Protestants, Catholics and Jews and an unusual policy of tolerance. However, the southern provinces (present day Belgium) remained under Habsburg rule, Holland benefiting greatly from the resulting eclipse of Flemish cities and massive influx of refugees.

During this struggle, commerce continued and the United Provinces prospered. Amsterdam became the most important trading centre in northern Europe. In the

Dutch Golden Age, which had its zenith in 1667, there was a remarkable flowering of trade, industry (especially shipbuilding), the arts (especially painting) and the sciences. The Dutch Republic, particularly Holland and Zeeland, became a veritable Dutch empire, a maritime power with a commercial, imperial and colonial reach that extended to Asia, Africa and the Americas — but not without slavery and colonial oppression.

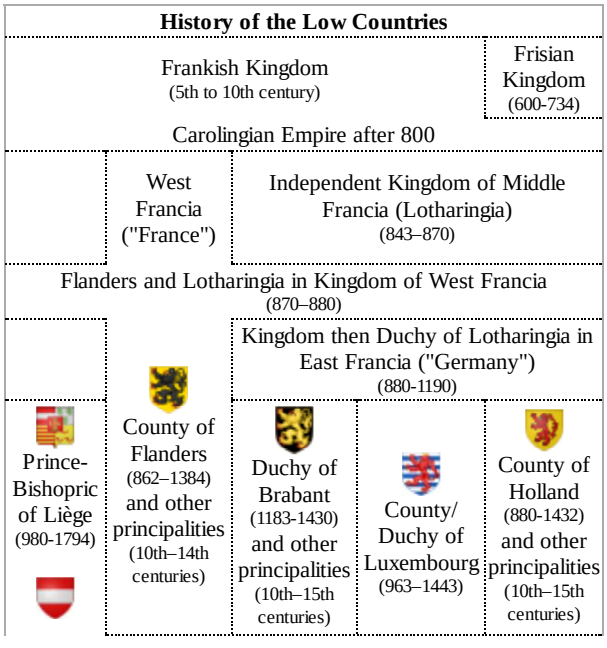
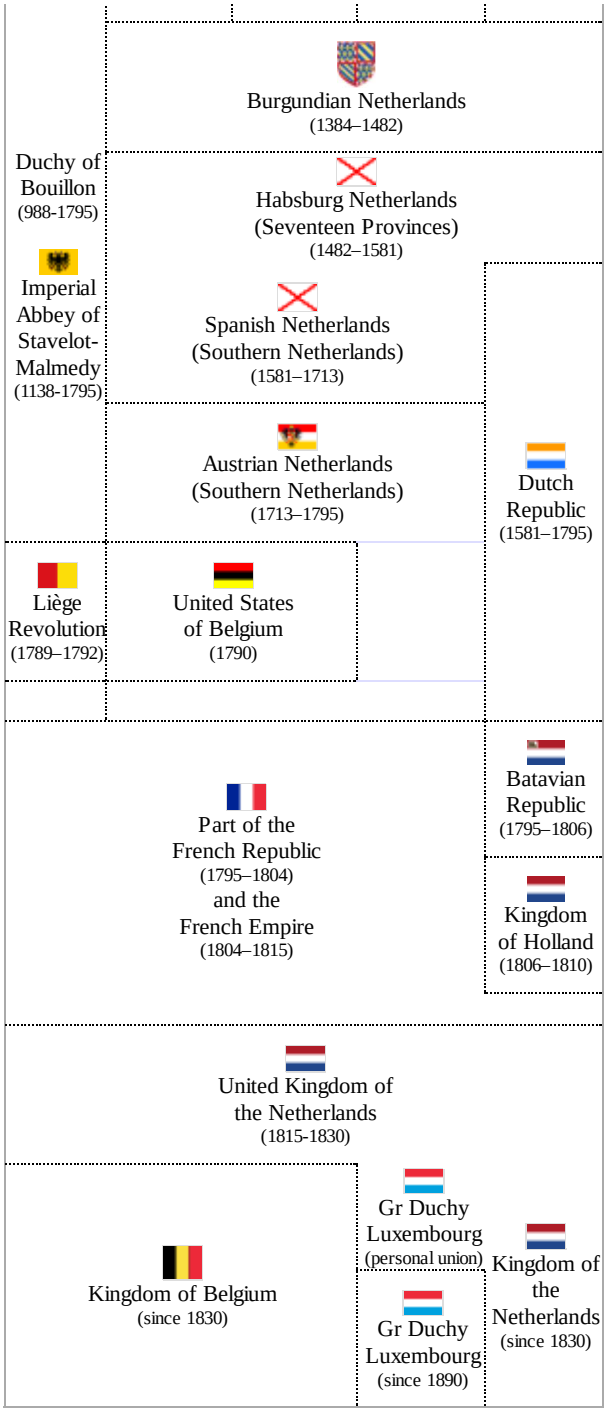
Netherlands Portal

By the mid-18th century decline had set in because of several economic factors. There was a series of wars with the English and the French. The country's political system was dominated by wealthy regents and (sometimes) by stadtholders drawn from the House of Orange. Eventually, Amsterdam lost its leading position to London. In 1784 a war with Great Britain ended particularly disastrously. There was growing unrest and conflict between the Orangists and the Patriots inspired by the French Revolution, and finally conflict with France itself. A pro-French Batavian Republic was established (1795–1806) and then the country was invaded by, and integrated into, the First French Empire as the Kingdom of Holland (1806–1815).



After the Battle of Waterloo in 1815, the Netherlands was restored as a nation by the Vienna Congress and the House of Orange was elevated to a monarchy. King William I was also given rule over Belgium, but this lasted only around two decades. After an initially conservative period, strong liberal sentiments arose, so that in the 1848 constitution the country was made a parliamentary democracy with a constitutional monarch.

The Netherlands was neutral during the First World War, but it was unable to stay out of the Second. On 10 May 1940 Nazi Germany invaded the country and, after destroying Rotterdam, occupied it. Around 100,000 Dutch Jews died in the Holocaust and many others died as well. On 5 May 1945, the war ended after liberation by mainly Canadian forces. The post-war years were a time of hardship, natural disaster and mass emigration, followed by rebuilding, large-scale public works programmes (especially the Delta Works), economic recovery, European integration and the gradual introduction of a welfare state. There was also a conflict with Indonesia, which ended with the Dutch withdrawing completely from their former colonies there in 1961. Suriname declared independence in 1975. Many people from Indonesia and Suriname, and later from other countries as well, moved to the Netherlands, which resulted in the transformation of the country into a vibrant, multicultural society.



The second half of the 20th century was marked by relative peace and prosperity. By the 21st century, the Netherlands had become a modern, dynamic country with a successful, internationally oriented economy (the 16th largest in the world in 2010) and a high standard of living.

Prehistory (before 800 BC)

Historical changes to the landscape

The prehistory of the area that is now the Netherlands was largely shaped by its constantly shifting, low-lying geography.

The Netherlands in 5500 BC

Earliest groups of hunter-gatherers (before 5000 BC)

The area that is now the Netherlands was inhabited by early humans at least 370,000 years ago, as attested by flint tools discovered in Woerden in 2010.[1] In 2009 a fragment of a 40,000-year-old Neanderthal skull was found in sand dredged from the North Sea floor off the coast of Zeeland.[2]

During the last ice age, the Netherlands had a tundra climate with scarce vegetation and the inhabitants survived as hunter-gatherers. After the end of the ice age, various Paleolithic groups inhabited the area. It is known that around 8000 BC a Mesolithic tribe resided near Burgumer Mar (Friesland). Another group residing elsewhere is known to have made canoes. The oldest recovered canoe in the world is the Pesse canoe.[3][4] According to C14 dating analysis it was constructed somewhere between 8200 BC and 7600 BC.[4] This canoe is exhibited in the Drents Museum in Assen.

Autochthonous hunter-gatherers from the Swifterbant culture are attested from around 5600 BC onwards.[5] They are strongly linked to rivers and open water and were genetically related to the southern Scandinavian Ertebølle culture (5300 BC–4000 BC). To the west, the same tribes might have built hunting camps to hunt winter game, including seals.

An oak statue found in Willemstad, The Netherlands, dating from around 4500 BC. On display in the Rijksmuseum van Oudheden in Leiden.

The arrival of farming (around 5000 BC-4000 BC)

Agriculture arrived in the Netherlands somewhere around 5000 BC with the Linear Pottery culture, who were probably central European farmers. Agriculture was practised only on the loess plateau in the very south (southern Limburg). Farms did not develop in the rest of the Netherlands, probably because of the lack of animal domestication and appropriate tools.

There is also some evidence of small settlements in the west of the country. These people made the switch to animal

husbandry sometime between 4800 BC and 4500 BC. Dutch archaeologist Leendert Louwe Kooijmans wrote, "It is becoming increasingly clear that the agricultural transformation of prehistoric communities was a purely indigenous process that took place very gradually."[5] This transformation took place as early as 4300 BC–4000 BC[6] and featured the introduction of grains in small quantities into a traditional broad-spectrum economy.[7]

Funnelbeaker and other cultures (around 4000 BC-3000 BC)

Hunebed D27, the largest dolmen in the Netherlands, located near Borger in Drenthe.

The Funnelbeaker culture was a farming culture extending from Denmark through northern Germany into the northern Netherlands. In this period of Dutch prehistory the first notable remains were erected: the dolmens, large stone grave monuments. They are found in Drenthe, and were probably built between 4100 BC and 3200 BC.

To the west, the Vlaardingen culture (around 2600 BC), an apparently more primitive culture of hunter-gatherers survived well into the Neolithic period.

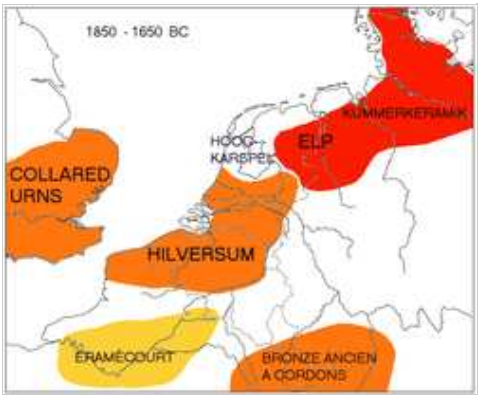
Corded Ware and Bell Beaker cultures (around 3000 BC-2000 BC)

Around 2950 BC there was a transition from the Funnelbeaker farming culture to the Corded Ware pastoralist culture. The cause of this transition is a matter of debate, but it was a quick, smooth and internal change in culture and religion that occurred in just two generations, probably because of developments in eastern Germany and without immigration.[8]

The Bell Beaker culture was also present in the Netherlands.[9][10]

The Corded Ware and Bell Beaker cultures were not indigenous to the Netherlands but were pan-European in nature, extending across much of northern and central Europe.

The first evidence of the use of the wheel dates from this period, about 2400 BC. This culture also experimented with working with copper. Evidence of this, including stone anvils, copper knives and a copper spearhead, was found on the Veluwe. Copper finds show that there was trade with other areas in Europe, as natural copper is not found in Dutch soil.



Bronze Age (around 2000 BC-800 BC)

The Bronze age probably started somewhere around 2000 BC and lasted until around 800 BC. The earliest bronze tools have been found in the grave of a Bronze Age individual called "the smith of Wageningen". (Typical Dutch Bronze Age items. (http://home.versatel.nl/postbus/pics1.html)) More Bronze Age objects from later periods have been found in Epe, Drouwen and elsewhere. Broken bronze objects found in Voorschoten were apparently destined for recycling. This indicates how valuable bronze was considered in the Bronze Age. (Typology of Dutch Bronze Age axes. (http://home.versatel.nl/postbus/images/typ.jpg)) Typical bronze objects from this period included knives, swords, axes, fibulae and bracelets.

Most of the Bronze Age objects found in the Netherlands have been found in Drenthe. One item shows that trading networks during this period extended a far distance. Large bronze *situlae* (buckets) found in Drenthe were manufactured somewhere in eastern France or in Switzerland. They were used for mixing wine with water (a Roman/Greek custom). The many finds in Drenthe of rare and valuable objects, such as tin-bead necklaces, suggest that Drenthe was a trading centre in the Netherlands in the Bronze Age.

A bronze ceremonial object (not a sword, but

Location of the Elp and Hilversum cultures in the Bronze Age.

The Bell Beaker cultures (2700–2100) locally developed into the Bronze Age Barbed-Wire Beaker culture (2100–1800). In the second millennium BC, the region was the boundary between the Atlantic and Nordic horizons and was split into a northern and a southern region, roughly divided by the course of the Rhine.

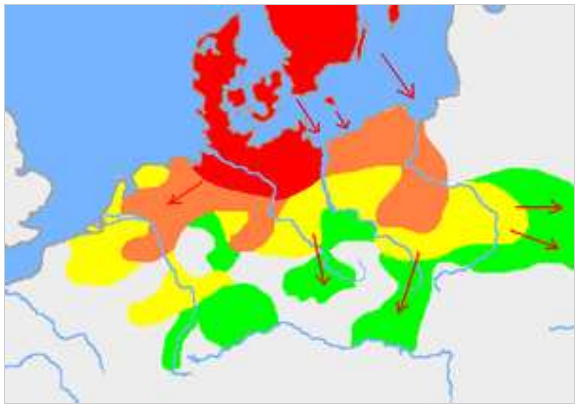
called the "Sword of Jutphaas"), dating from 1800-1500 BC and found south of Utrecht

In the north, the Elp culture (ca. 1800 to 800 BC)[11] was a Bronze Age archaeological culture having earthenware pottery of low quality known as "*Kümmerkeramik*" (or "*Grobkeramik*") as a marker. The initial phase was characterized by tumuli (1800–1200 BC) that were strongly tied to contemporary tumuli in northern Germany and Scandinavia, and were apparently related to the Tumulus culture (1600 BC – 1200 BC) in central Europe. This phase was followed by a subsequent change featuring Urnfield (cremation) burial customs (1200–800 BC). The southern region became dominated by the Hilversum culture (1800–800), which apparently inherited the cultural ties with Britain of the previous Barbed-Wire Beaker culture.

The pre-Roman period (800 BC – 58 BC)

Iron age

The Iron Age brought a measure of prosperity to the people living in the area of the present-day Netherlands. Iron ore was available throughout the country, including bog iron extracted from the ore in peat bogs (*moeras ijzererts*) in the north, the natural iron-bearing balls found in the Veluwe and the red iron ore near the rivers in Brabant. Smiths travelled from small settlement to settlement with bronze and iron, fabricating tools on demand, including axes, knives, pins, arrowheads and swords. Some evidence even suggests the making of Damascus steel swords using an advanced method of forging that combined the flexibility of iron with the strength of steel.



A reconstruction of an iron age dwelling on the Reijntjesveld near Orvelte in Drenthe.

In Oss, a grave dating from around 500 BC was found in a burial mound 52 metres wide (and thus the largest of its kind in western Europe). Dubbed the "king's grave", it contained extraordinary objects, including an iron sword with an inlay of gold and coral.(Iron age finds in the Netherlands (http://home.versatel.nl/postbus/pics2.html))

In the centuries just before the arrival of the Romans, northern areas formerly occupied by the Elp culture emerged as the probably Germanic Harpstedt culture[12] while the southern parts were influenced by the Hallstatt culture and assimilated into the Celtic La Tène culture. The contemporary southern and western migration of Germanic groups and the northern expansion of the Hallstatt culture drew these peoples into each other's sphere of influence.[13] This is consistent with Caesar's account of the Rhine forming the boundary between Celtic and Germanic tribes.

Arrival of Germanic groups

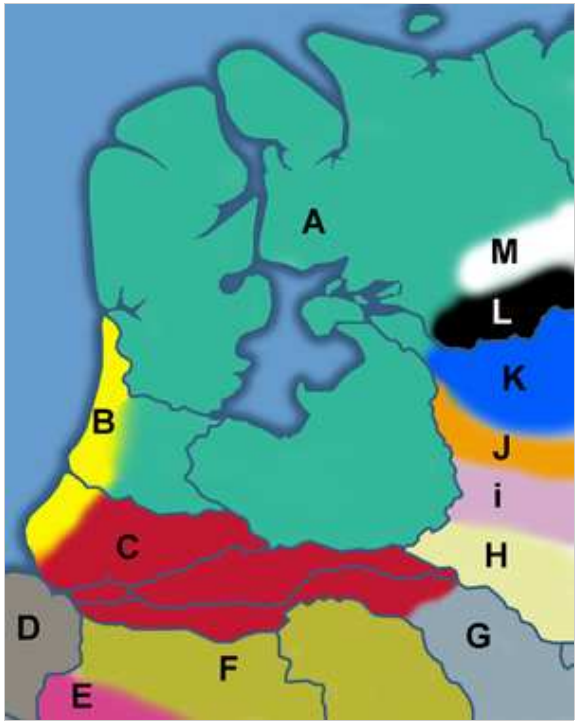
The Germanic tribes originally inhabited southern Scandinavia, Schleswig-Holstein and Hamburg,[14] but subsequent Iron Age cultures of the same region, like Wessenstedt (800 BC–600 BC) and Jastorf, are also in consideration.[15] A

Distribution of the primary Germanic groups ca. 1 AD.

deteriorating climate in Scandinavia around 850 BC to 760 BC and a later and more rapid one around 650 BC might have triggered migrations. Archeological evidence suggests around 750 BC a relatively uniform Germanic people from the Netherlands to the Vistula and southern Scandinavia.[14] In the west the coastal floodplains were populated for the first time, since in adjacent higher grounds the population had increased and the soil became exhausted.[16]

By the time this migration was complete, around 250 BC, a few general cultural and linguistic groupings are seen to have emerged.[17][18]

One grouping is today called the "North Sea Germanic", inhabiting the northern part of the Netherlands (north of the great rivers) and extending along the North Sea and into Jutland. This group is also sometimes referred to as the "Ingvaeones". Included in this group are the peoples who would later develop into, among others, the early Frisians and the early Saxons.[18]



A second grouping is now called the "Weser-Rhine Germanic" (or "Rhine-Weser Germanic"), extending along the middle Rhine and Weser and inhabiting the southern part of the Netherlands (south of the great rivers). This group, also sometimes referred to as the "Istvaeones", consisted of tribes that would eventually develop into the Salian Franks.[18]

Tribes

When the Romans arrived, various tribes were located in the area of the Netherlands, residing in the inhabitable higher parts, especially in the east and south. These tribes did not leave behind written records. All the information known about them during this pre-Roman period is based on what the Romans would later write about them.

The tribes shown in the map on the right:

- A. Frisii,
- B. Canninefates,
- C. Batavi,
- D. Marsac(i)i,
- E. Toxandri,
- F. Menapii,
- G. Ampsivarii,
- H. Chamavi,
- I. Sicambri,
- J. Bructeri,
- K. Tubantes,
- L. Usipetes, and
- M. Tencteri.

The suspected location of tribes in the Netherlands in the 1st century AD. The exact boundaries are unknown, however, and H through M in particular should not be considered exact representations.

Other tribal groups not shown on this map but associated with the Netherlands are:

- Chatti

- Chattuarii,
- Salii,
- Tungri, and
- Ubii.

Celts in the south

Diachronic distribution of Celtic peoples, showing expansion into the southern Netherlands:
core Hallstatt territory, by the 6th century BC
maximal Celtic expansion, by 275 BC
Lusitanian area of Iberia where Celtic presence is uncertain
the "six Celtic nations" which retained significant numbers of Celtic speakers into the Early Modern period
areas where Celtic languages remain widely spoken today

The Celtic culture had its origins in the central European Hallstatt culture (c. 800–450 BC), named for the rich grave finds in Hallstatt, Austria.[19] By the later La Tène period (c. 450 BC up to the Roman conquest), this Celtic culture had, whether by diffusion or migration, expanded over a wide range, including into the southern area of the Netherlands. This would have been the northern reach of the Gauls.

In March 2005 17 Celtic coins were found in Echt (Limburg). The silver coins, mixed with copper and gold, date from around 50 BC to 20 AD. In October 2008 a horde of 39 gold coins and 70 silver Celtic coins was found in the Amby area of Maastricht.[20] The gold coins were attributed to the Eburones people.[21] Celtic objects have also been found in the area of Zutphen.[22]

Although it is rare for hoards to be found, in past decades loose Celtic coins and other objects have been found throughout the central, eastern and southern part of the Netherlands. According to archaeologists these finds confirmed that at least the Maas river valley in the Netherlands was within the influence of the La Tène culture. Dutch archaeologists even speculate that Zutphen (which lies in the centre of the country) was a Celtic area before the Romans arrived, not a Germanic one at all.[22]

Scholars debate the actual extent of the Celtic influence.[16][23] The Celtic influence and contacts between Gaulish and early Germanic culture along the Rhine is assumed to be the source of a number of Celtic loanwords in Proto-Germanic.[*citation needed*] But according to Belgian linguist Luc van Durme, toponymic evidence of a former Celtic presence in the Low Countries is near to utterly absent.[24] Although there were Celts in the Netherlands, Iron Age innovations did not involve substantial Celtic intrusions and featured a local development from Bronze Age culture.[16]

The Nordwestblock theory

Some scholars (De Laet, Gysseling, Hachmann, Kossack & Kuhn) have speculated that a separate ethnic identity, neither Germanic nor Celtic, survived in the Netherlands until the Roman period. They see the Netherlands as having been part of an Iron Age "Nordwestblock" stretching from the Somme to the Weser.[25][26] Their view is that this culture, which had its own language, was being absorbed by the Celts to the south and the Germanic peoples from the east as late as the immediate pre-Roman perod.

Roman era (57 BC – 410 AD)

Main article: Romans in the Netherlands

During the Gallic Wars, the area south and west of the Rhine was conquered by Roman forces under Julius Caesar in a

series of campaigns from 57 BC to 53 BC.[26] The approximately 450 years of Roman rule that followed would profoundly change the Netherlands.

Starting about 15 BC, the Rhine in the Netherlands came to be defended by the Lower Limes Germanicus. After a series of military actions, the Rhine became fixed around 12 AD as Rome's northern frontier on the European mainland. A number of towns and developments would arise along this line. The area to the south would be integrated into the Roman Empire. At first part of Gallia Belgica, this area became part of the province of Germania Inferior. The tribes already within, or relocated to, this area became part of the Roman Empire. The area to the north of the Rhine, inhabited by the Frisii and the Chauci, remained outside Roman rule but not its presence and control.

Rhine Frontier of the Roman Empire around 70 AD.

Roman settlements in the Netherlands

1st century mask of a Roman cavalryman, found near Leiden (i.e. near the Roman settlement of Matilo

Romans built military forts along the Limes Germanicus and a number of towns and smaller settlements in the Netherlands. The more notable Roman towns were at Nijmegen (Ulpia Noviomagus Batavorum) and at Voorburg (Forum Hadriani).

Perhaps the most evocative Roman ruin is the mysterious Brittenburg, which emerged out of the sand at the beach in Katwijk several centuries ago, only to be buried again. These ruins were part of Lugdunum Batavorum.

Other Roman settlements, fortifications, temples and other structures have been found at Alphen aan de Rijn (Albaniana); Bodegraven; Cuijk; Elst, Overbetuwe; Ermelo; Esch; Heerlen; Houten; Kessel, North Brabant; Oss, i.e. De Lithse Ham near Maren-Kessel; Kesteren in Neder-Betuwe; Leiden (Matilo); Maastricht; Meinerswijk (now part of Arnhem); Tiel; Utrecht (Traiectum); Valkenburg (South Holland) (Praetorium Agrippinae); Vechten (Fectio) now part of Bunnik; Velsen; Vleuten; Wijk bij Duurstede (Levefanum); Woerden (Laurium or Laurum); and Zwammerdam (Nigrum Pullum).

Batavians

Main articles: Batavi (Germanic tribe) and Revolt of the Batavi

The Batavians are the most famous of the early Germanic tribes inhabiting the Netherlands during the Roman era. Since at least the 17th century the Dutch have identified with the rebellious Batavians, seeing in this tribe a precursor of their own historic struggle for freedom. Even today "Batavian" is a term sometimes used to describe the Dutch people. (This is similar to use of "Gallic" to describe the French and "Teutonic" to describe the Germans.)

About 38 BC a pro-Roman faction of the Chatti (a Germanic tribe located east of the Rhine) was settled by Agrippa in an area south of the Rhine, now thought to be the Betuwe area. They took on the name of the people already living there—the Batavians.[26] The relationship between the Romans and the Batavians was generally

Throughout Dutch history, but especially during the Eighty Years' War, the Batavians have been romantically portrayed as the heroic ancestors of the Dutch people. "The Batavians Defeating the Romans

quite good. Many Batavians even served in the Roman cavalry. The Batavians were regarded as loyal and courageous soldiers by the Romans[27] and fought in many important wars, for instance the conquest of Dacia (Romania) by the emperor Trajan. Batavian culture was influenced by the Romans, resulting among other things in Roman-style temples such as the one in Elst, dedicated to local gods. Trade between the Batavians and the Romans also flourished.

on the Rhine", ca.1613, by Otto van Veen.

The Conspiracy of Julius Civilis, 1661, by Rembrandt, depicts a Batavian oath to Gaius Julius Civilis, the head of the Batavian rebellion against the Romans in 69.

However, the Batavians rose against the Romans in the Batavian rebellion of 69 AD. The leader of this revolt was Batavian Gaius Julius Civilis. One of the causes of the rebellion was that the Romans had taken young Batavians as slaves. A number of Roman *castella* were attacked and burnt. Other Roman soldiers in Xanten and elsewhere and auxiliary troops of Batavians and Canninefatae in the legions of Vitellius) joined the revolt, thus splitting the northern part of the Roman army. In April 70 AD, a few legions sent by Vespasianus and commanded by Petilius Cerialis eventually defeated the Batavians and negotiated surrender with Gaius Julius Civilis somewhere between the Waal and the Maas near Noviomagus (Nijmegen), which was probably called "Batavodurum" by the Batavians.[28] The Batavians later merged with other tribes and became part of the Salian Franks.

Dutch writers in the 17th and 18th centuries saw the rebellion of the independent and freedom-loving Batavians as mirroring the Dutch revolt against Spain and other forms of tyranny. According to this nationalist view, the Batavians were the "true" forefathers of the Dutch, which explains the recurring use of the name over the centuries. Jakarta was named "Batavia" by the Dutch in 1619. The Dutch republic created in 1795 on the basis of French revolutionary principles was called the Batavian Republic.[29]

Emergence of the Franks

Map showing roughly the distribution of Salian Franks (in green) and Ripuarian Franks (in red) at the end of the Roman period.

Modern scholars of the Migration Period are in agreement that the Frankish identity emerged at the first half of the 3rd century out of various earlier, smaller Germanic groups, including the Salii, Sicambri, Chamavi, Bructeri, Chatti, Chattuarii, Ampsivarii, Tencteri, Ubii, Batavi and the Tungri, who inhabited the lower and middle Rhine valley between the Zuyder Zee and the river Lahn and extended eastwards as far as the Weser, but were the most densely settled around the IJssel and between the Lippe and the Sieg. The Frankish confederation probably began to coalesce in the 210s.[30]

The Franks eventually were divided into two groups: the Ripuarian Franks (Latin: Ripuari), who were the Franks that lived along the middle-Rhine River during the Roman Era, and the Salian Franks, who were the Franks that originated in the area of the Netherlands.

Franks appear in Roman texts as both allies and enemies (*laeti* and *deditícii*). By about 320, the Franks had the region of the Scheldt river (present day west Flanders and southwest Netherlands) under control, and were raiding the Channel, disrupting transportation to Britain. Roman forces pacified the region, but did not expel the Franks, who continued to be feared as pirates along the shores at least until the time of Julian the Apostate (358), when Salian Franks were granted to settle as *foederati* in Toxandria, according to Ammianus Marcellinus.[30]

Disappearance of the Frisii

Three factors contributed to the disappearance of the Frisii from the northern Netherlands. First, according to the *Panegyrici Latini* (Manuscript VIII), the ancient Frisii were forced to resettle within Roman territory as *laeti* (i.e., Roman-era serfs) in ca. 296.[31] This is the last reference to the ancient Frisii in the historical record. What happened to them, however, is suggested in the archaeological record. The discovery of a type of earthenware unique to 4th century Frisia, called *terp Tritzum*, shows that an unknown number of them were resettled in Flanders and Kent,[32] likely as *laeti* under Roman coercion. Second, the environment in the low-lying coastal regions of northwestern Europe began to deteriorate ca. 250 and gradually worsened over the next 200 years. Tectonic subsidence, a rising water table and storm surges combined to flood some areas with marine transgressions. The situation was aggravated by a shift to a cooler, wetter climate in the region. If there had been any Frisii left in Frisia, they would have fallen victim to the whims of nature.[33][34][35][36] Third, after the collapse of the Roman Empire, there was a decline in population as Roman activity stopped and Roman institutions withdrew. As a result of these three factors, the Frisii and Frisiaevones disappeared from the area. The coastal lands remained largely unpopulated for the next two centuries.[33][34][35][36]

Early Middle Ages (411–1000)

Frisians

Main articles: Frisian Kingdom and Dorestad

Map showing roughly the distribution of Franks and Frisians ca. 716 AD

As climatic conditions improved, there was another mass migration of Germanic peoples into the area from the east. This is known as the "Migration Period" (*Volksverhuizingen*). The northern Netherlands received an influx of new migrants and settlers, mostly Saxons, but also Angles and Jutes. Many of these migrants did not stay in the northern Netherlands but moved on to England and are known today as the Anglo-Saxons. The newcomers that stayed in the northern Netherlands would eventually be referred to as "Frisians", although they were not descended from the ancient Frisii. These new Frisians settled in the northern Netherlands and would become the ancestors of the modern Frisians.[37][38] (Because the early Frisians and Anglo-Saxons were formed from largely identical tribal confederacies, their respective languages were very similar. Old Frisian is the most closely related language to Old English[39] and the modern Frisian dialects are in turn the closest related languages to contemporary English.) By the end of the 6th century, the Frisian territory in the northern Netherlands had expanded west to the North Sea coast and, by the 7th century, south to Dorestad. During this period most of the northern Netherlands was known as Frisia. This extended Frisian territory is sometimes referred to as *Frisia Magna* (or Greater Frisia).

In the 7th century and 8th century, the Frankish chronologies mention this area as the kingdom of the Frisians. This kingdom comprised the coastal provinces of the Netherlands and the German North Sea coast. During this time, the Frisian language was spoken along the entire southern North Sea coast. The 7th century Frisian Kingdom (650–734) under King Aldegisel and King Redbad, had its centre of power in Utrecht.

Dorestad was the largest settlement (emporia) in northwestern Europe. It had grown around a former Roman fortress.

It was a large, flourishing trading place, three kilometers long and situated where the rivers Rhine and Lek diverge southeast of Utrecht near the modern town of Wijk bij Duurstede.[40][41] Although inland, it was a North Sea trading centre that primarily handled goods from the Middle Rhineland.[41][42] Wine was among the major products traded at Dorestad, likely from vineyards south of Mainz.[42] It was also widely known because of its mint. Between 600 and around 719 Dorestad was often fought over between the Frisians and the Franks.

Dorestad and main traderoutes

Franks

Main article: Franks

Expansion of the Franks from 481 to 870 AD.

When the Roman Empire collapsed, there were already Franks and other groups in the southern Netherlands on Roman soil.[30] In the 5th century Frankish rulers extended their territories to the south[43] until numerous small Frankish kingdoms existed, among them the ones in Cologne, Tournai, Le Mans and Cambrai. The kings of Tournai eventually came to subdue the other Frankish kings. By the 490s, Clovis I had conquered all the Frankish kingdoms to the west of the Meuse, including the Frankish territories in the southern Netherlands. He continued his conquests into Gaul.

After the death of Clovis I in 511, his four sons partitioned his kingdom amongst themselves, with Theuderic I receiving the lands that were to become Austrasia (including the southern Netherlands). A line of kings descended from Theuderic ruled Austrasia until 555, when it was united with the other Frankish kingdoms of Chlothar I, who inherited all the Frankish realms by 558. He redivided the Frankish territory amongst his four sons, but the four kingdoms coalesced into three on the death of Charibert I in 567. Austrasia (including the southern Netherlands) was given to Sigebert I. The southern Netherlands remained the northern part of Austrasia until the rise of the Carolingians.

The Franks who expanded south into Gaul settled there and eventually adopted the Vulgar Latin of the local population.[18] During this expansion to the south, many Frankish people remained in the north (i.e. southern Netherlands, Flanders and a small part of northern France). A widening cultural divide grew between them and the rulers far to the south.[43] They continued to reside in their original homeland and the area directly to the south and to speak their original language, Old Frankish, which by the 9th century had evolved into Old Dutch.[18] A Dutch-French language boundary came into existence (but this was south of where it is today).[18][43] In the Maas and Rhine areas of the Netherlands, the Franks had political and trading centres, especially at Nijmegen and Maastricht.[43] These Franks remained in contact with the Frisians to the north, especially in places like Dorestad and Utrecht.

Modern doubts about the traditional Frisian, Frank and Saxon distinction

In the late 19th century, Dutch historians believed that the Franks, Frisians, and Saxons were the original ancestors of the Dutch people. Some went further by ascribing certain attributes, values and strengths to these various groups and proposing that they reflected 19th century nationalist and religious views. In particular, it was believed that this theory explained why Belgium and the southern Netherlands (i.e. the Franks) had become Catholic and the northern Netherlands (Frisians and Saxons) had become Protestant. The success of this theory was partly due to anthropological theories based on a tribal paradigm. Being politically and geographically inclusive, and yet accounting for diversity, this theory was in accordance with the need for nation-building and integration during the 1890–1914 period. The theory was taught in Dutch schools.

However, the disadvantages of this historical interpretation became apparent. This tribal-based theory suggested that external borders were weak or non-existent and that there were clear-cut internal borders. This origins myth provided an historical premise, especially during the Second World War, for regional separatism and annexation to Germany. After 1945 the tribal paradigm lost its appeal for anthropological scholars and historians. When the accuracy of the three-tribe theme was fundamentally questioned, the theory fell out of favour.[29]

Due to the scarcity of written sources, knowledge of this period depends to a large degree on the interpretation of archaeological data. The traditional view of a clear-cut division between Frisians in the north, Franks in the south and Saxons in the east has proven historically problematic.[44][45][46] Archeological evidence suggests dramatically different models for different regions, with demographic continuity for some parts of the country and depopulation and possible replacement in other parts, notably the coastal areas of Frisia and Holland.[47]

Saint Willibrord, Anglo-Saxon missionary from Northumberland, Apostle to the Frisians, first bishop of Utrecht.

The emergence of the Dutch language

Main articles: Old Dutch, Old Frisian, and Dutch Low Saxon

The language from which Old Dutch (also sometimes called Old West Low Franconian) arose is not known with certainty, but it is thought to be Old Frankish, the language spoken by the Salian Franks. Even though the Franks are traditionally categorized as Weser-Rhine Germanic, Dutch has a number of Ingvaeonic characteristics and is classified by modern linguists as an Ingvaeonic language. Dutch also has a number of Old Saxon characteristics. There was a close relationship between Old Frankish, Old Saxon, Old English and Old Frisian. Because Old Frankish texts are almost non-existent and Old Dutch texts scarce and fragmentary, it is difficult to determine when the transition from Old Frankish to Old Dutch occurred, but it is thought to have happened by the end of the 9th century AD. and perhaps occurred before then. Old Dutch made the transition to Middle Dutch around 1150.[18]

Christianisation

The Christianity that arrived in the Netherlands with the Romans appears not to have died out completely (in Maastricht, at least) after the withdrawal of the Romans.[43]

The Franks became Christians after their king Clovis I converted to Catholicism, an event which is traditionally set in 496. Christianity was introduced in the north after the conquest of Friesland by the Franks. The Saxons in the east were converted before the conquest of Saxony, and became Frankish allies.

Hiberno-Scottish and Anglo-Saxon missionaries, particularly Willibrord, Wulfram and Boniface, played an important role in converting the Frankish and Frisian peoples to Christianity by the 8th century. Boniface was martyred by the Frisians in Dokkum (754).

Frankish dominance and incorporation into Holy Roman Empire

Main article: Frisian-Frankish Wars

In the early 8th century the Frisians came increasingly into conflict with the Franks to the south, resulting in a series of wars in which the Frankish Empire eventually subjugated Frisia. In 734, at the Battle of the Boarn, the Frisians in the Netherlands were defeated by the Franks, who thereby conquered the area west of the Lauwers. The Franks then

An early 16th century tapestry depicting the near baptism of Redbad, King of the Frisians, who died in 719.

conquered the area east of the Lauwers in 785 when Charlemagne defeated Widukind.

The linguistic descendants of the Franks, the modern Dutch-speakers of the Netherlands and Flanders, seem to have broken with the endonym "Frank" around the 9th century. By this time Frankish identity had changed from an ethnic identity to a national identity, becoming localized and confined to the modern *Franconia* and principally to the French province of *Île-de-France*.[48]

Although the people no longer referred to themselves as "Franks", the Netherlands was still part of the Frankish empire of Charlemagne. Indeed, because of the Austrasian origins of the Carolingians in the area between the Rhine and the Maas, the cities of Aachen, Maastricht, Liege and Nijmegen were at the heart of Carolingian culture.[43] Charlemagne maintained his *palatium* in Nijmegen at least four times.

The Carolingian empire would eventually include France, Germany, northern Italy and much of Western Europe. In 843, the Frankish empire was divided into three parts, giving rise to West Francia in the west, East Francia in the east, and Middle Francia in the centre. Most of what is today the Netherlands became part of Middle Francia; Flanders became part of West Francia. This division was an important factor in the historical distinction between Flanders and the other Dutch-speaking areas.

Middle Francia (Latin: *Francia media*) was an ephemeral Frankish kingdom that had no historical or ethnic identity to bind its varied peoples. It was created by the Treaty of Verdun in 843, which divided the Carolingian Empire among the sons of Louis the Pious. Situated between the realms of East and West Francia, Middle Francia comprised the Frankish territory between the rivers Rhine and Scheldt, the Frisian coast of the North Sea, the former Kingdom of Burgundy (except for a western portion, later known as *Bourgogne*), Provence and the Kingdom of Italy.

Middle Francia fell to Lothair I, the eldest son and successor of Louis the Pious, after an intermittent civil war with his younger brothers Louis the German and Charles the Bald. In acknowledgement of Lothair's Imperial title, Middle Francia contained the imperial cities of Aachen, the residence of Charlemagne, as well as Rome. In 855, on his deathbed at Prüm Abbey, Emperor Lothair I again partitioned his realm amongst his sons. Most of the lands north of the Alps, including the Netherlands, passed to Lothair II and consecutively were named Lotharingia. After Lothair II died in 869, Lotharingia was partitioned by his uncles Louis the German and Charles the Bald in the Treaty of Meerssen in 870. Although some of the Netherlands had come under Viking control, in 870 it technically became part of East Francia, which became the Holy Roman Empire in 962.

Viking raids

In the 9th and 10th centuries the Vikings raided the largely defenceless Frisian and Frankish towns laying on the coast and along the rivers of the Low Countries. Although Vikings never settled in large numbers in these areas, they did set up long-term bases and were even acknowledged as lords in a few cases. In Dutch and Frisian historical tradition the trading centre of Dorestad declined after Viking raids from 834 to 863; however, since no convincing Viking archaeological evidence has been found at the site (as of 2007), doubts about this have grown in recent years.[49]

One of the most important Viking families in the Low Countries was that of Rorik of Dorestad (based in Wieringen) and his brother the "younger Harald" (based in Walcheren), both thought to be nephews of Harald Klak.[50] Around 850 Lothair I acknowledged Rorik as ruler of most of Friesland. And again in 870 Rorik was received by Charles the Bald in Nijmegen, to whom he became a vassal. Viking raids continued during this period. Harald’s son Rodulf and his men were killed by the people of Oostergo in 873. Rorik died sometime before 882.

Buried Viking treasures consisting mainly of silver have been found in the Low Countries. Two such treasures have been found in Wieringen. A large treasure found in Wieringen in 1996 dates from around 850 and is thought perhaps to have been connected to Rorik. The burial of such a valuable treasure is seen as an indication that there was a permanent settlement in Wieringen.[51]

Around 879 Godfrid arrived in Frisian lands as the head of a large force that terrorised the Low Countries. Using Ghent as his base, they ravaged Ghent, Maastricht, Liège, Stavelot, Prüm, Cologne, and Koblenz. Controlling most of Frisia between 882 and his death in 885, Godfrid became known to history as Godfrid, Duke of Frisia. His lordship over Frisia was acknowledged by Charles the Fat, to whom he became a vassal. Godfried was assassinated in 885, after which Gerolf of Holland assumed lordship and Viking rule of Frisia came to an end.

Viking raids of the Low Countries continued for over a century. Remains of Viking attacks dating from 880 to 890 have been found in Zutphen and Deventer. In 920 King Henry of Germany liberated Utrecht. According to a number of chronicles, the last attacks took place in the first decade of the 11th century and were directed at Tiel and/or Utrecht.[52]

These Viking raids occurred about the same time that French and German lords were fighting for supremacy over the middle empire that included the Netherlands, so their sway over this area was weak. Resistance to the Vikings, if any, came from local nobles, who gained in stature as a result.

Rorik of Dorestad, Viking conqueror and ruler of Friesland, a romantic 1912 depiction by Hermanus W. Koekkoek.

High Middle Ages (1000–1432)

Part of the Holy Roman Empire

The German kings and emperors ruled the Netherlands in the 10th and 11th century. Germany was called the Holy Roman Empire after the coronation of King Otto the Great as emperor. The Dutch city of Nijmegen used to be the spot of an important domain of the German emperors. Several German emperors were born and died there. (Byzantine empress Theophanu died in Nijmegen for instance.) Utrecht was also an important city and trading port at the time.

Political disunity

The Holy Roman Empire was not able to maintain political unity. In addition to the growing independence of the towns, local rulers turned their counties and duchies into private kingdoms and felt little sense of obligation to the emperor who governed over large parts of the nation in name only. Large parts of what now comprise the Netherlands were governed by the Count of Holland, the Duke of Gelre, the Duke of Brabant and the Bishop of Utrecht. Friesland and Groningen in the north maintained their independence and were governed by the lower nobility.

The various feudal states were in a state of almost continual war. Gelre and Holland fought for control of Utrecht. Utrecht, whose bishop had in 1000 ruled over half of what is today the Netherlands, was marginalised as it experienced continuing difficulty in electing new bishops. At the same time, the dynasties of neighbouring states were more stable. Groningen, Drenthe and most of Gelre, which used to be part of Utrecht, became independent. Brabant tried to conquer its neighbours, but was not successful. Holland also tried to assert itself in Zeeland and Friesland, but

its attempts failed.

The Frisians

The language and culture of most of the people who lived in the area that is now Holland were originally Frisian. The sparsely populated area was known as "West Friesland" (*Westfriesland*). As Frankish settlement progressed, the Frisians migrated away or were absorbed and the area quickly became Dutch. (The part of North Holland situated north of the 'IJ' is still colloquially known as West Friesland).

The rest of Friesland in the north continued to maintain its independence during this time. It had its own institutions (collectively called the "Frisian freedom") and resented the imposition of the feudal system and the patriciate found in other European towns. They regarded themselves as allies of Switzerland. The Frisian battle cry was "better dead than a slave". They later lost their independence when they were defeated in 1498 by the German Landsknecht mercenaries of Duke Albrecht of Saxony-Meissen.

Chapel of St Nicholas (Sint Nicolaaskapel or Valkhofkapel) in Nijmegen, dating from ca. 975, the oldest building in the Netherlands.

The rise of Holland

Dirk VI, Count of Holland, 1114-1157, and his mother Petronella visiting the work on the Egmond Abbey, Charles Rochussen, 1881. The sculpture is the Egmond Tympanum (http://commons.wikimedia.org/wiki/File:Egmond_tympanum.jpg) , depicting the two visitors on either side of St Peter

The center of power in these emerging independent territories was in the County of Holland. Originally granted as a fief to the Danish chieftain Rorik in return for loyalty to the emperor in 862, the region of Kennemara (the region around modern Haarlem) rapidly grew under Rorik's descendants in size and importance. By the early 11th century AD, Dirk III, Count of Holland was levying tolls on the Meuse estuary and was able to resist military intervention from his overlord, the Duke of Lower Lorraine. In 1083, the name "Holland" first appears in a deed referring to a region corresponding more or less to the current province of South Holland and the southern half of what is now North Holland. Holland's influence continued to grow over the next two centuries. The counts of Holland conquered most of Zeeland but it was not until 1289 that Count Floris V was able to subjugate the Frisians in West Friesland (that is, the northern half of North Holland).

Expansion and growth

Around 1000 AD there were several agricultural developments (described sometimes as an agricultural revolution) that resulted in an increase in production, especially food production. The economy started to develop at a fast pace, and the higher productivity allowed workers to farm more land or to become tradesmen.

Much of the western Netherlands was barely inhabited between the end of the Roman period until around 1100 AD, farmers from Flanders and Utrecht began purchasing the swampy land, draining it and cultivating it. This process happened quickly and the uninhabited territory was settled in only a few generations. They built independent farms that were not part of villages, something unique in Europe at the time.

Two wings of an altar piece, ca. 1500, depicting the St Elizabeth Flood of 18–19 November 1421, with Dordrecht at the front left.

Guilds were established and markets developed as production exceeded local needs. Also, the introduction of currency made trading a much easier affair than it had been before. Existing towns grew and new towns sprang into existence around monasteries and castles, and a mercantile middle class began to develop in these urban areas. Commerce and town development increased as the population grew.

The Crusades were popular in the Low Countries and drew many to fight in the Holy Land. At home, there was relative peace. Viking pillaging had stopped. Both the Crusades and the relative peace at home contributed to trade and the growth in commerce.

Cities arose and flourished, especially in Flanders and Brabant. As the cities grew in wealth and power, they started to buy certain privileges for themselves from the sovereign, including city rights, the right to self-government and the right to pass laws. In practice, this meant that the wealthiest cities became quasi-independent republics in their own right. Two of the most important cities were Brugge and Antwerp (in Flanders) which would later develop into some of the most important cities and ports in Europe.

Hook and Cod Wars

Main article: Hook and Cod wars

Jacqueline, Countess of Hainaut, 1401-1436, known to the Dutch as "Jacoba of Bavaria"

The Hook and Cod Wars (Dutch: *Hoekse en Kabeljauwse twisten*) were a series of wars and battles in the County of Holland between 1350 and 1490. Most of these wars were fought over the title of count of Holland, but some have argued that the underlying reason was because of the power struggle of the bourgeois in the cities against the ruling nobility.

The Cod faction generally consisted of the more progressive cities of Holland. The Hook faction consisted for a large part of the conservative noblemen. Some of the main figures in this multi-generational conflict were William IV, Margaret, William V, William VI, Count of Holland and Hainaut, John and Philip the Good, Duke of Burgundy. But perhaps the most well known is Jacqueline, Countess of Hainaut.

The conquest of the county of Holland by the Duke Philip the Good of Burgundy was an odd affair. Leading noblemen in Holland invited the duke to conquer Holland, even though he had no historical claim to it. Some historians say that the ruling class in Holland wanted Holland to integrate with the Flemish economic system and adopt Flemish legal institutions. Europe had been wracked by many civil wars in the 14th and 15th centuries, while Flanders had grown rich and enjoyed peace.

Burgundian and Habsburg period (1433–1567)

Burgundian period

Main article: Burgundian Netherlands

Most of what is now the Netherlands and Belgium was eventually united by the Duke of Burgundy in 1433. Before the

The Low Countries in the late 14th century

Burgundian union, the Dutch identified themselves by the town they lived in, their local duchy or county or as subjects of the Holy Roman Empire. The Burgundian period is when the Dutch began the road to nationhood.

Holland's trade developed rapidly, especially in the areas of shipping and transport. The new rulers defended Dutch trading interests. The fleets of Holland defeated the fleets of the Hanseatic League several times. Amsterdam grew and in the 15th century became the primary trading port in Europe for grain from the Baltic region. Amsterdam distributed grain to the major cities of Belgium, Northern France and England. This trade was vital to the people of Holland, because Holland could no longer produce enough grain to feed itself. Land drainage had caused the peat of the former wetlands to reduce to a level that was too low for drainage to be maintained.

Habsburg rule from Spain

Main article: Charles V, Holy Roman Emperor

Influential Utrecht theologian Adriaan Florenszoon Boeyens, 1459-1523, was Pope Adrian VI in 1522 and 1523.

Charles V was born in the Flemish city of Ghent in 1500. The culture and courtly life of the Burgundian Low Countries were an important influence in his early life. He was tutored by William de Croÿ (who would later become his first prime minister), and also by Adrian of Utrecht (later Pope Adrian VI). In 1506, Charles inherited his father's Burgundian territories. In this way the Netherlands became part of the Spanish Empire ruled by the Habsburgs. Charles would become the most powerful man in Europe, his sprawling empire being controlled from Seville. The Low Countries held an important place in the Holy Roman Empire. Because of trade and industry and the wealth of the cities, they also represented an important income for the treasury.

Charles extended the Burgundian territory with the annexation of Tournai, Artois, Utrecht, Groningen and Guelders. The Seventeen Provinces had been unified by Charles's Burgundian ancestors, but nominally were fiefs of either France or the Holy Roman Empire. When he was a minor, his aunt Margaret acted as regent until 1515 and soon she found herself at war with France over the question of Charles's requirement to pay homage to the French king for Flanders, as his father had done. The outcome was that France relinquished its ancient claim on Flanders in 1528.

In 1548, eight years before his abdication, Charles granted the Seventeen Provinces of the Netherlands status as an entity separate from both the Holy Roman Empire and from France with the Transaction of Augsburg. It was not full independence, but it allowed significant autonomy. In the Pragmatic Sanction of 1549 it was stated that the Seventeen Provinces could only be passed on to his heirs as a united entity.[53]

From 1515 to 1523, Charles's government in the Netherlands had to contend with the rebellion of Frisian peasants (led by Pier Gerlofs Donia and Wijard Jelckama). Gelre attempted to build up its own state in northeast Netherlands and northwest Germany. Lacking funds in the 16th century, Gelre had its soldiers provide for themselves by pillaging enemy terrain. These soldiers were a great menace to the Burgundian Netherlands. One notorious event was the pillaging of The Hague.

Desiderius Erasmus, 1466-1536, Rotterdam Renaissance humanist, Catholic priest and theologian, by Hans Holbein the Younger, 1523.

Charles was succeeded by his son Philip II of Spain. Unlike his father, who had been raised in Ghent (Belgium), Philip had little personal attachment to the Low Countries (where he had only stayed for four years), and thus was perceived as detached by the local nobility. When Philip left the Netherlands on 7 August 1559, he appointed Margaret, Duchess of Parma as the governor of the Netherlands in his place.[54] Margaret was the illegitimate daughter of Charles V and Johanna Marie van der Gheynst.[55] Being appointed governor-general to the Netherlands was nothing new to her family. Both Margaret's great-aunt, Archduchess Margaret of Austria and Margaret's aunt Marie of Austria had served in the post of governor general of the Netherlands—serving from 1507 to 1530 and from 1530 to 1555, respectively.

The Reformation

The Protestant Reformation, which greatly influenced the history of the Netherlands, especially in western and northern areas of the country, started in the 16th century. The first wave of Reformation, initiated by Martin Luther, did not come to the Netherlands.

Title page of the 1637 Statenvertaling, the first Bible translated from the original Hebrew and Greek into Dutch, commissioned by the Synod of Dort, used well into the 20th c.

The second wave of the Protestant Reformation, Anabaptism, became very popular in the counties of Holland and Friesland. Anabaptists were very radical and believed that the apocalypse was very near. They refused to live the old way, and began new communities, creating considerable chaos. A prominent Dutch anabaptist was Menno Simons, who initiated the Mennonite church. Another Anabaptist, Jantje van Leyden became the ruler of a newly founded city, New Jerusalem. Anabaptists survived throughout the centuries and they were recognized by the States-General of the Netherlands in 1578. Institutionalized Dutch baptism stood for a model for both English and American Baptists.

The third wave of the Reformation, Calvinism, arrived in the Netherlands in the 1560s, converting both parts of the elite and the common population, mostly in Flanders. The Spanish government, under Philip II started harsh persecution campaigns, supported by the Spanish inquisition. In reaction to this persecution, Calvinists rebelled. First there was the Beeldenstorm in 1566, which involved the destruction of religious depictions in Churches. Also in 1566 William the Silent, a convert to Calvinism, started the Eighty Years' War to liberate the Calvinist Dutch from the Catholic Spaniards. The counties of Holland and Zeeland were conquered by Calvinists in 1572. A considerable number of people were Calvinist in Holland and Zeeland at that time already, while the other states remained almost entirely Catholic.

Prelude to war

The Netherlands was a valuable part of the Spanish Empire, especially after the Treaty of Cateau-Cambresis of 1559. This treaty ended a forty-year period of warfare between France and Spain conducted in Italy from 1521 to 1559.[56] The Treaty of Cateau-Cambresis was somewhat of a watershed—not only for the battleground that Italy had been, but also for northern Europe. Spain had been keeping troops in the Netherlands to be ready to attack France from the north as well as from the south.

1595 painting by Isaac van Swanenburg illustrating Leiden textile workers

With the settlement of so many major issues between France and Spain by the Treaty of Cateau-Cambresis, there was no longer any reason to keep Spanish troops in the Netherlands. Thus, the people of the Netherlands could get on with their peacetime pursuits. As they did so they found that there was a great deal of demand for their products. Fishing had long been an important part of the economy of the Netherlands.[54] However, now the fishing of herring alone came to occupy 2,000 boats operating out of Dutch ports.[54] Spain, still the Dutch trader's best customer, was buying fifty (50) large ships full of furniture and household utensils from Flanders merchants.[54]

Additionally, Dutch woolen goods were desired everywhere. The Netherlands bought and processed enough Spanish wool to sell four million florins of wool products through merchants in Bruges.[54] So strong was the Dutch appetite for raw wool at this time that they bought nearly as much English wool as they did Spanish wool.[54] Total commerce with England alone amounted to 24 million florins. Much of the export going to England resulted in pure profit to the Dutch because the exported items were of their own manufacture.[54] The Netherlands was just starting to enter its "Golden Age." Brabant and Flanders were the richest and most flourishing parts of the Dutch Republic at the time.[54] No wonder then that Spain could not let this very valuable property go off on its own while not sharing its wealth with the mother country. However, the economic issues tended to be cloaked in religious rhetoric.

A devout Catholic, Philip was appalled by the success of the Reformation in the Low Countries, which had led to an increasing number of Calvinists. His attempts to enforce religious persecution of the Protestants and his endeavours to centralise government, justice and taxes made him unpopular and led to a revolt. Fernando Alvarez de Toledo, Duke of Alba, was sent with a Spanish Army to punish the unruly Dutch.[55] Alba began his march across the Netherlands on May 5, 1567.[54]

William I, Prince of Orange, called William the Silent

The only opposition the Duke of Alba faced in his march across the Netherlands were the nobles, Lamoral, Count of Egmont; Philippe de Montmorency, Count of Horn and others. With the approach of Alba and the Spanish army, William the Silent of Orange fled to Germany with his three brothers and his whole family on April 11, 1567.[54] On July 26 & 27, 1567 the Duke of Alba sent a letter to the nobles that now faced him with armies.[55] In the letter, Alba expressed the desire to meet with the nobles in Brussels on September 9, 1567 and negotiate their differences, peacefully.[55] However, when the nobles arrived in Brussels they were all arrested.[54] Egmont and Horn were transported to the prison fortress in Ghent.[54] On 5 June 1568, Egmont and Horn were executed in the grand square of Brussels.[55] Alba then revoked all the prior treaties that Margaret, the Duchess of Parma had signed with the Protestants of the Netherlands and instituted the Inquisition to enforce the decrees of the Council of Trent.

The Eighty Years' War (1568–1648)

Main articles: Eighty Years' War and Dutch Revolt

The Dutch War for Independence from Spain is frequently called the Eighty Years' War (1568–1648). However, only the first fifty years (1568 through 1618) were uniquely a war between Spain and the Netherlands. During the last thirty years (1618–1648) the conflict between Spain and the Netherlands was submerged in the general European War that

became known as the Thirty Years War.[57] The seven rebellious provinces of the Netherlands were eventually united by the Union of Utrecht in 1579 and formed the Republic of the Seven United Netherlands (also known as the "United Provinces"). The Act of Abjuration or *Plakkaat van Verlatinghe* was signed on 26 July 1581, and was the formal declaration of independence of the northern Low Countries from the Spanish king.

Prince Maurits at the Battle of Nieuwpoort, 2 July 1600, by Paulus van Hillegaert, ca. 1621-1630

.

William of Orange (Slot Dillenburg, 24 April 1533 – Delft, 10 July 1584), the founder of the Dutch royal family, led the Dutch during the first part of the war, following the death of Egmont and Horn in 1568. The very first years were a success for the Spanish troops. However, the Dutch countered subsequent sieges in Holland. The Spanish king lost control of the Netherlands after the sack of Antwerp by mutinous Spanish soldiers killing 10,000 inhabitants.[55] The conservative Catholics in the south and east supported the Spanish. The Spanish recaptured Antwerp and other Flemish and Dutch cities. Most of the territory in the Netherlands was recaptured, but not in Flanders, leading to the historical split between the Netherlands and Flanders. Flanders was the most radical anti-Spanish territory. Many Flemish fled to Holland, among them half of the population of Antwerp, 3/4 of Bruges and Ghent and the entire population of Nieuwpoort, Dunkerque and countryside. The war dragged on for another 60 years, but the main fighting was over. The Peace of Westphalia, signed on 30 January 1648, confirmed the independence of the United Provinces from Spain and Germany. The Dutch didn't regard themselves as Germans any more since the 15th century, but they officially remained a part of the Holy Roman Empire until 1648. National identity was mainly formed by the province people came from. Holland was the most important province by far. The republic of the Seven Provinces came to be known as Holland in foreign countries.

These events formed part of a wider turmoil. See Spanish Armada for a view of some of the history from further west.

Golden Age

Main articles: Dutch Golden Age, Dutch Empire, and Economic history of the Netherlands (1500–1815)

During the Eighty Years' War the Dutch provinces became the most important trading centre of Northern Europe, replacing Flanders in this respect. During the Golden Age, there was a great flowering of trade, industry, the arts and the sciences in the Netherlands. In the 17th and 18th centuries, the Dutch were arguably the most economically wealthy and scientifically advanced of all European nations. This new, officially Calvinist nation flourished culturally and economically, creating what historian Simon Schama has called an "embarrassment of riches".[58] Speculation in the tulip trade led to a first stock market crash in 1637, but the economic crisis was soon overcome. Due to these developments the 17th century has been dubbed the Golden Age of the Netherlands.

Map of Dutch Republic by Joannes Janssonius

The invention[59] of the sawmill enabled the construction of a massive fleet of ships for worldwide trading and for defence of the republic's economic interests by military means. National industries such as shipyards and sugar refineries expanded as well.

The Anatomy Lesson of Dr. Nicolaes Tulp, by Rembrandt van Rijn, 1632

The Dutch, traditionally able seafarers and keen mapmakers,[60] obtained an increasingly dominant position world trade, a position which before had been occupied by the Portuguese and Spaniards. In 1602 the Dutch East India Company (Dutch: *Verenigde Oostindische Compagnie* or *VOC*) was founded. It was the first-ever multinational corporation, financed by shares that established the first modern stock exchange. It became the world's largest commercial enterprise of the 17th century. To finance the growing trade within the region, the Bank of Amsterdam was established in 1609, the precursor to, if not the first true central bank.[61]

Dutch ships hunted whales off Svalbard, traded spices in India and Indonesia (via the Dutch East India Company) and founded colonies in New Amsterdam (now New York), South Africa and the West Indies. In addition some Portuguese colonies were conquered, namely in Northeastern Brazil, Angola, Indonesia and Ceylon. In 1640 by the Dutch East India Company began a trade monopoly with Japan through the trading post on Dejima.

The Dutch also dominated trade between European countries. The Low Countries were favorably positioned on a crossing of east-west and north-south trade routes and connected to a large German hinterland through the Rhine river. Dutch traders shipped wine from France and Portugal to the Baltic lands and returned with grain destined for countries around the Mediterranean Sea. By the 1680s, an average of nearly 1000 Dutch ships entered the Baltic Sea each year.[62] The Dutch were able to gain control of much of the trade with the nascent English colonies in North America and following the end of war with Spain in 1648, Dutch trade with that country also flourished.

Antonie van Leeuwenhoek

Renaissance Humanism, of which Desiderius Erasmus (c. 1466–1536) was an important advocate, had also gained a firm foothold and was partially responsible for a climate of tolerance. Overall, levels of tolerance were sufficiently high to attract religious refugees from other countries, notably Jewish merchants from Portugal who brought much wealth with them. The revocation of the Edict of Nantes in France in 1685 resulted in the immigration of many French Huguenots, many of whom were shopkeepers or scientists. Still tolerance had its limits, as philosopher Baruch de Spinoza (1632–1677) would find out. Due to its climate of intellectual tolerance the Dutch Republic attracted scientists and other thinkers from all over Europe. Especially the renowned University of Leiden (established in 1575 by the Dutch stadtholder, William of Oranje, as a token of gratitude for Leiden's fierce resistance against Spain during the Eighty Years War) became a gathering place for these people. For instance French philosopher René Descartes lived in Leiden from 1628 until 1649.

Dutch lawyers were famous for their knowledge of international law of the sea and commercial law. Hugo Grotius (1583–1645) played a leading part in the foundation of international law. Again due to the Dutch climate of tolerance, book publishers flourished. Many books about religion, philosophy and science that might have been deemed controversial abroad were printed in the Netherlands and secretly exported to other countries. Thus during the 17th Century the Dutch Republic became more and more Europe's publishing house.

Christiaan Huygens (1629–1695) was a famous astronomer, physicist and mathematician. He invented the pendulum clock, which was a major step forward towards exact timekeeping. He contributed to the fields of optics. The most famous Dutch scientist in the area of optics is certainly Anton van Leeuwenhoek, who invented or greatly improved the microscope (opinions differ) and was the first to methodically study microscopic life, thus laying the foundations

Johannes Vermeer's Girl with a Pearl Earring

for the field of microbiology. Famous Dutch hydraulic engineer Jan Leeghwater (1575–1650) gained important victories in The Netherlands's eternal battle against the sea. Leeghwater added a considerable amount of land to the republic by converting several large lakes into polders, pumping all water out with windmills.

Painting was the dominant art form in 17th century Holland. Dutch Golden Age painting followed many of the tendencies that dominated Baroque art in other parts of Europe, such as Caravaggesque and naturalism, but was the leader in developing the subjects of still life, landscape, and genre painting. Portraiture were also popular, but History painting — traditionally the most-elevated genre struggled to find buyers. Church art was virtually non-existent, and little sculpture of any kind produced. While art collecting and painting for the open market was also common elsewhere, art historians point to the growing number of wealthy Dutch middle-class and successful mercantile patrons as driving forces in the popularity of certain pictorial subjects.[63] Today, the best-known painters of the Dutch Golden Age are the period's most dominant figure Rembrandt, the Delft master of genre Johannes Vermeer, the innovative landscape painter Jacob van Ruisdael, and Frans Hals, who infused new life into portraiture. Some notable artistic styles and trends include Haarlem Mannerism, Utrecht Caravaggism, the School of Delft, the Leiden fijnschilders, and Dutch classicism.

Due to the thriving economy, cities expanded greatly. New town halls, weighhouses and storehouses were built. Merchants that had gained a fortune ordered a new house built along one of the many new canals that were dug out in and around many cities (for defence and transport purposes), a house with an ornamented façade that befitted their new status. In the countryside, many new castles and stately homes were built. Most of them have not survived. Starting at 1595 Reformed churches were commissioned, many of which are still landmarks today. The most famous Dutch architects of the 17th century were Jacob van Campen, Pieter Post, Pieter Vingbooms, Lieven de Key, Hendrick de Keyser. Overall, Dutch architecture, which generally combined traditional building styles with some foreign elements, did not develop to the level of painting.

The Dutch Classicist Mauritshuis, named after Prince Johan Maurits and built 1636-1641, was designed by Jacob van Campen and Pieter Post.

The Golden Age was also an important time for developments in literature. Some of the major figures of this period were Gerbrand Adriaenszoon Bredero, Jacob Cats, Pieter Corneliszoon Hooft and Joost van den Vondel. Since Latin was the lingua franca of education, relatively few men could speak, write, and read Dutch all at the same time.

Music did not develop very much in the Netherlands since the Calvinists considered it an unnecessary extravagance, and organ music was forbidden in Reformed Church services, although it remained common at secular functions.

The Dutch in the Americas

Main articles: Dutch West India Company , New Netherland, and New Amsterdam

The *Dutch West India Company* was a chartered company (known as the "GWC") of Dutch merchants. On 2 June 1621, it was granted a charter for a trade monopoly in the West Indies (meaning the Caribbean) by the Republic of the

New Amsterdam in 1664

Seven United Netherlands and given jurisdiction over the African slave trade, Brazil, the Caribbean, and North America. The area where the company could operate consisted of West Africa (between the Tropic of Cancer and the Cape of Good Hope) and the Americas, which included the Pacific Ocean and the eastern part of New Guinea. The intended purpose of the charter was to eliminate competition, particularly Spanish or Portuguese, between the various trading posts established by the merchants. The company became instrumental in the Dutch colonization of the Americas.

Dutch trading posts and plantations in the Americas precede the much wider known colonisation activities of the Dutch in Asia. The first forts and settlements on the Essequibo River in Guyana and on the Amazon date from the 1590s. Actual colonization, with Dutch settling in the new lands, was not as common as with other European nations. Many of the Dutch settlements were lost or abandoned by the end of that century, but the Netherlands managed to retain possession of Suriname and a number of Dutch Caribbean islands.

New Netherland, or *Nieuw-Nederland* in Dutch, was the 17th-century colonial province of the Republic of the Seven United Netherlands on the East Coast of North America. The claimed territories were the lands from the Delmarva Peninsula to extreme southwestern Cape Cod. The settled areas are now part of the Mid-Atlantic States of New York, New Jersey, Delaware, and Connecticut, with small outposts in Pennsylvania and Rhode Island. The provincial capital, New Amsterdam, was located at the southern tip of the island of Manhattan on upper New York Bay.

Peter Stuyvesant, Director-General of New Netherland, unknown painter (attributed to Hendrick Couturier), ca. 1660

The colony was conceived as a private business venture to exploit the North American fur trade. New Netherland was slowly settled during its first decades, partially as a result of policy mismanagement by the Dutch West India Company (WIC), and conflicts with Native Americans. The settlements of New Sweden developed on its southern flank and its northern border was re-drawn in recognition of early New England expansion. During the 1650s, the colony experienced dramatic growth and became a major port for trade in the North Atlantic. The surrender of Fort Amsterdam to the British control in 1664 was formalized in 1667, contributing to the Second Anglo–Dutch War. In 1673 the Dutch re-took the area, but later relinquished it under the 1674 Treaty of Westminster ending the Third Anglo-Dutch War.

The inhabitants of New Netherland were Native Americans, Europeans, and Africans, the latter chiefly imported as enslaved laborers. Descendants of the original settlers played a prominent role in colonial America. For two centuries New Netherland Dutch culture characterized the region (today's Capital District around Albany, the Hudson Valley, western Long Island, northeastern New Jersey, and New York City). The concepts of civil liberties and pluralism introduced in the province became mainstays of American political and social life.

Slave trade

Main articles: History of Aruba, History of Curaçao, History of Saint Martin, and History of Suriname

Although slavery was illegal inside the Netherlands it flourished in the Dutch Empire, and helped support the economy.[64] In 1619 The Netherlands took the lead in building a large-scale slave trade between Africa and Virginia, by 1650 becoming the pre-eminent slave trading country in Europe. It was overtaken by Britain around 1700.

Historians agree that in all the Dutch shipped about 550,000 African slaves across the Atlantic, about 75,000 of whom died on board before reaching their destinations. From 1596–1829, the Dutch traders sold 250,000 slaves in the Dutch Guianas, 142,000 in the Dutch Caribbean islands, and 28,000 in Dutch Brazil.[65] In addition, tens of thousands of slaves, mostly from India and some from Africa, were carried to the Dutch East Indies[66] and slaves from the East Indies to Africa and the West Indies.

The Dutch in Asia

Logo of the Dutch East India Company (*Vereenigde Oost-Indische Compagnie* or "VOC" in Dutch, literally "United East Indian Company").

Main articles: Dutch East India Company and Dutch East Indies

The Dutch East India Company (*Vereenigde Oost-Indische Compagnie* or *VOC* in Dutch, literally *"United East Indian Company"*) was a chartered company established in 1602, when the States-General of the Netherlands granted it a 21-year monopoly to carry out colonial activities in Asia. It was the first multinational corporation in the world and the first company to issue stock.[67] It was also arguably the world's first megacorporation, possessing quasi-governmental powers, including the ability to wage war, imprison and execute convicts,[68] negotiate treaties, coin money, and establish colonies.[69]

Statistically, the VOC eclipsed all of its rivals in the Asia trade. Between 1602 and 1796 the VOC sent almost a million Europeans to work in the Asia trade on 4,785 ships, and netted for their efforts more than 2.5 million tons of Asian trade goods. By contrast, the rest of Europe combined sent only 882,412 people from 1500 to 1795, and the fleet of the English (later British) East India Company, the VOC's nearest competitor, was a distant second to its total traffic with 2,690 ships and a mere one-fifth the tonnage of goods carried by the VOC. The VOC enjoyed huge profits from its spice monopoly through most of the 17th century.[70]

Having been set up in 1602, to profit from the Malukan spice trade, in 1619 the VOC established a capital in the port city of Batavia (now Jakarta). Over the next two centuries the Company acquired additional ports as trading bases and safeguarded their interests by taking over surrounding territory.[71] It remained an important trading concern and paid an 18% annual dividend for almost 200 years. Weighed down by corruption in the late 18th century, the Company went bankrupt and was formally dissolved in 1800,[72] its possessions and the debt being taken over by the government of the Dutch Batavian Republic. The VOC's territories became the Dutch East Indies and were expanded over the course of the 19th century to include the whole of the Indonesian archipelago, and in the 20th century would form Indonesia.

The Dutch in Africa

Main articles: History of Cape Colony before 1806, History of South Africa (1652–1815), Afrikaners, and Afrikaans

In 1647, a Dutch vessel was wrecked in the present-day Table Bay at Cape Town. The marooned crew, the first Europeans to attempt settlement in the area, built a fort and stayed for a year until they were rescued. Shortly thereafter, the Dutch East India Company (in the Dutch of the day: *Vereenigde Oostindische Compagnie*, or VOC) decided to establish a permanent settlement. The VOC, one of the major European trading houses sailing the spice route to the East, had no intention of colonising the area, instead wanting only to establish a secure base camp where

passing ships could shelter, and where hungry sailors could stock up on fresh supplies of meat, fruit, and vegetables. To this end, a small VOC expedition under the command of Jan van Riebeeck reached Table Bay on 6 April 1652.[73]

Painting of an account of the arrival of Jan van Riebeeck, by Charles Bell.

To remedy a labour shortage, the VOC released a small number of VOC employees from their contracts and permitted them to establish farms with which they would supply the VOC settlement from their harvests. This arrangement proved highly successful, producing abundant supplies of fruit, vegetables, wheat, and wine; they also later raised livestock. The small initial group of "free burghers", as these farmers were known, steadily increased in number and began to expand their farms further north and east.

The majority of burghers had Dutch ancestry and belonged to the Calvinist Reformed Church of the Netherlands, but there were also numerous Germans as well as some Scandinavians. In 1688 the Dutch and the Germans were joined by French Huguenots, also Calvinists, who were fleeing religious persecution in France under King Louis XIV. The Huguenots in South Africa were absorbed into the Dutch population but they played a prominent role in South Africa's history.

From the beginning the VOC used the Cape as a place to supply ships travelling between the Netherlands and the Dutch East Indies. There was a close association between the Cape and these Dutch possessions in the far east. Van Riebeeck and the VOC began to import large numbers of slaves, primarily from Madagascar and Indonesia. These slaves often married Dutch settlers, and their descendants became known as the Cape Coloureds and the Cape Malays.

During the 18th century, the Dutch settlement in the area of the Cape grew and prospered. By the late 1700s the Cape Colony was one of the best developed European settlements outside Europe or the Americas.[74] The two bases of the Cape Colony's economy for almost the entirety of its history were shipping and agriculture. Its strategic position meant that almost every ship sailing between Europe and Asia stopped off at the colony's capital Cape Town. The supplying of these ships with fresh provisions, fruit, and wine provided a very large market for the surplus produce of the colony.[74]

De Tafelbaai by Aernout Smit, 1683

Some free burghers continued to expand into the rugged hinterlands of the north and east, many began to take up a semi-nomadic pastoralist lifestyle, in some ways not far removed from that of the Khoikhoi they had displaced. In addition to its herds, a family might have a wagon, a tent, a Bible, and a few guns. As they became more settled, they would build a mud-walled cottage, frequently located, by choice, days of travel from the nearest European settlement. These were the first of the Trekboers (Wandering Farmers, later shortened to Boers), completely independent of official controls, extraordinarily self-sufficient, and isolated from the government and the main settlement in Cape Town.

Dutch was the official language, but a dialect had formed that was quite distinct from Dutch. The Afrikaans language originated mainly from 17th century Dutch dialects.[75][76]

This Dutch dialect, sometimes referred to as the "kitchen language" (*kombuistaal*),[77] would eventually in the late 19th century be recognised as a distinct language called Afrikaans and replace Dutch as the official language of the Afrikaners.

An account of the first trekboers.

As the 18th century drew to a close, Dutch mercantile power began to fade and the British moved in to fill the vacuum. They seized the Cape Colony in 1795 to prevent it from falling into French hands, then briefly relinquished it back to the Dutch (1803), before definitively conquering it in 1806. British sovereignty of the area was recognised at the Congress of Vienna in 1815. By the time the Dutch colony was seized by the British in 1806, it had grown into an established settlement with 25,000 slaves, 20,000 white colonists, 15,000 Khoisan, and 1,000 freed black slaves. Outside Cape Town and the immediate hinterland, isolated black and white pastoralists populated the country.

Dutch interest in South Africa was mainly as a strategically located VOC port. Yet in the 17th and 18th centuries the Dutch created the foundation of the modern state of South Africa. The Dutch legacy in South Africa is evident everywhere, but particularly in the Afrikaner people and the Afrikaans language.

Dutch Republic: Regents and Stadholders (1649–1784)

Main article: Dutch Republic

'Skating fun' by 17th century Dutch painter Hendrick Avercamp.

The Netherlands gained independence from Spain as a result of the Eighty Years War, during which the Dutch Republic was founded. As the Netherlands was a republic, it was largely governed by an aristocracy of city-merchants called the regents, rather than by a king. Every city and province had its own government and laws, and a large degree of autonomy. After attempts to find a competent sovereign proved unsuccessful, it was decided that sovereignty would be vested in the various provincial Estates, the governing bodies of the provinces. The Estates-General, with its representatives from all the provinces, would decide on matters important to the Republic as a whole. However, at the head of each province was the stadtholder of that province, a position held by a descendant of the House of Orange. Usually the stadtholdership of several provinces was held by a single man.

After having gained its independence in 1648, the Netherlands tried in various coalitions to help to contain France, which had replaced Spain as the strongest nation of Europe. The end of the War of the Spanish Succession (1713) marked the end of the Dutch Republic as a major player. In the 18th century, it just tried to maintain its independence and stuck to a policy of neutrality.

The Netherlands sheltered many notable refugees, including Flemish Protestants, Portuguese and German Jews, French Protestants (Huguenots) (including Descartes) and English Dissenters (including the Pilgrim Fathers). Many immigrants came to the cities of Holland in the 17th and 18th century from the Protestant parts of Germany and elsewhere. The amount of first generation immigrants from outside the Netherlands in Amsterdam was nearly 50% in the 17th and 18th century. Indeed, Amsterdam's population consisted primarmily of immigrants, if one includes second and third generation immigrants and migrants from the Dutch countryside. People in most parts of Europe were poor and many were unemployed. But in Amsterdam there was always work. Tolerance was important, because a continuous influx of immigrants was necessary for the economy. Travellers visiting Amsterdam reported their surprise at the lack of control over the influx.

Anonymous 17th-century watercolor of the *Semper Augustus*, famous for being the most expensive tulip sold during the tulip mania.

Amsterdam

Main article: History of Amsterdam

By the mid-1660s Amsterdam had reached the optimum population (about 200,000) for the level of trade, commerce and agriculture then available to support it. The city contributed the largest quota in taxes to the States of Holland which in turn contributed over half the quota to the States General. Amsterdam was also one of the most reliable in settling tax demands and therefore was able to use the threat to withhold such payments to good effect.[78]

Amsterdam was governed by a body of regents, a large, but closed, oligarchy with control over all aspects of the city's life, and a dominant voice in the foreign affairs of Holland. Only men with sufficient wealth and a long enough residence within the city could join the ruling class. The first step for an ambitious and wealthy merchant family was to arrange a marriage with a long-established regent family. In the 1670s one such union, that of the Trip family (the Amsterdam branch of the Swedish arms makers) with the son of Burgomaster Valckenier, extended the influence and patronage available to the latter and strengthened his dominance of the council. The oligarchy in Amsterdam thus gained strength from its breadth and openness. In the smaller towns family interest could unite members on policy decisions but contraction through intermarriage could lead to the degeneration of the quality of the members.

In Amsterdam the network was so large that members of the same family could be related to opposing factions and pursue widely separated interests. The young men who had risen to positions of authority in the 1670s and 1680s consolidated their hold on office well into the 1690s and even the new century.[79]

Dam Square in the late 17th century: painting by Gerrit Adriaenszoon Berckheyde (Gemäldegalerie, Dresden)

Amsterdam's regents provided good services to residents. They spent heavily on the water-ways and other essential infrastructure, as well as municipal almshouses for the elderly, hospitals and churches.

Amsterdam's wealth was generated by its commerce, which was in turn sustained by the judicious encouragement of entrepreneurs whatever their origin. This open door policy has been interpreted as proof of a tolerant ruling class. But toleration was practiced for the convenience of the city. Therefore the wealthy Sephardic Jews from Portugal were welcomed and accorded all privileges except those of citizenship, but the poor Ashkenazi Jews from Eastern Europe were far more carefully vetted and those who became dependent on the city were encouraged to move on. Similarly, provision for the housing of Huguenot immigrants was made in 1681 when Louis XIV's religious policy was beginning to drive these Protestants out of France; no encouragement was given to the dispossessed Dutch from the countryside or other towns of Holland. The regents encouraged immigrants to build churches and provided sites or buildings for churches and temples for all but the most radical sects and the native Catholics by the 1670s (although even the Catholics could practice quietly in a chapel within the Beguinhof).[80]

First Stadtholderless Period and the Anglo-Dutch Wars (1650–1674)

Main articles: First Stadtholderless Period and Anglo-Dutch Wars

Johan de Witt (born 1625, died 1672), Grand Pensionary of Holland, painted between 1643-1700 after Jan de Baen

In 1650, the stadtholder William II, Prince of Orange suddenly died of smallpox; his son, the later stadtholder and subsequent king of England, William III, was born only eight days later, hence leaving the nation without an obvious successor. Since the conception of the Republic, there had been an ongoing struggle for power between the regents, an informal elite of affluent citizens on the one hand and the House of Orange on the other hand, whose supporters, Orangists, were mainly to be found among the common people. For now, the regents seized the opportunity: there would be no new stadtholder (in Holland) for 22 years to come. Johan de Witt, a brilliant politician and diplomat, emerged as the dominant figure.

Princes of Orange became the stadtholder and an almost hereditary ruler in 1672 and 1748. The Dutch Republic of the United Provinces was a true republic only from 1650–1672 and 1702–1748. These periods are called the First Stadtholderless Period and Second Stadtholderless Period.

The Republic and England were major rivals in world trade and naval power. Halfway through the 17th century the Republic's navy was the most powerful navy in the world.[81] The Republic fought several wars against England in the second half of the 17th century.

In the year 1651, England imposed its first Navigation Act, which severely hurt Dutch trade interests. An incident at sea concerning the Act resulted in the First Anglo-Dutch War, which lasted from 1652 to 1654, ending in the Treaty of Westminster (1654), which left the Navigation Act in effect.

After the English Restoration, Charles II tried to serve his dynastic interests by attempting to make Prince William III of Orange, his nephew, stadtholder of The Republic, using some military pressure. This led to a surge of patriotism in England, the country being, as Samuel Pepys put it, "mad for war".

"The Second Day of the Four Day Battle of 1666"

The Second Anglo-Dutch War, started in 1665, were marked by a number of great English victories, such as James II's taking of the Dutch colony of New Netherland (present day New York). There were also Dutch victories, such as the capture of the *Prince Royal* during the Four Days Battle in 1666, an event that was the subject of a famous painting by Willem van de Velde. However, the Raid on the Medway, in June 1667, ended the war with a Dutch victory. A flotilla of ships led by Admiral de Ruyter broke through the defensive chains guarding the Medway, burned part of the English fleet docked at Chatham and towed away the Unity and the Royal Charles, pride and normal flagship of the English fleet. The greatly expanded Dutch navy was for numerous years after the world's strongest. The Dutch Republic was at the zenith of its power.

Franco-Dutch War and Third Anglo-Dutch War (1672–1702)

Main articles: Franco-Dutch War, Rampjaar, and Third Anglo-Dutch War

The year 1672 is known in the Netherlands as the "Disaster Year" (*Rampjaar*). England declared war on the Republic, (the Third Anglo-Dutch War), followed by France, Münster and Cologne, which had all signed alliances against the Republic. France, Cologne and Münster invaded the Republic. Johan de Witt and his brother Cornelis, who had accomplished a diplomatic balancing act for a long time, were now the obvious scapegoats. They were lynched, and a

Willem III, Prince of Orange, born 1650, died 1702, reigned as William III of England from 1689 to 1702 after the Glorious Revolution

new stadtholder, William III, was appointed. ` An Anglo-French attempt to land on the Dutch shore could only just be repelled in three desperate naval battles under command of admiral Michiel de Ruyter. The advance of French troops from the south could only be halted by a costly inundation of its own heart land, by breaching river dykes. With the aid of friendly German princes, the Dutch succeeded in fighting back Cologne and Münster, after which the peace was signed with both of them, although some territory in the east was lost for ever. Peace was signed with England as well, in 1674 (Second Treaty of Westminster (1674)). In 1678, peace was made with France, although its Spanish and German allies felt betrayed by them signing the Treaty of Nijmegen.

In 1688, the relations with England reached crisis level once again. Stadtholder William III decided he had to take a huge gamble when he was invited to invade England by Protestant British nobles feuding with William's father-in-law the Catholic James II of England. This led to the Glorious Revolution and cemented the principle of parliamentary rule and Protestant ascendency in England. James fled to France and William ascended to the English throne as co-monarch with his wife Mary, James' eldest daughter. This manoeuvre secured England as a critical ally of the United Provinces in its ongoing wars with Louis XIV of France. William was the commander of the Dutch and English armies and fleets until his death in 1702. During Williams reign as King of England his primary focus was leveraging British manpower and finances to aid the Dutch against the French. The combination continued after his death as the combined Dutch, British, and mercenary army conquered Flanders and Brabant, and invaded French territory before the alliance collapsed in 1713 due to British political infighting.

Second Stadtholderless Period (1702–1747)

Main article: Second Stadtholderless Period

The *Second Stadtholderless Period* (Dutch: *Tweede Stadhouderloze Tijdperk*) is the designation in Dutch historiography of the period between the death of stadtholder William III on March 19[82] 1702 and the appointment of William IV, Prince of Orange as stadtholder and captain general in all provinces of the Dutch Republic on 2 May 1747. During this period the office of stadtholder was left vacant in the provinces of Holland, Zeeland, and Utrecht, though in other provinces that office was filled by members of the House of Nassau-Dietz (later called Orange-Nassau) during various periods.

The Inspectors of the Collegium Medicum in Amsterdam, by Cornelis Troost, 1724. This period is known as the "Periwig Era".

During the period the Republic lost its Great-Power status and its primacy in world trade, processes that went hand-in-hand, the latter causing the former. Though the economy declined considerably, causing deindustralization and deurbanization in the maritime provinces, a *rentier*-class kept accumulating a large capital fund that formed the basis for the leading position the Republic achieved in the international capital market. A military crisis at the end of the period caused the fall of the States-Party regime and the restoration of the Stadtholderate in all provinces. However, though the new stadtholder acquired near-dictatorial powers, this did not improve the situation.

Economic decline in the 18th century

After the Dutch fleet declined, merchant interests became dependent on the goodwill of Britain. The main focus of Dutch leaders was reducing the country's considerable budget deficits. Dutch trade and shipping remained at a fairly steady level through the 18th century, but no longer had a near monopoly and also could not match growing English and French competition. The Netherlands lost its position as the trading centre of Northern Europe to London.

Although the Netherlands remained wealthy, investors for the nation's money became more difficult to find. Some investment went into purchases of land for estates, but most went to foreign bonds and Amsterdam remained one of Europe's banking capitals. Dutch culture also declined both in the arts and sciences. Literature (for example) largely imitated English and French styles with little in the way of innovation or originality.

Life for the average Dutchman became slower and more relaxed than in the 18th century. The upper and middle classes continued to enjoy prosperity and high living standards, although laborers remained locked in poverty and hardship. The large underclass of unemployed beggars and riffraff required government and private charity to survive.

Religious life became more relaxed as well. Catholics faced greater tolerance despite still having no part in the political system. They became divided by the feud between Jansenists (who denied free will) and orthodox believers. The former split into a separate body known as the Old Catholic Church. The upper classes willingly embraced the ideas of the Enlightenment, although the liberalism of Dutch society resulted in relatively little hostility to organized religion compared to France.

The Orangist revolution (1747-1751)

Main article: Second Stadtholderless Period

William IV, Prince of Orange, stadholder from 1747-1751

During the term of Anthonie van der Heim as Grand Pensionary from 1737 to 1746, the Republic slowly drifted into the War of Austrian Succession. This started as a Prusso-Austrian conflict, but eventually all the neighbours of the Dutch Republic became involved. On one side were Prussia, France and their allies and on the other Austria, Britain (after 1744) and their allies. At first the Republic strove to remain neutral in this European conflict, but it maintained garrisons in a number of fortresses in the Austrian Netherlands. French grievances and threats spurred the Republic into bring its army up to European standards (84,000 men in 1743).[83]

In 1744 and 1745 the French attacked Dutch fortresses at Menen and Tournai. This prompted the Dutch Republic in 1745 to join the Quadruple Alliance, but this alliance was severely defeated at the Battle of Fontenoy in May 1745. In 1746 the French occupied most of the large cities in the Austrian Netherlands. Then, in April 1747, apparently as an exercise in armed diplomacy, a relatively small French military force occupied Zeelandic Flanders, part of the Dutch Republic.[83]

This relatively innocuous invasion fully exposed the rot underlying the Dutch defences. The consequences were spectacular. Still mindful of the French invasion in the "Disaster Year" of 1672, many fearful people clamored for the restoration of the stadtholderate.[83] William IV, Prince of Orange, had been waiting impatiently in the wings since acquiring his princely title in 1732. Over the next year he and his supporters engaged in a number of political battles in various provinces and towns in the Netherlands to wrest control from the regents. The aim was for William IV to obtain a firm grip on government patronage and place loyal officials in all strategic government positions. Eventually he managed to achieve this aim in all provinces.[83]

William Bentinck, 1st Earl of Portland was a prominent Orangist. People like Bentinck hoped that gathering the reins

Willem V of Orange, stadholder from 1751-1806, and Wilhelmina of Prussia with three of their five children. From left to right: the future William I of the Netherlands, Frederick, and Frederica Louise Wilhelmina.

of power in the hands of a single "eminent head" would soon help restore the state of the Dutch economy and finances. The regents they opposed included the Grand Pensionary Jacob Gilles and Adriaen van der Hoop. This popular revolt had religious, anti-Catholic and democratic overtones and sometimes involved mob violence. It eventually involved political agitation by Daniel Raap, Rousset de Missy and the Doelisten, attacks on tax farmers (pachtersoproer), religious agitation for enforcement of the Sabbath laws and preference for followers of Gisbertus Voetius and various demands by the civil militia.[83]

The war against the French was itself brought to a not-too-devastating end for the Dutch Republic with the Treaty of Aix-la-Chapelle (1748). The French retreated of their own accord from the Dutch frontier. William IV died unexpectedly, at the age of 40, on 22 October 1751.[83]

Regency and indolent rule (1752-1779)

His son, William V, was only 3 years old when his father died, and a long regency characterised by corruption and misrule began. His mother delegated most of the powers of the regency to Bentinck and her favorite, Duke Louis Ernest of Brunswick-Lüneburg. All power was concentrated in the hands of an unaccountable few, including the Frisian nobleman Douwe Sirtema van Grovestins.[83] Still a teenager, William V assumed the position of stadtholder in 1766, the last to hold that office. In 1767, he married Princess Wilhelmina of Prussia, the daughter of Augustus William of Prussia, niece of Frederick the Great.

The position of the Dutch during the American War of Independence was one of neutrality. William V, leading the pro-British faction within the government, blocked attempts by pro-independence, and later pro-French, elements to drag the government to war. However, things came to a head with the Dutch attempt to join the Russian-led League of Armed Neutrality, leading to the outbreak of the disastrous Fourth Anglo-Dutch War in 1780. After the signing of the Treaty of Paris (1783), the impoverished nation grew restless under William's rule.

An English historian summed him up uncharitably as "a Prince of the profoundest lethargy and most abysmal stupidity."[84] And yet he would guide his family through the difficult French-Batavian period and his son would be crowned king.

Fourth Anglo-Dutch War (1780-1784)

Main article: Fourth Anglo-Dutch War

Battle of Dogger Bank (1781), by Thomas Luny

The Fourth Anglo–Dutch War (1780–1784) was a conflict between the Kingdom of Great Britain and the Dutch Republic. The war, tangentially related to the American Revolutionary War, broke out over British and Dutch disagreements on the legality and conduct of Dutch trade with Britain's enemies in that war.

Although the Dutch Republic did not enter into a formal alliance with the United States and their allies, U.S. ambassador (and future President) John Adams managed to establish diplomatic relations with the Dutch Republic, making it the second European country to diplomatically recognize the Continental Congress in April 1782. In October 1782, a treaty of amity and commerce was concluded as well.

Most of the war consisted of a series of largely successful British operations against Dutch colonial economic interests, although British and Dutch naval forces also met once off the Dutch coast. The war ended disastrously for the Dutch and exposed the weakness of the political and economic foundations of the country.[85] The Treaty of Paris (1784), according to Fernand Braudel, "sounded the knell of Dutch greatness."[86]

The French-Batavian period (1785–1815)

Main articles: Batavian revolution, Batavian Republic, and Kingdom of Holland

After the war with the Great Britain ended disastrously in 1784, there was growing unrest and a rebellion by the anti-Oranist Patriots. The French Revolution resulted first in the establishment of a pro-French Batavian Republic (1795–1806), then the creation of the Kingdom of Holland, ruled by a member of the House of Bonaparte (1806–1810), and finally annexation by the French Empire (1810–1813).

Patriot rebellion and its suppression (1785–1795)

Firefight on the Vaartse Rijn at Jutphaas on 9 May 1787. The pro-revolutionary Utrecht Patriots are on the right; the troops of stadholder William V, Prince of Orange on the left. Painted by Jonas Zeuner, 1787

Influenced by the American Revolution, the Patriots sought a more democratic form of government. The opening shot of this revolution was the 1781 publication of a manifesto called "*Aan het Volk van Nederland*" (*To the People of the Netherlands*) by Joan van der Capellen tot den Pol, the founder of the Patriots. The aim of the Patriots was to reduce corruption and the power held by the stadtholder, William V, Prince of Orange.

Support for the Patriots came mostly from the middle class. They formed a militia called the "Free Corps". In 1785 there was an open rebellion by the Patriots, which took the form of an armed insurrection by local militias in certain Dutch towns, "*Vrijheid*" being the rallying cry. Herman Willem Daendels attempted to organise an overthrow of various municipal governments (vroedschap). The goal was to oust government officials and force new elections. "Seen as a whole this revolution was a string of violent and confused events, accidents, speeches, rumours, bitter enmities and armed confrontations", wrote French historian Fernand Braudel, who saw it as a forerunner of the French Revolution.

In 1785 the stadholder left The Hague and moved his court to Guelders, a province remote from the heart of Dutch political life. In June 1787 his energetic wife Wilhelmina (the sister of Frederick William II of Prussia) tried to travel to The Hague. Outside Schoonhoven, she was stopped by militiamen and taken to a farm near Goejanverwellesluis. Within two days she was forced to return to Nijmegen, an insult not unnoticed in Prussia.

The House of Orange reacted with severity, relying on Prussian troops led by Charles William Ferdinand, Duke of Brunswick and a small contingent of British troops to suppress the rebellion. Dutch banks at this time still held much of the world's capital. Government-sponsored banks owned up to 40% of Great Britain's national debt and there were close connections to the House of Stuart. The stadholder had supported British policies after the American Revolution.

This severe military response overwhelmed the Patriots and put the stadholder firmly back in control. A small unpaid Prussian army was billeted in the Netherlands and supported themselves by looting and extortion. The Free Corps continued urging citizens to resist the government. They distributed pamphlets, formed "Patriot Clubs" and held public demonstrations. The government responded by pillaging those towns where opposition continued. Five leaders were sentenced to death (but fled first). Lynchings also occurred. For a while, no one dared appear in public without an

orange cockade to show their support for Orangism. Many Patriots, perhaps around 40,000 in all, fled to Brabant, France (especially Dunkirk and St. Omer) and elsewhere. However, before long the French became involved in Dutch politics and the tide turned.

Batavian Republic (1795–1806)

Main article: Batavian Republic

Liberty tree erected in Dam Square in Amsterdam, 1795; by H. Numan

Against this background it is not surprising that, after the French Revolution, when the French army invaded and occupied the Netherlands in 1795, the French encountered so little united resistance. William V of Orange fled to England. The Patriots proclaimed the short-lived Batavian Republic, but government was soon returned to stabler and more experienced hands. The Batavian Republic (Dutch: *Bataafse Republiek*) was the successor of the Republic of the United Netherlands. It was proclaimed on 19 January 1795, and ended on 5 June 1806, with the accession of Louis Bonaparte to the throne of the Kingdom of Holland.

Shortly after his flight to England Stadtholder William V sent the Kew Letters in which he gave the Dutch colonies in "safekeeping" to Great Britain and ordered the colonial governors to surrender to the British. This helped put an end to much of the Dutch colonial empire. Guyana and Ceylon never returned to Dutch rule, though other colonies were initially returned by the Treaty of Amiens. The Cape Colony, which had changed hands several times, remained British after 1806. Other colonies, including what is today Indonesia, were returned to the Netherlands under the Anglo-Dutch Treaty of 1814. Ten years later there was another treaty—the Anglo-Dutch Treaty of 1824.

The new Republic enjoyed widespread support from the Dutch population and was the product of a genuine popular revolution. Nevertheless, it clearly was founded with the armed support of the revolutionary French Republic. The Batavian Republic became a client state, first of that "sister-republic", and later of the French Empire of Napoleon Bonaparte, and its politics were deeply influenced by the French. Nevertheless, the process of creating a written Dutch constitution was mainly driven by internal political factors, not by French influence—until Napoleon forced the Dutch government to accept his brother as monarch.

Coat of arms of the Batavian Republic

The political, economic and social reforms that were brought about during the relatively short duration of the Batavian Republic had a lasting impact. The confederal structure of the old Dutch Republic was permanently replaced by a unitary state. The constitution adopted in 1798 had a genuinely democratic character (despite the fact that it was pushed through after a coup d'état). For a while the Republic was governed democratically, though the coup d'état of 1801 put an authoritarian regime in power, after another change in constitution. A type of ministerial government was introduced for the first time in Dutch history and many of the current government departments date their history back to this period.

Though the Batavian Republic was a client state, its successive governments tried their best to maintain a modicum of independence and to serve Dutch interests even where those clashed with those of their French overseers. This perceived obduracy led to the eventual demise of the Republic when the short-lived experiment with the (again authoritarian) regime of Grand Pensionary Rutger Jan Schimmelpenninck was insufficient docile in Napoleon's eyes.

Kingdom of Holland and annexation by the French Empire (1806–1815)

Main article: Kingdom of Holland

In 1806 Napoleon restyled the Netherlands (along with a small part of what is now Germany) into the Kingdom of Holland, with his brother Louis (Lodewijk) Bonaparte (1778–1846), on the throne. The new king was unpopular, but he was willing to cross his brother for the benefit of his new kingdom. Napoleon forced his abdication in 1810 and incorporated the Netherlands directly into the French empire, imposing economic controls and conscription of all young men as soldiers.

Administrative divisions of the First French Empire in 1812, illustrating the incorporation of the Netherlands and its internal reorganisation.

On 30 November 1813, the son of former stadholder William V, invited by the Driemanschap (Triumvirate), landed in Scheveningen and was proclaimed by the Driemanschap as William I, Sovereign Prince of the United Netherlands (Dutch: *Soeverein Vorstendom der Verenigde Nederlanden*).

After the unification in 1815 of the northern Netherlands with the Austrian Netherlands William proclaimed himself king of the United Kingdom of the Netherlands.

United Kingdom of the Netherlands (1816–1839)

Main articles: United Kingdom of the Netherlands and Dutch monarchy

The French occupation of the Dutch Republic ended on the defeat of Napoleon. In a secret convention called the Eight Articles of London, and then later ratified by the Congress of Vienna, the Great Powers agreed on the unification of the Dutch Republic, the Austrian Netherlands (approximately modern-day Belgium) and the former Prince-Bishopric of Liège into a single constitutional monarchy called the United Kingdom of the Netherlands, with the House of Orange-Nassau elevated to royal status and providing the king. A stronger country on France's northern border was considered (especially by the Russian tsar) to be an important part of the strategy to keep France's power in check.

William I, the son of the last stadtholder, William V, was crowned king. He also became the hereditary Grand Duke of Luxembourg. The newly created country had two capitals: Amsterdam and Brussels. Except for the Cape Colony, the Dutch colonies were returned to the Netherlands.

Economy

Griffiths argues that several factors made possible a national economy in the 19th century. They included the abolition of internal tariffs and guilds; the a unified coinage system, modern methods of tax collection; standardized weights and measures; and the building of many roads, canals, and railroads. Although industrialization was slow, the provinces of North Brabant and Overijssel did advance rapidly and became the most advanced economically.[87]

Constitutional monarchy

William I, who reigned from 1815–1840, had almost unlimited constitutional power, the constitution having been written by a number of notable people chosen by him. An enlightened despot, he had no difficulty in accepting some of the changes resulting from the social transformation of the previous 25 years, including equality of all before the law. However, he resurrected the estates as a political class and elevated a large number of people to the nobility. Voting rights were still limited, and only the nobility were eligible for seats in the upper house.

William I was a Calvinist and intolerant of the Catholic majority in the newly created United Kingdom of the Netherlands. He promulgated the "Fundamental Law of Holland", with some modifications. This entirely overthrew

the old order of things in the southern Netherlands, suppressed the clergy as an order, abolished the privileges of the Catholic Church, and guaranteed equal protection to every religious creed and the enjoyment of the same civil and political rights to every subject of the king. It reflected the spirit of the French Revolution, but it did not please the Catholic bishops in the south, who had detested the Revolution.[88]

William I actively promoted economic modernization. His position as monarch was ambivalent, however; his sovereignty was real, but his authority was shared with a legislature elected partly by himself and partly by the wealthy citizens under a constitution granted by the king. Government was in the hands of ministries of state. The old provinces were reestablished in name only. The government was now fundamentally unitary, and all authority flowed from the center.

The first 15 years of the Kingdom showed progress and prosperity, as industrialization proceeded rapidly in the south, where the Industrial Revolution allowed entrepreneurs and labor to combine in a new textile industry, powered by local coal mines. There was little industry in the northern provinces, but most overseas colonies were restored, and highly profitable trade resumed after a 25 year hiatus. Economic liberalism combined with moderate monarchical authoritarianism to accelerate the adaptation of the Netherlands to the new conditions of the 19th century. The country prospered until a crisis arose in relations with the southern provinces.

Belgium breaks away

Protestants were only a quarter of the population, being a majority in the North (population 2 million), but were few among the 3.5 million South-Netherlanders, who were overwhelmingly Catholic. Nevertheless Protestants totally controlled the government and army. The Catholics did not consider themselves an integral part of the united Netherlands, preferring instead to identify with medieval Dutch culture. The French-speaking elite in the southern Netherlands felt like second-class citizens. The primary factors that contributed to this feeling were religious (Protestant North versus Catholic South), economic (the South was industrializing, the North had always been a merchants' nation) and linguistic (the French-speaking South was not just Wallonia, but also extended to the French-speaking bourgeoisie in the Flemish cities).

In the Catholic South,[89] William's policies were unpopular. The French-speaking Walloons strenuously rejected his attempt to make Dutch the universal language of government. Flemings in the south spoke a Dutch dialect ("Flemish") and welcomed the encouragement of Dutch with a revival of literature and popular culture. Other Flemings, notably the educated bourgeoisie, preferred to speak French. Although Catholics possessed legal equality, after centuries as the state church in the south, they resented their subordination to a government that was fundamentally Protestant in spirit and membership. Few Catholics held high office in state or army. Political liberals in the south complained as well about the king's authoritarian methods. All southerners complained of underrepresentation in the national legislature. Although the south was industrializing and was more prosperous than the north the accumulated grievances allowed the multiple opposition forces to coalesce. The outbreak of revolution in France in 1830 was a signal for action, at first on behalf of autonomy for Belgium, as the southern provinces were now called, and later on behalf of total independence. William dithered and his half-hearted efforts to reconquer Belgium were thwarted both by the efforts of the Belgians themselves and by the diplomatic opposition of the great powers.

At the London Conference of 1830–31, the chief powers of Europe ordered (in November, 1830) an armistice between the Dutch and the Belgians. The first draft for a treaty of separation of Belgium and the Netherlands was rejected by the Belgians. A second draft (June, 1831) was rejected by William I, who resumed hostilities. Franco-British intervention forced William to withdraw Dutch forces from Belgium late in 1831, and in 1833 an armistice of indefinite duration was concluded. Belgium was effectively independent but William’s attempts to recover Luxembourg and Limburg led to renewed tension. The London Conference of 1838–39 prepared the final Dutch-Belgian separation treaty of 1839 and divided Luxembourg and Limburg between the Dutch and Belgian crowns. The Kingdom of the Netherlands thereafter was made up of only the 11 northern provinces.[90]

Democratic and Industrial Development (1840-1939)

1848 Constitutional reform

In 1848 unrest broke out all over Europe. Although there were no major events in the Netherlands, these foreign developments persuaded king William II to agree to liberal and democratic reform. That same year the liberal Johan Rudolf Thorbecke was asked by the king to rewrite the constitution, turning the Netherlands into a constitutional monarchy. The new document was proclaimed valid on 3 November of that year. It severely limited the king's powers (making the government accountable only to an elected parliament), and it protected civil liberties. The relationship between monarch, government and parliament has remained essentially unchanged ever since.

The personal union between the Netherlands and Luxembourg ended in 1890 when William III of the Netherlands, the last Dutch male head of state so far, died, as ascendancy rules in Luxembourg prevented a woman from becoming ruling Grand Duchess.

Social change

As in the rest of Europe, the 19th century saw the gradual transformation of the Netherlands into a modern middle-class industrial society. The number of people employed in agriculture decreased while the country made a heroic effort to revive its stake in the highly competitive shipping and trade business. The Netherlands began to develop various industries such as textiles and (later) the great Philips industrial conglomerate. Rotterdam became a major shipping and manufacturing center. Poverty and begging also largely disappeared along with steadily improving working conditions for the population.

Street in Amsterdam in 1891 (Vijzelstreet looking towards Muntplein).

The Netherlands remained one of the most tolerant countries in Europe towards religious belief, although conservative Protestants objected to the liberalization of the Dutch Reformed Church during the 19th century and faced opposition from the government when they tried to establish separate communities (Catholics and other non-Protestants were left unmolested by Dutch authorities). Some moved to the United States as a consequence, but as the century drew to a close, religious persecution had totally ceased.

A number of skilled Impressionist painters emerged, although none achieved international recognition except for Vincent van Gogh, who spent most of his life in France.

During this period the Netherlands also produced a few notable scientists, including Hugo de Vries and Hendrik Lorentz.

Colonial focus

By the end of the 19th century, in the New Imperialism wave of colonisation, the Netherlands extended their hold on Indonesia. In 1860 Multatuli wrote *Max Havelaar*, one of the most notable books in the history of Dutch literature, criticizing the exploitation of the country and its inhabitants by the Dutch, although the indigenous princes as their proxies were not spared either.

The Netherlands had not fought a major military campaign since the Seven Years War, and the strength of its armed forces had gradually dwindled. No longer a significant force in European politics, the country devoted most of its effort to the overseas colonies in Indonesia, where a large, powerful military was not needed to subdue backwards native populations. This resulted in a long, costly campaign against the Indonesian Achin state. The Dutch were unable to defend themselves from the major powers in case of war and therefore chose the policy of neutrality, a choice that

Queen Wilhelmina, queen of the Netherlands from 1890 to 1948.

would influence the Dutch involvement in the wars to come.[91]

Neutrality during the First World War

Marshal Count Alfred von Schlieffen designed the Schlieffen Plan in 1905, a plan to invade France while passing through neutral Belgium and neutral Netherlands. In 1908, Von Schlieffen's successor Helmuth von Moltke the Younger changed the plan, and chose not to invade the Netherlands in case of war but instead to conserve Dutch neutrality, the simple reason being that the Netherlands supplied many goods to Germany and would be a vast resource of raw materials such as rubber, tin, quinine and oil, and of course food, all of which came through the port of Rotterdam. Some 50% of Dutch agricultural imports before 1916 came through Rotterdam. In 1917, the United States joined the war, and the Dutch suffered from the blockade but less to than Germany. Therefore the economic importance of Dutch neutrality was lost.[91]

Electrified fence along the border between the Netherlands and Belgium during the First World War.

However, there were other factors that made it valuable for both the Allies and the Central Powers for the Netherlands to remain neutral. The Netherlands controlled the mouths of the Scheldt, the Rhine and the Meuse Rivers. Germany had an interest in the Rhine since it ran through the industrial areas of the Ruhr and connected it with the Dutch port of Rotterdam. Britain had an interest in the Scheldt River, and the Meuse flowed into France. All countries had an interest in keeping the others out of the Netherlands so that no one's interests could be taken away or be changed. If one country were to have invaded the Netherlands, another would certainly have counterattacked to defend their own interest in the rivers. It was too big a risk for any of the belligerent nations, and none wanted to risk fighting on another front.[91]

Nevertheless, the Dutch were affected by the war. Troops were mobilized and conscription was introduced in the face of harsh criticism from opposition parties. In 1918, mutinies broke out in the military. Food shortages were extensive, due to the control the belligerents exercised over the Dutch. Each wanted their share of Dutch produce. As a result, the price of potatoes rose sharply because Britain had demanded so much from the Dutch. Food riots even broke out in the country.[91]

A big problem was smuggling. When Germany had conquered Belgium, the Allies saw it as enemy territory and stopped exporting to Belgium. Food became scarce for the Belgian people, since the Germans seized all food. This gave the Dutch the opportunity to start to smuggle. This, however, caused great problems in the Netherlands, including inflation and further food shortages. The Allies demanded that the Dutch stop the smuggling, and the government took measures to remain neutral. The government placed many cities under 'state of siege'. On 8 January 1916, a five-kilometre zone was created by the government along the border. In that zone, goods could only be moved on main roads with a permit.[91] In addition, an electrified fence was erected all along the Belgian – Dutch border that caused many fugitives to lose their lives.

Interwar period

The Afsluitdijk, the dike closing off the Zuiderzee, was constructed between 1927 and 1933. Public works projects like this were one way to deal with high unemployment during the Great Depression.

Main article: Great Depression in the Netherlands

Although both houses of the Dutch parliament were elected by the people, only men with high incomes were eligible to vote until 1917, when pressure from socialist movements resulted in elections in which all men were allowed to vote. In 1919 women also obtained the right to vote.

The worldwide Great Depression of 1929 and the early 1930s had crippling effects on the Dutch economy, lasting longer than in most other European countries. The long duration of the Great Depression in the Netherlands is often explained by the very strict fiscal policy of the Dutch government at the time, and its decision to adhere to the Gold Standard for much longer than most of its trading partners. The depression led to high unemployment and widespread poverty, as well as increasing social unrestn

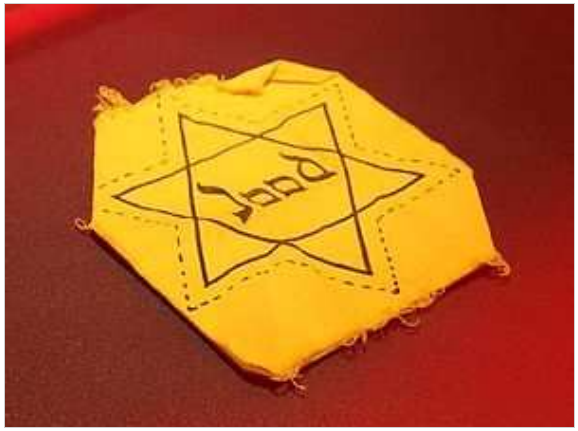
The rise of Nazism in Germany did not go unnoticed in the Netherlands, and there was growing concern at the possibility of armed conflict, but most Dutch citizens expected that Germany would again respect Dutch neutrality.

The Second World War (1939-1945)

Main articles: History of the Netherlands (1939–1945) and Netherlands in World War II

Nazi invasion and occupation

Main articles: Battle of the Netherlands and Rotterdam Blitz



At the outbreak of World War II in 1939, the Netherlands once again declared its neutrality. However, on 10 May 1940, Nazi Germany launched an attack on the Netherlands and Belgium and quickly overran most of the country. Fighting against the Dutch army proved more of a burden than foreseen; the northern attack was stopped dead, the one in the middle came to a grinding halt near the Grebbeberg and many airborne assault troops were killed and taken prisoner in the west of the country. More than 2,000 of General Student's elite troops were brought as POWs to England; Student himself was shot and taken out of action for years. Only in the south, defenses broke but the one passage over the river Maas at Rotterdam was held by the Dutch. By May 14, fighting in many locations had ceased and the German army could make little or no headway, So the Luftwaffe bombed Rotterdam, second largest city of the Netherlands, killing about 900 people, destroying the inner city and leaving 78,000 people homeless.

Rotterdam was destroyed by German bombers on 14 May 1940. 814 people died in the Rotterdam Blitz.

Following the bombing and German threats of the same treatment for Utrecht, the Netherlands capitulated on 15 May, except for the province of Zeeland where French and French Moroccan troops stood side by side with the Dutch forces. Still, the royal family and some armed forces fled to the United Kingdom. Some members of the royal family eventually moved to Ottawa, Canada until the Netherlands was liberated; Princess Margriet was born in Canadian exile.

Holocaust in the Netherlands

Yellow Star of David with the Dutch word for "Jew".

About 140,000 Jews lived in the Netherlands at the beginning of the war. Persecution of Dutch Jews started shortly after the occupation. At the end of the war, only 40,000 Jews were still alive. Of the 100,000 Jews who did not go in to hiding, only about 1,000 survived the war.

One who perished was Anne Frank, who gained worldwide fame posthumously when her diary, written in the *achterhuis* ('backhouse') while hiding from the Nazis, was found and published by her father, Otto Frank, the only survivor of the family.

Resistance and collaboration

Main article: Dutch resistance

Resentment of the Germans grew as the occupation became more harsh, prompting many Dutch in the latter years of the war to join the resistance. But collaboration was not uncommon either; many thousands of young Dutch males volunteered for combat service on the Russian Front with the Waffen-SS and many companies worked for the Germans.

Identification papers issued to Dutch people during the war.

The war in the Dutch East Indies

Main article: Dutch East Indies campaign

On 8 December 1941, the day after the attack on Pearl Harbor, the Netherlands declared war on Japan.[92] The Dutch government in exile in London had for long been working with London and with Washington to cut off oil supplies to Japan. Japanese forces invaded the Dutch East Indies on 11 January 1942. The Dutch surrendered March 8 after Japanese troops landed on Java. Dutch citizens and everybody with Dutch ancestry, the so-called "Indo's" were captured and put to work in labour camps or interned. As in the homeland, many Dutch ships, planes and military personnel managed to reach safe territory, in this case Australia, from where they were able to fight again.

False hopes and the Hunger Winter

In Europe, after the Allies landed in Normandy in June 1944, progress was slow until the Battle of Normandy ended in August 1944. German resistance collapsed in western Europe and the allied armies advanced quickly towards the Dutch border. The First Canadian Army and the Second British Army conducted operations on Dutch soil from September onwards. On 17 September a daring operation, Operation Market Garden, was executed with the goal of capturing bridges across three major rivers in the southern Netherlands. Despite desperate fighting by American, British and Polish forces, the bridge at Arnhem, across the Neder Rijn, could not be captured.

Areas south of the Rhine river were liberated in the period September–December 1944, including the province of Zeeland, which was liberated in October and November in the Battle of the Scheldt. This opened Antwerp to allied shipping. The First Canadian Army held a static line along the river Meuse (Maas) from December 1944 through February 1945.

The rest of the country remained occupied until the spring of 1945. In the face of Dutch defiance the Nazis

deliberately cut off food supplies resulting in near-starvation in the cities during the *Hongerwinter* (Hunger winter) of 1944–45. Soup kitchens were set up but many fragile people died.[93] A few days before the Allied victory the Germans allowed emergency shipments of food.

Liberation

The First Canadian Army launched Operation Veritable in early February, cracking the Siegfried Line and reaching the banks of the Rhine in early March. In the final weeks of the war in Europe, the First Canadian Army was charged with clearing the Netherlands of German forces.

Liberation celebration

The Liberation of Arnhem began on 12 April 1945 and proceeded to plan, as the three infantry brigades of the 49th Division leapfrogged each other through the city. Within four days Arnhem, now a ruined city, was totally under Allied control.[94]

The Canadians then advanced immediately further into the country, encountering and defeating a German counterattack at Otterlo and Dutch SS resistance at Ede. On 27 April a temporary truce came into effect, allowing the distribution of food aid to the starving Dutch civilians in areas under German control (Operation Manna). On 5 May 1945, Generaloberst Blaskowitz agreed to the unconditional surrender of all German forces in the Netherlands, signing the surrender to Canadian general Charles Foulkes at Wageningen.[95] (The fifth of May is now celebrated annually in the Netherlands as Liberation Day.) Three days later Germany unconditionally surrendered, bringing the war in Europe to a close.

Immediate aftermath

After the euphoria and settling of scores had ended, the Dutch were a traumatized people with a ruined economy, a shattered infrastructure and several destroyed cities (including Rotterdam, Nijmegen, Arnhem and part of The Hague.

Artur Seyss-Inquart, Nazi Commissioner of the Netherlands, was tried at Nüremberg.

In the early post-war years the Netherlands made continued attempts to expand its territory by annexing neighbouring German territory. The larger annexation plans were continuously rejected by the United States, but the London conference of 1949 permitted the Netherlands to perform a smaller scale annexation. Most of the annexed territory was returned to Germany on 1 August 1963.[96]

Operation Black Tulip was a plan in 1945 by Dutch minister of Justice Kolfschoten to evict all Germans from the Netherlands. The operation lasted from 1946 to 1948 and in the end 3691 Germans (15% of Germans resident in the Netherlands) were deported.[97] The operation started on 10 September 1946 in Amsterdam, where Germans and their families were taken from their homes in the middle of the night and given one hour to collect 50 kg of luggage. They were allowed to take 100 guilders. The rest of their possessions went to the state. They were taken to concentration camps near the German border, the biggest of which was Mariënbosch near Nijmegen.[98]

Prosperity and European Unity (1946-today)

Flooding and flood control

A town in Zuid Bevelandinundated in 1953.

The last major flood in the Netherlands took place in early February 1953, when a huge storm caused the collapse of several dikes in the southwest of the Netherlands. More than 1,800 people drowned in the ensuing inundations. The Dutch government subsequently decided on a large-scale programme of public works (the "Delta Works") to protect the country against future flooding. The project took more than thirty years to complete. According to Dutch government engineers, the odds of a major inundation anywhere in the Netherlands are now one in 10,000 years. Following the disaster with hurricane Katrina in 2005, an American congressional delegation visited the Netherlands to inspect the Delta Works and Dutch government engineers were invited to a hearing of the United States Congress to explain the Netherlands' efforts to protect low-lying areas.

Europeanisation

The European Coal and Steel Community (ECSC), was founded in 1951 by the six founding members: Belgium, the Netherlands and Luxembourg (the Benelux countries) and West Germany, France and Italy. Its purpose was to pool the steel and coal resources of the member states, and to support the economies of the participating countries. As a side effect, the ECSC helped defuse tensions between countries which had recently been enemies in the war. In time this economic merger grew, adding members and broadening in scope, to become the European Economic Community, and later the European Union. In recent years the Dutch have often been a driving force behind the integration of European countries in the European Union. It participated in the introduction of the euro in 1999.

Decolonisation and multiculturalism

By the first half of the Twentieth Century, new organizations and leadership had developed in the Dutch East Indies. Under its Ethical Policy, the Netherlands had helped create an educated Indonesian elite. These profound changes constituted the "Indonesian National Revival". Increased political activism and Japanese occupation undermining Dutch rule culminated in nationalists proclaiming independence on 17 August 1945, two days after the surrender of Japan[99]

Arrival of the vessel "Castel Felice" with "Indos" (Dutch-Indonesian Eurasians) on the Lloydkade in Rotterdam, The Netherlands, 20 May 1958.

The Dutch East Indies had long been a valuable resource to the Netherlands, so the Dutch feared its independence. The Indonesian National Revolution followed as Indonesia attempted to secure its independence in the face of Dutch diplomatic and military opposition (sometimes brutal in nature). Increasing international pressure eventually led the Netherlands to withdraw and it formally recognised Indonesian independence on 27 December 1949.[100] The western part of New Guinea, remained under Dutch control as Netherlands New Guinea until 1961, when the Netherlands transferred sovereignty of this area to Indonesia.

During and after the Indonesian National Revolution, around 300,000 people, pre-dominantly "Indos" (Dutch-Indonesian Eurasians), left Indonesia for the Netherlands. This difficult, complex and messy mass migration was called repatriation, but the majority of this group had never set foot in the Netherlands before. This migration occurred in five distinct waves over a period of 20 years. It included Indos (many of whom spent the war years in Japanese concentration camps), former South Moluccan soldiers and their families, "New-Guinea Issue" Dutch citizens, Dutch citizens from Netherlands New Guinea (including Papuan civil servants and their families), and other Indos who had remained behind but later regretted their decision to take out Indonesian citizenship (called *spijtoptanten* in Dutch and *warga negara* in Indonesian).[101][102][103]

The Indo community (now numbering around 680,000) is the largest minority group in the Netherlands. They are integrated into Dutch society, but they have also retained many aspects of their culture and have added a distinct Indonesian flavour to the Netherlands.[104]

Although it was originally expected that the loss of the Dutch East Indies would contribute to an economic decline, the Dutch economy experienced exceptional growth (partly because a disproportionate amount of Marshall Aid was received) in the 1950s and 60s. In fact, the demand for labour was so strong that immigration was actively encouraged, first from Italy and Spain then later on, in larger numbers, from Turkey and Morocco.

Suriname was decolonised on 25 November 1975, this time encouraged by the Dutch government, partly because it wanted to stem the flow of immigrants from Suriname, partly because the very possession of colonies had become politically embarrassing; however, hundreds of thousands of inhabitants of Suriname voted with their feet against it, creating a Suriname community in the Netherlands, now roughly as large as the population of the motherland.

Because of immigration from the Netherlands Antilles, and from many other parts of the world, the Netherlands became a multicultural country.

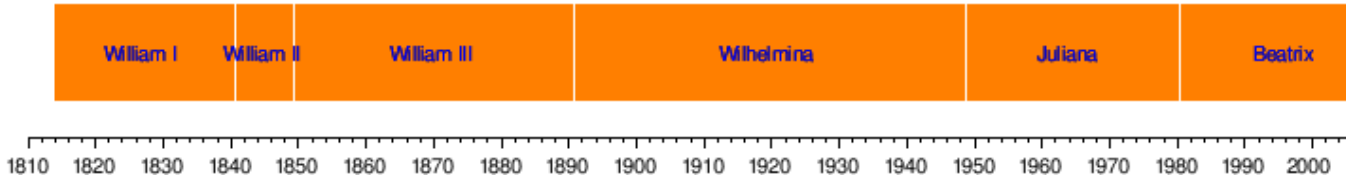
Liberalisation

The 60s and 70s were a time of great social and cultural change, such as rapid *ontzuiling* (literally: depillarisation), a term that describes the decay of the old divisions along class and religious lines. Youths, and students in particular, rejected traditional mores, and pushed for change in matters like women's rights, sexuality, disarmament and environmental issues. Today, the Netherlands is regarded as a liberal country, considering its drugs policy and its legalisation of euthanasia. Same-sex marriage has been permitted since 1 April 2001.

Following the election of 1994, in which the Christian-democratic CDA lost a considerable portion of its representatives, the social-liberal Democrats 66 (D66) doubled in size and formed a coalition with the labour party (Netherlands) (PvdA), and the People's Party for Freedom and Democracy (VVD). This purple (government) coalition, so-called because of the mixing of socialist red with liberal blue, marked the first absence of the CDA in decades. During the Purple years, a period lasting until the rise of the populist politician Pim Fortuyn, the government addressed issues previously viewed as taboo under the Christian-influenced cabinet. At this time the Dutch government introduced a series of unprecedented legislations based on a principles of toleration (*gedoogbeleid*). Abortion and euthanasia became decriminalized, while stricter guidelines were set for their implementation. Drug policy, especially in regards to the regulation of marijuana was reformed. Prostitution was legalized, but confined to brothels in which the health and safety of those involved could be properly monitored. With the Same-sex Marriage Act of 2001, the Netherlands became the first country to legalize gay marriage. In addition to social reforms, the Purple coalition also marked a period of remarkable economic prosperity.

Recent politics

The power of the coalition waned with the introduction of List Pim Fortuyn in the Dutch general election of 2002, a populist party, which ran a distinctly anti-immigration and anti-purple campaign, citing "Purple Chaos" (*Puinhopen van Paars*) as the source of the countries economic and social woes. In the first political assassination since the Second World War, Fortuyn was murdered with little over a week left before the election. In the wake of his death, LPF swept the elections, entering parliament with one sixth of the seats, while the PvdA (Labour) lost half of its seats. The ensuing cabinet was formed by CDA, VVD and LPF, led by Prime Minister Jan Peter Balkenende. Though the party succeeded in displacing the rival purple-coalition, without the charismatic figure of Pim Fortuyn at its helm, it proved to be short-lived lasting only 87 days in power.



Two events changed the political landscape:

- On 6 May 2002, the assassination of Politician Pim Fortuyn, calling for a very strict policy on immigration, shocked the nation, not at all used to political violence in peace time. His party won a landslide election victory,

partly because of his perceived martyrdom, However, internal party squabbles and blowing up the coalition government they had helped to create, resulted in the loss of 70% of their support in early general elections in 2003.
- Another murder that caused great upheaval took place on 2 November 2004, when film director and publicist Theo van Gogh was assassinated by a Dutch-Moroccan youth with radical Islamic beliefs, because of Van Gogh's alleged blasphemy. One week later, several arrests were made of several would-be Islamist terrorists, who have later been found guilty of conspiracy with terrorist intentions, this verdict was however reversed on appeal. All this sparked a debate on the position of radical Islam and of Islam generally in Dutch society, and on immigration and integration. The personal protection of most politicians, especially of the Islam critic Ayaan Hirsi Ali, was stepped up to unprecedented levels.

Pim Fortuyn (1948–2002)

Incumbent:
Beatrix

Style:	Her Majesty
Heir apparent:	Willem-Alexander, Prince of Orange
First monarch:	William I
Formation:	16 March 1815

Constitutional role and position of the monarch

The Kingdom of the Netherlands is a constitutional monarchy. As such, the role and position of the monarch are defined and limited by the constitution of the Netherlands. An obvious consequence of this is that a fairly large portion of the Dutch constitution is devoted to the monarch; all in all, roughly a third of the constitution describes the succession, mechanisms of accession and abdication to the throne, the roles and responsibilities of the monarch and the formalisms of communication between the States-General of the Netherlands and the monarch in the creation of laws.

The constitution refers to the monarch of the Kingdom of the Netherlands as "*The King*".[Cons 1] This is an indication of the role and refers equally to a man or a woman. This practice sometimes carries over into written language in Dutch, when the capitalized word "King" is used to distinguish the role of monarch from the person (who is then referred to as the uncapitalized "king" or

"queen").[nb 1]

Succession, accession, abdication and removal of the King

The cycle of monarchs is described in the first section of Chapter 2 of the constitution (which is dedicated to the government of the Netherlands).

Succession

The monarchy of the Netherlands passes by right of succession to the heirs of William I.[Cons 2] The heir is determined through two mechanisms: absolute cognatic primogeniture and proximity of blood. The Netherlands have followed absolute cognatic primogeniture instead of male primogeniture since 1983. The principle of proximity of blood is used to prevent the accession of a person who is not related to the monarch within three degrees of kinship. For example, the grandchildren of Princess Margriet of the Netherlands have no succession rights because their kinship with Queen Beatrix (her sister, and their great-aunt) is of the fourth degree (that is, the queen is their parent's parent's parents' daughter). Also, succession is limited to legitimate heirs, precluding a claim to the throne by children born out of wedlock.[Cons 3] A special case arises if the male King dies while his queen is still pregnant: the unborn child is considered the heir at that point, unless stillborn — the child is then considered never to have existed, so that proximity of blood can take precedence over primogeniture. This means that if the old king dies while his wife is pregnant with their first child, the unborn child is immediately considered born and immediately becomes the new King. If the pregnancy goes badly and the unborn monarch is stillborn, his or her reign is expunged and proximity of blood will determine which person will be the successor to the *old* king.[Cons 4]

If the monarch is a minor, a regent is appointed and serves until the monarch comes of age.[Cons 5][Cons 6] The regent is customarily the surviving parent of the monarch, but the constitution determines that the custody and parental authority of the minor monarch will be determined by law. This means that another person might also be appointed as regent, as legal guardian or both.[Cons 7]

There are also a number of special cases which the constitution recognizes. First of all, if there is no heir when the monarch dies, the States-General may appoint a successor upon the suggestion of the government. This suggestion may also be made before the death of the reigning monarch, even by the monarch himself (in case it is clear that the monarch will die without leaving an heir).[Cons 8] Second, there are a number of persons who may be excluded from the line of succession. There are two categories of these:

- The heir-apparent who marries without the permission of the States-General loses the right of succession. This is a generalization of the historic law that the King may not marry a Catholic, which was intended to prevent the return of Spanish rule. Currently the rule is intended to prevent truly objectionable royal consorts.[Cons 9]
- A person who has done something to make him undesirable as King can be removed from the line of succession by an act of the States-General, upon the suggestion of the King. This possibility has never been used and is to be seen as an "emergency exit" (for example, in case the heir-apparent sides with an enemy of the Kingdom).[Cons 10]

Accession

As with most monarchies, The Netherlands cannot be without a King (strictly in the constitutional sense; the role of King has been fulfilled by queens since 1890). There must be a head of state in order for the government to function. For this reason, the new King assumes the duties of Kingship the moment that the previous King ceases to hold the throne. The only exception is if there is no heir at all, in which case the Council of State assumes the role of the King pending the appointing of a King or regent.[Cons 1]

The King is expected to execute his duties and responsibilities for the good of the nation. He must therefore swear to uphold the constitution and execute his office faithfully. This swearing-in must occur as soon as possible after the King assumes the throne, before a joint session of the States-General held in Amsterdam. The language of Article 32 of the Dutch constitution speaks of a swearing-in in *"the capital Amsterdam"*, which incidentally is also the only phrase in the constitution that makes Amsterdam the capital of the Kingdom.[Cons 11]

The King is not crowned (there is a physical royal crown for heraldic use, but it is too big for anybody to wear). The monarch's swearing of the oath described

Dutch Royal Family

HM The Queen *

- HRH The Prince of Orange *
  HRH Princess Máxima *
  - HRH Princess Catharina-Amalia *
  - HRH Princess Alexia *

earlier constitutes his acceptance of the position of King. Note though that it is not so that the monarch becomes King by taking this oath: this would imply a vacancy of the throne until the new monarch swears the oath, which is not allowed to occur. The monarch ascends immediately after the previous monarch ceases to reign; the swearing-in only constitutes acceptance in public.

Abdication and removal

The King may cease being King in any of four ways:

Death
: A dead person cannot be King.

Abdication
: A King may willingly step down as King.

Ceding the throne
: The King may temporarily cease executing his office.

Removal from the throne
: The government may remove the King if he is deemed unfit.

The first of these options is obvious. The first two are permanent: a deceased monarch cannot become alive again and an abdicated monarch cannot return (for this reason any children born to the abdicated monarch are not in line for the throne; children born before abdication are[Cons 12]). Both these events cause the regular mechanisms of succession to go into effect.[Cons 12] Interestingly, the constitution considers both permanent possibilities so obvious that they are not explicitly mentioned anywhere. They are both acknowledged, however, in that the constitution describes what happens after the king dies or abdicates; but the possibilities are never explicitly mentioned as causes of the end of a King's reign.

There is only one monarch, so an abdicated monarch becomes a prince or princess once again (and a dead person technically cannot have any titles at all in the Netherlands). However, a deceased monarch (abdicated or not) is customarily referred to again as "king" or "queen". So, for example, Queen Juliana became queen on September 4, 1948 and princess again on April 30, 1980 following her abdication, but has been referred to as Queen Juliana again since her death on March 20, 2004.

The other two occurrences are both temporary and examined in detail in the constitution. A monarch can temporarily cease being King for any reason. This can be at his own request, or because the Council of Ministers deems the monarch unfit for office.[Cons 13][Cons 14] Although there is no limit on reasons for ceding the throne or removal, both the monarch and the Council are deemed to act responsibly and not to leave the country without a King frivolously. Taken in that light, both possibilities of temporary removal of kingship are intended to deal with emergency situations such as physical or mental inability to execute the office of monarch.

Both in case of ceding and removal an act of the joint States-General is needed to strip the monarch of authority. In the case of the monarch ceding the throne, the required act is a law. In case of removal, it is a declaration of the States-General. Procedurally these are the same — both are achieved following the same procedure as is used to pass a new law in the Netherlands.[Cons 13][Cons 14] In case of removal it is not a law, however, since a law requires the signature of the King to come into effect (and presumably the monarch will not agree to being removed).

Since neither ceding nor removal is permanent, neither triggers succession. Instead, the States-General appoint a regent. This must be the heir-apparent, if the heir-apparent is old enough.[Cons 6] In order for the actual monarch to resume his duties, a law must be passed to that effect (which is signed into law by the regent). The monarch resumes the throne the moment the law of his return is made public.[Cons 13][Cons 14]

** Member of the Dutch Royal House*

The reign of the King

As head of state, the King has many duties and responsibilities under the constitution. Most of these are ceremonial in practice, however.

The King and the executive branch

The King and the government

Although the King has roles and duties in all parts of the government and in several important places in the rest of society, the primary role of the King is within the executive branch of the Dutch government: the King is part of the government of the Netherlands. More than that: together with the Council of Ministers of the Netherlands, the King *is* the government.

The role of the King within the government of the Netherlands is described in Article 42 of the constitution:[Cons 15]

> **Article 42**
>
> 1. The government consists of the King and the ministers.
> 2. The King is inviolate; the ministers are responsible.

This article is probably the greatest paradox in the entire constitution, in that it is the basis of the full power and influence of the King and makes him beyond reproach before the law — yet serves to render the King all but powerless in the Dutch system of government.

The first paragraph of Article 42 determines that the government of the Netherlands consists of the King and his ministers. It is important to note that, even though the King is the head of state, there is no hierarchy: the King is not the head of government, the ministers are not answerable to the King within the government. This holds true even though the ministers are civil servants and as such technically work for the King (they are appointed by the King[Cons 16]). It even holds against the fact that the Prime Minister is commonly referred to as the head of government (which he is not; he is the chairman of the Council of Ministers).[Cons 17] The essential thing to understand is that there is no distinction, no dichotomy, no segregation or separation: the King and his ministers *are* the government and the government **is one**.[ext 1]

This fact has practical consequences, in that it is not possible for the King and the ministers to be in disagreement. The government speaks with one voice and makes decisions as a united body. When the King acts in an executive capacity, he does so as representative of the united government. And when the government decides, the King is in agreement (even if the king or queen personally disagrees). As an ultimate consequence of this, it is not possible for the King to refuse to sign into law a proposal of law that has been agreed to and signed by the responsible minister. Such a disagreement between the King and his minister is a situation not covered by the constitution and is automatically a constitutional crisis. These are quite rare in the Netherlands and have, on occurrence, always led to collapse of the government (resignation of the ministers), parliamentary elections and eventually to abdication of the monarch.[ext 1]

The second paragraph of the article, though, is what really renders the King powerless. This paragraph states that the King is inviolate. He is beyond any reproach, beyond the grasp of any prosecution (criminal or otherwise) for any acts committed or actions taken as King. If anything goes wrong, the minister responsible for the topic at hand is responsible for the failings of the King. This sounds like it makes the King an absolute tyrant, but in fact the opposite is true: since the ministers are responsible, they also have the authority to make the decisions. The ministers set the course of the government and the country, the ministers make executive decisions and run the affairs of state. And since the government is one, the King abides by the decision of the ministers. In fact the Kings of the Netherlands rarely make any executive decisions at all and practically never speak in public on any subject other than to read a statement prepared by the Prime Minister (since an unfortunate off-the-cuff remark could get a minister into trouble). The practical consequence of this limit on the power of the King is that the King never makes a decision on his own. Every decision, every decree must be countersigned by the responsible minister(s).[ext 1]

The King and the law of the land

Technically, the King has a lot of practical power. For instance, no proposal of law actually becomes a law until signed by the King — and there is no legal requirement for the King to sign.[Cons 18] In practice, the King will always give assent since most proposals of

law are made by the government "by or on behalf of the King".[Cons 19] And while proposals of law must be *approved* by the States-General, a lot of the practical running of the country is done by Royal Decree (in Dutch: *Koninklijk Besluit*). These Royal Decrees are used for all sorts of things, ranging from appointments of civil servants and military officers to clarifications of how public policy is to be executed (in this they are like American executive orders) to filling in the details of certain laws. Royal Decrees create ministries,[Cons 20] disband the houses of the States-General,[Cons 21] and appoint and fire ministers.[Cons 22]

However, since the ministers are responsible, Royal Decrees are in fact made by the responsible minister. And while the King must sign laws and Royal Decrees before they come into effect, the constitution determines that the responsible ministers and state secretaries must countersign.[Cons 23] That, given the fact that the ministers have the authority, really means that they decide and it is the King who countersigns, and even that is a formality. Also, while the King may technically propose laws ("by or on behalf of the King"), ministerial responsibility means that he never does. And even though the government may refuse to sign a States-General approved proposal into law, this is practically unheard of and the King refusing to sign on his own is even more rare (and a constitutional crisis to boot).[ext 2]

There is one special case in which the King has, if possible, even less power than normal: the appointment of his ministers. Ministers are appointed by Royal Decree, which of course have to be countersigned by the responsible minister. The Royal Decree to appoint a minister, however, is countersigned by *two* responsible ministers rather than one: the outgoing minister responsible for the ministry and the Prime Minister.[Cons 24]

Formation of the government

Given the discussion above, it is a valid question whether the position of King of the Netherlands is entirely ceremonial. The answer however, is "no". Despite all appearances the King does have some actual power, relating to the formation of a new government after parliamentary elections. And, even more interestingly, this power is traditional and is not described in the constitution.[ext 1]

After the parliamentary election there follows a period of time in which the leaders of the political parties in the parliament seek to form a coalition of parties that can command a majority of the newly elected parliament. The current nationwide party-list system, combined with a low threshold for getting a seat (two-third percent of the vote) makes it all but impossible for one party to win an outright majority. Thus, the bargaining required to put together a governing coalition is as important as the election itself.

This process of negotiations, which can last anywhere from two to four months (more on occasion...), is coordinated in the initial stages by one or more informateurs, whose duty it is to investigate and report upon viable coalitions. After a likely combination is found, a formateur is appointed to conduct the formal coalition negotiations and form a new Council of Ministers (of which the formateur himself usually becomes the Prime Minister). If the negotiations fail, the cycle starts over. The informateurs and formateur in question are all appointed to this task by the King. The King makes his own decision in this, based on advice from the leaders of the different parties in parliament, as well as other important figures (the speakers of the new parliament and the senate are among them).[ext 1]

There is usually some popular discussion in the Netherlands around the time of these negotiations about whether the authority of the King in this matter should not be limited and whether or not the newly elected parliament should not make the appointments that the King makes. These discussions are usually based (to varying degrees) around the argument that decision by a King is undemocratic and there is no parliamentary oversight over the decision and the King might make use of this to push for a government of his or her liking.

On the other hand, it is somewhat questionable that the King really has much opportunity here to exert any influence. The informateur is there to investigate possible coalititions and report on them. He could technically seek "favorable" coalitions, but the political parties involved are usually quite clear on what they want and don't want and the first choice for coalition almost always is the coalition of preference of the largest party in the new parliament. Besides, the kings and (particularly) the queens have traditionally known better than to appoint controversial informateurs, usually settling for well-established yet fairly neutral people in the political arena (the deputy chairman of the Dutch Council of State is a common choice). Once a potential coalition has been identified the King technically has a free rein in selecting a formateur. However, the formateur almost always becomes the next Prime Minister, and in any case it is a strong convention that a government must command the support of a majority of the House of Representatives in order to stay in office. These considerations mean that the selected formateur is always the party leader of the largest party in the potential coalition.[ext 1]

The King and the States-General

The one branch of government in which the King has no direct part is the legislative branch, which is formed by the States-General of

the Netherlands. This parliamentary body consists of two chambers, the *House of Representatives* (also commonly referred to as the *Parliament*) and the *Senate*.[Cons 25]

As in most parliamentary democracies the States-General are dually responsible for overseeing the government in its executive duties as well as approving proposals of law before they can become actual laws. In this respect it is of course vital for the government to maintain good relations with the States-General and technically the King shares that effort (although the King never officially speaks to members of the States on policy matters due to ministerial responsibility).

Constitutionally, the King deals with the States-General in three areas: lawmaking, policy outlining at the opening of the parliamentary year and dissolution.

Of the three, policy outlining is the most straightforward. The parliamentary year is opened on the third Tuesday of September with a joint session of the two houses.[Cons 26] At this occasion the King addresses the joint States in a speech in which he sets forth the outlines for his government's policies for the coming year (the speech itself is of course prepared by the ministers, their ministries and finally crafted and approved by the Prime Minister). This event is mandated by the constitution in Article 65. Tradition has made more of this occasion than a policy speech though, and the event known as Prinsjesdag has become a large affair with much pomp and circumstance, in which the States-General and other major bodies of government assemble in the Ridderzaal to hear the queen deliver the speech from the throne after having arrived from the Noordeinde Palace in her golden carriage. Both in constitutional aspects and in ceremony the event has much in common with both the British Queen's Speech and the American State of the Union.

Lawmaking is the area in which the King has the most frequent involvement with the States-General (although in fact he has very little to do with it in practice). Laws in the Netherlands are primarily proposed by the government and can be proposed "by or on behalf of" the King (this phrase is repeated often in the constitution).[Cons 18] Technically this means that the King may propose laws in person, hearkening back to the days of the first kings of the Netherlands when the kings really could and did propose laws. However, this possibility is at odds with ministerial responsibility and the queens have always avoided the issue by never proposing laws in person. The King must still sign proposals into law though, a historical deference to the fact that the law of the land is decreed by the King.

While the King has no practical involvement anymore in lawmaking other than a signature at the end, one might get a different impression from reading the communication between the government and the States-General regarding proposals of law and the laws themselves. All communication from the States-General to the government is addressed to the King and communication in the opposite direction formally is from the King (it is also signed by the King, without a ministerial countersignature – such communication is not a decision or decree, so does not require a countersignature). The formal language still shows deference to the position of the King, with a refusal of the States-General to approve a proposal of law for example becoming "a request to the King to reconsider the proposal". The constitution prescribes a number of the forms used:[Cons 27]

- If the government accepts a proposal of law and signs it into law, the language is that "The King accedes to the proposal".
- If the government refuses a proposal of law, the language is that "The King shall keep the proposal under advisement".

A law, once passed, is formulated in such a way as to be decreed by the King.

The final involvement of the King with the States is dissolution. Constitutionally, the King is empowered to disband either house of the States by Royal Decree. Of course, this means that a minister (usually the Prime Minister) makes the decision and the King countersigns. The signing of such a Royal Decree constitutionally implies new elections for the house in question and the formation of a new house within three months of dissolution.[Cons 21]

The constitution prescribes a number of cases in which one or more houses of the States are disbanded (particularly for changes to the constitution); this is always done by Royal Decree. In addition, traditionally the collapse of the government is followed by dissolution of the House of Representatives and general elections. Before World War II, before it became common to form new governments with each new parliament, it would happen from time to time that a Council of Ministers found itself suddenly facing a new and unfriendly parliament. When the inevitable clash came, it was an established political trick for the Prime Minister to attempt to resolve the problem by disbanding the parliament in name of the King in the hope that new elections brought a more favorable parliament (but it was also possible for the trick to backfire, in which case the new, equally hostile and far more angry parliament would suspend the budget to force the resignation of the government).

Even though the King never speaks with members of the States-General formally, it was tradition up to 1999 that the queen would invite the members of parliament over once a year for informal talks about the general state of affairs in the country. Of course these conversations were held in the strictest confidence due to ministerial responsibility. The tradition was suspended after 1999 though, due to repeated incidents involving MPs blabbing about the contents of the conversations despite agreeing not to (and embarrassing the Prime Minister in doing so). In 2009 an attempt was made to resume the tradition, but this failed due to Arend Jan Boekestijn

resuming the tradition of revealing the contents of his conversation with queen Beatrix anyway.[ext 3]

Other functions of the King

In addition to the duties and responsibilities described in previous sections, the King has several other functions as well. Some of these are (partly) constitutional, others are more traditional in nature.

Although it does not say so anywhere in the constitution, the King is the head of state of the Kingdom of the Netherlands (this meaning is implied from the fact that the King is the King). As such, the King is the face of the kingdom towards the world: the ambassadors of the Netherlands are emissaries of the King, foreign ambassadors represent foreign heads of state to the King. And even though head-of-government responsibility lies with the Prime Minister, it is the King that makes state visits to foreign heads of state as representative of the Netherlands. It is also the King whose face is shown on Dutch stamps and Dutch euro coins.

Constitutionally the King is the head of the Dutch Council of State.[Cons 28] The Council is a constitutional body of the Netherlands that serves two purposes. First, it is an advisory council to the government which advises on the desirability, practicability and constitutionality of new proposals of law. Second, it is the Supreme Court for the Netherlands in matters of administrative law.[Cons 29] The position of the King as constitutional head of this Council means two things for the constitutional position of the King:[ext 4]

1. The King is constitutionally directly involved with practically all aspects of lawmaking except approval by the States-General (the representative of the electorate). From inception of the law through proposal to the States to finally signing into law, the King is involved. This involvement is derived from the days when the King was an absolute ruler and really made law. Originally, with the creation of the first constitutions, the kings strove to maintain power by maximum involvement with all aspects of lawmaking. Over time this has grown into a more advisory role.
2. The King is constitutionally involved with at least part of the judicial branch of government as well.

Of course, the role played by the King in the Council is largely theoretical due to ministerial responsibility. While the King is officially head of the Council, in practice the queen never votes in Council meetings and always turns over her responsibility as chair of the meetings to the deputy head of the Council. She is presumed to be part of the discussions though.

Despite the limitations on the role the King may play in the Council, his involvement is seen as valuable due to the experience and knowledge that a monarch accrues over the years. Reciprocally, being part of the Council deliberations is considered invaluable training and preparation for the role of King, which is why the heir-apparent is constitutionally an observer-member of the Council from the time he comes of age.[Cons 28]

The King is also the Grand Master of the Dutch orders of knighthoods: the Order of Orange-Nassau,[Law 1] the Order of the Netherlands Lion[Law 2] and the Military William Order.[Law 3]

Lastly, the King plays a very large but completely unofficial role in the running of the country as advisor and confidant to the government. This duty traditionally takes the form of a weekly meeting between the Prime Minister and the monarch in which they discuss the affairs of the week, the plans of the cabinet and so on. It is assumed that the queen exerts most of her influence (as such) in these meetings, in that she can bring her knowledge and experience to bear in what she tells the Prime Minister. In the case of queen Beatrix, several former Prime Ministers have remarked that her case knowledge of each and every dossier is extensive and that she makes sure to be fully aware of all the details surrounding everything that lands on her desk.

Perhaps somewhat surprisingly for a monarchy, the King is not formally the commander-in-chief of the military of the Netherlands. He was until 1983, but a large overhaul of the constitution that year shifted supreme command of the armed forces to the government as a whole.[Cons 30]

Remuneration and privileges

Stipend

Article 40 of the constitution states that the King is to receive an annual stipend from the Kingdom (in other words wages, except that it cannot be called that since the King is not employed by the country but rather the other way around). The exact rules surrounding these stipends are to be determined by law, as is the list of members of the Royal House who also receive them.[Cons 31]

Under current Dutch law the King receives an annual stipend which is part of the annual budget, as do the heir-apparent, the consort of the King and the consort of the heir-apparent.[Law 4] The King receives this stipend constitutionally, the others because they are

not allowed to work for anybody due to their positions. For practical purposes this means that the current recipients of royal stipends are Queen Beatrix (€813,000 in the 2009 budget), Prince Willem-Alexander (the heir-apparent; €241,000 in the 2009 budget) and Princess Máxima (wife of Prince Willem-Alexander; €241,000 in the 2009 budget).[Law 5] This stipend is currently linked to the development of the wages of Dutch civil servants.

At the beginning of 2009 there was some upset in the parliament about the cost of the Royal House and the lack of insight into the structure of those costs. At the insistence of the parliament the development of the stipends of the Royal House members was then linked to the development of the salaries of the Dutch civil servants. During 2009 it was agreed collectively that the civil servants would receive a pay increase of 1%. In September 2009, at the first budget debate in parliament during the economic crisis, it was pointed out to the parliament that their earlier decision meant that the stipend to the queen would now also increase. This in turn was reason for the parliament to be displeased again.

Royal privileges

Under the constitution, Royal House members receiving a stipend are exempt from income tax over that stipend. They are also exempt from all personal taxes over assets and possessions that they use or need in the execution of their functions for the Kingdom. The King and the heir-apparent are exempt from inheritance tax on inheritances received from members of the Royal House.[Cons 31]

Royal Standard

The King has the use of Huis ten Bosch as a residence and Noordeinde Palace as a work palace. In addition the Royal Palace of Amsterdam is also at the disposal of the King (although it is only used for state visits and is open to the public when not in use for that purpose), as is Soestdijk Palace (which is open to the public and not in official use at all at this time).[Law 6]

The King has the use of an airplane and a train for state visits (although the airplane is not exclusively reserved for the King anymore).[ext 5] The King also has a small fleet of cars available, on which he may display the royal standard.

Positions of other members of the Royal House and royal family

The royal family has become quite extensive since the birth of Queen Juliana. By consequence so has the Royal House (nominally the collection of persons in line for the throne and their spouses), to the extent that membership of the Royal House was limited by a change in the law in 2002.[Law 7]

Despite being a large clan, the family as a whole has very little to do officially with the Dutch government or the running of the Netherlands. Constitutionally an important role is played by the monarch. The heir-apparent is deemed to be preparing to ascend to the throne, so he has some limited tasks and a number of limits on his person (particularly he cannot hold a paying job, since this might lead to entanglements later on). Since neither King nor heir-apparent may hold jobs, they receive a stipend from the government. Their spouses are similarly forbidden from earning an income and receive a stipend as well. But constitutionally that is the whole of the involvement of the royal family with the Dutch government.

In particular (even though it is a common mistake to believe otherwise), members of the Royal House other than the King and the heir-apparent have no official tasks within the Dutch government and do not receive stipends. They are responsible for their own conduct and their own income. They may of course be asked to stand in from time to time (for instance to accompany the King on a state visit if the consort is ill), but this is always a personal favor and not an official duty. In addition, they are not exempt from taxation.

Many members of the royal family do hold (or have held) significant positions within civil society, usually functioning as head or spokesperson of one or more charitable organizations, patron of the arts and similar endeavors. Some members of the royal family are also (or have been) avid supporters of some personal cause; Prince Bernhard for instance was always passionate about the treatment of World War II veterans and Princess Margriet (who was born in Canada) has a special relationship with Canadian veterans specifically. As a rule of thumb, the members of the royal family who are contemporaries of Queen Beatrix tend to hold civil society positions as a primary occupation whereas younger family members hold these positions in conjunction with a regular, paying job. A notable exception to this rule is Pieter van Vollenhoven (husband to Princess Margriet), who is chairman of the Dutch Safety Board.

As noted before, the spouses of the monarch and the heir-apparent are forbidden from holding paying jobs or government responsibilities. This is to prevent any monetary entanglements or undue influences involving the (future) King. These legal limits were not a great problem when they were instituted in the 19th century; The Netherlands had kings and it was considered normal for a married woman to tend the household, raise the family and not to hold any position outside the home. The limits have been more problematic since the early 20th century, when the monarchy of the Netherlands passed to a series of queens and the consorts

became men (starting with Prince Hendrik in 1901). The male consorts since then have all either been raised with an expectation of government responsibility (such as Prince Hendrik), or had established careers of their own before marrying the future queen (Prince Bernhard and Prince Claus). Upon marrying into the Dutch royal family they all found themselves severely restricted in their freedom to act and make use of their abilities. All of the male consorts have been involved in some form of difficulty or another (scandals involving infidelity and finances in the cases of Hendrik and Bernhard, deep depression in the case of Claus) and it has been widely speculated (and even generally accepted) that sheer boredom played at least a part in all of these difficulties.

Over time the restrictions on royal consorts have eased somewhat. Prince Frederik was allowed no part or role in the Netherlands whatsoever. Due to his war efforts, Prince Bernhard was made Inspector General of the Dutch armed forces (although that role was created for him) and was an unofficial ambassador for the Netherlands who leveraged his wartime contacts to help Dutch industry. All that came to a halt in 1976 however, after the Lockheed bribery scandals. Prince Claus was allowed more leeway still after having established himself in Dutch society (he was unpopular at first, being a German marrying into the royal family after World War II); he was eventually given an advisorship within the Ministry for Development Cooperation pertaining to Africa, where he made good use of his experiences as a German diplomat in that continent. Nevertheless, neither Bernhard nor Claus ever fully got over the restrictive nature of their marriages and at the time of the royal wedding in 2002 it was broadly agreed in government circles that Princess Máxima (who had a career in banking before marrying Prince Willem-Alexander) should be allowed far more leeway if she desires.

Death and burial

Although Dutch lawmakers have historically favored being very conservative about creating special legal positions for members of the Royal House or the Royal family, there is one area in which the rules for members of the Royal House are very different than for other Dutch citizens: the area of death and burial. More specifically, there is only one rule that pertains to members of the Royal House in this area and that is that there are no rules.

For Dutch citizens, the rules surrounding death and burial are laid out by the Funereal Law (Dutch: *Wet op de Lijkbezorging*).[Law 8] However, article 87 of this law states that the entire law is not applicable to members of the Royal House and that the Minister of Internal Affairs can also waive the law for other relatives of the King. The reason for this exceptional position of members of the Royal House is traditional. Ever since the burial of William the Silent in the Nieuwe Kerk in Delft, members of the Orange-Nassau family have favored burial in the same crypt where William was entombed (some members of the family buried elsewhere were even moved there later). However, for health and hygiene reasons, burial in churches was forbidden in the Netherlands by decree of William I in 1829 (the practice had been banned before under French occupation of the country, but returned after 1815). In order to allow entombing of members of the Royal family, all Dutch laws pertaining to burial have made an exception for the Royal House ever since the 1829 decree.

Burial of members of the Royal House is completely a matter of tradition, circumstance, practicality and spirit of the times (this due to the lack of any formal rules whatsoever). As a rule of thumb, the body of a deceased member of the Royal House is placed on display for a few days in one of the palaces, to allow the family to say goodbye. Depending on the identity of the deceased (a deceased monarch, for instance), there may also be a viewing for the public. Then, on the burial day, the body is transported to Delft in a special horse-drawn carriage. Current protocol specifies eight horses for a deceased monarch and six for a deceased royal consort (which is relatively new, since Prince Frederik was borne to Delft by eight horses). The current carriage is purple with white trim (this has also changed since the burial of Queen Wilhelmina in 1962, when the carriage was white). Currently, the route to Delft is lined by members of the Dutch armed forces (which is also new since the burial of Prince Hendrik, which was a very quiet affair).

Once in Delft, the body is entombed in the family crypt after a short service. Only members of the family are allowed into the crypt, through the main entrance in the church which is only opened for royal funerals (the mayor of Delft has a key to a separate service entrance, which is only opened in the presence of two military police officers and two members of the Dutch General Intelligence and Security Service for maintenance).

The monarchy in Dutch society

Importance and position within Dutch society

The importance and position of the monarchy within Dutch society has changed over time, together with changes in the constitutional position of the monarchy.

The monarchy of the Netherlands was established in 1815 as a reaction to the decline and eventual fall of the Dutch Republic. It was observed at the time that a large part of the decline of the republic was due to a lack of a strong, central government in the face of strong, centrally led competitor nations such as Great Britain and the French kingdom. After the defeat of Napoleon Bonaparte in

1813 and the resurrection of the Netherlands, it was decided to reform the republic in the Kingdom of the Netherlands with a monarchy rather than the old stadtholder system.

The original monarchy was absolute in nature, with the States-General serving as more of an advisory board without the power to do much against the King. This state of affairs allowed the King great freedom to determine the course of the nation and indeed William I was able to push through many changes that set the nation on the course towards industrialization and wealth. He also established the first Dutch railway system and the Nederlandsche Handel Maatschappij, which would later evolve into the ABN Amro bank. On the other hand, his policies caused great discord with the Southern Netherlands, leading to the Belgian Revolution and a years-long war. A backlash against these policies plus rising fear of early Marxism led to acceptance by William II of a series of reforms, starting with a new constitution in 1848 (which was the start of a continuing series of limitations on royal power).

Direct political power and influence of the King continued until 1890, although it slowly declined in the meantime. Both William I and William II proved quite conservative rulers (although William II was less inclined to interfere with policy than his father was), both resisting major reforms until eventually conflict with the States-General and their own government forced their abdications. William III's reign was a continuous saga of power struggles between the monarch and the parliamentary government (which he forced out a couple of times), plus major international crises due to the same stubbornness (including the Luxembourg Crisis). As a result the Dutch government used the succession of William III by a female regent as an opportunity to make a power play and establish government authority over royal authority.

Queen Wilhelmina was not happy with the new situation and made several half-hearted attempts during her reign to reassert authority. She was partly successful in certain areas (being able to push for military rearmament before World War I) but she never succeeded in restoring royal power. She did introduce a new concept to Dutch royalty though: the popular monarch. Establishing her popularity in military circles through her support of Dutch military prior to 1917, she was able to wield her personal popularity to uphold the government against a socialist revolution in 1917.

Royal power continued to decline until the start of World War II. Forced to flee to London, queen Wilhelmina established the position of "mother of the Dutch state" through her radio broadcasts into the occupied Netherlands and her support for other Dutchmen evading the Germans and fighting from England. She tried to position her family into more influence by giving prince Bernhard an important position in the military, but was still relegated to a position of constitutional monarchy after the war.

Following Wilhelmina's abdication in 1948, the Orange family seems to have settled for a position of unofficial influence behind the scenes coupled with a role as "popular monarchs" in public. As such the monarchs are practically never seen in public doing their official work (except news footage of state visits and the reading of the government plans on Prinsjesdag) and instead their relationship with the public has become more of a popular and romanticized notion of royalty. The queen nowadays is popularly perceived to have a figurehead role, serving as "mother of the nation" in times of crises and disasters (such as the 1953 floods). In addition, there is a public holiday called Koninginnedag, in which the royal family pays a visit somewhere in the country and participates in local activities and traditions in order to get closer to the people.

Popularity of the monarchy

The popularity of the monarchy has changed over time, with constitutional influence, circumstance and economic tides.

When the monarchy was established in 1815, popularity was not a major concern. Still, the Orange family held popular support in around 60% percent of the population following the fall of the French. This changed drastically over the following years as William I's policies alienated the Southern Netherlands, drew the country into civil war and established industries that favored the rich Protestants and not the general populace.

Royal popularity remained relatively low throughout the reign of the kings. William II was conservative, but on the whole did as little to lose popularity as he did to gain it. Economic decline drove most of his popular decline, although popular support for the monarch was still not considered of much import then. William III was unpopular under a wide section of the public, earning himself the nickname "King Gorilla" for his boorish way of behaving.

Royal popularity started to increase with Wilhelmina's ascent to the throne. She pushed for national reforms, was a huge supporter of the armed forces and strove for renewed industrialization. Around 1917 the country was generally divided into two camps: socialists in the cities, royalists elsewhere. This showed in the dividing lines during the failed Troelstra revolution, where Troelstra gained popular support in the larger cities but the countryside flocked to the queen. Wilhelmina was able to muster popular support with a countryside "publicity tour" together with her daughter — this showing of popular support for the queen was instrumental in halting the revolution and stabilizing the government. Still, Wilhelmina remained deeply unpopular in the cities throughout the 1920s and 1930s.

Nationwide support came for Wilhelmina and the monarchy during World War II. Wilhelmina was forced to retreat to London, but refused evacuation all the way to Canada (although princess Juliana was sent there with her children). Wilhelmina regularly held radio broadcasts into the occupied Netherlands and staunchly supported the Dutch troops in exile. She became the symbol for Dutch resistance against the Germans, leading to the term "WOZO" (*Wilhelmina, Oranje Zal Overwinnen*, or *Wilhelmina, Orange Shall Be Victorious*) being graffiti'd over all manner of Dutch walls as a sign of resistance. Wilhelmina established popular support for the monarchy that essentially holds to this day.

Although a completely different type of queen than Wilhelmina, Juliana gained enormous popular support in her own right. Starting with her public appearances after the 1953 floods, Juliana established herself as a "mother of the nation" type of queen. A far more homey, down-to-earth character than Wilhelmina, queen Juliana reigned with a "neighbour and housewife" air about her in a time when the Netherlands went through a period of social relaxation in the 1960s and 1970s (shrugging off the more rigid nature of previous Dutch society). Juliana was also a pacifist at heart at a time when Vietnam was an unpopular war and opposition to nuclear weapons was on the rise. Amid all this, queen Juliana's socialist views and unassuming nature (she had a popular image of being a queen who prepared her own Brussels sprouts) made her the "right queen for the time" and she maintained and increased the popular support she had inherited from her mother, even in the face of different scandals surrounding her husband.

Popular support waned for a time in the early 1980s, during the start of queen Beatrix' reign. She adopted a style of government more like that of queen Wilhelmina and was perceived as cold and distant in a country used to queen Juliana being everybody's grandmother. Over time the country has got used to her style though and acceptance has grown. This was also aided by the public image of prince Claus, who came to be perceived as charming and funny during her reign. Particularly his public love declaration for Beatrix a few years before the end of his life endeared him to many people. Popular support for the monarchy (which was only measured regularly since Beatrix' reign) has consistently been above 85% since the mid-1990s and reached a peak with the marriage of prince Willem-Alexander to princess Máxima in 2002.

Popular support has become more volatile over the last few years though, in the face of seeming improprieties by prince Willem-Alexander and other members of the royal family during the economic crisis. Prince Willem-Alexander always had a reputation for being a "naughty boy" (he became popularly known as "Prins Pils" ("prince beer") after being photographed drinking beer as a student and once drove his car into a ditch while in university as well). Despite ongoing efforts to prepare for being King (including internships throughout society, military service and a very public interest in water management), he has made some clumsy choices from time to time that have negatively impacted his popularity. When he became engaged to Máxima Zorreguieta (daughter of Argentine junta member Jorge Zorreguieta), he publicly defended her by citing a letter describing her father's actions as harmless — the letter turned out to have been written by Jorge Rafael Videla. The matter was set aside when princess Máxima described her future husband's actions as "een beetje dom" ("a little bit dumb") in fluent Dutch during her first press conference (this also established her reputation as a charming young lady in the Netherlands). In 2009 Willem-Alexander and Máxima were in the news again for investing in a vacation resort in Mozambique. Even though there were good reasons to believe the project would have benefited the local populace greatly, the expenditure of money abroad during a crisis in a project involving some shady brokers did not sit well with the Dutch public. Also a purchase of an alternative vacation home in Argentina the same year was unpopular.

In and of themselves the incidents were not terrible, but they became public knowledge around the same time that other questions were being raised about the family finances of the Oranges. Even though the incidents caused only a slight drop in overall popular support (down to about 83%), they led to an increased support for moving to a fully ceremonial monarchy (around 43%), a freezing of the royal stipends (around 66%) or even a lowering of the stipends (about 33%) and removing the royal exemption on taxation (also around 40%).

History

For rulers of the Netherlands before 1806, see Stadtholder of the Netherlands

Prior to the Napoleonic wars, most of the semi-independent provinces of the Netherlands had been ruled by elected stadtholders, who were all drawn from the House of Orange-Nassau.

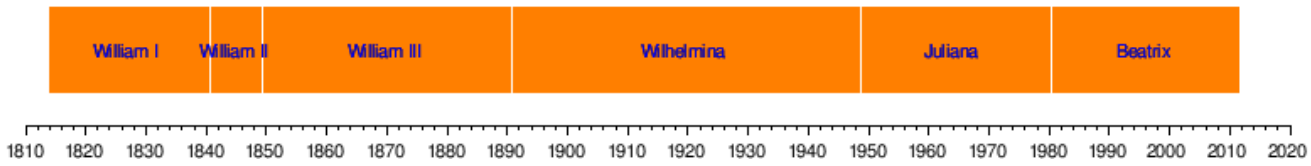
The House of Orange-Nassau came from Dillenburg, Germany, seat of the Dukes of Nassau. Their title 'Prince of Orange' was acquired through inheritance of the Principality of Orange in southern France, in 1544. William of Orange (also known as William the Silent) was the first Orange-Nassau stadtholder (ironically, appointed by Philip II of Spain). From 1568 to his death in 1584, he led the Dutch struggle for independence from Spain. His younger brother, John VI, Count of Nassau-Dillenburg, was the direct male line ancestor of the first King of the Netherlands.

The Netherlands remained, formally, a confederated republic, even when in 1747 the office of stadtholder was centralized (one stadtholder for all provinces) and became formally hereditary the House of Orange-Nassau.

The first King of the Netherlands was actually French. In 1806, Emperor Napoleon installed his brother Louis Bonaparte as ruler of the Kingdom of Holland, a puppet state. The Kingdom of Holland was abolished in 1810.

The present monarchy was founded in 1813, when the French were driven out. Prince William V of Orange was proclaimed Sovereign Prince of the United Netherlands (comprising certain northern provinces). The new monarchy was confirmed in 1815 at the Congress of Vienna as part of the re-arrangement of Europe after the fall of Napoleon, and its status as a kingdom was also confirmed.

William VI became the first king of the constitutional monarchy of the Netherlands as William I.



The House of Orange-Nassau was given the modern day Netherlands and also Belgium and Luxembourg to rule as the United Kingdom of the Netherlands. In addition, the King of the Netherlands became hereditary Grand Duke of Luxembourg. Until 1839, Luxembourg was both a Grand Duchy of the German Confederation and a Province of the Kingdom simultaneously.

Abdication of the throne has become a de facto tradition in the Dutch monarchy. Queen Wilhelmina and Queen Juliana both abdicated in favour of their daughters and William I abdicated in favor of his eldest son.

The present monarch, Queen Beatrix, has stated she will not abdicate in the near future, to allow Crown Prince Willem-Alexander and his wife Princess Máxima to spend time with their family.

Monarchs of the Netherlands

Main article: List of monarchs of the Netherlands

Wilhelmina (1890–1948)

Main article: Wilhelmina of the Netherlands

When Wilhelmina came to the throne in 1890 at age 10 (her mother, queen Emma, second wife of the then deceased William III, acted as regent until Wilhelmina reached the age of 18) Luxembourg, also a former member of the erstwhile German Confederation, was not willing to accept a (female) Grand Duchess under Salic law. Instead a family member, Adolf, former Duke of Nassau, became Grand Duke of Luxembourg, ending the personal union between the Netherlands and Luxembourg.

The 58-year reign of queen Wilhelmina was dominated by the two World Wars. She married a German prince, Heinrich von Mecklenburg-Schwerin, who unfortunately was not happy with his unrewarding role of husband-to-the-queen. Wilhelmina's strong personality and unrelenting passion to fulfill her inherited task overpowered many men in position of authority, including ministers, prime-ministers and her own husband. She is mostly remembered for her role during World War II. The initial disappointment of many Dutch people because of her quick withdrawal to London faded (though it was never forgotten and by some was never forgiven) when she proved to be of great moral support to the people and the resistance in her occupied country. Hendrik and Wilhelmina had one daughter, Juliana, who came to the throne in 1948. They lived in The Hague and in Palace 't Loo (Paleis 't Loo) in Apeldoorn. She died in 1962. For her early reign and character, the letters of Queen Victoria give a good perspective.

Juliana (1948–1980)

Main article: Juliana of the Netherlands

Juliana reigned from 1948 until 1980, and whereas Wilhelmina reigned like a general, Juliana expressed a more motherly character. One of her first official acts was to sign the treaty of independence of the Dutch colony Indonesia. She became involved in two major crises: the Greet Hofmans affair and the Lockheed bribery scandals, both of which directly threatened the credibility of the throne. She married a German of noble descent, Prince Bernard von Lippe-Biesterfeld. Together they had four daughters, Beatrix, Irene, Margriet and Christina. After their return from Ottawa, Canada in 1945 (where Margriet

Dutch Royalty
House of Orange-Nassau

was born), they lived in the Soestdijk Palace (Paleis Soestdijk) in Soestdijk, about 20 km north-east of Utrecht. She died on 20 March 2004. Her husband Bernhard died on 1 December 2004.

Beatrix (1980–present)

Main article: Beatrix of the Netherlands

The Dutch royal family today is much larger than it has ever been. Queen Beatrix and her husband, the late prince Claus, have three sons, Willem-Alexander (married to Princess Máxima), Friso (married to Princess Mabel) and Constantijn (married to Princess Laurentien). Her sister Margriet and her spouse Pieter van Vollenhoven have four sons: Maurits, Bernhard, Pieter-Christiaan and Floris. Four of these seven princes as well as princess Margriet, are all (potentially) legal heirs to the throne, although the first right goes to the crown prince, and after him his daughters Catharina-Amalia, Alexia, Ariane, and then his brother Constantijn. Prince Friso lost his right to the throne because no approval was asked for his marriage to Mabel Wisse Smit to the States-General. The two other sisters of Beatrix, Irene and Christina, have lost their rights to the throne because their marriages were not approved by the States-General. They both married Roman Catholics and Irene herself converted to Roman Catholicism, which at that time (the 1960s) was still politically problematic for an heir to the throne. An additional complication which the government wanted to avoid, was that Irene's husband, Prince Carlos-Hugo of Bourbon-Parma, (whom she later divorced) was a member of a deposed Italian dynasty who claimed rights to the Spanish throne. Traditionally, Dutch monarchs have always been members of the Dutch Reformed Church although this was never constitutionally required. This tradition is embedded in the history of the Netherlands.

Willem-Alexander

Main article: Willem-Alexander, Prince of Orange

The heir apparent to the Dutch throne is prince Willem-Alexander (born 1967), the Prince of Orange since 1980. He studied history at the University of Leiden and became actively involved in water management. His wife is Princess Máxima (née Máxima Zorreguieta Cerruti), an economy major, whose father was a minister of agriculture in the dictatorial regime under General Videla in Argentina. Because of that their relationship was accompanied by fierce public debate and only officially sanctioned after quiet diplomacy, resulting in Máxima's father agreeing not to be present on their wedding day (2 February 2002). Former minister Max van der Stoel and prime minister Wim Kok seem to have played a crucial role in this process.

On 7 December 2003 Princess Máxima gave birth to a daughter: Princess Catharina-Amalia. On 26 June 2005 another daughter was born: Princess Alexia. On 10 April 2007 a third daughter was born, Princess Ariane. After Willem-Alexander they are second, third, and fourth in line to the Dutch throne.

Full title

Most members of the Dutch Royal Family, in addition to other titles hold (or held) the princely title Prince of Orange-Nassau. The children of prince Friso and prince Constantijn are instead count or countess of Orange-Nassau. Princess Margriet's and Princess Christina's grand children do not hold any title. Princess Irene's grand children only hold titles if they are (recognised) children of the princes Carlos and Jaime, according to the house rules of the House of Bourbon-Parma. In addition to the titles King/Prince of the Netherlands and Prince of Orange-Nassau, descendants of Queen Juliana and Prince Bernhard of Lippe-Biesterfeld hold another princely title - Prince of Lippe-Biesterfeld. The children of queen Beatrix and her husband Claus van Amsberg and their descendants, except for the children of prince Willem-Alexander and princess Máxima, also carry the appellative Honourable (Jonkheer/Jonkvrouw) in combination with the name Van Amsberg.

Queen Juliana, the only descendant of Queen Wilhelmina and Duke Hendrik of Mecklenburg-Schwerin, was also Duchess Juliana of Mecklenburg-Schwerin. Since the title can pass only through the male line, Queen Juliana's descendants do not carry the title of Duke of Mecklenburg-Schwerin.

The title Prince of the Netherlands is the prerogative of the most important members of the Royal House (sons and daughters of king

or queen and sons/daughters of the heir apparent, the Prince of Orange), which is smaller than the Royal Family. Members of the Royal House can lose their membership when they enter into marriage without asking (and receiving) consent from Parliament.

Beatrix of the Netherlands

From Wikipedia, the free encyclopedia

Beatrix (Beatrix Wilhelmina Armgard, Dutch pronunciation: ['beəˈɛtrɪks ˌʋɪlhɛl'minə 'ɑrmgɑrd]; born 31 January 1938) is the Queen regnant of the Kingdom of the Netherlands comprising the Netherlands, Curaçao, Sint Maarten, and Aruba. She is the first daughter of Queen Juliana of the Netherlands and Prince Bernhard of Lippe-Biesterfeld. She studied law at Leiden University. In 1966, she married Claus von Amsberg, with whom she had three children: Prince Willem-Alexander (born 1967), Prince Friso (born 1968), and Prince Constantijn (born 1969). When her mother Juliana abdicated on 30 April 1980, Beatrix succeeded her as Queen of the Netherlands.

Early life

Princess Beatrix was born *Princess Beatrix Wilhelmina Armgard of the Netherlands, Princess of Orange-Nassau, Princess of Lippe-Biesterfeld*, on 31 January 1938 at the Soestdijk Palace in Baarn, the Netherlands. She was the eldest daughter of Crown Princess Juliana of the Netherlands and Prince Bernhard of Lippe-Biesterfeld.[1] Beatrix's five godparents are King Leopold III of the Belgians, Princess Alice, Countess of Athlone, Princess Elisabeth of Waldeck and Pyrmont, Duke Adolf Friedrich of Mecklenburg, and Countess Allene de Kotzebue.[2] When Beatrix was one year old, in 1939, her first sister Princess Irene was born.[1]

Beatrix as an infant with her mother Juliana in 1938

When World War II broke out in the Netherlands in May 1940, the Dutch Royal Family fled to London in Great Britain. One month later, Beatrix went to Ottawa, Ontario, Canada, with her mother Juliana and her sister Irene, while her father Bernhard and maternal grandmother Queen Wilhelmina remained in London.[1] The family lived at the Stornoway residence.[3] In thanks for the protection of her and her daughters, (then) Princess Juliana established the delivery of tulips to the Canadian government every spring, which are the centrepiece of the Canadian Tulip Festival. Her second sister Princess Margriet was born in 1943.[1] During their exile in Canada, Beatrix attended nursery and the primary school[4] Rockcliffe Park Public School.[5]

Princesses Margriet, Irene and Beatrix during World War II

The family returned to the Netherlands on 2 August 1945. Beatrix went to the progressive primary school *De Werkplaats* in Bilthoven. Her third sister Princess Christina was born in 1947.[1] On 6 September 1948, her mother Juliana succeeded her grandmother Wilhelmina as Queen of the Netherlands, and Beatrix became the heiress presumptive to the throne of the Netherlands at the age of ten.[*citation needed*]

Education

Princess Beatrix and Queen Juliana in 1960

In April 1950, Princess Beatrix entered the Incrementum, a part of Baarnsch Lyceum, where, in 1956, she passed her school-graduation examinations in the subjects of arts and classics.[6]

On 31 January 1956, Princess Beatrix celebrated her 18th birthday. From that date, under the Constitution of the Netherlands, she was entitled to assume the Royal Prerogative. At that time, her mother installed her in the Council of State.[*citation needed*]

The same year, at Leiden University, her university studies began. In her first years at the university, she studied sociology, jurisprudence, economics, parliamentary history and constitutional law.[6] In the course of her studies she also attended lectures on the cultures of Suriname and the Netherlands Antilles, the Charter for the Kingdom of the Netherlands, international affairs, international law, history and European law.[*citation needed*]

The Princess also visited various European and international organisations in Geneva, Strasbourg, Paris, and Brussels. She was also an active member of the VVSL (Female Union for Students in Leiden), now called L.S.V.Minerva, after it had merged with the Leidsch Studenten Corps (which before then was male-only). In the summer of 1959, she passed her preliminary examination in law, and she obtained her law degree in July 1961.[6]

Political involvement and marriage

Her appearance on the political scene was almost immediately marked by controversy. In 1965, Princess Beatrix became engaged to the German aristocrat Claus von Amsberg, a diplomat working for the German Foreign Office. Their marriage caused a massive protest during the wedding day in Amsterdam on 10 March 1966. Prince Claus had served in the Hitler Youth and the Wehrmacht and was, therefore, associated by a part of the Dutch population with German Nazism. Protests included such memorable slogans as "Claus 'raus!" (Claus out!) and "Mijn fiets terug" (Give me back my bike), a reference to the memory of occupying German soldiers confiscating Dutch bicycles. A smoke bomb was thrown at the wedding carriage by a group of Provos causing a violent street battle with the police. As time went on, however, Prince Claus became one of the most popular members of the Dutch monarchy and his 2002 death was widely mourned.

An even more violent riot occurred on 30 April 1980, during the investiture (sovereigns of the Netherlands are not crowned as such) of Queen Beatrix. Some people, including socialist squatters, used the occasion to protest against poor housing conditions in the Netherlands and against the monarchy in general, using the also memorable slogan "Geen woning; geen Kroning" (No house; no coronation). Clashes with the police and security forces turned brutal and violent. The latter event is reflected in contemporary Dutch literature in the books of A.F.Th. van der Heijden.

Queen Beatrix is a member of the Bilderberg Group[7] and an honorary member of the Club of Rome.[8]

Queen of the Netherlands

On 30 April 1980, Beatrix became Queen of the Netherlands when her mother abdicated. In domestic matters, she has little political say; however, in international relations, the Queen has much more latitude. In 1994, the Minister of Foreign Affairs announced in the States-General that a Dutch embassy in Jordan had been opened at her request.

On 6 October 2002, the Queen's husband, Prince Claus, died after a long illness. A year and a half later, her mother died after long suffering from senile dementia, while her father succumbed to cancer in December 2004.

Queen Beatrix is rarely quoted directly in the press, since the government information service (*Rijksvoorlichtingsdienst*) makes it a condition of interviews that she may not be quoted. This policy was introduced shortly after her inauguration, reportedly to protect her from political complications that may arise from "off-the-cuff" remarks. It does not apply to her son Prince Willem-Alexander.

** Member of the Dutch Royal House*

On 8 February 2005, Queen Beatrix received a rare honorary doctorate from Leiden University, an honour the Queen does not usually accept. In her acceptance speech she reflected on the monarchy and her own 25 years as Queen.[9] The speech was broadcast live.[10]

On 29 April and 30 April 2005, she celebrated the 25th anniversary of her reign. She was interviewed on Dutch television, was offered a concert on Dam Square in Amsterdam, and a celebration took place in The Hague, the country's seat of government.

Queen Beatrix and Prince Willem-Alexander in the Golden Carriage in 2007

On 30 April 2009, the Queen and many senior members of the Royal Family were targeted in a car attack by a man called Karst Tates. Tates crashed his car into a parade in Apeldoorn, narrowly missing a bus carrying the Queen. Five people were killed instantly; and two victims and the assailant Tates died later. Other victims of the crash were in a critical life threatening situation. One week after the attack another victim had succumbed to sustained injuries. The royal party were unharmed, but the Queen and members of her family saw the crash at close range and were visibly shaken. Within hours, Queen Beatrix made a rare televised address to express her shock and condolences. The man apparently told police he was deliberately targeting the royal family.[11] It is thought to be the first physical attack on Dutch royalty in modern times.

Royal finances

The royal palaces are the property of the Dutch state and given for the use of the reigning monarch;[12] While the House of Orange-Nassau possesses a large number of personal belongings, items such as paintings, historical artifacts and jewellery are usually associated with the performance of royal duties and/or the decoration of royal residences. As such, these items have a cultural significance beyond that of simple artworks and jewellery, and have therefore been placed in the hands of trusts: the House of Orange-Nassau Archives Trust and the House of Orange-Nassau Historic Collections Trust. Part of the collection is on permanent loan to Het Loo Palace Museum in Apeldoorn and the Rijksmuseum in Amsterdam. Queen Juliana had sold the remaining royal palaces

and had put the cultural assets (paintings, antiques, books, etc.) into non-personal trusts.

The Crown Jewels, comprising the crown, orb and sceptre, Sword of State, royal banner, and ermine mantle have been placed in the Crown Property Trust. The trust also holds the items used on ceremonial occasions, such as the carriages, table silver, and dinner services. Placing these goods in the hands of a trust ensures that they will remain at the disposal of the monarch in perpetuity.[13] The Royal Archives house the personal archives of the royal family.[14] This includes books, photographs, and artworks, as well as the books of the House of Orange-Nassau and the music library. The library was begun in 1813, following the return of the Orange-Nassaus to the Netherlands. King William I allowed the Stadtholder's library to remain part of the Royal Library in The Hague. The library houses a collection of some 70,000 books, journals and brochures. The music library has 6,000 scores, going back to the mid 18th century.

The *Royal House Finances Act* (1972)[15] as amended in 2008 sets allowances for the King (or Queen Regnant), the Heir to the Throne, and the former sovereign who has abdicated. Provision is also made for their spouses (and in the case of death, for the surviving spouse). The allowances have two components: income (A-component) and personnel and materials (B-component). Annual increases or decreases are provided for: the A component is linked to changes in the annual salary of the Vice-President of the Council of State; the B-component is linked to changes in civil service pay and the cost of living.

In 2009, the Government decided that the annual State Budget of the Netherlands should show in a transparent way all the costs of the Royal House, some of which had previously been borne by various Government Ministries.[16] Three sets of costs are now separately allocated in the annual budget for the Royal House (Budget I of the annual State Budget). These are:

- Allowances paid under the Royal House Finances Act. They comprise the income and personnel and materials components mentioned above.
- Expenses incurred in the performance of official duties. They include costs which had been previously been borne by the budgets of three Government Ministries (Interior, Transport and Water Management, Health and Welfare) and which are now attributed to the Royal budget in the interest of transparency. They also include the costs relating to royal flights and the royal yacht, Groene Draeck.
- Other expenses relating to the management of the Royal House. They relate to expenses for the Government Information Service (AZ/RVD) in connection with the Royal House, the cost of the Royal Military Household, the Queen's Cabinet and the travel and other costs incurred by royal visits to Netherlands Antilles and Aruba

Costs relating to the security of members of the Royal House, State Visits, and the maintenance and upkeep of the Royal Palaces (which are considered to be national monuments) continue to be funded by the budgets of the appropriate Government Ministries and are not included in the budget for the Royal House.[17]

According to the State Budget for 2010, the budgetary allocation for the Royal House in 2010 is €39.643 million.[18] There are the following categories of expenditure:

- Allowances paid to the Queen, the Prince of Orange and Princess Máxima under the Royal House Finances Act. They total some €7.102 million in 2010.
- Expenses incurred in the performance of official duties. They total some €26.818 million in 2010.
- Other expenses relating to the management of the Royal House. They total some €5.723 million in 2010.

Personal wealth

In 2009, *Forbes* estimated her wealth at US$300 million but gave no details to substantiate this figure.[19]

Titles, styles, and honours

Main article: List of titles and honours of Beatrix of the Netherlands

Royal Monogram of Queen Beatrix

Queen Beatrix has held titles throughout her life, as a granddaughter or daughter of a monarch, and eventually as the Sovereign. Queen Beatrix's official title is *Her Majesty Beatrix, by the Grace of God, Queen of the Netherlands, Princess of Orange-Nassau, etc. etc. etc*. The triple 'etc.' refers to the title Princess of Lippe-Biesterfeld and many dormant titles still formally borne by the Queen. The Queen signs official documents with only "Beatrix". In common parlance she is *The Queen* or *Her Majesty*. But when in conversation with the Queen, the practice is to initially address her as "Your Majesty" or in Dutch as "Uwe Majesteit"[20] and thereafter as "Madam" or in Dutch as "Mevrouw" which is the official etiquette though she prefers to be called "Your Majesty" at all times.

Beatrix has received honours and awards from countries around the world, both during her life as princess as well as the monarch. In capacity as the Sovereign she is Grand Master of the Military Order of William (*Militaire Willemsorde*) and the other Dutch orders of merit. She is the 975th Member and Lady of the Most Noble Order of the Garter, the 1,187th Dame of the Order of the Golden Fleece in Spain and has received numerous other medals and decorations.

House of Orange-Nassau

From Wikipedia, the free encyclopedia

This article **needs additional citations for verification**. Please help improve this article by adding citations to reliable sources. Unsourced material may be challenged and removed.
(February 2010)

The **House of Orange-Nassau** (in Dutch: *Huis van Oranje-Nassau*), a branch of the European House of Nassau, has played a central role in the politics and government of the Netherlands — and at times in Europe — since William I of Orange (also known as "William the Silent" and "Father of the Fatherland") organized the Dutch revolt against Spanish rule, which after the Eighty Years' War led to an independent Dutch state.

Several members of the house served during this war and after as governor or stadtholder (Dutch *stadhouder*) during the Dutch Republic. However, in 1815, after a long period as a republic, the Netherlands became a monarchy under the House of Orange-Nassau.

The dynasty was established as a result of the marriage of Hendrik III of Nassau-Breda from Germany and Claudia of Châlon-Orange from French Burgundy in 1515. Their son René inherited in 1530 the Principality of Orange from his mother's brother, Philibert of Châlon. As the first Nassau to be the Prince of Orange, René could have used "Orange-Nassau" as his new family name. However, his uncle, in his will, had stipulated that René should continue the use of the name Châlon-Orange. History knows him therefore as René of Châlon. After the death of René in 1544 his cousin William of Nassau-Dillenburg inherited all his lands. This "William I of Orange" - in English better known as William the Silent - became the founder of the House of Orange-Nassau.[1]

House of Orange-Nassau

Royal Coat of arms of the Netherlands

Country	Netherlands, England, Scotland, Ireland, Luxembourg, Orange, Nassau
Ancestral house	House of Nassau
Titles	Count of Nassau-Dillenburg, Prince of Orange, Stadtholder of various provinces of the Dutch Republic, King of England, Scotland and Ireland, Princely Count of Nassau-Dietz, Fürst of Nassau-Orange, Fürst of Nassau-Orange-Fulda, King or Queen of the Netherlands (main title), Duke of Limburg, Grand Duke of Luxembourg, 1815-1890
Founder	William I of Orange (William the Silent)
Current head	Queen Beatrix of the Netherlands
Founding	1544
Dissolution	Since 1962 extinct in the original agnatic line

The House of Nassau [edit]

The Castle of Nassau was founded around 1100 by Count Dudo-Henry of Laurenburg (German: *Dudo-Heinrich von Laurenburg*), the founder of the House of Nassau. In 1120, Dudo-Henry's sons and successors, Counts Robert I (German: *Ruprecht*; also translated Rupert) and Arnold I of Laurenburg, established themselves at Nassau Castle with its tower. They renovated and extended the castle complex in 1124.[1]

The first man to be called the count of Nassau was Henry I, who lived in the first half of the 13th century. The Nassau family married into the family of the neighboring Counts of Arnstein (now Kloster Arnstein). His sons Walram and Otto split the Nassau possessions. The descendants of Walram became known as the Walram Line, which became Dukes of Nassau, and in 1890, the Grand Dukes of Luxembourg. The descendants of Otto became known as the Otton Line, which inherited parts of the Nassau county, properties in France, and in the Netherlands. [1]

The House of Orange-Nassau stem from the Otton Line. The second person was Engelbert I, who offered his services to the Duke of Burgundy, married in 1403 the Dutch noblewoman Johanna van Polanen and so inherited lands in the Netherlands, with the barony of Breda as the core of the Dutch possessions & the family fortune. [2]

1544 - "Orange-Nassau" symbolized by adding the "Châlon-Orange" arms in an escutcheon to the "Nassau" arms

The importance of the Nassaus grew throughout the 15th and 16th century. Generated by

Nassau-Breda was appointed stadtholder of Holland and Zeeland by Charles of Ghent in the beginning of the 16th century. Hendrik was succeeded by his son René of Châlon-Orange in 1538, who was, as his full name stated, the Prince of Orange. When René died prematurely on the battlefield in 1544 his possessions passed to his cousin, William I of Orange. From then on, the family members called themselves "Orange-Nassau." [2][1] [3] [4]>

The Dutch rebellion [edit]

Main article: Dutch Revolt

and

Main article: Eighty Years' War

"The Nassau Cavalcade", members of the house of Orange and Nassau on parade in 1621 from an engraving by Willem Delff. From left to right in the first row: Prince Maurice, Prince Philip William and Prince Frederick Henry.[5]

Although Charles V resisted the Protestant Reformation, he ruled the Dutch territories wisely with moderation and regard for local customs, and he did not persecute his Protestant subjects on a large scale. His son Philip II inherited his antipathy for the Protestants but not his moderation. Under the reign of Philip, a true persecution of Protestants was initiated and taxes were raised to an outrageous level. Discontent arose and William of Orange (with his vague Lutheran childhood) stood up for the Protestant (mainly Calvinist) inhabitants of the Netherlands. Things went badly after the Eighty Years' War started in 1568, but luck turned to his advantage when Protestant rebels attacking from the North Sea captured Brielle, a coastal town in present-day South Holland in 1572. Many cities in Holland began to support William. During the 1570s he had to defend his core territories in Holland several times, but in the 1580s the inland cities in Holland were secure. William of Orange was considered a threat to Spanish rule in the area and was assassinated in 1584 by a hired killer sent by Philip.[6] [4] [3]

William was succeeded by his second son Maurits, a Protestant who proved an excellent military commander. His abilities as a commander and the lack of strong leadership in Spain after the death of Philip II (1598) gave Maurits excellent opportunities to conquer large parts of the present-day Dutch territory. [3] [7] In 1585 Maurits was elected stadtholder of the Provinces of Holland and Zealand as his father's successor and as a counterpose to Elizabeth's delegate, the Earl of Leicester. In 1587 he was appointed captain-general (military commander-in-chief) of the armies of the Dutch Republic. In the early years of the 17th century there arose quarrels between stadtholder and oligarchist regents — a group of powerful merchants led by Johan van Oldebarnevelt — because Maurits wanted more powers in the Republic. Maurits won this power struggle by arranging the judicial murder of Oldebarnevelt. [4] [7]

Expansion of dynastic power [edit]

Willem II (1626-50), prince of Orange, and his wife Princess Maria Stuart of England (1631-60).

Maurits died unmarried in 1625 and left no legitimate children. He was succeeded by his half-brother Frederick Henry (Dutch: *Frederik Hendrik*), youngest son of William I. Maurits urged his successor on his deathbed to marry as soon as possible. A few weeks after Maurits's death, he married Amalia van Solms-Braunfels. Frederick Henry and Amalia were the parents of a son and several daughters. These daughters were married to important noble houses such as the house of Hohenzollern, but also to the Frisian Nassaus, who were stadtholders in Friesland. His only son, William, married Mary, Princess Royal and Princess of Orange, the eldest daughter of Charles I of Scotland and England. These dynastic moves were the work of Amalia. [1] [8]

Exile and resurgence [edit]

Frederick Henry died in 1647 and his son succeeded him. As the Treaty of Munster was about to be signed, thereby ending the Eighty Years War, William tried to extend his powers beyond the military to make his function valuable at peace, at the great distress of the regents. When Andries Bicker and Cornelis de Graeff, the great regents of the city of Amsterdam refused some mayors he appointed, he besieged Amsterdam. The siege provoked the wrath of the regents. William died of smallpox on November 6, 1650, leaving only a posthumous son, William III (*November 14, 1650). Since there was no Prince of Orange upon the death of William II, the regents used this opportunity to leave the stadtholdership vacant. This inaugurated the era in Dutch history that is known as the First Stadtholderless Period. [9] A quarrel about the education of the young prince arose between his mother and his grandmother Amalia (who outlived her husband by 28 years). Amalia wanted an education which was pointed at the resurgence of the House of Orange to power, but Mary wanted a pure English education. The Estates of Holland, under Jan de Witt and Cornelis de Graeff, meddled in the education and made William a "child of state" to be educated by the state. The doctrine used in this education was keeping William from the throne. William became indeed very docile to the wishes of the regents and the Estates. [8] [9]

The Dutch Republic was attacked by France and England in 1672. The military function of stadtholder was no longer superfluous, and with the support of the Orangists, William was restored, and he became the stadtholder as "William III". William successfully repelled the invasion and seized royal power. He became more powerful than his predecessors from the Eighty Years War. [8] [9] In 1677, William married his cousin Mary Stuart, the daughter of the future king James II of England. In 1688, William embarked on a mission to depose his Catholic father-in-law from the thrones of England, Scotland and Ireland. He and his wife were crowned the King and Queen of England on April 11, 1689. With the accession to the thrones of the three kingdoms, he became one of the most powerful sovereigns in Europe, and the only one to defeat Louis XIV of France. [8] Many members of the House of Orange were devoted admirers of the King-Stadtholder afterwards. [3] William III died childless after a riding accident on March 8, 1702, leaving the House of Orange extinct, and leaving Scotland, England and Ireland to his sister-in-law Queen Anne.

The second stadtholderless era [edit]

The regents found that they had suffered under the powerful leadership of King William III and declared the stadtholdership vacant for the second time. Since William III died childless in 1702 the principality became a matter of dispute between Prince John William Friso of Nassau-Dietz of the Frisian Nassaus and King Frederick I of Prussia, who both claimed the title Prince of Orange. Both descended from Frederick Henry, Prince of Orange. The King of Prussia was his grandson through his mother, Countess Luise Henriette of Nassau. Frederick Henry in his will had appointed this line as successor in the case the main House of Orange-Nassau would die out. John William Friso was a great-grandson of Frederick Henry and was appointed heir in William III's will. The principality was captured by the forces of King Louis XIV of France under François Adhémar de Monteil, Count of Grignan, in the Franco-Dutch War in 1672, and again in August 1682. With the Treaty of Utrecht that ended the wars of Louis XIV, the territory was finally ceded to France by Frederick I in 1713. The treaty also decided that both claimants and their descendents were allowed to bear the title. [2] John William Friso drowned in 1711 in the Hollands Diep near Moerdijk, and he left his posthumously-born son Willem IV of Nassau. William IV was proclaimed the stadtholder of Guelders, Overijssel, Drenthe, and Utrecht in 1722. When the French invaded Holland in 1747, William IV was restored as the stadtholder of the entire Dutch Republic, hereditary in both the male and the female lines. [1]

The collateral house of Nassau: the four brothers of Willem I, prince of Orange: Jan (1536-1606), sitting, Hendrik (1550-74), Adolf (1540-68) and Lodewijk (1538-74), counts of Nassau.

The end of the republic [edit]

William IV died in 1751, leaving his three-year-old son, Willem V of Orange, as the stadtholder. Since Willem V was still a minor, the regents reigned for him. He developed to be an indecisive person, a character defect which would follow Willem V for his whole life. His marriage to Wilhelmina of Prussia relieved this defect to some degree. In 1787, Willem V survived a coup by the Patriots (democratic revolutionaries) after the Kingdom of Prussia intervened. When the French invaded Holland in 1795, Willem V was forced to flee, and he was never to return to Holland. [1] [3]

After 1795, the House of Orange-Nassau faced a difficult period, surviving in exile at other European courts, especially those of Prussia and of England. In 1802 William V's son William VI unconditionally renounced the stadtholdership in return for a few territories from Napoleon Bonaparte (Treaty of Amiens), which was erected into the Principality of Nassau-Orange-Fulda. [3] [10] Willem V died in 1806.

The Monarchy (since 1815) [edit]

A new spirit: the United Kingdom of the Netherlands [edit]

After a repressed Dutch rebel action, Prussian and Cossack troops drove out the French in 1813, with the support of the Patriots of 1785. Although most of the leaders were the same men who had driven out William V, it was virtually taken that any new government would have to be headed by his son, William VI, prince of Orange (known in Dutch as *Willem Frederik*). All agreed that it would be better in the long term for the Dutch to restore William themselves rather than have him imposed by the allies. [1]

At the invitation of the provisional government, William VI returned to the Netherlands on November 30. This move was strongly supported by the United Kingdom, which sought ways to strengthen the Netherlands and deny future French aggressors easy access to the Low Countries' Channel ports. On December 6, William proclaimed himself hereditary sovereign prince of the Netherlands (having previously declined the offer of kingship considering a stadtholdership could give him more power). In 1814 the former Austrian Netherlands (now Belgium) was added to his realm. On March 15, 1815 with the support of the powers gathered at the Congress of Vienna, William proclaimed himself King William I. He was also made grand duke of Luxembourg, and the title 'Prince of Orange' was changed to 'Prince of Oranje'. The two countries remained separate despite sharing a common monarch. [3]

As king of the United Kingdom of the Netherlands, William tried to establish one common culture. This provoked resistance in the southern parts of the country, which had been culturally separate from the north since 1581. He was considered an enlightened despot.[3]

The Prince of Orange held rights to Nassau lands (Dillenburg, Dietz, Beilstein, Hadamar, Siegen) in central Germany. On the other hand the King of Prussia, Frederick William III--brother-in-law and first cousin of William I, had beginning from 1813 managed to establish his rule in Luxembourg, which he regarded as his inheritance from Anne, Duchess of Luxembourg who had died over three centuries earlier. At the Congress of Vienna, the two brothers-in-law agreed to a trade—Frederick William received William I's ancestral lands while William I received Luxembourg. Both got what was geographically nearer to their center of power.[3]

In 1830 Belgium declared its independence and William fought a disastrous war until 1839 when he was forced to settle for peace. With his realm halved, he decided to abdicate in 1840. Royal power was curbed during the reign of his son William II in a constitution ordered by the King to prevent the Revolution of 1848 from spreading to his country.[3]

William III and the threat of extinction [edit]

William II died in 1849. He was succeeded by his son, King William III, a rather conservative, even a reactionary man. William III was sharply opposed to the new 1848 constitution, and he continually tried to form his own royal governments. In 1868, he tried to sell Luxembourg to France, which was the source of a quarrel between Prussia and France.[3]

William III had a rather unhappy marriage with Sophie of Württemberg, and his heirs died young. This raised the possibility of the extinction of the House of Orange-Nassau. After the death of Queen Sophie in 1877, William remarried, to Emma of Waldeck and Pyrmont in 1879. One year later, Queen Emma gave birth to their daughter and the royal heiress, Wilhelmina. [3]

Since females were not allowed to hold power in Luxembourg, due to Salic law, Luxembourg passed to the House of Nassau-Weilburg, a collateral line to the House of Orange. The Dutch Royal Family faced the threat of a complete extinction until 1909, when Wilhemina gave birth to her daughter, Juliana. The Dutch royal house remained quite small until the latter 1930s and the early 1940s, during which Juliana gave birth to four children. Although the House of Orange died out in its male line with the death of Queen Wilhelmina, the name "Orange" continues to be used by the Dutch royalty.[3]

A modern monarchy [edit]

Wilhelmina was queen of the Netherlands for 58 years, from 1890 to 1948. Because she was only 10 years old in 1890, her mother, Queen Emma, was the regent until Wilhelmina's 18th birthday in 1898. The Netherlands remained neutral in World War I, during her reign, and this country was not invaded by Germany, as neighboring Belgium was. [11][*dead link*]

Nevertheless, Queen Wilhelmina became a symbol of the Dutch resistance during World War II. The moral authority of the Monarchy was restored because of her rule. After fifty years on the throne as the Queen, Wilhelmina decided to abdicate in favour of her daughter, Juliana. Juliana had the reputation of making the monarchy less "aloof", and under her reign the Monarchy became known as the "cycling monarchy". Members of the royal family were often seen bicycling through the cities and the countryside under Juliana. [11]

A royal marriage policy quarrel occurred starting in 1966, when the future Queen Beatrix decided to marry Claus von Amsberg, a German diplomat. The marriage of a member of the royal family to a German was quite controversial in the Netherlands, which had suffered under Nazi German occupation in 1940 - 45. This reluctance to accept a German consort probably was exacerbated by von Amsberg's former membership in the Hitler Youth under the Nazi regime in his native country, and also his following service in the German Wehrmacht.[11]

Permission was needed from the civilian government for Beatrix to marry anyone, but after some argument, it was granted. As the years went by, Prince Claus was fully accepted by the Dutch people. In time, he became one of the most popular members of the Dutch monarchy, and his death in 2002 was widely mourned.[11]

On April 30, 1980, Queen Juliana abdicated in favor of her daughter, Beatrix. In the early years of the twenty-first century, the Dutch monarchy seems to be popular with a large part of the population. The first-born son of Beatrix and her husband, Prince Claus, Crown Prince Willem-Alexander, was born on April 27, 1967 - the first male heir to the Dutch throne in almost 100 years. Willem-Alexander married Máxima Zorreguieta in 2002. They are already the parents of three daughters: Catharina-Amalia, Alexia, and Ariane. When Beatrix of the Netherlands passes away, or abdicates the throne, the Crown Prince will take the throne, most likely as King William IV. [11]

After a long struggle with neurological illness, Queen Juliana died on March 20, 2004, and her husband, Prince Bernhard, died on December 1 of that same year.[11]

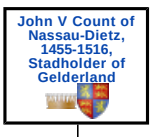
The Royal Family and the Royal House [edit]

A distinction is made in the Netherlands between the royal family and the Royal House.

The royal family is the Orange-Nassau family. This includes people born into the family or who have married into the family. They are entitled to bear the title "prince or princess of Oranje-Nassau." However, not every member of which is a member of the Royal House, and entitled to bear the designation "prince or princess of the Netherlands". By Act of Parliament, the members of the Royal House are [11]:

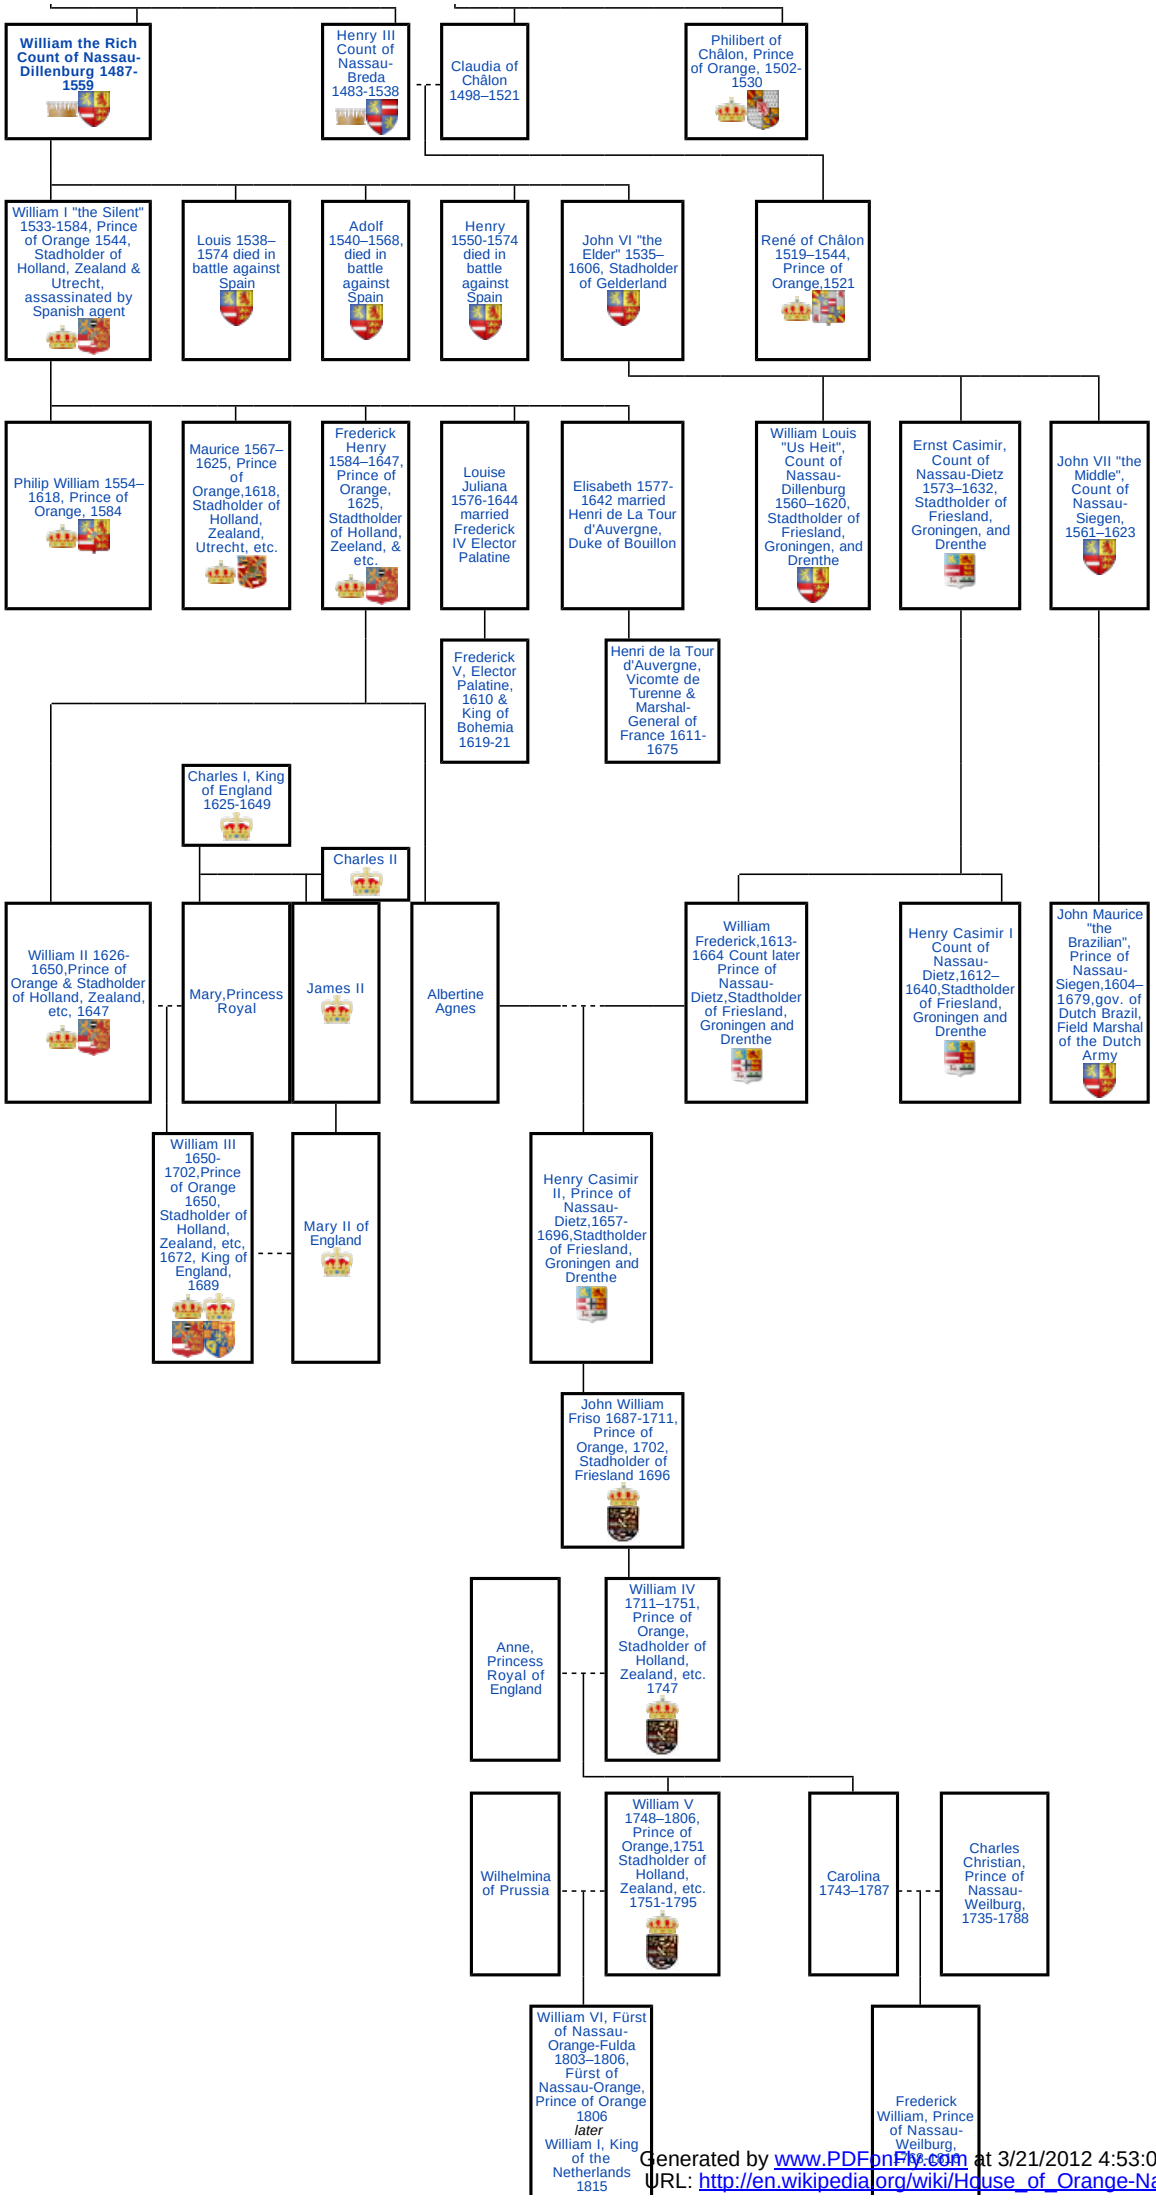
- the monarch (King or Queen);
- the former monarch (on abdication);
- the members of the royal family in the line of succession to the throne;
- the spouses of the above.



Members of the Royal House can lose their membership and designation as prince or princess of the Netherlands if they marry without the consent of the Dutch Parliament. For example, this happened with Prince Friso when he married Mabel Wisse Smit. This is written down explicitly in the part of the constitution of the Netherlands that controls the Monarchy of the Netherlands.[11]

Family Tree [edit]

The house of Orange and Nassau is traceable to the 10th century, and a detailed family tree can be found at [1]. A detailed family tree of the House of Orange-Nassau from the 15th century can be found on the Dutch Wikipedia at at Dutch monarchs family tree.



A summary family tree of the House of Orange-Nassau[11]from the joining of the house of Nassau-Breda/Dillenburg and the House of Châlon-Arlay to the end of the Dutch Republic. The family spawned many famous statesmen and generals, including two of the acknowledged "first captains of their age", Maurice of Nassau and the Marshal de Turenne.

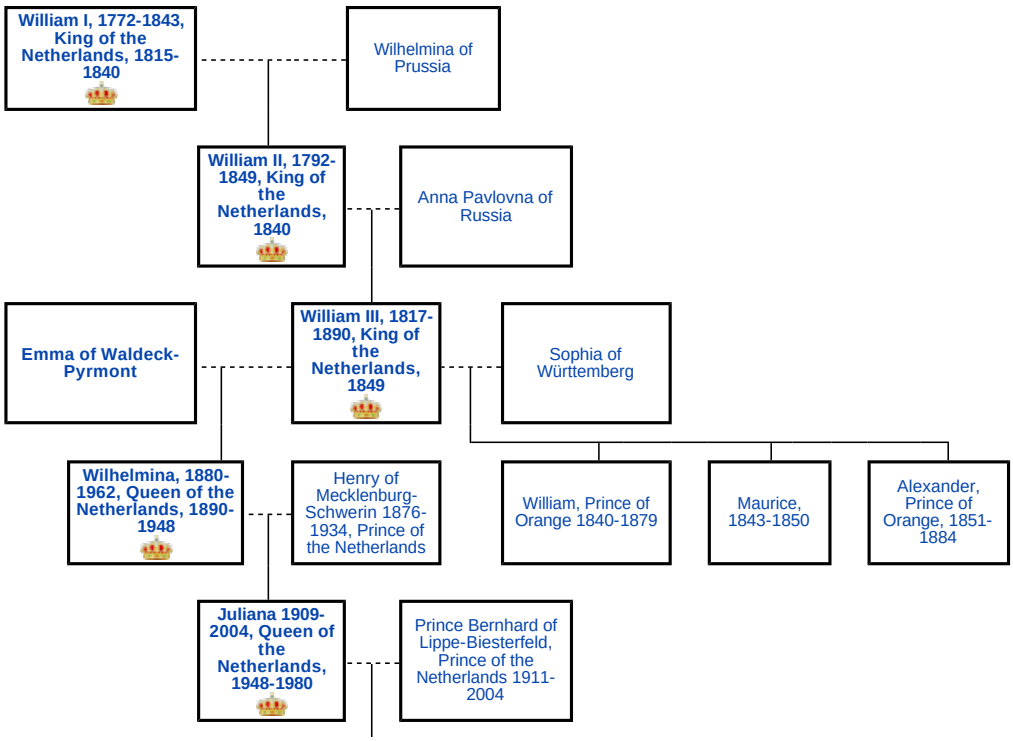
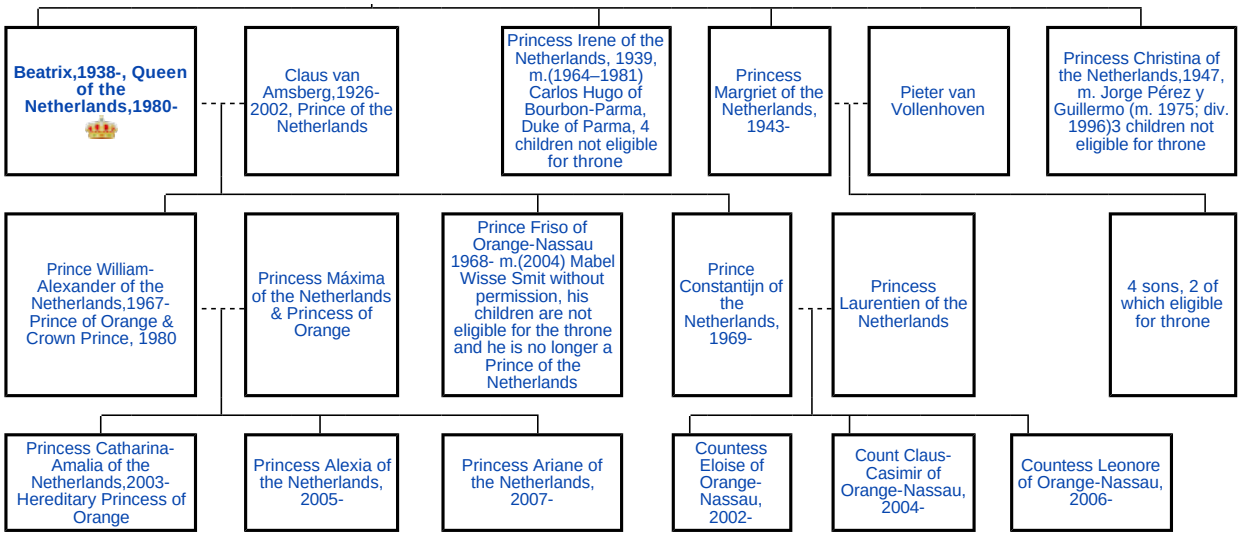
The house of Orange-Nassau was relatively unlucky in establishing a hereditary dynasty in an age that favoured hereditary rule. The Stuarts and the Bourbons came to power at the same time as the Oranges, and the Vasas were able to establish a hereditary kingship in Sweden. The House of Orange was no less gifted than those houses, in fact, some might argue more so, as their ranks included some the foremost statesmen and captains of the time. Although the institutions of the United Provinces became more republican and entrenched as time went on, William the Silent had been offered the countship of Holland and Zealand, and only his assassination prevented his accession to those offices. This fact did not go unforgotten by his successors.[1]



The Prince of Orange was also not just another noble among equals in the Netherlands. First, he was the traditional leader of the nation in war and in rebellion against Spain. He was uniquely able to transcend the local issues of the cities, towns and provinces. He was also a soveriegn ruler in his own right (see Prince of Orange article). This gave him a great deal of prestige, even in a republic. He was the center of a real court like the Stuarts and Bourbons, French speaking, and extravagant to a scale. It was natural for foreign ambassadors and dignitaries to present themselves to him and consult with him as well as to the States General to which they were officially credited. The marriage policy of the princes, allying themselves twice with the Royal Stuarts, also gave them acceptance into the royal caste of rulers.[12]



Painting by Willem van Honthorst (1662), showing four generations of Princes of Orange: William I, Maurice and Frederick Henry, William II, and William III.

Besides showing the relationships among the family, the tree above then also points out an extraordinary run of bad luck. In the 211 years from the death of William the Silent to the conquest by France, there was only one time that a son directly succeeded his father as Prince of Orange, Stadholder and Captain-General without a minority (William II). When the Oranges were in power, they also tended to settle for the actualities of power, rather than the appearances, which increasingly tended to upset the ruling regents of the towns and cities. On being offered the dukedom of Gelderland by the States of that province, William III let the offer lapse as liable to raise too much opposition in the other provinces.[12]:75–83

In 1814, William VI of Orange became King of the Netherlands. The institution of the monarch in the Netherlands is considered an office under the Dutch Constitution. There are none of the religious connotations to the office as in some other monarchies. A Dutch sovereign is inaugurated rather than crowned/"coronated". It was initially more of a crowned/hereditary presidency, and a continuation of the status quo ante of the pre-1795 hereditary stadholderate in the republic. In practice today, the monarch has considerably less power. This summary genealogical tree shows how the now Royal house of Orange-Nassau is related[11]:

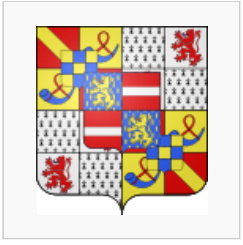
Coats of Arms [edit]

The gallery below show the coats of arms used by members of the house of Orange-Nassau. Their growing complexity and use of crowns shows how arms are used to reflect the growing political position and royal aspirations of the family. A much more complete armorial is given at the Armorial de la Maison de Nassau, section Lignée Ottonienne at the French Wikipedia, and another one at Wapen van Nassau, Tak van Otto at the Dutch Wikipedia.

The ancestral coat of arms of the Ottonian line of the house of Nassau is shown below. Their distant cousins of the Walramian line added a red coronet to distinguish them. There is no specific documentation in the literature on the origin of the arms. The lion was always a popular noble symbol, originating as a symbol of nobility, power, and royal aspirations in western culture going all the way back to Hercules. Blue because of its nearness to purple in the northern climes (red was the other choice) was a also a popular color for those with royal aspirations. The billets could have been anything from blocks of wood to abstractions of the reenforcements holding the shield together. The fact that these were arms were very similar to those of the counts of Burgundy (Franche-Comté) did not seem to cause too much confusion.

Arms of the Ottonian Branch of the House of Nassau.[13]

Achievement of the Ottonian Branch House of Nassau (since the 13th century).[14]



Henry III of Nassau-Breda came to the Netherlands in 1499 as heir to his uncle, Engelbrecht II of Nassau-Breda. His and his uncle's arms are shown below. When Philbert, prince of Orange died in 1530, his sister's son René of Breda inherited the Princedom of Orange on condition that he used the name and coat of arms of the Châlon-Orange family. History knows him therefore as René of Châlon instead of as "René of Nassau-Breda." The 1st and 4th grand quarters show the arms of the Chalons-Arlay (the gold bend) princes of Orange (the bugle). The blue and gold cross is the arms of Jeanne of Geneva, who married one of the Chalons princes. The 2nd and 3rd show the quarterings of Brittany and Luxembourg-St. Pol. The inescutcheon overall is his paternal arms quarterd of Nassau and Breda.[2] William the Silent's father, William the Rich, was rich only in children. He bore the arms shown below. Clockwise from upper left they displayed the arms of Nassau (1st quarter), Katzenelenbogen (3rd quarter), Dietz (2nd quarter), Vianden (4th quarter).

Arms of Engelbrecht II and Henry III of Nassau-Breda. [14]

Arms of the counts of Nassau-Dietz, one of the cadet lines.[14]

Coat of arms of Rene of Chalons as Prince of Orange.[14]

Arms of William the Rich, count of Nassau-Dillenburg.[14]

The princes of Orange in the 16th and 17th century used the following sets of arms. On becoming prince of Orange, William placed the Châlon-Arlay arms in the center ("as an inescutcheon") of his father's arms. He used these arms until 1582 when he purchased the marquisate of Veere and Vlissingen. It had been the property of Philip II since 1567, but had fallen into arrears to the province. In 1580 the Court of Holland ordered it sold. William bought it as it gave him two more votes in the States of Zeeland. He owned the government of the two towns, and so could appoint their magistrates. He already had one as First Noble for Philip William, who had inherited Maartensdijk. This made William the predominant member of the States of Zeeland. It was a smaller version of the countship of Zeeland (& Holland) promised to William, and was a potent political base for his descendants. William then added the shield of Veere and Buren

Generated by www.PDFonFly.com at 3/21/2012 4:53:08 AM
URL: http://en.wikipedia.org/wiki/House_of_Orange-Nassau

to his arms as shown in the arms of Frederick Henry, William II and William III with the arms of the marquisate in the top center, and the arms of the county of Buren in the bottom center. William also started the tradition of keeping the number of billets in the upper left quarter for Nassau at 17 to symbolize the original 17 provinces of the Burgundian/Habsburg Netherlands, which he always hoped would form one united nation.[1]

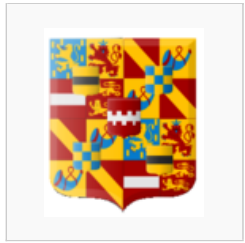
Coat of arms of William the Silent as Prince of Orange from 1544 to 1582, and his eldest son Philip William[14]

The coat of arms used by Maurice showing the county of Moers (top left center and bottom right center) and his mother's arms of Saxony (center)[12][15][16]

The coat of arms used by William the Silent from 1582 until his death, Frederick Henry, William II, and William III as Prince of Orange[14]

An alternate coat of arms sometimes used by Frederick Henry, William II, and William III as Prince of Orange showing the county of Moers in the top center rather than Veere.[17]

Coat of arms of King William III of England as King of England.



The princes of Orange also had personal arms before they became reigning prince. Maurice never changed his as he rarely used the tile of "Prince of Orange". Some others are:

Personal arms of Frederick Henry before becoming Prince of Orange. At the center is his mother's arms of Coligny.

Alternate personal arms of Frederick Henry before becoming Prince of Orange. At the center is his mother's arms of Coligny.

Personal arms of William II of Orange before becoming Prince of Orange. At the center are the arms of the County of Buren.

The main house of Orange-Nassau also spawned several illegitimate branches. These branches contributed to the political and economic history of England and the Netherlands. Justinus van Nassau was the only extramarital child of William of Orange. He was a Dutch army commander known for unsuccessfully defending Breda against the Spanish, and the depiction of his surrender on the famous picture by Diego Velázquez, *The Surrender of Breda*. Louis of Nassau, Lord of De Lek and Beverweerd was a younger illegitimate son of Prince Maurice and Margaretha van Mechelen. His descendants were Counts of Nassau-LaLecq. One of his sons was the famous general Henry de Nassau, Lord of Overkirk, King William III's Master of the Horse, and one of the most trusted generals of John Churchill, 1st Duke of Marlborough. His descendants became the Earls of Grantham in England. Frederick van Nassau, Lord of Zuylestein, an illegitimate son of Frederick Henry, Prince of Orange, gave rise to the Earls of Rochford in England. The 4th earl of Rochford was a famous English diplomat and a statesman.

Arms of Justinus van Nassau.[14]

Arms of the branch Nassau-LaLecq.[14]

Arms of the branch Nassau-Zuylestein.[14]

The house of Orange-Nassau also had many younger branches in the 16th, 17th and 18th centuries descended from William the Silent's younger brother Count John of Nassau-Dillenburg. The division and re-uniting of this patrimony is complex and outlined at the article on

Generated by www.PDFonFly.com at 3/21/2012 4:53:08 AM
URL: http://en.wikipedia.org/wiki/House_of_Orange-Nassau

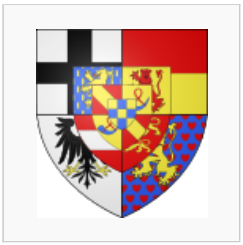
the County of Nassau-Dillenburg. One branch, the Nassau-Dietz branch in the 17th century, succeeded to the Dutch title of prince of Orange and the stadholderate in the 18th century. They also survived the other braches and inherited the whole German patrimony. The arms are:[18]

Arms of the counts, later princes of Nassau-Dietz. They were usually elected stadholders of Friesland, and sometimes Groningen. They gave rise to the kings of the Netherlands. They show the county of Spiegelberg and the baronie of Liesveld on the bottom.[19]

Arms of the Princes of Nassau-Dietz (Henry Casimir II)at the end of the 17th century with the cross of the Teutonic Order in the center.[19]

Through the marriage in 1646 of Henry of Nassau-Siegen and Maria Magdalena of Limburg-Styrum the lordship of Wisch came into de protestant line of the house of Nassau-Siegen. The center shield shows Limburg-Styrum, with the county of Limburg in the 1st quarter, and then clockwise the lordships of Bronkhorst, Borculo, and Wisch.

Arms of the counts, later princes of Nassau-Siegen. They use the arms of Nassau-Dillenburg. These were used by Johm Maurice "the Brazilian" as well as the branch of the Nassau-Siegens that went back to loyalty to the King of Spain and resided in Brussels.



Arms of the counts, later princes of Nassau-Schaumburg, showing the county of Holzapfel-Schaumburg in the center.

When John William Friso became Prince of Orange, he used the arms below. However, he was never recognized outside of Holland and areas friendly to Holland as Prince of Orange. His son, William IV, recognized as Prince of Orange, seems to have used the original arms of William the Silent.[18] When the princes of Orange fled the Netherlands during the Batavian Republic and the Kingdom of Holland, and when France occupied the Netherlands, they were compensated by Napoleon with the Principality of Nassau-Orange-Fulda. These principalities were confiscated when Napoleon invaded Germany (1806) and William VI supported his Prussian relatives. He succeeded his father as prince of Orange later that year, after William V's death.

Arms of Johan Willem Friso as Prince of Orange.[19]

Arms of William VI of Orange as prince of Orange-Nassau-Fulda. The bottom most shield shows clockwise from top left the principality of Fulda, the lordship of Corvey, the county of Weingarten, and the lordship of Dortmund.[18]

When William VI of Orange returned to the Netherlands in 1813 and was proclaimed Sovereign Prince of the Netherlands, he quartered the former Arms of the Dutch Republic (1st and 4th quarter) with the "Châlon-Orange" arms (2nd and 3rd quarter), which had come to symbolize Orange. As an inescutcheon he placed his ancestral arms of Nassau. When he became King in 1815, he combined the Dutch Republic Lion with the billets of the Nassau arms and added a royal crown to from the Coat of arms of the Netherlands. In 1907, Queen Wilhelmina replaced the royal crown on the arms with a coronet.

Arms of the States-General of the Dutch Republic. The sword symbolizes the determination to defend the nation, and the bundle of 7 arrows the unity of the 7 United Provinces of the Dutch Republic.

Arms of William VI as sovereign prince of the Netherlands.[14]

First arms of the Kingdom and Kings of the Netherlands from 1815-1907.[11]

Arms of the Kingdom and Kings of the Netherlands since 1907.[11]

Wilhelmina further decreted that in perpetuit her descendants should be styled "princes and princesses of Orange-Nassau" and that the name of the house would be "Orange-Nassau" (in Dutch "Oranje-Nassau". Only those members of the members of the Dutch Royal House that are part of the smaller "Royal Family" can use the title of prince or princess of the Netherlands.[11] Since then, individual members of the House of Orange-Nassau are also given their own arms by the reigning monarch, similar to the United Kingdom. This is usually the royal arms, quartered with the arms of the principality of Orange, and an inescutcheon of their paternal arms.

Personal coat of arms of William Alexander and his brothers. [11]

Personal arms of Juliana. The inescutcheon is her father's arms of Mecklenburg. [11]

Personal arms of Beatrix and her sisters. The inescutcheon is their father's arms of Lippe. [11]

Personal Arms of the children of princess Margriet of the Netherlands (Princes Maurice, Bernhard, Floris and Pieter-Christian). The inescutcheon is their father's arms of van Vollenhoven. [11]

Standards [edit]

The Dutch Royal Family also makes extensive use of royal standards that are based on their coats of arms, but not identical to them (as the British Royal Family does). Some examples from the Royal Family's website are:[11]

The standards of the ruling king or queen:

Royal Flag of the Netherlands until 1908

Current Royal Standard of the Netherlands

The standards of the current sons of Queen Beatrix and their wives and the Queen's husband:

Royal Sandard of the Princes of the Netherlands (Sons of Queen Beatrix)

Standard of Claus von Amsberg as Royal consort of the Netherlands

Standard of Princess Maxima of the Netherlands

Standard of Princess Laurentien of the Netherlands

Generated by www.PDFonFly.com at 3/21/2012 4:53:08 AM
URL: http://en.wikipedia.org/wiki/House_of_Orange-Nassau

The standards of the sisters of Queen Beatrix and their children:

Standard of the Princesses of the Netherlands (Daughters of Queen Juliana)

Standard of the Princes of Oranje-Nassau (Sons of Princess Margriet)

The standards of former members of the Royal Family:

Standard of Juliana of the Netherlands as Princess

Standard of Bernhard of Lippe-Biesterfeld as Royal consort of the Netherlands

Standard of Hendrik of Mecklenburg-Schwerin as Royal consort of the Netherlands

Standard of Queen Mother Emma of the Netherlands

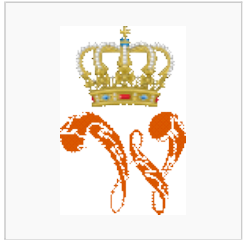
Standard of Marie of Wied, Princess of the Netherlands

Monograms [edit]

As most Royal Families, the Dutch Royal Family also makes use of royal monograms. Some examples from the Royal Family's website are:[11]

The monograms of the ruling kings or queens:

Queen Beatrix



Queen Juliana

Queen Juliana, Variant

Queen Wilhelmina

William I-III

William I

For further about the Dutch Monarchy and the Dutch Royal House:

- Dutch monarchy
- House of Nassau
- Prince of Orange
- Orange Institution
- William III of England

Traditionally, members of the Nassau family were buried in Breda, but as that city was in Spanish hands when William died, he was buried in a new crypt the New Church in Delft. His monument on his tomb was originally very modest, but it was replaced in 1623 by a new one, made by Hendrik de Keyser and his son Pieter. Since then, most of the members of the **House of Orange-Nassau**, including all Dutch monarchs have been buried in the same church. His great-grandson William the third, King of England and Scotland and Stadtholder in the Netherlands, was buried in Westminster Abbey

Norway

From Wikipedia, the free encyclopedia

Norway /ˈnɔrweɪ/ (Norwegian: *Norge* (Bokmål) or *Noreg* (Nynorsk)), officially the **Kingdom of Norway**, is a Nordic unitary constitutional monarchy whose territory comprises the western portion of the Scandinavian Peninsula, Jan Mayen, and the Arctic archipelago of Svalbard and Bouvet Island.[note 1] Norway has a total area of 385,252 square kilometres (148,747 sq mi) and a population of about 5 million.[9] It is the second least densely populated country in Europe. The majority of the country shares a border to the east with Sweden; its northernmost region is bordered by Finland to the south and Russia to the east; in its south Norway borders the Skagerrak Strait across from Denmark. The capital city of Norway is Oslo. Norway's extensive coastline, facing the North Atlantic Ocean and the Barents Sea, is home to its famous fjords.

Two centuries of Viking raids tapered off following the adoption of Christianity by King Olav Tryggvason in 994. A period of civil war ended in the 13th century when Norway expanded its control overseas to parts of the British Isles, Iceland, and Greenland. Norwegian territorial power peaked in 1265, but competition from the Hanseatic League and the spread of the Black Death weakened the country. In 1380, Norway was absorbed into a union with Denmark that lasted more than four centuries. In 1814, Norwegians resisted the cession of their country to Sweden and adopted a new constitution. Sweden then invaded Norway but agreed to let Norway keep its constitution in return for accepting the union under a Swedish king. Rising nationalism throughout the 19th century led to a 1905 referendum granting Norway independence. Although Norway remained neutral in World War I, it suffered heavy losses to its shipping. Norway proclaimed its neutrality at the outset of World War II, but was nonetheless occupied for five years by the Third Reich. In 1949, neutrality was abandoned and Norway became a founding member of NATO. Discovery of oil and gas in adjacent waters in the late 1960s boosted Norway's economic fortunes. In referenda held in 1972 and 1994, Norway rejected joining the EU. Key domestic issues include immigration and integration of ethnic minorities, maintaining the country's extensive social safety net with an aging population, and preserving economic competitiveness.[2][10]

Norway is a unitary parliamentary democracy and constitutional monarchy, with King Harald V as its head of state and Jens Stoltenberg as its prime minister. It is a unitary

state with administrative subdivisions on two levels known as counties (fylke) and municipalities (kommuner). The Sámi people have a certain amount of self-determination and influence over traditional territories through the Sámi Parliament and the Finnmark Act. Although having rejected European Union membership in two referenda, Norway maintains close ties with the union and its member countries, as well as with the United States. Norway remains one of the biggest financial contributors to the United Nations,[11] and participates with UN forces in international missions, notably in Afghanistan, Kosovo, Sudan and Libya. Norway is a founding member of the United Nations, NATO, the Council of Europe, and the Nordic Council; a member of the European Economic Area, the WTO, and the OECD; and is also a part of Schengen Area.

Norway has extensive reserves of petroleum, natural gas, minerals, lumber, seafood, fresh water, and hydropower. The country has the fourth-highest GDP per capita in the world. On a per-capita basis, it is the world's largest producer of oil and natural gas outside the Middle East,[12][13] and the petroleum industry accounts for around a quarter of the country's gross domestic product.[14] The country maintains a Nordic welfare model with universal health care, subsidized higher education, and a comprehensive social security system. From 2001 to 2006,[15] and then again from 2009 through 2011, Norway has had the highest human development index ranking in the world.[16][17]

1 Includes Svalbard and Jan Mayen. (Without these two areas, the area of Norway is 323,802 km^2, placing it 67th in the world.[6])

2 Two more TLDs have been assigned, but to date not used: .sj for Svalbard and Jan Mayen; .bv for Bouvet Island.

3 This percentage is for the mainland and also includes glaciers[7]

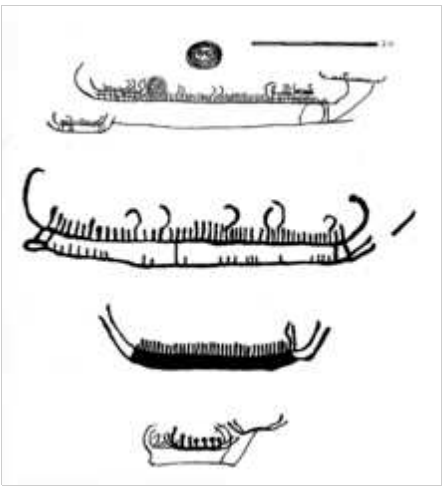
Etymology

Modern etymologists believe the country's name means "the northward route" (the "way north" or the "north way"), which in Old Norse would have been *nor veg* or **norð vegr*. The Old Norse name for Norway was *Nóregr*, the Anglo-Saxon *Norþ weg* and mediaeval Latin *Northvegia*. The present name of the Kingdom of Norway in Bokmål is "Kongeriket Norge" and in Nynorsk "Kongeriket Noreg", both only a couple of letters removed from the original "northern way": *Nor(d)-(v)e.g.*

History

Main articles: History of Norway and History of Scandinavia

Prehistory



Main article: Scandinavian prehistory

The first inhabitants were the Ahrensburg culture (11th to 10th millennia BC) which was a late Upper Paleolithic culture during the Younger Dryas, the last spell of cold at the end of the Weichsel glaciation. The culture is named after village of Ahrensburg, 25 km (15.53 mi) northeast of Hamburg in the German state of Schleswig-Holstein where wooden arrow shafts and clubs have been excavated.[18] The earliest traces of human

Approximate extent of the Corded Ware culture.

occupation in Norway are found along the coast, where the huge ice shelf of the last ice age first melted between 11,000 and 8,000 BC. The oldest finds are stone tools dating from 9,500 to 6,000 BC, discovered in Finnmark (Komsa culture) in the north and Rogaland (Fosna culture) in the southwest. However, theories about two altogether different cultures (the Komsa culture north of the Arctic Circle being one and the Fosna culture from Trøndelag to Oslo Fjord being the other) were rendered obsolete in the 1970s. More recent finds along the entire coast revealed to archaeologists that the difference between the two can simply be ascribed to different types of tools and not to different cultures. Coastal fauna provided a means of livelihood for fishermen and hunters, who may have made their way along the southern coast about 10,000 BC when the interior was still covered with ice. It is now thought that these so-called "Arctic" peoples came from the south and followed the coast northward considerably later. Some may have come along the ice-free coast of the Kola Peninsula, but the evidence of this is still poor.

Nordic Bronze Age rock carvings at Steinkjer, Central Norway

In the southern part of the country are dwelling sites dating from about 5,000 BC. Finds from these sites give a clearer idea of the life of the hunting and fishing peoples. The implements vary in shape and mostly are made of different kinds of stone; those of later periods are more skillfully made. Rock carvings (i. e. petroglyphs) have been found, usually near hunting and fishing grounds. They represent game such as deer, reindeer, elk, bears, birds, seals, whales, and fish (especially salmon and halibut), all of which were vital to the way of life of the coastal peoples. The carvings at Alta in Finnmark, the largest in Scandinavia, were made at sea level continuously from 4,200 to 500 BC and mark the progression of the land as it rose from the sea after the last ice age (Rock carvings at Alta).

Bronze Age

Main article: Nordic Bronze Age

Between 3000 and 2500 BC new settlers (Corded Ware culture) arrived in eastern Norway. They were Indo-European farmers who grew grain and kept cows and sheep. The hunting-fishing population of the west coast was also gradually replaced by farmers, though hunting and fishing remained useful secondary means of livelihood.

From about 1500 BC bronze was gradually introduced, but the use of stone implements continued; Norway had few riches to barter for bronze goods, and the few finds consist mostly of elaborate weapons and brooches that only chieftains could afford. Huge burial cairns built close to the sea as far north as Harstad and also inland in the south are characteristic of this period. The motifs of the rock carvings differ from those typical of the Stone Age. Representations of the Sun, animals, trees, weapons, ships, and people are all strongly stylized, probably as fertility symbols connected with the religious ideas of the period.

Iron Age

Main article: Pre-Roman Iron Age

Sæbø sword from Sæbø, Hordaland (800 AD)

Little has been found dating from the early Iron Age (the last 500 years BC). The dead were cremated, and their graves contain few burial goods. During the first four centuries AD the people of Norway were in contact with Roman-occupied Gaul. About 70 Roman bronze cauldrons, often used as burial urns, have been found. Contact with the civilized countries farther south brought a knowledge of runes; the oldest known Norwegian runic inscription dates from the 3rd century. At this time the amount of settled area in the country increased, a development that can be traced by coordinated studies of topography, archaeology, and place-names. The oldest root names, such as nes, vik, and bø ("cape," "bay," and "farm"), are of great antiquity, dating perhaps from the Bronze Age, whereas the earliest of the groups of compound names with the suffixes vin ("meadow") or heim ("settlement"), as in Bjorgvin (Bergen) or Saeheim (Seim), usually date from the 1st century AD.

Migration Age

Main article: Migration Age

The destruction of the Western Roman Empire by the Germanic tribes (5th century) is characterized by rich finds, including chieftains' graves containing magnificent weapons and gold objects. Hill forts were built on precipitous rocks for defense. Excavation has revealed stone foundations of farmhouses 60 to 90 feet (18 to 27 metres) long—one even 150 feet (46 metres) long—the roofs of which were supported on wooden posts. These houses were family homesteads where several generations lived together, with people and cattle under one roof. From this period and later (600–800), nascent communities can be traced. Defense works require cooperation and leadership, so petty states of some kind with a defense and administrative organization must have existed.

These states were based on either clans or tribes (e.g., the Horder of Hordaland in western Norway). By the 9th century each of these small states had things, or tings (local or regional assemblies), for negotiating and settling disputes. The thing meeting places, each eventually with a horg (open-air sanctuary) or a hov (temple; literally "hill"), were usually situated on the oldest and best farms, which belonged to the chieftains and wealthiest farmers. The regional things united to form even larger units: assemblies of deputy yeomen from several regions. In this way, the lagting (assemblies for negotiations and lawmaking) developed. The Gulating had its meeting place by Sognefjord and may have been the centre of an aristocratic confederation along the western fjords and islands called the Gulatingslag. The Frostating was the assembly for the leaders in the Trondheimsfjord area; the earls Jarls of Lade, near Trondheim, seem to have enlarged the Frostatingslag by adding the coastland from Romsdalsfjord to the Lofoten Islands. A lagting developed in the area of Lake Mjøsa in the east and eventually established its meeting place at Eidsvoll, becoming known as the Eidsivating. The area around Oslofjord, although at times closely tied to Denmark, developed a lagting—with its meeting place at Sarpsborg called the Borgarting.

Viking Age

Main article: Viking Age

The Viking Age was characterized by expansion and emigration by Viking seafarers. According to tradition, Harald Fairhair (Harald Hårfagre) unified them into one in 872 after the Battle of Hafrsfjord in Stavanger, thus becoming the first king of a united Norway. (The date of 872 may be somewhat arbitrary. In fact, the actual date may be just prior to 900).[19] Harald's realm was mainly a South Norwegian coastal state. Harald Fairhair ruled

with a strong hand and, according to the sagas, many Norwegians left the country to live in Iceland, the Faroe Islands, Greenland, and parts of Britain and Ireland. The modern-day Irish cities of Dublin, Limerick, and Waterford were founded by Norwegian (and Danish) settlers.[20] Norse traditions were slowly replaced by Christian ones in the 10th and 11th Centuries. This is largely attributed to the missionary kings Olav Tryggvasson and St. Olav. Haakon the Good was Norway's first Christian king, in the mid-10th century, though his attempt to introduce the religion was rejected. Born sometime in between 963–969, Olav Tryggvasson set off raiding in England with 390 ships. He attacked London during this raiding. Arriving back in Norway in 995, Olav landed in Moster.[21] There he built a church which became the first Christian church ever built in Norway.[21] From Moster, Olav sailed north to Trondheim were he was acclaimed King of Norway by the Eyrathing in 995.[21]

The Gokstad ship at the Viking Ship Museum in Oslo, Norway.

The Norwegian Kingdom at its greatest extent, c. 1265

Feudalism never really developed in Norway and Sweden, as it did in the rest of Europe.[22] However, the administration of government took on a very conservative feudal character.[22] The Hanseatic League forced the royalty to cede to them greater and greater concessions over foreign trade and the economy.[22] The League had this hold over the royalty because of the loans the Hansa had made to the royalty and the large debt the kings were carrying.[22] The League's monopolistic control over the economy of Norway put pressure on all classes, especially the peasantry, to the degree that no real burgher class existed in Norway.[22]

Kalmar Union

Main article: Kalmar Union

Upon the death of Haakon V, King of Norway, in 1319, three year-old Magnus Erikson inherited the throne as King Magnus VII of Norway.[23] At the same time a movement to make Magnus King of Sweden proved successful.[23] (At this time both the kings of Sweden and of Denmark were elected to the throne by their respective nobles.)[23] Thus, with his election to the throne of Sweden, both Sweden and Norway were united under King Magnus VII.[23]

In 1349, the Black Death radically altered Norway, killing between 50% and 60% of its population[24] and

leaving it in a period of social and economic decline.[25] The plague left Norway very poor.[26] Although the death rate was comparable with the rest of Europe, economic recovery took much longer because of the small, scattered population.[25] Before the plague, total population was only about 500,000 people.[27] After the plague, many farms lay idle while the population slowly increased.[25] The few surviving farms' tenants found their bargaining positions with their landlords greatly strengthened.[25]

Kalmar Union c. 1500 AD

King Magnus VII ruled Norway until 1350, when his son, Haakon, was placed on the throne as Haakon VI.[28] In 1363, Haakon VI married Margaret, the daughter of King Valdemar IV of Denmark.[25] Upon the death of Haakon VI, in 1379, his son, Olaf IV, was only 10 years-old.[25] Olaf had already been elected to the throne of Denmark on May 3, 1376.[25] Thus, upon Olaf's ascension to the throne of Norway, Denmark and Norway entered personal union.[29] Olaf's mother and Haakon's widow, Queen Margaret, managed the foreign affairs of Denmark and Norway during the minority of Olaf IV.[25]

Margaret was working toward a union of Sweden with Denmark and Norway by having Olaf elected to the Swedish throne. She was on the verge of achieving this goal when Olaf IV suddenly died.[25] However, Denmark made Margaret temporary ruler upon the death of Olaf. On February 2, 1388, Norway followed suit and crowned Margaret.[25]

Queen Margaret knew that her power would be more secure if she were able to find a king to rule in her place. She settled on Eric of Pomerania, grandson of her sister. Thus at an all-Scandinavian meeting held at Kalmar, Erik of Pomerania was crowned king of all three Scandinavian countries. Thus, royal politics resulted in personal unions between the Nordic countries, eventually bringing the thrones of Norway, Denmark, and Sweden under the control of Queen Margaret when the country entered into the Kalmar Union.

Union with Denmark

Main article: Denmark–Norway

After Sweden broke out of the Kalmar Union in 1521, Norway remained with Denmark until 1814, a total of 436 years. During the national romanticism of the 19th century, this period was by some referred to as the "400-Year Night", since all of the kingdom's royal, intellectual, and administrative power was centred in Copenhagen in Denmark. With the introduction of Protestantism in 1536, the archbishopric in Trondheim was dissolved, and Norway effectually became a tributary to Denmark, and the church's incomes were distributed to the court in Copenhagen instead. Norway lost the steady stream of pilgrims to the relics of St. Olav at the Nidaros shrine, and with them, much of the contact with cultural and economic life in the rest of Europe. Additionally, Norway saw its land area decrease in the 17th century with the loss of the provinces Båhuslen, Jemtland, and Herjedalen to Sweden, as a result of numerous wars between Denmark–Norway and Sweden. To the north, however, its territory was increased by the acquisition of the northern provinces of Troms and Finnmark, at the expense of Sweden and Russia.

The famine of 1695–96 killed roughly 10% of Norway's population.[30] At least nine severe harvest failures were recorded in the Scandinavian countries between 1740 and 1800, each resulting in a substantial rise of the death rate.[31]

Union with Sweden (19th century)

Main article: Union between Sweden and Norway

The 1814 constitutional assembly, painted by Oscar Wergeland

After Denmark–Norway was attacked by the United Kingdom at the Battle of Copenhagen, it entered into an alliance with Napoleon, with the war leading to dire conditions and mass starvation in 1812. As the Danish kingdom found itself on the losing side in 1814, it was forced, under terms of the Treaty of Kiel, to cede Norway to the king of Sweden, while the old Norwegian provinces of Iceland, Greenland and the Faroe Islands remained with the Danish crown.[32]

Norway took this opportunity to declare independence, adopted a constitution based on American and French models, and elected the Crown prince of Denmark and Norway, Christian Frederick, as king on 17 May 1814. This is the famous Syttende Mai (Seventeenth of May) holiday celebrated by Norwegians and Norwegian-Americans alike. *Syttende Mai* is also called *Norwegian Constitution Day*.

Norwegian opposition to the great powers' decision to link Norway with Sweden caused the Norwegian-Swedish War to break out as Sweden tried to subdue Norway by military means. As Sweden's military was not strong enough to defeat the Norwegian forces outright and Norway's treasury was not large enough to support a protracted war, and as British and Russian navies blockaded the Norwegian coast,[33] the belligerents were forced to negotiate the Convention of Moss. According to the terms of the convention, Christian Frederik abdicated the Norwegian throne and authorized the Parliament of Norway to make the necessary constitutional amendments to allow for the personal union that Norway was forced to accept. On November 4, 1814, the Parliament (Storting) elected Charles XIII of Sweden as king of Norway, thereby establishing the union with Sweden.[34] Under this arrangement, Norway kept its liberal constitution and its own independent institutions, except for the foreign service. Following the recession caused by the Napoleonic Wars, economic development of Norway remained slow until economic growth began around 1830.[35]

This period also saw the rise of the Norwegian romantic nationalism, as Norwegians sought to define and express a distinct national character. The movement covered all branches of culture, including literature (Henrik Wergeland [1808–1845], Bjørnstjerne Bjørnson [1832–1910], Peter Christen Asbjørnsen [1812–1845], Jørgen Moe [1813–1882]), painting (Hans Gude [1825–1903], Adolph Tidemand [1814–1876]), music (Edvard Grieg [1843–1907]), and even language policy, where attempts to define a native written language for Norway led to today's two official written forms for Norwegian: Bokmål and Nynorsk.

Harvesting of oats in Jølster, c. 1890. *(Photo: Axel Lindahl/Norwegian*

King Karl XIV Johan, who came to the throne of Norway and Sweden in 1818, was the second king following Norway's break from Denmark and the union with Sweden. Karl Johan was a complex man whose long reign extended to 1844. King Karl Johan protected the constitution and liberties of Norway and Sweden during the age of Metternich. As such, he was regarded as a liberal monarch for that age. However, he was ruthless in his use of paid informers, the secret police and restrictions on the freedom of the press to put down public movements for reform —especially the Norwegian national independence movement.[36]

The Romantic Era that followed the reign of King Karl Johan brought some significant social and political reforms. In 1854, women were given

A Sami (Lapp) family in Norway around 1900.

Museum of Cultural History)

the right to inherit property in their own right just like men.[37] In 1863, the last trace of keeping unmarried women in the status of minors was removed.[37] Furthermore, women were then eligible for different occupations, particularly the common school teacher.[37] However, by mid-century, Norway was still far from a "democracy". Voting was limited to officials, property owners, leaseholders, and burghers of incorporated towns.[38] There was some dissatisfaction with this backwardness.

Still Norway remained a conservative society. Life in Norway (especially economic life) was "dominated by the aristocracy of professional men who filled most of the important posts in the central government."[39] There was no strong bourgeosie class in Norway to demand a breakdown of this aristocratic control of the economy.[40] Thus, even while revolution swept over most of the countries of Europe in 1848, Norway was largely unaffected by revolts that year. Most revolts broke themselves on the granite conservativism of the Norwegian society.[40] Indeed, the Thrane movement was the only "revolt" that broke out in Norway in 1848.

Marcus Thrane was a Utopian socialist.[41] He made his appeal to the labouring classes urging a change of social structure "from below upwards."[41] In 1848, he organized a labour society in Drammen. In just a few months this society had a membership of 500 and the society was publishing its own newspaper.[41] Within two years 300 societies had been organized all over Norway with a total membership of 20,000 persons.[41] The membership was drawn from the lower classes of both the town and country.[41] For the first time these two groups felt they had common cause with each other.[41] In the end, the revolt was easily crushed, Thrane was captured and sentenced to three years in jail for crimes against the safety of the state. Upon his release from jail, after serving his sentence, Marcus Thrane migrated to the United States of America.

In 1898, all men were granted universal suffrage, followed by all women in 1913.

Independence

Main article: Dissolution of the union between Norway and Sweden in 1905

Christian Michelsen, a shipping magnate and statesman, Prime Minister of Norway from 1905 to 1907, played a central role in the peaceful separation of Norway from Sweden on 7 June 1905. After a national referendum confirmed the people's preference for a monarchy over a republic, the Norwegian government offered the throne of Norway to the Danish Prince Carl, and Parliament unanimously elected him king, the first king of a fully independent Norway in 586 years. He took the name of Haakon VII, after the mediaeval kings of independent Norway.

World War I and II

See also: Occupation of Norway by Nazi Germany and Free Norwegian Forces

During World War I, Norway was a neutral country. In reality, however, Norway had been pressured by the United Kingdom to hand over increasingly large parts of its massive merchant fleet to the UK at low rates, as well as to join the trade blockade against Germany.[*citation needed*] Norwegian merchant marine ships with Norwegian sailors were then required to sail under the British flag and risk being sunk by German

submarines.[42] Thus, many Norwegian sailors and ships were lost.[42] Thereafter, the world ranking of the Norwegian merchant marine fell from fourth place in the world to sixth place in the world.[42]

Scenes from the Norwegian Campaign in 1940

Norway also proclaimed its neutrality during World War II, but Norway was invaded by German forces on 9 April 1940. Norway was unprepared for the German surprise attack (see: Battle of Drøbak Sound, Norwegian Campaign, and Invasion of Norway), but military and naval resistance lasted for two months. The armed forces in the north launched an offensive against the German forces in the Battles of Narvik, until they were forced to surrender on June 10 after losing British help diverted to France during the German Invasion of France.

King Haakon and the Norwegian government escaped to Rotherhithe, London, England, and they supported the fight through inspirational radio speeches from London and by supporting clandestine military actions in Norway against the Nazis. On the day of the invasion, the collaborative leader of the small National-Socialist party Nasjonal Samling, Vidkun Quisling, tried to seize power but was forced by the German occupiers to step aside. Real power was wielded by the leader of the German occupation authority, Reichskommissar Josef Terboven. Quisling, as *minister president*, later formed a collaborationist government under German control. Up to 15,000 Norwegians volunteered to fight in German units, including the Waffen-SS.[43]

There were also many Norwegians, and those of Norwegian descent, who joined the Allied forces as well as the Free Norwegian Forces. From the small group that had left Norway in June 1940 consisting of 13 ships, five aircraft and 500 men from the Royal Norwegian Navy who followed the King to the United Kingdom the force had grown by the end of the war to 58 ships and 7,500 men in service in the Norwegian Navy; 5 squadrons of aircraft (including Spitfires, Sunderland flying boats and Mosquitos) in the newly formed Norwegian Air Force; and land forces including the Norwegian Independent Company 1 and 5 Troop as well as No. 10 Commandos.

During the five years of Nazi occupation, Norwegians built a resistance movement which fought the German occupation forces with both civil disobedience and armed resistance including the destruction of Norsk Hydro's heavy water plant and stockpile of heavy water at Vemork, which crippled the German nuclear program (see: *Norwegian heavy water sabotage*). More important to the Allied war effort, however, was the role of the Norwegian Merchant Marine. At the time of the invasion, Norway had the fourth largest merchant marine fleet in the world. It was led by the Norwegian shipping company Nortraship under the Allies throughout the war and took part in every war operation from the evacuation of Dunkirk to the Normandy landings. Each December Norway gives a Christmas tree to the United Kingdom as thanks for the British assistance during World War II. A ceremony takes place to erect the tree in London's famous Trafalgar Square.[44]

Post-war history

From 1945 to 1962, the Labour Party held an absolute majority in the parliament. The government, led by prime minister Einar Gerhardsen, embarked on a program inspired by Keynesian economics, emphasizing state financed industrialization, cooperation between trade unions and employers' organizations. Many measures of state control of the economy imposed during the war were continued, although the rationing of dairy products was lifted in 1949, while price control and rationing of housing and cars continued as long as until 1960.

The wartime alliance with the United Kingdom and the United States was continued in the post-war years.

Although pursuing the goal of a socialist economy, the Labour Party distanced itself from the communists (especially after Soviet seizure of power in Czechoslovakia in 1948), and strengthened its foreign policy and defence policy ties with the U.S. Norway received Marshall Plan aid from the United States starting in 1947, joined the OEEC one year later and became a founding member of the North Atlantic Treaty Organization (NATO) in 1949.

Around 1975, both the proportion and absolute number of workers in industry peaked. Since then labour intensive industries and services like factory mass production and shipping have largely been outsourced.

In 1969, the Phillips Petroleum Company discovered petroleum resources at the Ekofisk field west of Norway. In 1973, the Norwegian government founded the State oil company, Statoil. Oil production did not provide net income until the early 1980s because of the large capital investment that was required to establish the country's petroleum industry.

Norway was a founding member of the European Free Trade Area (EFTA). Two referendums on joining the European Union failed by narrow margins in 1972 and 1994. In 1981, a Conservative government led by Kåre Willoch replaced the Labour Party with a policy of stimulating the stagflated economy with tax cuts, economic liberalization, deregulation of markets, and measures to curb the record-high inflation (13.6% in 1981).

Norway's first female prime minister, Gro Harlem Brundtland of the Labour party, continued many of the reforms of her right-wing predecessor, while backing traditional Labour concerns such as social security, high taxes, the industrialization of nature, and feminism. By the late 1990s, Norway had paid off its foreign debt and had started accumulating a sovereign wealth fund. Since the 1990s, a divisive question in politics has been how much of the income from petroleum production the government should spend, and how much it should save.

In 2011 Norway suffered a pair of devastating attacks conducted by Anders Behring Breivik which struck the government quarter in Oslo and a summer camp of the Labour party's youth movement at Utøya island, resulting in 77 deaths and 96 wounded.

Geography

Main articles: Geography of Norway and Geology of Norway

Norway comprises the western part of Scandinavia in Northern Europe. The rugged coastline, broken by huge fjords and thousands of islands, stretches 25,000 kilometres (16,000 mi) and 83,000 kilometres (52,000 mi) including fjords and islands. Norway shares a 1,619-kilometre (1,006 mi) land border with Sweden, 727 kilometres (452 mi) with Finland and 196 kilometres (122 mi) with Russia at the east. To the north, west and south, Norway is bordered by the Barents Sea, the Norwegian Sea, the North Sea and Skagerrak.[45]

A satellite image of continental Norway in winter

At 385,252 square kilometres (148,747 sq mi) (including Svalbard and Jan Mayen), (and 323,802 square kilometres (125,021 sq mi) without) much of the country is dominated by mountainous or high terrain, with a great variety of natural features caused by prehistoric glaciers and varied topography. The most noticeable of these are the fjords: deep grooves cut into the land flooded by the sea following the end of the Ice Age. The longest is Sognefjorden at 204 kilometres (127 mi). Sognefjorden is the world's second deepest fjord, and the world's longest. Hornindalsvatnet is

the deepest lake in all Europe.[46] Frozen ground all year can be found in the higher mountain areas and in the interior of Finnmark county. Numerous glaciers are found in Norway.

Norway lies between latitudes 57° and 81° N, and longitudes 4° and 32° E.

The land is mostly made of hard granite and gneiss rock, but slate, sandstone and limestone are also common, and the lowest elevations contain marine deposits. Because of the Gulf Stream and prevailing westerlies, Norway experiences higher temperatures and more precipitation than expected at such northern latitudes, especially along the coast. The mainland experiences four distinct seasons, with colder winters and less precipitation inland. The northernmost part has a mostly maritime Subarctic climate, while Svalbard has an Arctic tundra climate.

Because of the large latitudinal range of the country and the varied topography and climate, Norway has a larger number of different habitats than almost any other European country. There are approximately 60,000 species in Norway and adjacent waters (excluding bacteria and virus). The Norwegian Shelf large marine ecosystem is considered highly productive.[47]

Reine in Lofoten, Northern Norway

Climate

The southern and western parts of Norway experience more precipitation and have milder winters than the southeastern part. The lowlands around Oslo have the warmest and sunniest summers but also cold weather and snow in wintertime (especially inland).

Because of Norway's high latitude, there are large seasonal variations in daylight. From late May to late July, the sun never completely descends beneath the horizon in areas north of the Arctic Circle (hence Norway's description as the "Land of the Midnight Sun"), and the rest of the country experiences up to 20 hours of daylight per day. Conversely, from late November to late January, the sun never rises above the horizon in the north, and daylight hours are very short in the rest of the country.

Biodiversity

The total number of species include 16,000 species of insects (probably 4,000 more species yet to be described), 20,000 species of algae, 1,800 species of lichen, 1,050 species of mosses, 2,800 species of vascular plants, up to 7,000 species of fungi, 450 species of birds (250 species nesting in Norway), 90 species of mammals, 45 fresh-water species of fish, 150 salt-water species of fish, 1,000 species of fresh-water invertebrates and 3,500 species of salt-water invertebrates.[48] About 40,000 of these species have been described by science. The red list of 2010 encompasses 4,599 species.[49]

Seventeen species are listed mainly because they are endangered on a global scale, such as the European beaver, even if the population in Norway is not seen as endangered. The number of threatened and near-threatened species equals to 3,682; it includes 418 fungi species, many of which are closely associated with the small remaining areas of old-growth forests,[50] 36 bird species, and 16 species of mammals. As of 2010, 2,398 species were listed as endangered or vulnerable; of these are 1250 listed as vulnerable (VU), 871 as endangered (EN), and 276 species as critically endangered (CR), among these are the gray wolf, the Arctic fox (healthy population

on Svalbard) and the pool frog.[49]

The largest predator in Norwegian waters is the sperm whale, and the largest fish is the basking shark. The largest predator on land is the polar bear, while the brown bear is the largest predator on the Norwegian mainland, where the common moose (also known as the "European Elk") is the largest animal.

Environment

Stunning and dramatic scenery and landscape is found throughout Norway. The west coast of southern Norway and the coast of northern Norway present some of the most visually impressive coastal sceneries in the world. National Geographic has listed the Norwegian fjords as the world's top tourist attraction.[51] The 2010 Environmental Performance Index put Norway in fifth place, based on the environmental performance of the country's policies.

See also: Norwegian parliamentary election, 2009

Harald V, the King of Norway since 1991

According to the Constitution of Norway, which was adopted on 16 May 1814[52] and inspired by the United States Declaration of Independence and French Revolution of 1776 and 1789, respectively, Norway is a unitary constitutional monarchy with a parliamentary system of government, wherein the King of Norway is the head of state and the Prime Minister is the head of government. Power is separated between the legislative, executive and judicial branches of government, as defined by the Constitution, which serves as the country's supreme legal document.

The Monarch officially retains executive power, however, following the introduction of a parliamentary system of government, the duties of the Monarch have since become strictly representative and ceremonial,[53] such as the formal appointment and dismissal of the Prime Minister and other ministers in the executive government. Accordingly, the Monarch is commander-in-chief of the Norwegian armed forces, supreme authority in the Church of Norway, and serves as chief diplomatic official abroad and a symbol of unity.

In practice, it is the Prime Minister who is responsible for the exercise of executive powers. Since his accession in 1991, Harald V of the House of Schleswig-Holstein-Sonderburg-Glücksburg has been King of Norway, the first since the 14th century who has actually been born in the country.[54] Haakon, Crown Prince of Norway is the legal and rightful heir to the throne and the Kingdom.

Constitutionally, legislative power is vested with both the government and the Parliament of Norway, but the latter is the supreme legislature and a unicameral body.[55] A proposition can become a law or an act by simple majority amongst the 150 representatives, who are elected on the basis of proportional representation from 19 constituencies for four-year terms. An additional 19 seats ("levelling seats") are allocated on a nationwide basis to make the representation in parliament correspond better with the popular vote.

As a result, there are currently 169 Members of Parliament altogether. There is also a 4% election threshold to

The Storting is the Parliament of Norway

gain levelling seats in Parliament.[56] As such, Norway is fundamentally structured as a representative democracy. Effectively called the *Stortinget*, meaning *Grand Assembly*, members of Parliament ratify treaties and can impeach members of the government if their acts are declared unconstitutional, and as such have the power to remove them from office in case of an impeachment trial.

The position of Prime Minister, Norway's head of government, is allocated to the Member of Parliament who can obtain the confidence of a majority in Parliament, usually the current leader of the largest political party or more effectively through a coalition of parties, as a single party normally does not have the support to form a government on its own. However, Norway has often been ruled by minority governments.

Jens Stoltenberg, the Prime Minister of Norway since 2005

The Prime Minister nominates the Cabinet, traditionally drawn from members of the same political party in the Storting, to which they are responsible, and as such forms the executive government and exercises power vested to them by the Constitution.[57] In order to form a government, however, more than half the membership of the Cabinet is required to belong to the Church of Norway. Currently, this means at least ten out of the 19 ministries. This has sparked controversy regarding an ongoing debate of separation of church and state in Norway. The current Prime Minister is Jens Stoltenberg, the leader of the Norwegian Labour Party (AP).

Royal Palace of Norway in Oslo

Through the Council of State, a privy council presided over by the Monarch, the Prime Minister and the Cabinet meet at the Royal Palace and formally consult the Monarch. Besides enacting parliamentary bills, all government bills need the formal approval by the Monarch before and after introduction to Parliament. Approval is also given by the Council to all of the Monarch's actions as head of state. Although all government and parliamentary acts are decided beforehand, the privy council is an example of another symbolic gesture the King obtains.[54]

Members of the Storting are directly elected from party-lists proportional representation in nineteen plural-member constituencies in a national multi-party system.[58] Historically, both the Norwegian Labour Party and Conservative Party have played leading political roles, while the former has remained in power since the 2005 election, in a Red-Green Coalition with the Socialist Left Party and the Centre Party.[59]

Since then, both the Conservative Party and the Progress Party have won great amount of seats in the Parliament, however, as of the 2009 general election, not sufficient enough to overthrow the coalition. This has been the result of poor cooperation between the opposition parties, including the Liberal Party and the Christian Democratic Party. As such, Jens Stoltenberg, the leader of the Labour Party, remains Prime Minister of Norway with the necessary majority attributed to the alliance with the Socialist Left and Centre parties.[60]

Administrative divisions

Main articles: Administrative divisions of Norway, Counties of Norway, Municipalities of Norway, List of towns and cities in Norway, and Dependencies of Norway

Norway, a unitary state, is divided into nineteen first-level administrative counties (*fylker*). The counties are administrated through directly elected county assemblies who elect the County Governor. Additionally, the King and government are represented in every county by a fylkesmann, who effectively acts as a Governor.[61] As such, the Government is directly represented at a local level through the County Governors' offices. The counties are then sub-divided into 430 second-level municipalities (*kommuner*), which in turn are administrated by directly elected municipal council, headed by a mayor and a small executive cabinet. The capital of Oslo is considered both a county and a municipality. Norway also has two integral overseas territories, Jan Mayen and Svalbard. There are three Antarctic and Subantarctic dependencies: Bouvet Island, Peter I Island and Queen Maud Land.

In addition, there are 96 settlements with city status in Norway. In most cases, the city borders are coterminous with the borders of their respective municipalities. Often, Norwegian city municipalities include large non-built up areas; for example, Oslo municipality contains large forests, located north and southeast of the city, and over half of Bergen municipality consists of mountainous areas.[62]

The counties of Norway are:

Judicial system and law enforcement

Norway uses a civil law system where laws are created and amended in Parliament and the system regulated through the Courts of Justice of Norway. It consists of the Supreme Court of 19 permanent judges and a Chief Justice, appellate courts, city and district courts, and conciliation councils.[63] The judiciary, although traditionally a third branch of government, is independent of executive and legislative branches. While the Prime Minister nominates Supreme Court Justices for office, their nomination must be approved by Parliament and formally confirmed by the Monarch in the Council of State. Usually, judges attached to regular courts are formally appointed by the Monarch on the advice of the Prime Minister.

The Courts' strict and formal mission is to regulate the Norwegian judicial system, interpret the Constitution, and as such implement the legislation adopted by Parliament and monitor the legislative and executive powers to ensure that they themselves comply with the acts of legislation that have been previously adopted.[63]

Law enforcement in Norway is carried out by the Norwegian Police Service. The Norwegian Police Service is a Unified National Police Service made up of 27 Police Districts and several specialist agencies like Økokrim and Kripos, each headed by a Chief of Police. The Police Service is headed by the National Police Directorate, which in turn is subordinate to the Ministry of Justice and the Police, the Police Directorate is headed by a National Police Commissioner. The only exception is the Norwegian Police Security Agency who answers directly to the Ministry of Justice and the Police.

In its 2007 Worldwide Press Freedom Index, Reporters Without Borders ranked Norway at a shared 1st place (with Iceland) out of 169 countries.[64] The death penalty was abolished in Norway in 1902. Death penalty for high treason in war and war-crimes was also abolished in 1979.

Foreign relations

See also: Norway and the European Union and Whaling in Norway

Royal Norwegian Navy *Fridtjof Nansen* class frigate

Norway maintains embassies in 86 countries.[65] 60 countries maintain an embassy in Norway, all of them in the capital, Oslo.

Norway is a founding member of the United Nations (UN), the North Atlantic Treaty Organization (NATO), the Council of Europe and the European Free Trade Association (EFTA). Scandinavia has traditionally been considered more reluctant in relation to the process of European integration than other European countries. Norway did however follow suit when neighbouring Nordic countries issued applications for accession to the European Union (EU) in 1962, 1967 and 1992, respectively. While Denmark, Sweden and Finland obtained membership, the treaties of accession which had been negotiated were rejected by the Norwegian electorate in 1972 and 1994. After the failed 1994 referendum, Norway maintained its membership in the European Economic Area (EEA), an arrangement which had been seen as a prerequisite for countries about to accede to the EU in 1995. This continues to grant the country access to the internal market of the Union, on the condition that Norway implements those of the Union's pieces of legislation which are deemed relevant to the internal market (counting approximately seven thousand as of 2010)[66] Successive Norwegian governments have, since 1994, requested Norway's participation in parts of the EU's cooperation which go beyond the provisions of the EEA agreement. Non-voting participation by Norway has been granted in for instance the Union's Common Security and Defence Policy, the Schengen Agreement, the European Defence Agency as well as 19 separate programmes.[67]

Norway has been considered a notable participant in international development, having been involved in the 1990s brokering which lead to the ill-fated Oslo Accords regarding the Israeli–Palestinian conflict.

Military

Main article: Norwegian Armed Forces

Norwegian Leopard tanks in the snow in Målselv

The Norwegian Armed Forces currently numbers about 23,000 personnel, including civilian employees. According to the current (as of 2009) mobilization plans, the strength during full mobilization is approximately 83,000 combatant personnel. Norway has conscription for males (6–12 months of training) and voluntary service for females.[68] The Armed Forces are subordinate to the Norwegian Ministry of Defence and the Commander-in-Chief is[*citation needed*] King Harald V. The military of Norway is divided into the following branches: the Army, the Royal Navy, the Royal Air Force and the Home Guard.

Partly due to Norway's inability to maintain its traditional policy of

neutrality in World War II (joining the Allied war effort after being invaded by Nazi Germany in April 1940), the country was one of the founding nations of the North Atlantic Treaty Organization (NATO) on 4 April 1949. At present, Norway contributes in the International Security Assistance Force (ISAF) in Afghanistan.[69] Additionally, Norway has contributed in several missions in contexts of the United Nations, NATO, and the Common Security and Defence Policy of the European Union.

Economy

Main articles: Economy of Norway, Energy in Norway, and European Economic Area

GDP and GDP growth

Norwegians enjoy the second highest GDP per-capita (after Luxembourg) and fourth highest GDP (PPP) per-capita in the world. Today, Norway ranks as the second wealthiest country in the world in monetary value, with the largest capital reserve per capita of any nation.[*citation needed*] According to the CIA World Factbook, Norway is a net external creditor of debt.[2] Norway maintained first place in the world in the UNDP Human Development Index (HDI) for six consecutive years (2001–2006),[5] and then reclaimed this position in 2009 and 2010.[16] Cost of living is about 90% higher in Norway than in the United States and 50% higher than the United Kingdom.[*citation needed*] The standard of living in Norway is among the highest in the world. Foreign Policy Magazine ranks Norway last in its Failed States Index for 2009, judging Norway to be the world's most well-functioning and stable country. Continued oil and gas exports coupled with a healthy economy and substantial accumulated wealth lead to a conclusion that Norway will remain among the richest countries in the world in the foreseeable future.

The Norwegian economy is an example of a mixed economy, a prosperous capitalist welfare state featuring a combination of free market activity and large state ownership in certain key sectors. The Norwegian welfare state makes public health care free (above a certain level), and parents have 46 weeks paid[70] parental leave. The income that the state receives from natural resources includes a significant contribution from petroleum production and the substantial and carefully managed income related to this sector. Norway has a very low unemployment rate, currently 3.1%.[71] 30% of the labour force are employed by the government, the highest in the OECD.[72] 22% are on welfare and 13% are too disabled to work, the highest proportions in the world.[73] The hourly productivity levels, as well as average hourly wages in Norway are among the highest in the world.[*citation needed*] The egalitarian values of the Norwegian society ensure that the wage difference between the lowest paid worker and the CEO of most companies is much smaller than in comparable western economies.[*citation needed*] This is also evident in Norway's low Gini coefficient. The state has large ownership positions in key industrial sectors, such as the strategic petroleum sector (Statoil and Aker Solutions), hydroelectric energy production (Statkraft), aluminium production (Norsk Hydro), the largest Norwegian bank (DnB NOR), and telecommunication provider (Telenor). Through these big companies, the government controls approximately 30% of the stock values at the Oslo Stock Exchange. When non-listed companies are included, the state has even higher share in ownership (mainly from direct oil license ownership). Norway is a major shipping nation and has the world's 6th largest merchant fleet, with 1,412 Norwegian-owned merchant vessels.

Referendums in 1972 and 1994 indicated that the Norwegian people wished to remain outside the European Union (EU). However, Norway, together with Iceland and Liechtenstein, participates in the European Union's single market via the European Economic Area (EEA) agreement. The EEA Treaty between the European Union

Bryggen in Bergen is on the list of UNESCO World Heritage Sites

countries and the EFTA countries– transposed into Norwegian law via "EØS-loven"[74]– describes the procedures for implementing European Union rules in Norway and the other EFTA countries. This makes Norway a highly integrated member of most sectors of the EU internal market. However, some sectors, such as agriculture, oil and fish, are not wholly covered by the EEA Treaty. Norway has also acceded to the Schengen Agreement and several other intergovernmental agreements between the EU member states.

The country is richly endowed with natural resources including petroleum, hydropower, fish, forests, and minerals. Large reserves of petroleum and natural gas were discovered in the 1960s, which led to a boom in the economy. Norway has obtained one of the highest standards of living in the world in part by having a large amount of natural resources compared to the size of the population. In 2011, 28% of state revenues were generated from the petroleum industry.[75]

Agriculture is a significant sector, in spite of the mountainous landscape (Flakstad)

Resources

Export revenues from oil and gas have risen to 45% of total exports and constitute more than 20% of the GDP.[76] Norway is the fifth largest oil exporter and third largest gas exporter in the world, but it is not a member of OPEC. To reduce overheating in the economy from oil revenues and minimize uncertainty from volatility in oil price, and to provide a cushion for the effect of aging of the population, the Norwegian government in 1995 established the sovereign wealth fund ("Government Pension Fund — Global"), which would be funded with oil revenues, including taxes, dividends, sales revenues and licensing fees.

Oil production has been a big part of the Norwegian economy since the 1970s, with a dominating state ownership (Statfjord oil field)

The government controls its petroleum resources through a combination of state ownership in major operators in the oil fields (with approximately 62% ownership in Statoil in 2007) and the fully state-owned Petoro, which has a market value of about twice Statoil, and SDFI. Finally, the government controls licensing of exploration and production of fields. The fund invests in developed financial markets outside Norway. The budgetary rule ("Handlingsregelen") is to spend no more than 4% of the fund each year (assumed to be the normal yield from the fund).

As of March 2011, the Government Pension Fund of Norway controlled assets valued at is approximately US$570 billion (equal to US$114,000 per capita) which is about 140% of Norway's current GDP. Currently it is the second-largest state-owned sovereign wealth fund, second only to the Abu Dhabi Investment Authority; Conservative estimates tell that the fund may reach US$800–900 billion by 2017. Projections indicate that the Norwegian pension fund may become the largest capital fund in the world. The fund controls approximately 1.25% of all listed shares in Europe and more than 1% of all the publicly traded shares in the world. The Norwegian Central Bank operates investment offices in London, New York and Shanghai. Guidelines implemented in 2007 allow the fund to invest up to 60% of the capital in shares (maximum of 40% prior), while the rest may be placed in bonds and real-estate. As the stock markets tumbled in September 2008, the fund was able to buy more shares at low prices. In this way, the losses incurred by the market turmoil was recuperated by

November 2009.

Other natural resource-based economies, such as Russia, are trying to learn from Norway by establishing similar funds. The investment choices of the Norwegian fund are directed by ethical guidelines; for example, the fund is not allowed to invest in companies that produce parts for nuclear weapons. The highly transparent investment scheme is lauded by the international community.

Stockfish has been exported from Lofoten in Norway for at least 1,000 years

The future size of the fund is of course closely linked to the price of oil and to developments in international financial markets. The Norwegian trade surplus for 2008 reached approximately US$80 billion. With an enormous amount of cash invested in international financial markets, Norway has financial muscles to avert many of the worst effects of the financial crisis that hit most countries in the fall of 2008. As most western countries struggle with burgeoning foreign debt, Norway remains a nation of stowed-away wealth, financial stability and economic power to meet the challenges of the worldwide economic crisis. In spite of the crisis, Norway still runs a 9% state budget surplus, being the only western country to run a surplus as of July 2009.

In 2000, the government sold one-third of the state-owned oil company Statoil in an IPO. The next year, the main telecom supplier, Telenor, was listed on Oslo Stock Exchange. The state also owns significant shares of Norway's largest bank, DnB NOR and the airline SAS. Since 2000, economic growth has been rapid, pushing unemployment down to levels not seen since the early 1980s (unemployment in 2007: 1.3%). The international financial crisis has primarily affected the industrial sector, but unemployment has remained low and is at 3.3% (86 000 people) in August 2011. Norway is among the least affected countries of the international economic downturn. Neighbouring Sweden is experiencing substantially higher actual and projected unemployment numbers as a result of the ongoing recession, and in the 1st quarter of 2009 the GNP of Norway surpassed Sweden's for the first time in history, despite a population numbering about half of Sweden's.

Norway is also the world's second largest exporter of fish (in value, after China)[77] and the 6th largest arms exporter in the world.[78][79] Hydroelectric plants generate roughly 98–99% of Norway's electric power.[80]

Transport

Main articles: Transport in Norway, Rail transport in Norway, and List of airports in Norway

Due to the low population density, narrow shape and long coastlines, public transport in Norway is less developed than in many European countries, especially outside the cities. As such, Norway has old water transport traditions, but the Norwegian Ministry of Transport and Communications has in recent years implemented rail, road and air transport through numerous subsidiaries in order to develop the country's infrastructure.[81] Most recently there has been discussion of the possibility of creating a new high-speed rail system between the nation's largest cities.[82][83]

Norway's main railway network consists of 4,114 kilometres (2,556 mi) of standard gauge lines, of which 242 kilometres (150 mi) is double track and 64 kilometres (40 mi) high-speed rail (210 km/h) while 62% is electrified at 15 kV 16⅔ Hz AC. The railways transported 56,827,000 passengers 2,956 million passenger kilometres and 24,783,000 tonnes of cargo 3,414 million tonne kilometres.[84] The entire network is owned by the Norwegian National Rail Administration,[85] while all domestic passenger trains except the Airport Express Train are operated by Norges Statsbaner (NSB).[86] Several companies operate freight trains.[87]

Investment in new infrastructure and maintenance is financed through the state budget,[85] and subsidies are provided for passenger train operations.[88] NSB operates long-haul trains, including night trains, regional services and four commuter train systems, around Oslo, Trondheim, Bergen and Stavanger.[89]

NSB type 73 at Oslo Central Station, the largest railway station in the country

There are approximately 92,946 kilometres (57,754 mi) of road network in Norway, of which 72,033 kilometres (44,759 mi) are paved and 664 kilometres (413 mi) are motorway.[90] There are four tiers of road routes; national, county, municipal and private, with only the national roads numbered en route. The most important national routes are part of the European route scheme, and the two most prominent are the E6 going north-south through the entire country, while E39 follows the West Coast. National and county roads are managed by the Norwegian Public Roads Administration.[91]

Norwegian and Scandinavian aircraft at Oslo Airport, Gardermoen

Of the 97 airports in Norway,[90] 52 are public,[92] and 46 are operated by the state-owned Avinor.[93] Seven airports have more than one million passengers annually.[92] 41,089,675 passengers passed through Norwegian airports in 2007, of which 13,397,458 were international.[92]

The central gateway by air to Norway is Oslo Airport, Gardermoen,[92] located about 50 kilometres (31 mi) north of Oslo with departures to most European countries and some intercontinental destinations.[94][95] It is hub for the two major Norwegian airlines Scandinavian Airlines System[96] and Norwegian Air Shuttle,[97] and for regional aircraft from Western Norway.[98]

Demographics

Main article: Demographics of Norway

Demographics in Norway

Norway's population numbers roughly 4.9 million.[9] Most of the population are Norwegians, a North Germanic people.

The Sami people traditionally inhabit central and northern parts of Norway and Sweden, as well as in northern Finland and in Russia on the Kola Peninsula. Another national minority are the Kven people who are the descendants of Finnish speaking people that moved to northern Norway in the 18th up to the 20th century. Both the Sami and the Kven were subjected to a strong assimilation policy by the Norwegian government from the 19th century up to the 1970s.[101] Because of this "Norwegianization process", many families of Sami or Kven ancestry now self-identify as

Historical populations

Year	Pop.	±%

Migration

Emigration

Main article: Norwegian American

There are almost 4.7 million Norwegian Americans according to the 2006 U.S. census.[103] The number of Americans of Norwegian descent living in the U.S. today is roughly equal to the current population of Norway. In the 2006 Canadian census, 432,515 Canadian citizens claimed Norwegian ancestry.[104]

Norman Borlaug, father of the Green Revolution.

Immigration

Main article: Immigration to Norway

In recent years, immigration has accounted for most of Norway's population growth. According to Statistics Norway (SSB), a record 61,200 immigrants arrived in the country in 2007, an increase of 35% from 2006. At the beginning of 2010, there were 552,313 people in Norway of some immigrant background (including those born of immigrant parents), comprising 11.4% of the total population. 210,725 were from Western countries (Europe, the United States, Canada, Australia, New Zealand) and 341,588 were from other countries. The largest immigrant groups by country of origin, in order of size, are Poles, Swedes, Pakistanis, Iraqis, Somalis, Germans, Vietnamese, and Danes.[105]

Pakistani Norwegians are the largest non-European minority group in Norway, and most of their 31,000 members live around Oslo. The Iraqi immigrant population has increased significantly in recent years. After the enlargement of the EU in 2004, there has also been an influx of immigrants from Central and Eastern Europe, particularly Poland. The large 2007 immigrant group was primarily from Poland, Germany, Sweden, Lithuania and Russia.[106][107]

In 2011 there were approximately 600,900 people of some non-Norwegian background residing in Norway, or 12.2% of the total population. In 2010, the immigrant community grew by 57,000, which accounted for 90% of Norway's population growth; some 27% of newborn children were of immigrant background.[1] The policies of immigration and integration are subjected to major controversy in Norway. These statistics indicate that Norway's population is now 82.0% ethnic Norwegian, a figure that has steadily decreased since the late 20th century. Some 12.2% of the population is of solely immigrant background, while 5.7% of the population is of mixed Norwegian-foreign ancestry. People of other European ethnicity are 5.8% of the total, while Asians (including Pakistanis, Iraqis, and Turks) are 4.3%, Africans 1.5%, and others 0.6%.

Ethnicity	Population[108]	Percent
Norwegians	4,305,886[note 2]	86.2%
Swedes	78,830	1.6%
Poles	65,294	1.3%
Danes	53,630	1.0%
Germans	40,847	0.8%
British	36,312	0.7%
Pakistanis	35,722	0.7%

Rindal and Beiarn municipalities have the highest percentage of Norwegians, 99.5% and 99.1%, respectively.

Religion

Main article: Religion in Norway

Norwegians are registered at baptism as members of the Church of Norway; many remain in the state church to be able to use services such as baptism, confirmation, marriage and burial, rites which have strong cultural standing in Norway. About 79.2%[109] of Norwegians were members of the Church of Norway as of January 1, 2010. However, only 20% of Norwegians say that religion occupies an important place in their life (according to a recent Gallup poll), the fourth-lowest such percentage in the world (only Estonia, Sweden and Denmark are lower).[110] In the early 1990s, it was estimated that between 4.7% – 5.3% of Norwegians attended church on a weekly basis.[111] This figure has dropped to about 2% – the lowest such percentage in Europe – according to 2009 and 2010 data[112][113]

Nidaros Cathedral in Trondheim

There are, by November 2011, about 98,000 registered Catholics in Norway.[114] But there are also lots of Catholics who aren't registered with their personal identification number; the real number is probably about 230,000 Catholics, 70% of whom were born abroad.[115][116] Annuario Pontificio 2011 use a number of 229,652 Catholics. That constitutes about 5% of the population, making Norway the most Catholic country in Northern Europe.[117]

In 2010, 10% of the population was religiously unaffiliated, while another 9% (431 000 people), were members of religious and life stance communities outside the Church of Norway.[118] Other Christian denominations total about 4.9%[118] of the population, the largest of which is the Catholic Church, with 83,000 members.[119] Others include Pentecostals (39,600),[119] the Evangelical Lutheran Free Church of Norway (19,600),[119] Methodists (11,000),[119] Baptists (9,900),[119] Orthodox (9,900)[119] Brunstad Christian Church (6,800),[119] Adventists (5,100),[119] Assyrians and Chaldeans, and others. The Swedish, Finnish and Icelandic Lutheran congregations in Norway have about 27,500 members in total.[119] Other religions comprise less than 1% each, including 4,000 members in the Church of Jesus Christ of Latter-day Saints, and 12,000 Jehovah's Witnesses.[119]

Among non-Christian religions, Islam is the largest with the population of 106,735.[120] It is practiced mainly by Somali, Arab, Albanian, and Turkish immigrants, as well as Norwegians of Pakistani descent. Other religions comprise less than 1% each, including 819 adherents of Judaism.[121] Indian immigrants introduced Hinduism to Norway, which in 2011 has slightly more than 5,900 adherents, or 1% of non-Lutheran Norwegians.[121] Sikhism has approximately 3,000 adherents with most living in Oslo, with two Gurdwaras; Gurdwara Sri Guru Nanak Dev Ji and Gurdwara Sikh Sangat. Sikhs first came to Norway in the early 1970s. The troubles in Punjab after Operation Bluestar and the genocide of Sikhs after the assassination of Indira Gandhi led to an increase of Sikhs moving to Norway. Drammen also has a sizeable population of Sikhs with the largest Gurdwara in north Europe completed in Lier. There are eleven Buddhist organizations, grouped under the Buddhistforbundet organization, with slightly over 14,000 members,[121] which make up 0.2% of the population. The Baha'i religion has slightly more than 1,000 adherents.[121][121] Around 1.7% (84,500) of Norwegians adhere to the secular Norwegian Humanist Association.

From 2006 to 2011, the fastest-growing religious faith in Norway was Orthodox Christianity, which grew in membership by 80.0%; however, its share of the total population remains small, at 0.20%. One of the reasons is

huge immigration from Eritrea and Ethiopia and to a lesser extent from Eastern European and Middle Eastern countries. Other fast-growing religions were the Roman Catholic Church (78.7%), Hinduism (59.6%), Islam (48.1%), and Buddhism (46.7%).[122]

According to the Eurobarometer Poll 2005, at that time 32% of Norwegian citizens responded that "they believe there is a god".[123] A study conducted three years previously by Gustafsson and Pettersson (2002), similarly found that 72% of Norwegians did not believe in a 'personal God.'[124]

Like other Scandinavian countries, the Norse followed a form of native Germanic paganism known as Norse paganism. By the end of the 11th century, when Norway had been Christianized, the indigenous Norse religion and practices were prohibited. Remnants of the native religion and beliefs of Norway survive today in the form of names, referential names of cities and locations, the days of the week, and other parts of the everyday language. Modern interest in the old ways has led to a revival of the pagan religious practices in the form of Asatru. The Norwegian Åsatrufellesskapet Bifrost formed in 1996; as of 2011, the fellowship has about 300 members. Foreningen Forn Sed formed in 1999 and has been recognized by the Norwegian government as a religious organization.

Parts of the Sami minority retained their shamanistic religion well into the 18th century when they were converted to Christianity by Dano-Norwegian missionaries.

Religion	Members	Percent	As of 2011[120]

Education

Main article: Education in Norway

The main building of the Norwegian University of Science and Technology in Trondheim

Higher education in Norway is offered by a range of seven universities, five specialized colleges, 25 university colleges as well as a range of private colleges. Education follows the Bologna Process involving Bachelor (3 years), Master (2 years) and PhD (3 years) degrees.[125] Acceptance is offered after finishing upper secondary school with general study competence.

Public education is virtually free, regardless of nationality,[126] with an academic year with two semesters, from August to December and from January to June. The ultimate responsibility for the education lies with the Norwegian Ministry of Education and Research.

Languages

Main article: Languages of Norway

See also: Norwegian language and Sami languages

Distribution of Norwegian dialect groups: North Norwegian (yellow), Trøndelag Norwegian (navy blue), West Norwegian (orange) and East Norwegian (pale blue).

The North Germanic Norwegian language has two official written forms, *Bokmål* and *Nynorsk*. Both of them are recognized as official languages, in that they are both used in public administration, in schools, churches, and media, and Bokmål is the written language used by the vast majority of about 80–85%. Around 95% of the population speak Norwegian as their native language, although many speak dialects that may differ significantly from the written language. In general, most Norwegian dialects are inter-intelligible, although some may require significant efforts on the part of a listener to understand. Several Uralic Sami languages are spoken and written throughout the country, especially in the north, by the *Sami people*. Speakers have a right to get education in Sami language no matter where they are living and receive communication from the government in various Sami languages. The Kven minority speak the Uralic Kven language/Finnish. There is advocacy for making Norwegian Sign Language an official Norwegian language.

In the 19th and 20th century, Norwegian language was subject to strong political and cultural controversy, which led to the creation of Nynorsk in the 19th century and to the formation of alternative spelling standards in the 20th century, notably the Riksmål standard, which is more conservative (that is, more similar to Danish) than Bokmål.

Norwegian is similar to the other languages in Scandinavia, Swedish and Danish. All three languages are mutually intelligible and can be, and commonly are, employed in communication between inhabitants of the Scandinavian countries. As a result of the cooperation within the Nordic Council, inhabitants of all Nordic countries, including Iceland and Finland, have the right to communicate with the Norwegian authorities in their own language.

Any Norwegian student who is a child of immigrant parents is encouraged to learn the Norwegian language. The Norwegian government offers language instructional courses for immigrants wishing to obtain Norwegian citizenship. From 1 September 2008, an applicant for Norwegian citizenship must also give evidence of proficiency in either the Norwegian or Sami language or give proof of having attended classes in Norwegian for 300 hours, or meet the language requirements for university studies in Norway (which is met by being proficient in one of the Scandinavian languages).

The main foreign language taught in Norwegian elementary school is English. The majority of the population are fluent in English, especially those born after World War II. German, French and Spanish are also commonly taught as a second or, more often, third language. Russian, Japanese, Italian, Latin and rarely Chinese (Mandarin) are available in some schools, mostly in the cities. Traditionally, English, German and French were considered the main foreign languages in Norway. These languages, for instance, had been used on Norwegian passports until the 1990s, and university students have a general right to use these languages when submitting their theses.

Culture

Main article: Culture of Norway

The various regions of Norway have their own bunads; traditional costumes

The unique Norwegian farm culture, sustained to this day, has resulted not only from scarce resources and a harsh climate but also from ancient property laws. In the 18th century, it brought about a strong romantic nationalistic movement, which is still visible in the Norwegian language and media. In the 19th century, Norwegian culture blossomed as efforts continued to achieve an independent identity in the areas of literature, art and music. This continues today in the performing arts and as a result of government support for exhibitions, cultural projects and artwork.[127]

Norway has been, in many regards, an early adopter of women's rights, minority rights, and LGBT rights.[128] For example, in 1990 Norway was the first country to recognize the ILO-convention 169 on indigenous people, and in 1913 become one of the first countries to grant women universal suffrage (without conditions on civil status). It was also the first independent nation to allow women to run for elected office.

In regards to LGBT rights, Norway was the first country in the world to enact an anti-discrimination law protecting the rights of gays and lesbians. In 1993 Norway became the second country to legalize civil union partnerships for same-sex couples, and on January 1, 2009, Norway became the sixth country to grant full marriage equality to same-sex couples.

However, only in 1990 was the Norwegian constitution altered to grant absolute primogeniture to the Norwegian throne, meaning that the eldest child, regardless of gender, takes precedence in the line of succession. This was not done retroactively, meaning that even now the current successor to the throne is not the eldest child to the King, but the eldest son. The Norwegian constitution Article 6 states that “For those born before the year 1990 it shall [..] be the case that a male shall take precedence over a female.”[129]

An ardent promoter of human rights, Norway is home to the annual Oslo Freedom Forum conference, a gathering described by The Economist as “on its way to becoming a human-rights equivalent of the Davos economic forum.”[130]

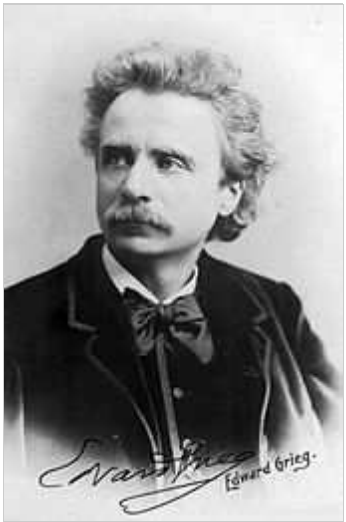
Cinema

Main article: Cinema of Norway

Not until fairly recently has the Norwegian cinema received international recognition, but as early as 1951 a documentary film of the *Kon-Tiki* expedition won an Oscar Academy Award. In 1959, Arne Skouen's *Nine Lives* was nominated, but failed to win. Another notable film is *Flåklypa Grand Prix* (English: *Pinchcliffe Grand Prix*), an animated feature film directed by Ivo Caprino. The film was released in 1975 and is based on characters from Norwegian cartoonist Kjell Aukrust. It is the most widely seen Norwegian film of all time.

There was however a real breakthrough in 1987 with Nils Gaup's *Pathfinder* which told the story of the Sami. It was nominated for an Oscar and was a huge international success. Berit Nesheim's *The Other Side of Sunday* was also nominated for an Oscar in 1997.

Since the 1990s, the film industry has thrived with up to 20 feature films each year. Particular successes were *Kristin Lavransdatter*, *The Telegraphist* and *Gurin with the Foxtail*. Knut Erik Jensen was among the more successful new directors together with Erik Skjoldbjærg remembered for *Insomnia*.[131]



In late 2008, the movie *Max Manus* opened at Norwegian theatres. The movie was a WW2 drama, telling the story of the Norwegian resistance hero Max Manus who led many successful sabotage operations against the German occupation. The movie became the highest grossing Norwegian movie ever.

Other notable successful Norwegian films, include Orion's Belt (film), Cold Prey, Cold Prey 2, Cold Prey 3 and The Troll Hunter

Music

Main article: Music of Norway

Along with the classical music of romantic composers Edvard Grieg; Rikard Nordraak and Johan Svendsen, and the modern music of Arne Nordheim, Norwegian black metal has become something of an export article in recent years.

Edvard Grieg, composer and pianist

Norway's classical performers include Leif Ove Andsnes, one of the world's more famous pianists, Truls Mørk, an outstanding cellist, and the great Wagnerian soprano Kirsten Flagstad.

Since the 1990s, Norway's biggest cultural export is black metal. The lo-fi, dark and raw form of heavy metal exploded in Norway during the 1990s and launched the careers of bands such as Darkthrone, Mayhem, Burzum, Emperor, Gorgoroth and Immortal, as well as later bands such as Dimmu Borgir. This development has since become an important part of extreme metal, but many events that took place in the early 1990s related to the black metal movement such as several church burnings and a prominent murder case caused some concern amongst the Norwegian citizens at large.

The jazz scene in Norway is also thriving. Jan Garbarek, Terje Rypdal, Mari Boine, Arild Andersen, and Bugge Wesseltoft are internationally recognized while Paal Nilssen-Love, Supersilent, Jaga Jazzist and Wibutee are becoming world-class artists of the younger generation.[132]

Hardingfele, a fiddle from Norway

Norway has a strong folk music tradition which remains popular to this day.[133] Among the most prominent folk musicians are Hardanger fiddlers Andrea Een, Olav Jørgen Hegge and Annbjørg Lien, vocalists Agnes Buen Garnås, Kirsten Bråten Berg and Odd Nordstoga.[134]

Other internationally recognized bands are a-ha and Röyksopp. The group a-ha initially rose to fame during the mid 1980s after being discovered by musician and producer John Ratcliff and has had continued global success in the 1990s and 2000s (decade).

In recent years, various Norwegian songwriters and productionteams have contributed to other international artists releases. Most notabilly the Norwegian productionteam Stargate (production team) who has produced songs for Rihanna, Beyonce Knowles, Shakira, Jennifer Lopez and Lionel Richie among others. Espen Lind who has written and produced songs for Beyonce Knowles, Lionel Richie, Ne-Yo, Chris Brown, Jessica Simpson and Leona Lewis. Lene Marlin who has written songs for Rihanna and Lovebugs (band)

Norway enjoys many music festivals throughout the year, all over the country. Norway is the host of one of the world's biggest Extreme sport festivals with music; Ekstremsportveko – a festival held annually in Voss. Oslo is the host of many festivals, such as: Øyafestivalen and by:Larm. Oslo used to have a summerparade similar to the German Love Parade. In 1992 the city of Oslo wanted to adopt the French music festival "Fête de la Musique". Fredrik Carl Størmer established the festival. Even in its first year, "Musikkens Dag" gathered thousands of people and artists in the streets of Oslo. "Musikkens Dag" is now renamed "Musikkfest Oslo. Norway also have a festival named trænafestivalen each year on the island Træna.

Literature

Main article: Norwegian literature

See also: List of Norwegian writers

History of Norwegian literature starts with the pagan Eddaic poems and skaldic verse of the 9th and 10th centuries with poets such as Bragi Boddason and Eyvindr skáldaspillir. The arrival of Christianity around the year 1000 brought Norway into contact with European mediaeval learning, hagiography and history writing. Merged with native oral tradition and Icelandic influence this was to flower into an active period of literature production in the late 12th and early 13th centuries. Major works of that period include *Historia Norwegiæ*, *Þiðrekssaga* and *Konungs skuggsjá*.

Knut Hamsun

Little Norwegian literature came out of the period of the Scandinavian Union and the subsequent Dano-Norwegian union (1387—1814), with some notable exceptions such as Petter Dass and Ludvig Holberg. In his play Peer Gynt, Ibsen characterized this period as "Twice two hundred years of darkness/brooded o'er the race of monkeys", although the latter line is not as frequently quoted as the former. During the union with Denmark, written Norwegian was replaced by Danish.

Two major events precipitated a major resurgence in Norwegian literature. In 1811 a Norwegian university was

Henrik Ibsen

established in Christiania. Seized by the spirit of revolution following the American and French Revolutions, the Norwegians signed their first Constitution in 1814. Soon, the cultural backwater that was Norway brought forth a series of strong authors recognized first in Scandinavia, and then worldwide; among them were Henrik Wergeland, Peter Christen Asbjørnsen, Jørgen Moe and Camilla Collett.

By the late 19th century, in the Golden Age of Norwegian literature, the so-called *Great Four* emerged: Henrik Ibsen, Bjørnstjerne Bjørnson, Alexander Kielland, and Jonas Lie. Bjørnson's "peasant novels", such as "En glad gutt" (A Happy Boy) and "Synnøve Solbakken" are typical of the national romanticism of their day, whereas Kielland's novels and short stories are mostly realistic. Although an important contributor to early Norwegian romantic nationalism (especially the ironic Peer Gynt), Henrik Ibsen's fame rests primarily on his pioneering realistic dramas such *The Wild Duck* and *A Doll's House*, many of which caused moral uproar because of their candid portrayals of the middle classes.

In the 20th century, three Norwegian novelists were awarded the Nobel Prize in Literature: Bjørnstjerne Bjørnson in 1903, Knut Hamsun for the book "Markens grøde" ("Growth of the Soil") in 1920, and Sigrid Undset in 1928. Further important contributions to Norwegian literature were made by writers like Dag Solstad, Jon Fosse, Cora Sandel, Olav Duun, Olav H. Hauge, Gunvor Hofmo, Stein Mehren, Kjell Askildsen, Hans Herbjørnsrud, Aksel Sandemose, Bergljot Hobæk Haff, Jostein Gaarder, Erik Fosnes Hansen, Jens Bjørneboe, Kjartan Fløgstad, Lars Saabye Christensen, Johan Borgen, Herbjørg Wassmo, Jan Erik Vold, Rolf Jacobsen, Olaf Bull, Jan Kjærstad, Georg Johannesen, Tarjei Vesaas, Sigurd Hoel, Arnulf Øverland and Johan Falkberget.

Architecture

Main article: Architecture of Norway

Norway has always had a tradition of building in wood. Indeed, many of today's most interesting new buildings are made of wood, reflecting the strong appeal that this material continues to hold for Norwegian designers and builders.[135]

Urnes Stave Church has been listed by UNESCO as a World Heritage Site

Norway's conversion to Christianity some 1,000 years ago led to the introduction of stonework architecture, beginning with the construction of Nidaros Cathedral in Trondheim.

The small town Røros has

In the early Middle Ages, stave churches were constructed throughout Norway. Many of them remain to this day and represent Norway's most important contribution to architectural history. A fine example is Urnes Stave Church which is now on UNESCO's World Heritage List. Another notable example of wooden architecture is the Bryggen Wharf in Bergen, consisting of a row of narrow wooden structures along the quayside.

In the 17th century, under the Danish monarchy, cities such as Kongsberg with its Baroque church and Røros with its wooden buildings were established.

After Norway's union with Denmark was dissolved in 1814, Oslo became the capital. Architect Christian H. Grosch designed the oldest parts of the University

small streets and old houses.

of Oslo, the Oslo Stock Exchange, and many other buildings and churches.

At the beginning of the 20th century, the city of Ålesund was rebuilt in the Art Nouveau style. The 1930s, when functionalism dominated, became a strong period for Norwegian architecture, but it is only in recent decades that Norwegian architects have truly achieved international renown. One of the most striking modern buildings in Norway is the Sami Parliament in Kárášjohka designed by Stein Halvorson and Christian Sundby. Its debating chamber is an abstract timber version of a Lavvo, the traditional tent used by the nomadic Sami people.[136]

Art

Main article: Norwegian art

For an extended period, the Norwegian art scene was dominated by artwork from Germany and Holland as well as by the influence of Copenhagen. It was in the 19th century that a truly Norwegian era began, first with portraits, later with even more impressive landscapes. Johan Christian Dahl (1788–1857), originally from the Dresden school, eventually returned to paint the landscapes of western Norway, defining Norwegian painting for the first time."[137]

Norway's new-found independence from Denmark encouraged painters to develop their Norwegian identity, especially with landscape painting by artists such as Kitty Kielland, a female painter who studied under Hans Gude; Harriet Backer, 1845–1932, another pioneer among female artists, influenced by impressionism. Frits Thaulow, an impressionist, was influenced by the art scene in Paris as was Christian Krohg, a realist painter, famous for his paintings of prostitutes.[138]

Brudeferd i Hardanger by Adolph Tidemand og Hans Gude, 1848

Of particular note is Edvard Munch, a symbolist/expressionist painter who became world famous for The Scream which is said to represent the anxiety of modern man.

Other artists of note include Harald Sohlberg, a neo-romantic painter remembered for his paintings of Røros; and Odd Nerdrum, a figurative painter who maintains his work is not art but kitsch.

Cuisine

Main article: Norwegian cuisine

Norway's culinary traditions show the influence of long seafaring and farming traditions with salmon (fresh and cured), herring (pickled or marinated), trout, codfish and other seafood balanced by cheeses, dairy products and breads (predominantly dark/darker).

Lefse is a Norwegian potato flatbread, most common around Christmas. Some traditional Norwegian dishes include lutefisk, smalahove, pinnekjøtt and fårikål.[139]

History of Norway

From Wikipedia, the free encyclopedia

The history of human settlement in what is present day Norway goes back at least 11,000 years, to the late Paleolithic. Archaeological finds in the county of Møre og Romsdal have been dated to 9,200 BC and are probably the remains of settlers from Doggerland, an area now submerged in the North Sea, but at the time a landbridge that connected the present day British Isles with Jutland. The Fosna-Hensbacka culture inhabited parts of Norway about 8300 BC to 7300 BC. Petroglyphs dating from the Neolithic Age (in Norway 4000 BC to 1800 BC) show scenes of hunter-gatherers. More permanent settlements developed during the Bronze Age (1800 BC to 400 BC) and Iron Age. The earliest runes (an inscription in North Germanic) that have been found were inscribed on an arrowhead dating from about 200 AD. Many more inscriptions appear until 800 AD; a number of small kingdoms developed during these centuries.

The period from 800–1066 saw significant expansion, and is referred to as the Viking age. During this period, Norwegians, as well as Swedes and Danes, traveled abroad on longships, as raiders, explorers, settlers and traders. By the middle of the 11th century, the Norwegian kingdom was firmly established, although there was still only a very rudimentary administrative framework. The Black Death arrived in Norway in 1349, killing perhaps half the population, after which Norway entered into a period of decline.

Between 1396 and 1536 Norway was a part of the Kalmar Union, and from 1536 to 1814 Norway was effectually a tributary to Denmark, named as the personal union Denmark–Norway. Denmark–Norway entered into an alliance with Napoleon, with the war leading to dire conditions and mass starvation in 1812. In 1814 Denmark–Norway was defeated in the Napoleonic wars and the king was forced to cede Norway to the king of Sweden in the Treaty of Kiel (January 14). Sweden and Norway adopted a loose union, in which Norway was permitted to maintain its own Constitution.

This period also saw the rise of the Norwegian romantic nationalism cultural movement, as Norwegians sought to define and express a distinct national character. The union with Sweden was dissolved in 1905. Norway remained neutral during World War I. Norway claimed neutrality again during World War II, but was occupied by German forces from April 9, 1940 until May 8, 1945.

Norway joined NATO in 1949 and in 1960 the European Free Trade Area as one of the seven founding members.[1] Two plebiscites to join the European Union failed by narrow margins in 1972 and 1994. Norway has been a close ally of the United States. Large reserves of petroleum and natural gas were discovered in the 1960s, which led to a continuing boom in the economy. Whaling was once an important industry and commercial fishing continues to be so.

Etymology

Modern etymologists believe the country's name means "the northward route" (the way north or the north way), which in Old Norse would be *nor veg* or **norð vegr*. The Old Norse name for Norway was *Nóregr*, in Anglo-Saxon *Norþ weg*, and in mediaeval Latin *Northvegia*. The present name of the Kingdom of Norway in Norwegian Bokmål is "Kongeriket Norge" and in Norwegian Nynorsk "Kongeriket Noreg", both only a couple of letters removed from the original "northern way"; "Nor(d)-(v)e.g.

Pre-historic age (10,000 BC–800 AD)

Burial mound on Karmøy

Settled since the end of the last ice age, modern-day Scandinavia contains finds from the Stone age and Bronze age, such as rock carvings.

Pytheas description of Thule as a land six days sailing north of Britain, where there is no nightfall in summer, might be the first written reference to what we today know as Norway. Later Scandinavia is known for its Iron Age culture. From around the time of the Roman Empire until about 800 AD, many stone inscriptions can be found, written in Runes. Apparently, the petty kingdoms developed during these centuries.

The Viking Age (800–1066)

See also: Viking Age and Unification of Norway

The period from 800–1066 AD is referred to in Norwegian history as the Viking age. During this period, Norwegians, as well as Swedes and Danes, traveled abroad on longships, as raiders, explorers, settlers and traders. Viking raids affected large parts of Europe. The Norwegian Vikings mainly traveled west, to Britain and Ireland. Emigrants from Norway colonized Shetland, Orkney, the Faroe Islands and Iceland. From Iceland, Greenland was also colonized, and voyages were even made to North America, where remains of Viking dwellings have been found in Newfoundland.

The Oseberg Viking Ship which is exhibited in the Viking Ship Museum in Oslo

Several historic works, known as the kings' sagas were written in Norway and Iceland in the 12th and 13th centuries, the best known of which is Snorri Sturluson's *Heimskringla* (c. 1220). These provide our main sources for the early history of Norway. However, their accuracy for the earliest period is uncertain, and a much debated topic among modern historians. The stories about the earliest times are partly legendary in nature, and can hardly be taken as accurate history.

The period of the Viking age coincides with the first consolidation of a single Norwegian kingdom. By the time of the first historical records of these events, about the 700s AD, Norway was divided into several petty kingdoms. It is also assumed that Danish rulers often held sway in the Oslofjord-area.

King Harald Fairhair is the king who is credited by later tradition as having unified Norway into one kingdom. According to the sagas, he ruled Norway from approximately 872 to 930. Modern historians assume that his rule was limited to the coastal areas of southern Norway. Kings of Norway until King Olav IV, who died in 1387, claimed descent from Harald Fairhair. After Harald's death, the unity of the kingdom was not preserved, and for the next century, the kingdom was variously ruled, wholly or in part, by descendants of King Harald or by earls under the suzerainty of Denmark.

During this period, Christianity was introduced to Norway, probably mainly from the British Isles. In terms of church organization, Norway remained part of the Archdiocese of Bremen until 1152 or 1153. The first Norwegian king to have adopted Christianity was, according to the sagas, Harald Fairhair's son, King Haakon the Good (c. 934–961). Haakon did not force his subjects to accept the new religion. His successors, Olaf Tryggvason (c. 995–1000), and Olaf Haraldsson (St. Olav) (1015–1028) resorted to forceful means to convert the Norwegian people. Olaf Haraldsson was probably the first King of Norway to extend his rule to the inland regions of eastern Norway, and to have ruled more or less the whole of the present-day country. His death in the battle of Stiklestad in 1030 is traditionally considered a milestone in the history of the Christianisation of the country, although religion was not one of the issues at stake in that battle. After his death, Olaf was revered as a saint. He became the patron saint of Norway, and by the end of the century, Christianity was the only religion allowed in the country. In theory, later kings of Norway were said to hold the kingdom as vassals of St. Olav.

After Olaf's death, Norway was ruled from Denmark, as part of the "North Sea Empire" of King Knut the Great. However, Knut was the last Danish king to rule Norway for more than three centuries, and already in 1035, Olaf's son, Magnus the Good took the throne. His successor, King Harald Hardrada attempted the invasion of England in 1066, but was beaten and killed at the battle of Stamford Bridge, an event which is generally considered the end of the Viking Age.

These maps are mainly based on later saga sources, from the 13th century. Their historical accuracy is questionable.

Norwegian petty kingdoms c. AD 820 at the death of Gudrød the Hunter. The most important kingdoms were Vestfold (red), Hålogaland (purple), Alvheim (yellow) and Agder (green).

Petty kingdoms ca. 860 AD at the death of Halfdan the Black. In red is the kingdom inherited by Harald Fairhair.

Petty kingdoms ca. 872 AD (the unified kingdom shown in red) before the defining Battle of Hafrsfjord.

King Harald I's division of the kingdom ca. 930 AD. The yellow areas are petty kingdoms, the purple is the domain of the Jarls of Lade, orange is the domain the earls of Møre.

The division of the kingdom after the Battle of Svolder (1000) between Sweden (yellow), Denmark (red) and the Jarl of Lade (purple).

Unified Norway during the reign of Saint Olav ca. 1020 AD. In pale red the *Finnmarken* ("Marches of the Sami") most of which paid tribute to the kings of Norway[*citation needed*].

Norway in the High Middle Ages (1066–1380)

By the middle of the 11th century, the Norwegian kingdom was firmly established, although there was still only a very rudimentary administrative framework. The establishment of cities gathered pace, and by the end of the 11th century, the three largest cities of modern-day Norway, Oslo, Trondheim (*Nidaros*) and Bergen (*Bjørgvin*)

Leif Ericson discovers America. Painting by Christian Krogh, 1893.

were flourishing, as well as Tønsberg, the most important city in Eastern Norway until c. 1300. King Olaf Kyrre (1067–1093) was the first Norwegian king to be literate. The Church gradually developed its organization, and the archdiocese of Nidaros was established in 1152 or 1153. By that time, there were five dioceses in mainland Norway, with bishops in Nidaros, Bjorgvin, Stavanger, Oslo and Hamar. The islands of the North Sea, which had been colonized from Norway, were also part of the archdiocese of Nidaros. Orkney, Shetland and the Faeroe Islands were subject to the Norwegian king. The Hebrides and the Isle of Man were made subject to Norway by King Magnus Barefoot c. 1100. The rulers of these islands held the title of "king" themselves, but recognised the suzerainty of the Norwegian king. The extent to which the Norwegian king was able to exercise his rule over all of these islands was highly variable, and dependent on the individual kings.

According to the succession practices of the time, all sons of the king had the same right to inherit from their father, and this also included illegitimate sons. This led to periods when there were several kings at the same time, at several times three, on one occasion even four. The division of the kingdom does not appear to have been geographical, when there was more than one king, all were kings of the whole country, but they divided the royal income. The unclear succession laws, and the frequent divisions of the kingdom, combined with social and economic conflicts, were some of the main causes of the civil war era, the name given to the period between 1130 and 1240. The civil wars started with the disputed succession after King Sigurd the Crusader, who died in 1130, and flared up at shorter or longer intervals for over a century. In the 1160s, the Church got involved, and made King Magnus Erlingsson the first Norwegian king to be crowned, in 1163 or 1164. The first written succession law was written at this time, stipulating one king, who had to be of legitimate birth. However, this law never came into force, as King Magnus was defeated and killed by Sverre Sigurdsson, who became King Sverre. Sverre was excommunicated by the Church, and the country was placed under an interdict. Although constantly challenged by various pretenders, Sverre fended off his rivals, and when he died in 1202, he was the first King of Norway to have died of natural causes since 1130. By this time, the warring factions had coalesced into two groups: The birchlegs, King Sverre's party, and the bagler, who were supported by the Church, and tried to place descendants of King Magnus Erlingsson on the throne. From 1208 to 1217, the country was divided between these two factions by a peace treaty. In 1217, the kings of both factions died, and both accepted the young King Haakon Haakonsson as king. Haakon defeated the last royal pretender in 1240, thus ending the civil war era.

The extent to which the civil wars adversely affected the general population at the time has been debated by recent historians. What is clear is that the country came out of the civil wars in 1240 as a much more unified and consolidated kingdom than it had been in 1130. The rule of King Haakon and his successors until 1319 has sometimes been called *the golden age* of the Norwegian medieval kingdom, by later historians. Under King Haakon Haakonsson, a centralised administration was for the first time built up, with a chancellery in Bergen, which became the first capital city of the country. Clear succession laws were put into place, stipulating one single ruler, who had to be of legitimate birth. The Old Norse language, which had first been written with the Latin alphabet in the 12th century, was used in administration, as well as for the composition of original literature, and the translation of foreign literature. Haakon also brought Iceland and Greenland under Norwegian rule, in the early 1260s, at which point the kingdom of Norway reached its largest territorial extent. Haakon died in 1263 while on campaign against Scotland, defending his claim to the overlordship of the Hebrides and the Isle of Man. His successor, King Magnus the Lawmender gave up that claim in the treaty of Perth, but secured Scotland's recognition of Norwegian rule over Orkney and Shetland. King Magnus promulgated the first national law-code for all of Norway in 1274, a rare thing in Europe at that time. During the late 13th century, the

Norwegian kings attempted to play the part of a great power in international politics, forging wedding alliances with Castile in 1258, and Scotland in 1281. King Eirik II was one of the many claimants for the throne of Scotland in the "Great Cause", claiming succession from his daughter, Margaret. In 1295, he forged an alliance with France and Scotland against England, whereby Norway undertook to supply the King of France with 300 ships and 50 000 troops. It is clear that Norway could not have the manpower to fulfil the terms of this treaty; however, it was never put to the test.

The Kingdom of Norway (white), c. 1265, at its greatest extent.

In 1299, King Haakon V took the throne, and moved the capital of the country to Oslo. Haakon led an active foreign policy, aimed at increasing Norway's influence in Scandinavia[*citation needed*]. These policies, which included complex dynastic ties between the Nordic royal houses, were to lead Norway into several centuries of unions with her neighbours. At his death, Haakon left no male issue, and the throne went to his daughter's son, the King of Sweden, Magnus Eriksson. The union with Sweden was a personal union, and it was agreed that Magnus' two sons would inherit one kingdom each. King Magnus abdicated, and his son, Haakon, became King of Norway. However, Haakon, who married Margrethe, the daughter of the Danish king, also vied for the throne of Sweden. Haakon and Margrethe's son, Olaf, became King of Denmark in 1376. On his father's death in 1380, Olaf also succeeded to the Norwegian throne, as King Olav IV. With brief exceptions, Norway and Denmark were to be ruled by the same king until 1814.

The Kalmar Union and the union with Denmark

After the Black Death Norway entered into a period of decline. The Royal line died out and the country entered into two unequal unions from 1396 until 1814; this period was called "the 400-year-night" by Henrik Ibsen during the national romantic period as Norwegian national awareness was rediscovered in the 19th century. It can be broken into two main periods:

- The union of all Scandinavia referred to as the Kalmar Union, and
- The Danish Period or Union with Denmark.

The Kalmar Union (1396–1523)

Main article: Kalmar Union

King Haakon V died without male heirs in 1319. His daughter married a Swedish prince, whose son Magnus Eriksson inherited both kingdoms. Magnus's son Haakon VI and his infant son Olav IV were Norway's last native kings until Harald V ascended to the throne in 1991. Margrethe, the queen mother, who was the oldest daughter of King Valdemar IV of Denmark, succeeded in uniting Norway with Denmark and Sweden in the Kalmar Union (1397–1523), which ended after 180 years when Sweden seceded in 1536. Norway's power was weakened during this period by the loss of a large part of the population during the Black Death pandemic of 1349–1351.

The Union with Denmark (1523–1814)

Main article: Denmark–Norway

The elite in Norway was so weakened that it was not able to resist the pressures from the Danes. More and more

decisions were taken in Copenhagen and the Norwegian Riksråd was eventually disbanded. The Danish crown was represented by a governor styled *Statholder*, but it was always important for the King to maintain Norway's legal status as a separate hereditary kingdom. The Danish period can be separated into subperiods:

Map of the north Atlantic and Scandinavia from 1570

Map of Norway from 1668

- **The Reformation in Norway** (1537–1596): Norway's power was further weakened by the dissolution of the independent Norwegian church in the reformation of 1537. Norway became a tributary to Denmark.
- **The Northern Wars** (1596–1720): A period of virtually continual war and preparation for war, including the Kalmar War (1611–1613), the Thirty Years' War (1618–1648), the Second Northern War (1655–1658), the Gyldenløve War (1675–1679) and culminating in the Great Northern War (1700–1721). In the treaties of Roskilde and Copenhagen, Norway lost Bohuslen, Jemtland and Herjedalen, in addition to Idre and Serna, two smaller communities of Eastern Norway.
- **The Period of Peace and Economic Growth** (1721–1770): During the 18th century, Norway enjoyed a period of great prosperity and became an increasingly important part of the united kingdoms.
- **National Reawakening and Preparation for Independence** (1770–1814): This period was built on the strong natural independence of the Norwegian farm culture, combined with awareness of the American Revolution (1775–1783) and the French Revolution (1789–1799), building the natural national assertiveness, and culminating in the constitutional convention of 1814.

Union with Sweden (1814–1905)

Main article: Union between Sweden and Norway

See also: Dissolution of the union between Norway and Sweden in 1905

In 1814 Denmark–Norway was defeated in the Napoleonic wars and the king was forced to cede Norway to the king of Sweden in the Treaty of Kiel (January 14). The Norwegian dependencies Iceland, Greenland and the

Constitution Day celebration outside the Royal Palace, Oslo.

Faroe Islands were kept by Denmark. In an attempt to retain control over Norway despite the treaty, the Viceroy and hereditary prince of Denmark–Norway encouraged representatives of various social and political factions to gather at Eidsvoll to declare independence, adopt a constitution and elect hereditary prince Christian Frederik as king. May 17 is still celebrated as the day of the new democratic constitution of independent Norway. Sweden responded later the same year by waging war on Norway. In the peace negotiations, Christian Frederik agreed to relinquish claims to the Norwegian throne and return to Denmark if Sweden would accept the democratic Norwegian constitution and a loose personal union. The Norwegian parliament (*Stortinget*) then elected the Swedish king as king of Norway on November 4, 1814. When residing in Sweden, the king was represented by a governor-general styled *Stattholder*, often noble, repeatedly even the Crown Prince (then called Viceroy). The stattholder office, vacant after 1856, was abolished in 1873.

The union was peacefully dissolved in 1905 after several years of political unrest when Sweden recognised Norwegian independence. The parliament offered the throne to Prince Carl of Denmark, who accepted it after a referendum confirmed the monarchy and rejected a republican form of government. On November 18 he ascended the throne under the Norwegian name of Haakon VII.

Independent monarchy (1905–present)

Norway in World War I

Norway remained neutral during World War I, but 829 Norwegian ships were sunk during the war at sea,[2] with the loss of some 2,000 sailors.[3] Despite their neutrality, the Norwegian government went to considerable lengths to accommodate Britain, on account of both British pressure and an anti-German sentiment. These accommodations came in the form of the very large Norwegian merchant fleet, which delivered essential supplies to Britain, which in return supplied Norway with vital coal. This led to Norway occasionally being called The Neutral Ally.

Interwar years

A political tension developed in Norway during the 1930s. The effects of the international economic depression on Norway created a stalemate within the government. This stalemate created a frustration with moderate governments in Norway and allowed extremists on both the left and the right of Norweigan politics to thrive. The right-wing of Norweigan politics was embodied in the career of Vidkun Quisling. The Norwegan parliament consisted of 150 seats. Between 1930 and 1936, six political parties from across the Norweigan political spectrum competed for these seats. During the general election of 1933, the Labor Party received 500,526 votes from the Norweigan public. The Conservative Party received 272,690 votes, the Liberal Party received 220,001 votes, the Farmers Party received 173,534 votes. On the extremes of Norweigan politices, the right wing was represented by Quisling's *Nasjonal Samling* or the "National Unification Party" which in 1933 received only 27,847 votes and the left wing was represented by the Communist Party of Norway, which in 1933 received only 22,000 votes.[4]

Norway in World War II

Main article: Occupation of Norway by Nazi Germany

See also: Norwegian Campaign, Norwegian resistance movement, Quisling regime, and Legal purge in Norway after World War II

The German cruiser *Blücher* sinking in the Oslofjord on April 9, 1940.

As World War II erupted, Norway insisted on remaining neutral. In a surprise dawn attack on April 9, 1940, Germany launched *Operation Weserübung*. The German forces attacked Oslo and the major Norwegian ports (Bergen, Trondheim, Kristiansand and Narvik) and quickly gained footholds in those cities and the surrounding areas. The Norwegian Army, manning a fort in the Oslofjord, sank the German cruiser *Blücher* at 7:23am after a two hour enagement. This delayed the Nazi German invasion long enough for King Haakon, his government and the parliament to escape the city with much of the treasury, and to resist the invaders, although Oslo itself surrendered to the invaders at 14:00 on 9 April 1940. The Norwegian armed forces, together with allied British, French and Polish forces, kept up an organized military resistance for two months, longer than any other country invaded by Germany, except for the Soviet Union. Eventually, on June 7 the Norwegian forces had to surrender and King and government left Norway to form a government in exile in London.

The Norwegian national socialist politician Vidkun Quisling attempted a coup the same day, but was met with such strong resistance from the people that Nazi Germany deposed him within a week and installed a bureaucratic administration in lieu of a government. In September 1940 the German Reichskommissar Josef Terboven formed a cabinet with himself presiding, and with most ministers recruited among members of Quisling's Nazi party, plus some independent collaborators. In 1942 this administration was replaced with a semi-independent puppet government headed by Quisling, who was promoted to "minister president" of the "National government" by the Reichskommissar. Quisling's name has come to mean "traitor" in several languages.

King Haakon and his government fled to Britain on June 7, the same day the allied forces that had retaken Narvik abandoned it and the French forces returned to a quickly disintegrating France. The continued existence of a legitimate Norwegian government gave the exiles considerably more room for action than the French. The worldwide operations of the large Norwegian merchant fleet were a material aid to the Allies.

The Norwegian resistance movement began on a small scale right after the invasion, but gained in strength, especially after the installation of Quisling's puppet government in late 1940 and its attempt to enforce the native brand of fascism, and to enroll labour, teachers and officials in its organizations (for an anecdote of Norwegian civil resistance, see Paper Clip).

The resistance became very active towards the end of the war, closely and continuously supported by the British SOE. Norwegian resistance (generally termed the 'Home Front'), and its military branch *(milorg)* kept many German divisions tied down in occupation duty, and Norwegian spotters contributed to the destruction of numerous German warships and installations. The Norwegian resistance also smuggled people in and out of Norway during the war (typically to Scotland via the 'Shetland Bus', and to neutral Sweden), and, with the SOE, managed to destroy much of the world's supply of heavy water and cripple the Vemork heavy water plant at Rjukan, thus perhaps preventing Germany from developing an atomic bomb (*Operation Gunnerside*).

Not all Norwegians sided with the government in exile. 2% of the population became members of Quisling's National Socialist party (Nasjonal Samling – NS). Numerous opportunists joined his movement initially, while Germany seemed to be winning the war. Six thousand young Norwegians joined German Waffen-SS divisions to

fight against the Soviet Union on the Eastern Front.

Following the 1941 raid by British Commandos on the minor port of Vaagsoy, Hitler further reinforced Norway, mistakenly thinking that the British might invade northern Norway to put pressure on Sweden and Finland. By the end of the war the German garrison was 372,000 strong (the Norwegian population at the time numbering a little over 3 million). In May 1945, when the *milorg* was advised they no longer need act covertly, they were found to number some 50,000 members.

During the entire occupation, the German authorities built the so called Festung Norwegen. Innumerable bunkers, pillboxes, air strips and submarine hangars dotted the coast to fend off any invaders. Coupled with the large number of German soldiers in Norway, the Allies (especially the Norwegian government in exile) were worried that the remnants of the Nazi party would flee to Norway and make their last stand there.

The Norwegian merchant ships that were in Allied waters at the time of invasion were requisitioned by the exiled Norwegian Government in London. The Norwegian Shipping and Trade Mission was established in London shortly thereafter, and the name abbreviated to Nortraship, following a suggestion from the British Postal Services. The main duties were those of war transports, supply services etc. including the supply of food, ammunition and reinforcements to the front lines, besides evacuating the wounded. Nortraship had 1,081 ships with 33,000 sailors. 570 ships were lost (these numbers vary according to source), along with 3,734 sailors.

By the end of the war, Norwegian naval vessels were also fighting alongside the British. Norway was counted among the victors in World War II and was a founding member of the United Nations. The first UN Secretary General, Trygve Lie, was a Norwegian.

After the liberation, active members of the National Socialist party and those who had collaborated with the enemy were prosecuted and sentenced. Twenty-five Norwegians, including Quisling, were executed for treason and/or war crimes, and 12 Germans were executed for war crimes.

Post-war

Main articles: Foreign relations of Norway, Military of Norway, and Norway and the European Union

A side effect of the large German garrison was the birth of up to 12,000 children born to Norwegian women and German soldiers. Most of these women suffered recriminations after the war, as did their children, who were called *tyskerbarna* ("German children") or "Nazi children". Many children were sent to homes where they had to suffer physical and sexual abuse, some have been used as test subjects for medical experiments.[5][6]

In 1949 Norway became a member of NATO.

The discovery of oil and gas in adjacent waters in the late 1960s boosted Norway's economic fortunes.

The current focus is on containing spending on the extensive welfare system and planning for the time when petroleum reserves are depleted. In referendums held in 1972 and on November 28, 1994, Norway rejected joining the European Union, though it chose to remain associated with it through being part of the wider European Economic Area.

Norway has advanced in its standard of living beyond many of its European counterparts, in large part to its affluent economy. As a result, for the last several years the United Nations has ranked Norway as having the highest standard of living in the world. This ranking compares nations' level of education and income, combined with expected length of life.

Norway also ranked 2nd in a study conducted by World Economic Forum on the gender gap in 58 nations based on measuring the level of equality with men in five areas: Economic participation, economic opportunity, political empowerment, educational attainment, and health and well-being.[7][8]

21st century

Since the year 2000, Norway has focused on culture. A number of museums have been built and now the new Munch museum and the Historic Museum is the government's current focus. The construction of the new financial district is a new mass-scale project in Oslo. As the biggest building project in Scandinavian history the government plans to renovate Bjørvika and eastern Oslo. The Oslo Opera House received two architectural awards in 2008 and 2009. The new "port of Oslo" and "Barcode"buildings are being built, and the new Oslo Central Station will be built in 2014. Oslo has established a large group of telecom and software companies. Some of the probably largest ones are Telenor, Opera Software, Statnett, Netcom and Ementor. A new IT "city" has been built at Fornebu, Bærum near Oslo. Until 2008, Tandberg's headquarer was located at Lysaker, outside Fornebu The area is currently housing the headquarters of Telenor, Microsoft Norway and Oracle Norway.

A three-party minority coalition of the Centre, Christian Democratic, and Liberal parties, headed by Christian Democrat Prime Minister Kjell Magne Bondevik, moved into office in October 1997. That government fell in March 2000, and Jens Stoltenberg took over the government with a cabinet from the Norwegian Labour Party. In 2001, Bondevik once again became Prime Minister in 2001, this time as head of a minority coalition of the Conservatives, Christian Democrats and Liberals. Since 2005, Jens Stoltenberg has been leading a red-green coalition, consisting of Norwegian Labour Party, Socialist Left Party and Center Party.

Norway participated in sending troops to serve in Afghanistan as part of the NATO force that responded to the Taliban government’s support of al-Qaeda. Norway also contributed warplanes to the NATO mission to Libya in 2011.

On July 22, 2011, Norwegian conservative Anders Behring Breivik launched a terror attack on the capital, bombing government offices in Oslo and orchestrating a shooting at Utøya Island in Buskerud, where the Workers' Youth League (the youth wing of the Labour Party) was holding an annual youth camp. Eight people perished in the blast in central Oslo, and sixty-nine people were gunned down at Utøya, mainly children.

Monarchy of Norway

From Wikipedia, the free encyclopedia

The **Norwegian monarch** or **Sovereign** is the head of state of Norway, which is a constitutional monarchy with a parliamentary system of government. The Norwegian monarchy can trace its line back to the reign of Harald Fairhair and the previous petty kingdoms which were united to form Norway; it has been in unions with both Sweden and Denmark for long periods.

King of Norway

MONARCHY

Arms of His Majesty the King of Norway

Incumbent:
Harald V

Style:	His Majesty
First monarch:	Harald I
Formation:	c. 872

The present sovereign is King Harald V, who has reigned since 17 January 1991. The heir apparent is his only son, Crown Prince Haakon. The Crown Prince undertakes various public ceremonial functions, as does the King's wife, Queen Sonja. The Crown Prince also acts as regent in the King's absence. There are several other members of the Royal Family, including the King's daughter, grandchildren and siblings. The Royal House is a branch of the princely family of Glücksburg, originally from Schleswig-Holstein in Germany,[1] the same royal house as the Danish and former Greek royal families.

While the Constitution of Norway grants important executive powers to the king, these are almost always exercised by the Council of State in the name of the King (King's Council, or cabinet). Formally the King appoints the government according to his own judgement, but parliamentary practice has been in place since 1884. Constitutional practice has replaced the meaning of the word King in most articles of the constitution from the king personally to the elected government. The powers vested in the Monarch are significant, but are treated only as reserve powers and as an important security part of the role of the Monarchy.

The King's functions are mainly ceremonial. He ratifies laws and royal resolutions, receives and sends envoys to foreign countries and hosts state visits. He has a more tangible influence as the symbol of national unity. The annual New Year's Eve speech is one venue where the king traditionally raises issues dealing with negative aspects in society. The King is also High Protector of the Church of Norway (the state church), Supreme Commander of the Norwegian armed forces and Grand Master of the Royal Norwegian Order of St. Olav and the Royal Norwegian Order of Merit.[2][3]

History

Main article: Hereditary Kingdom of Norway

The position of King of Norway has been in continuous existence since the unification of Norway in 872. Although Norway has officially been a hereditary kingdom throughout that entire time there have been several instances of elective succession, latest in 1905 Haakon VII was elected by the people of Norway to the position of king through a plebiscite. In recent years members of the Socialist Left party have proposed the abolition of the monarchy during each new session of parliament, though without any likelihood of success.[4] This gives the Norwegian monarchy the unique status of being a popularly elected royal family and receiving regular formal confirmations of support from the Storting.

Germanic kingdom

King Harald receives Norway out of his

Prior to and in the early phase of the Viking Age Norway was divided into several smaller kingdoms. These are thought to follow the same tradition as other Germanic monarchies of the time; the king was usually elected by the high ranking farmers of the area and served mainly as judge during the popular assemblies, as a priest during the sacrifices and as a military leader during wars.

Harald Fairhair was the first king of Norway. The date of the first formation of a unified Norwegian kingdom is set to 872 when he

father's hands in this illustration from the 14th century Flateyjarbók.

defeated the last petty kings who resisted him at the Battle of Hafrsfjord, however the consolidation of his power took many years. The boundaries of Fairhair's kingdom were not identical to those of present day Norway, and upon his death the kingship was shared among his sons. Some historians put emphasis on the actual monarchial control over the country and assert that Olaf II alias *Saint Olaf*, who reigned from 1015 and to 1028, was the first king to control the entire country. Olaf is generally held to be the driving force behind Norway's final conversion to Christianity. Furthermore he was in 1031 revered as Rex Perpetuum Norvegiæ (Latin for *Eternal King of Norway*), and subsequently, the 1163 Succession Law stated that all kings after Olaf II's son, Magnus I, were not independent monarchs, but vassals holding Norway as a fief from Saint Olaf.[5]

Middle ages

In the twelfth and thirteenth centuries the Norwegian kingdom was at its geographical and cultural peak. The kingdom included Norway (including the now Swedish provinces of Jemtland, Herjedalen, Særna, Idre and Båhuslen), Iceland, the Faroe Islands, Greenland, Shetland, Orkney and other smaller areas in the present day United Kingdom. The king had diplomatic relations with most of the European kingdoms and formed alliances with Scotland and Castile, among others. Large castles such as Haakon's Hall and cathedrals, the foremost being Nidaros Cathedral, were built.

Mainland Norway during the reign of Saint Olav ca. 1020 AD. The *Finnmarken* ("Marches of the Sami"), most of which paid tribute to the kings of Norway, are shown in pink.

In the tradition of the Germanic monarchy the king had to be elected by a representative assembly of noblemen. Men eligible for election had to be of royal blood; the eldest son of the previous king was not automatically chosen. During the civil war era the unclear succession laws and the practice of power-sharing between several kings simultaneously gave personal conflicts the potential to become full-blown wars. Over the centuries kings consolidated their power and eventually a strict succession law made Norway a principally hereditary kingdom. In practice the king was elected by the Riksråd in a similar way to Denmark. He adhered to a håndfæstning and governed in the council of Norwegian noblemen according to existing laws.

After the death of Haakon VI of Norway in 1380, his son Olav IV of Norway succeeded to both the thrones of Norway and Denmark and was also elected King of Sweden. After his death at the age of 17 his mother Margrethe united the three Scandinavian kingdoms in personal union under one crown, in the Kalmar Union. Olav's death extinguished the Norwegian male royal line; he was also the last Norwegian king to be born on Norwegian soil for the next 567 years.[5]

The Black Death of 1349–51 was a contributing factor to the decline of the Norwegian monarchy as the noble families and population in general were gravely affected. But the most devastating factor for the nobility and the monarchy in Norway was the steep decline in income from their holdings. Many farms were deserted and rents and taxes suffered. This left the Norwegian monarchy weakened in terms of manpower, noble support, defence ability and economic power.[5]

Surviving the unions

The Kalmar Union was made possible not only by the complex events in the royal dynasties of Scandinavia but was also, among other things, a direct reaction to the expansive and aggressive policies of the Hanseatic League.[5]

On 6 June 1523 Sweden left the union permanently, leaving Norway in an unequal union with a Danish king already embarked on centralising the government of the Union.

In the following centuries the Norwegian monarchy was characterised by a king mostly residing abroad. This weakened the monarchial governing structures of Norway; the Riksråd, for example, was gradually undermined as the Norwegian nobles were not able to enjoy the King's confidence to the same extent as their Danish counterparts. The King was also less able to govern according to Norwegian needs as the distance meant he and his advisors had less knowledge of the conditions in Norway.[6]

Norway was one of few countries where the archdiocese was coterminous with the national territory. The church was therefore an important factor in trying to maintain the separate Norwegian monarchy. In the 16th century the power struggle between the Norwegian nobles and the king culminated at the same time as the reformation. This prompted a set of events in which the struggle against the Danish dominance in Norway was coupled with the struggle against the reformation. When both failed the effects were harsh. The Norwegian Catholic bishops were replaced with Danes and the Norwegian church was subdued and made wholly Danish. The Norwegian Riksråd was abolished in 1536 and more and more foreign men were appointed to important positions in Norway.[6]

The Danish nobles pushed the king to reduce Norway to a Danish province in order for them to gain more control in the election of future kings. However, the hereditary nature of the Norwegian monarchy meant that the King had to maintain the basic principle of Norway being a separate and extant kingdom. If the Danish nobles were to elect as king someone other than the next in line to the throne the Union would be dissolved. This gave the king the upper hand in the negotiations for the håndfesting. Potential heirs to Norway were present both in the royal dynasties of Sweden and Schleswig-Holstein, so if the King of Denmark did not assert his position as King of Norway they would.[6]

King Frederick III

During this time the Danish kings were more preoccupied with securing the traditionally Danish fringe territories and therefore paid little attention to and made few attempts at maintaining the Norwegian interests. As a result Jemtland, Herjedalen, Båhuslen, Shetland and Orkney were lost to Sweden and Scotland. In addition all contact with Greenland ceased.

In 1661 Frederick III introduced absolute monarchy in Denmark and Norway and introduced new laws in both countries to that effect. Up until that time the law of Magnus the law-mender given in 1274 and 1276 had been the law of Norway. Christian IV's Norwegian law was in effect a translation into Danish of that older law. 1661 also marks the point where the last remnants of representational local government were removed and had to be rebuilt. However, that process started almost immediately when local men of means started putting pressure on local governors in order to gain or regain influence on local matters.[6]

Emerging independence

During the Napoleonic Wars the King aligned Denmark–Norway with France. When Napoleon lost the war, the

king was forced to cede Norway to the king of Sweden under the Treaty of Kiel in 1814. It was initially proposed that the Norwegian dependencies of Greenland, Iceland and the Faroes would remain with Norway, but that point was dropped during the negotiations so they became Danish.[7]

The Constituent Assembly at Eidsvoll in 1814.

On hearing news of the treaty, the Prince of the Kingdom of Denmark-Norway, Christian Frederick, the resident viceroy in Norway, participated in founding a Norwegian independence movement. The independence movement was successful, partly due to clandestine support from the Danish Crown, but also because of the strong desire for independence in Norway. On 10 April, a national assembly met at Eidsvoll to decide on a constitution. Norway eventually declared independence on 17 May 1814, electing Christian Frederick as King. A short war with Sweden later that year ended with the Convention of Moss. This led to the ousting of Christian Frederick, and the Norwegian Storting electing Charles XIII of Sweden as King of Norway, creating the union between Sweden and Norway.[7] In turn the king recognised the Norwegian constitution which was only changed to facilitate the union.

The end result was that the Norwegian monarchy became a constitutional monarchy. In this new union the King was much more a King of Norway than under the previous Danish system. The only area of policy not in the hands of the Norwegians was foreign policy.

Norway had been brought along into the new developments of the world as they arrived in Denmark. However, with the break the Norwegians were able to forge a more progressive political development than was the case in Denmark. Denmark introduced a constitutional monarchy 35 years after Norway. Parliamentarism was introduced in Norway 17 years before Denmark and 33 years before Sweden.[8] The union with Denmark also had its adverse effects on the monarchy, among other things it resulted in the crown of Norway experiencing a loss of territory which today amounts to 2 322 755 km².[9] Very few royal undertakings had been located to Norway and the country is thus lacking the monumental palaces of the period as can be seen in Copenhagen and other parts of Denmark.

Union with Sweden

Main article: Union between Sweden and Norway

Royal Standard

The Treaty of Kiel stipulated that Norway was to be ceded by the king of Denmark–Norway to the king of Sweden. This was however rejected in Norway, where calls for self-determination were already mounting. A Norwegian constituent assembly was called, and a liberal constitution was adopted on 17 May 1814. A short war ensued, ending in a new agreement between the Norwegian parliament and the Swedish king.

The Convention of Moss was from a Norwegian point of view a significant improvement over the terms dictated to Denmark-Norway at the treaty of Kiel. Notably, Norway was no longer to be treated as a Swedish conquest but rather as an equal party in a personal union of two independent states. Both the principle and substance of the Norwegian Constitution were preserved, with only such amendments as were required to allow for the union with Sweden. Norway retained its own parliament and separate institutions, except for the common king and foreign service.

The Norwegian Storting would propose Norwegian laws without interference from Sweden, to be approved by the common King in his capacity as King of Norway. The King would occasionally enact laws unfavourable to Sweden. As the Norwegian movement towards full independence gained momentum, the King approved the building of forts and naval vessels intended to defend Norway against a Swedish invasion.

The union was nevertheless marked by the Norwegians' constant and growing discontent with being in a union of any kind. The Storting would propose laws to reduce the king's power or to assert Norwegian independence. This would most often be vetoed by the king, but as he only had the right to veto the same law twice, it would eventually be passed. Already the constitution of 1814 specified that Norway would have a separate flag, and the present design was introduced in 1821. The flags of both kingdoms were defaced with the union mark in 1844 to denote their equal status within the union. It was discarded despite royal objections from the Norwegian flag in 1898. In 1837 local self-government in certain areas of policy was introduced in rural areas as well as towns. Parliamentarism was introduced in 1884.

Jean Baptiste Bernadotte [a.k.a. King Charles XIV John], Marshal of France, King of Sweden (1818). Joseph Nicolas Jouy, after François Kinson. As Crown Prince, Jean Baptiste Bernadotte was primarily responsible for establishing the union.

It also has to be said that the Royal House of Bernadotte tried hard to be a Norwegian Royal House as well. The Royal Palace in Oslo was built during this period. There were separate coronations in Trondheim as stipulated in the Constitution. The royal princes even had a hunting lodge built in Norway in order to spend more private time there.[10] King Oscar II himself spoke and wrote Norwegian fluently.

Full independence

In 1905 a series of disputes between parliament and the King culminated with the matter of separate Norwegian consuls to foreign countries. Norway had grown into one of the world's leading shipping nations while Sweden retained control of both the diplomatic and consulate corps. The Swedes had little insight in the matters Norwegian ships and businessmen needed assistance with abroad and consulates were not even established in several important shipping cities. The demand for separate Norwegian consuls was seen as very important by the Norwegian parliament and society. The Storting proposed a law establishing a separate Norwegian consulate corps. King Oscar II refused to ratify the law and subsequently the Norwegian cabinet resigned. The king was not able to form any other government that had the support of parliament and as such it was deemed on 7 June that he had failed to function as King of Norway.[7][11]

King Haakon VII early during his reign.

The Norwegian people gave their consent in a plebiscite held on 13 August which resulted in an overwhelming 368,208 votes (99.95%) in favor of dissolution of the Union, against 184 (0.05%) opposed, with 85 percent of Norwegian men voting. No women voted, as universal suffrage was not granted until 1913, however Norwegian feminists collected more than 200,000 signatures in favor of dissolution.[7][11]

On 12 and 13 November, in the second constitutional plebiscite in three months, Norwegian voters decided by a nearly 79 percent majority (259,563 to 69,264) to keep the monarchy instead of establishing a republic.[11]

During the summer a Norwegian delegation had already approached the 33-year-old Prince Carl of Denmark, the second son of the Crown Prince Frederick of Denmark. The Norwegian parliament had considered other candidates but ultimately chose Prince Carl, partly because he already had a son to continue the line of succession, but more significantly because Carl was married to Maud of Wales, the daughter of King Edward VII. By bringing in a king with British royal ties, it was hoped that Norway could court Britain's support.[11]

Prince Carl impressed the delegation in many ways, not the least because of his sensitivity to the liberal and democratic movements that had led to Norway's independence. Though the Norwegian constitution stipulated that the Storting could choose a new king if the throne were vacant, Carl was aware that many Norwegians — including leading politicians and high-ranking military officers — favored a republican form of government. Attempts to persuade the prince to accept the throne on the basis of Parliament's choice failed; Carl insisted that he would accept the crown only if the Norwegian people expressed their will for monarchy by referendum and if the parliament then elected him king.

Following the November plebiscite affirming Norwegians' desire for a monarchy, the parliament by an overwhelming majority offered Carl a clear mandate to the Norwegian throne on 18 November. The prince accepted the same evening, choosing the name **Haakon**, a traditional name used by Norwegian kings. The last king with that name was Haakon VI, who died in the year 1380.

The new king therefore became Haakon VII, King of Norway. His two-year-old son Alexander, the heir apparent, was renamed Olav and became Crown Prince Olav. The new royal family arrived in the capital Kristiania (later Oslo) on 25 November. Haakon VII was sworn in as king of Norway on 27 November.[11]

A new monarchy

The early years of the new Norwegian monarchy were marked by a shortage of funds. The Norwegian state was poor and funds were needed elsewhere than in the upkeep of a large court. In that sense it was a stroke of good fortune that Prince Carl had set as a condition for accepting the throne that he would not be forced to keep a large court. However, the royal travels and the upkeep of the royal residences, after the initial refurbishment in 1905, were to some extent neglected. One example of the negative financial situation is that Prince Carl had been promised a Royal Yacht when he accepted the throne, but this was not fulfilled until 1947.[12]

One important incident in the early years of the new monarchy was in 1928 when the King appointed the first Labour government. The Norwegian Labour Party was at that time quite radical and even had the abolition of monarchy as part of their programme. It was the custom for the King to rely on the advice of previous Prime Minister in deciding who to give the assignment as new Prime Minister. In this case the previous conservative Prime Minister was opposed to giving power to the radicals and advised the appointment of someone else. But the King adhered to the established practice of parliamentarism and decided to appoint Christopher Hornsrud the first Labour Prime Minister. The Labour party later dropped the abolition of monarchy from their programme.

During the German occupation of World War II the King was an important symbol of national unity and resistance. His steadfast opposition to the German demands of surrender was important for the fighting spirit of the Norwegian population. The constitutional powers granted to the King in the Norwegian monarchial system made his position very important and enabled the government in exile to continue its work with the utmost legitimacy.

After the war the Norwegian royal house succeeded in maintaining a balance between regality and

approachability. King Olav V was deemed the people's king and the spontaneous show of mourning from the population upon his death in 1991 demonstrated the high standing he had among the Norwegian people. Even republicans were among the masses lighting candles in front of the Palace.[13]

In later years the marriages of the then Crown Prince Harald in 1968 and of Crown Prince Haakon in 2001 sparked considerable controversy, but the lasting effect on the popularity of the monarchy has been minimal. Although decreased from its level of above 90 percent after the war, support for the monarchy seems to remain stable around and mostly above the 70 percent mark.[14]

Constitutional rights and privileges

Although the 1814 constitution grants important executive powers to the king, these are almost always exercised by the Council of State in the name of the King (King's Council, or cabinet). Constitutional practice has replaced the meaning of the word King in most articles from the king personally to the elected government. The reserve powers vested in the Monarch by the constitution are significant and an important security part of the role of the Monarchy, and were last used during World War II.

Immunity

Article 5 states: *The King's person is sacred; he cannot be censured or accused. The responsibility rests with his Council.*[15]

This article applies to the king personally. The king has legal sovereign immunity.

Article 37 states: *The Royal Princes and Princesses shall not personally be answerable to anyone other than the King, or whomever he decrees to sit in judgment on them.*[15]

This means that the Princes and Princesses also have immunity on the discretion of the king. He could decide to let them be judged by the regular courts or he could decide to judge them himself. This has never been tested in practice.

Council of State

The Council of State consists of a Prime Minister and his council, all formally appointed by the King. The Council of State is the Government of Norway. Parliamentarism has been in place since 1884 and entails that the cabinet must not have the parliament against it, and that the appointment by the King is a formality. In practice, the monarch will ask the leader of a parliamentary block that has a majority in the Storting to form a government. The King relies on the advice of the previous prime minister and the President of the Storting in this question. The last time the King appointed a new prime minister contrary to the advice of the previous was in 1928 when he appointed the first Labour government.

Article 12 states: *The King himself chooses a Council from among Norwegian citizens who are entitled to vote.* [...] *The King apportions the business among the Members of the Council of State, as he deems appropriate.*

Article 30 states: [...] *Everyone who has a seat in the Council of State has the duty frankly to express his opinion, to which the King is bound to listen. But it rests with the King to make a decision according to his own judgment.* [...][15]

Veto of laws

The King has to sign all laws in order for them to become valid. He can veto any law. However, if three separate Stortings approves the law it becomes valid even without the King's consent. The King has not vetoed any law in modern times. The last law enacted without the King's consent was the law regarding a pure national flag in 1898.

Article 78 states: *If the King assents to the Bill, he appends his signature, whereby it becomes law.*[15]

If he does not assent to it, he returns it to the Odelsting with a statement that he does not for the time being find it expedient to sanction it. In that case the Bill must not again be submitted to the King by the Storting then assembled. [...][15]

Church of Norway

The Church of Norway, also known as the Evangelical Lutheran Church of Norway, is the state church of Norway, to which 86% of Norwegians are members. The Church of Norway professes the Lutheran branch of Christianity, and is a member of the Porvoo Communion.

The King is the supreme governor and protector of the Church of Norway. He formally decides who is to become bishops and oversees that the church conducts its business according to "the norms prescribed" for them. In practice this authority has been delegated to the Ministry of Church Affairs.[15]

Pardoning criminals

Article 20 states: *The King shall have the right in the Council of State to pardon criminals after sentence has been passed.*[15]

A pardon is the forgiveness of a crime and the penalty associated with it. It may be given if new information on the crime or criminal has come to light after sentencing has begun. A pardon may entail a complete or partial withdrawal of punishment. The practical execution of this right has been delegated to the Ministry of Justice which may dismiss an application for a pardon.[16] The formal approval of a pardon has to be done by the King in Council. In 2004 a total of 51 applications for pardon were approved and 274 were denied.[17]

Appointing senior officials

Article 21 states: *The King shall choose and appoint, after consultation with his Council of State, all senior civil, ecclesiastical and military officials.*[15] The appointment is formally made by the king, but is in practice up to the elected government.

Dismissing the government

Article 22 states: *The Prime Minister and the other Members of the Council of State, together with the State Secretaries, may be dismissed by the King without any prior court judgment, after he has heard the opinion of the Council of State on the subject.*[15]

Chivalric orders

Article 23 states: *The King may bestow orders upon whomever he pleases, as a reward for distinguished services*[...][15]

Norway has two chivalric orders: the Royal Norwegian Order of St. Olav and the Royal Norwegian Order of Merit. In addition the King awards several other distinguished medals for a wide range of accomplishments.

War

Article 25 states: *The King is Commander-in-Chief of the land and naval forces of the Realm.*[15] The King is also Commander-in-Chief of the Air Force. It is not mentioned because there was no Air Force in 1814.

Article 26 states: *The King has the right to call up troops, to engage in hostilities in defence of the Realm and to make peace, to conclude and denounce conventions, to send and to receive diplomatic envoys.*[15]

The King is revered in the armed forces as their highest commander, but there is no doubt as to the complete control of the armed forces by the elected government. The Kings of Norway have traditionally received an extensive military training and to some extent pursued a career within the armed forces before ascending to the throne. During World War II the King took a more active role in the decision-making and while the government still had the last word the King's advice was given much weight. On one occasion during the invasion the King was given an ultimatum from the Germans demanding Norway's surrender. King Haakon VII told the government he would abdicate if they decided to accept. In 1944 Crown Prince Olav was appointed Chief of Defence based on his military leadership abilities.

Coronation

From before recorded Norwegian history the monarch would be installed by acclamation, a ceremony held on the ting where the king swore to uphold the laws of the land and the assembled chieftains swore allegiance to him. The first coronation in Norway and in all Scandinavia took place in Bergen in 1163 or 1164. For a long time both ceremonies were used in Norway. That way the king was invested with powers both from the noblemen and from the church. The coronations also symbolised that the king would hold the kingdom in fief to St. Olav the eternal king of Norway. The last acclamation took place on Akershus Castle in 1648. The last medieval coronation in Norway took place 29 July 1514. Today the king still goes through a ceremony similar to the acclamation when he takes the oath of allegiance to the Constitution in the Storting. The Norwegian Constitution of 1814 determined that any Norwegian coronations from that time onward were to take place in Nidaros Cathedral in Trondheim. This re-established the relationship to the sacred king's burial church. The constitutional article about the coronation was annulled in 1908. When king Olav V ascended the throne in 1957 he still wanted to receive the blessing of the church for his reign and the Benediction of the king was introduced. The benediction is a much simpler ceremony, but it still takes place in Nidaros Cathedral and with the Royal Regalia at the high altar. King Harald V and Sonja also received the benediction in 1991.[18]

Succession

Main article: Line of succession to the Norwegian Throne

The order of succession to the Norwegian throne has followed absolute primogeniture since 1990, as is described in article 6 in the Constitution of Norway:

> *The order of succession is lineal, so that only a child born in lawful wedlock of the Queen or King, or of one who is herself or himself entitled to the succession may succeed, and so that the nearest line shall take precedence over the more remote and the elder in the line over the younger.*
>
> *An unborn child shall also be included among those entitled to the succession and shall immediately take*

> *her or his proper place in the line of succession as soon as she or he is born into the world.*
>
> *The right of succession shall not, however, belong to any person who is not born in the direct line of descent from the last reigning Queen or King or a sister or brother thereof, or is herself or himself a sister or brother thereof.*
>
> [...]
>
> *For those born before the year 1971, Article 6 of the Constitution as it was passed on 18 November 1905 shall, however, apply. For those born before the year 1990 it shall nevertheless be the case that a male shall take precedence over a female.*[15]

Article 6 of the original constitution had specified salic (male-only) succession; so Harald's sisters Ragnhild (b. 1930) and Astrid (b. 1932) and their descendants are excluded from the line of succession. Under the male-preference primogeniture applying to those born between 1971 and 1990, Princess Märtha Louise (b. 1971) places behind her younger brother Haakon and his descendants.

If a monarch were to be without any heirs they are allowed to nominate their successor, but the decision rests with the Storting.

The specific line of succession is as follows:

1. HRH Crown Prince Haakon Magnus, King Harald's son (b. 1973)
2. HRH Princess Ingrid Alexandra, Crown Prince Haakon's daughter (b. 2004)
3. HH Prince Sverre Magnus, The Crown Prince's son (b. 2005)
4. HH Princess Märtha Louise, King Harald's daughter (b. 1971)
5. Maud Angelica Behn, Princess Märtha Louise's daughter (b. 2003)
6. Leah Isadora Behn, Princess Märtha Louise's second daughter (b. 2005)
7. Emma Tallulah Behn, Princess Märtha Louise's third daughter (b. 2008)

As specified in the constitution the line of succession to the throne will never be very long as successors will lose their right when they no longer are a direct descendant of the last reigning monarch or of his or her siblings.

Finances

The King, Queen, Crown Prince and Crown Princess are exempt from paying any taxes and their personal finances are not revealed to the public. Other members of the royal family have lost that privilege upon marriage. It is believed that only the King has a personal fortune of a notable size.

The royal farms generate some revenue, but this is always re-invested in the farms themselves.

In the Norwegian state budget of 2010 the sum of 142.5 million Norwegian kroner was allocated to the Royal Household.[19] 16.5 million was also given to the monarchs as appanage.[20] 20.9 million was in addition allocated to rehabilitazion of royal property.[21] In 2010, the Royal Household of Norway claimed that King Haralds fortune was close to a 100 million Norwegian kroner. [22] 500 million Norwegian kroner was in the late 1990s allocated to the extensive refurbishments of the royal residences that have been taking place and are still under way. The restoration of the Royal Palace in Oslo went far beyond budget because the structural state of the palace was much worse than expected. However, the large expense was criticised in the media.[13]

Residences

The Royal Palace in Oslo is the main official residence of the monarch. It was built in the first half of the 19th century as the Norwegian residence of Norwegian and Swedish king Charles III (Carl Johan, Charles XIV of Sweden) and is used as the official residence of the present Norwegian Monarch.[23] Bygdøy Royal Estate is the official summer residence and is also situated in Oslo. Bygdøy has been under extensive restoration and has therefore not been used regularly since the accention of King Harald V.[24] Oscarshall castle is a "recreational castle" also situated in Oslo, but rarely used. There are also official residences in three other Norwegian cities:

The Royal Palace in Oslo from the front

- Gamlehaugen in Bergen
- Ledaal in Stavanger
- Stiftsgården in Trondheim

All of the official residences are partially open to the public.[25]

The King owns a royal yacht bearing the name HNoMY Norge which is manned and maintained by the Royal Norwegian Navy and used both for official and private travels in Norway and abroad.[26] The Norwegian State Railways maintains a set of royal train carriages.[27]

The crown princely couple resides at Skaugum Manor in Asker municipality outside of Oslo, while the three princesses of Norway live on estates in Oslo, Fredrikstad and Rio de Janeiro, Brazil.

Both Skaugum and Bygdøy are working farms producing grain, milk and meat where the profits are re-invested in the farms themselves.[28] In 2004 the King transferred management of the farming activities on Bygdøy to the Norwegian Museum of Cultural History.[29]

The royal family also possess several other holiday homes of a private nature.[30]

Royal coat of arms

The Coat of arms of Norway is one of the oldest in Europe and serves both as the coat of arms of the nation and of the Royal House. This is in keeping with its origin as the coat of arms of the kings of Norway during the Middle Ages.[31]

Painting of the Royal coat of arms of 1905 by Eilif Peterssen.

Håkon the Old (1217–1263) used a shield with a lion. The earliest preserved reference to the colour of the arms is the King's Saga written down in 1220.[31]

In 1280 King Eirik Magnusson added the crown and silver axe to the lion.[31] The axe is the martyr axe of St. Olav, the weapon used to kill him in the battle of Stiklestad in 1030.

The specific rendering of the Norwegian arms has changed through the years,

following changing heraldic fashions. In the late Middle Ages, the axe handle gradually grew longer and came to resemble a halberd. The handle was usually curved in order to fit the shape of shield preferred at the time, and also to match the shape of coins. The halberd was officially discarded and the shorter axe reintroduced by royal decree in 1844, when an authorized rendering was instituted for the first time. In 1905 the official design for royal and government arms was again changed, this time reverting to the medieval pattern, with a triangular shield and a more upright lion.[31]

The coat of arms of the royal house as well as the Royal Standard uses the lion design from 1905. The earliest preserved depiction of the Royal Standard is on the seal of Duchess Ingebjørg from 1318.[32] The rendering used as the official coat of arms of Norway is slightly different and was last approved by the king 20 May 1992.[33]

When used as the Royal coat of arms the shield features the insignias of the Royal Norwegian Order of St. Olav around it and is framed by a royal ermine robe, surmounted by the crown of Norway.

The Royal coat of arms is not used frequently. Instead, the king's monogram is extensively used, for instance in military insignia and on coins.

Harald V of Norway

From Wikipedia, the free encyclopedia

Harald V (born 21 February 1937) is the king of Norway. He succeeded to the throne of Norway upon the death of his father Olaf V on 17 January 1991. The son of the then-Crown Prince Olaf and of Princess Märtha of Sweden, Harald was born at the Crown Prince Residence at Skaugum, Akershus, Norway.

A member of the House of Schleswig-Holstein-Sonderburg-Glücksburg, originally from Northern Germany, Harald became the first Norwegian-born prince since Olaf IV, who was born in 1370. Harald V is the formal head of the Church of Norway and the Norwegian Armed Forces. He has two children, Crown Prince Haakon and Princess Märtha Louise. His grandchildren are Maud Angelica (2003), Leah Isadora (2005), Emma Tallulah (2008), Princess Ingrid Alexandra (2004), and Prince Sverre Magnus (2005).

Harald has two older sisters: Princess Ragnhild of Norway, Mrs. Lorentzen (Ragnhild Alexandra, born Oslo, 9 June 1930), who lives in Brazil, and Princess Astrid of Norway, Mrs. Ferner (Astrid Maud Ingeborg, born Oslo, 12 February 1932), who lives in Oslo.

Norwegian Royal Family

In 1940 the entire royal family had to flee their homes because of the German invasion. The dramatic journey northbound was marked by the Germans' repeated attempts to kill the King through bombing. It was deemed safer for the family to split up. The King and Crown Prince Olav would remain in Norway and the Crown Princess was to make her way to Sweden with the three children. The latter party reached Sweden on the night of 10 April, but although Crown Princess Märtha was Swedish-born, they encountered problems at the border station. According to Princess Astrid and others who were present, they were admitted only after the driver threatened to ram the border gate. Another account does not describe the escape so dramatically.[3] However when the King and Crown Prince inquired of Swedish foreign minister Christian Günther whether they could sleep one night in Sweden without being interned, they were denied.[3]

Prince Harald spent the following days in Sälen before relocating to Prince Carl Bernadotte's home in Frötuna on 16 April. On 26 April the group moved to Drottningholm in Stockholm. King Gustaf V has been accounted to have had an amicable relationship with his Norwegian guests, but the topic of the war in Norway was not to be raised. However, influential Swedish politicians including Minster of Justice Westman wanted the Crown Princess and Prince Harald to be sent back to Norway so he could be proclaimed King by the Germans.[3][4] After the King and Crown Prince had to leave Norway on 7 June they felt Sweden might not be the best place for the rest of the family. They started planning for them to be relocated to the USA. On 17 August the Crown Princess and her children left for the USA from Petsamo, Finland, aboard the ship *American Legion*.[3]

Harald and his mother and sisters lived in Washington, D.C., during the war,[5] while his father, Prince Olav, and his grandfather, King Haakon, stayed in London with the Norwegian government-in-exile. One of the notable events he remembers from that time is standing behind Franklin D. Roosevelt when he was sworn in for his fourth term on the South Portico of the White House in 1945. Such childhood experiences are reflected in a trace of an American accent when he speaks

English.[6] The Doris Kearns Goodwin book *No Ordinary Time: Franklin and Eleanor Roosevelt and the Home Front in World War II* contains a picture of the King (then Prince) playing with FDR's dog, Fala, on the North Lawn of the White House in 1944.

Prince Harald visited Norwegian servicemen on training in the United States. The prince also visited outside America, travelling north to visit Norwegians training in Canada's "Little Norway" in Ontario, Canada. He attended The White Hall Country School from 1943. Prince Harald returned to Norway along with his family at the war's end in 1945.

In the autumn of 1945 he was enrolled in third grade of Smestad skole as the first royal to attend a public school. In 1955 he graduated from Oslo katedralskole and in the autumn of that year, Harald began studies at the University of Oslo. Later he attended the Cavalry Officers' Candidate School at Trandum, followed by enrollment at the Norwegian Military Academy, from which he graduated in 1959.

In 1960, Harald entered Balliol College, Oxford where he studied history, economics and politics.[6] He was a keen rower during his student days at Oxford. In 1960 he also made his first official journey abroad, visiting the United States in connection with the fiftieth anniversary of the American Scandinavian Foundation.

Adult life

Crown Prince Harald attended Council of State for the first time on 27 September 1957 and took the oath to the Constitution of Norway on 21 February 1958. In the same year, he also served as regent in the King's absence for the first time.

Harald married a commoner, Sonja Haraldsen, at Oslo Domkirke in Oslo on 29 August 1968, a marriage that sparked much public controversy. The couple have two children, Princess Märtha Louise and His Royal Highness Crown Prince Haakon, heir-apparent to the Norwegian throne.

The King heads the government meetings at Oslo Palace every Friday (Council of State). He also has weekly meetings with the Prime Minister and the Foreign Minister. He receives foreign envoys, and opens parliament every September. According to the Norwegian constitution, he appoints his government. Since 1884 parliamentarism has been in place in Norway, so the government has to have support from Parliament. The King appoints the leader of the parliamentary block with majority as prime minister. When the parliamentary situation is unclear the king relies on the advice of the president of Parliament and the sitting prime minister. He travels extensively throughout Norway and makes official state visits to other countries.

An avid sailor,[7] Harald represented Norway in the yachting events of Olympic Games in Tokyo in 1964[8] and in Mexico City in 1968[6] and the Munich 1972. The Crown Prince carried the Norwegian flag at the opening parade of the 1964 Summer Olympics. In 1994, both the King and Crown Prince Haakon played roles during the opening ceremony of the Lillehammer Olympics. The King declared opened the games, while the Crown Prince lit the cauldron, paying tribute to both the King and his grandfather as Olympians. The King has also represented Norway at opening ceremonies of Olympic Games, among them Torino and Beijing. However, he wasn't present in Vancouver, the Crown Prince attended instead, with the King and Queen attending later in the games.

With his sailing crew he won World Championship bronze, silver and gold medals, in 1988, 1982 and 1987, respectively. In July 2005, the King and his crew aboard the royal sailboat *Fram XV* won the gold medal at the European Championships in Sweden. In the 2007 World Championship the King obtained a sixth place.[9]

Twice during recent years, King Harald has been unable to perform his monarchial duties, owing to hospitalization

and convalescence: in December 2003 to mid-April 2004 due to urinary bladder cancer, and in April to early June 2005 due to aortic stenosis (for details see "The King's health", below). Crown Prince Haakon served as the country's regent on both occasions.

Positions as King of Norway and honorary titles

As King of Norway

The King is the nominal head of the Church of Norway.

He is a Four-star General, an Admiral and formally the Supreme Commander of the Norwegian Armed Forces. The infantry battalion His Majesty the King's Guard are considered the King's and the Royal Family's bodyguards, they guard the Royal residences, including the Royal Palace and the Crown Prince Residence at Skaugum, as well as the Royal Mausoleum at Akershus Castle.

Royal Monogram

Honorary titles

In the British Army, the King was the final Colonel-in-Chief of the Green Howards. It remains to be seen whether there will continue to be an active association between the 2nd Battalion, Yorkshire Regiment (Green Howards) and the Norwegian Royal Family. He is also an honorary Colonel in the British Royal Marines.

Royal Standard

The King is The Grand Master of the Order of St. Olav and the Royal Norwegian Order of Merit. He is a Knight of the Garter, and he is also a Knight Grand Cross of the Royal Victorian Order, and a recipient of the Royal Victorian Chain as well as numerous other orders of chivalry.

The King is patron of the Anglo-Norse Society in London, together with Queen Elizabeth II, his second cousin. He is also patron of the Norwegian-American Foundation (*Norge-Amerika Foreningen*) and the Norse Federation (*Nordmanns-Forbundet*) in the United States.

He received the honorary degree Doctor of Civil Law from Oxford University in 2006 (as did his father, King Olav, in 1937, and his grandfather, King Haakon, in 1943).[10] The King has earlier been appointed an honorary doctor of law by the University of Strathclyde (1985) in Scotland and by Waseda University (2001) in Japan (2001). He is also an honorary fellow at Balliol College, Oxford.

King Harald V is Honorary President of the Offshore Racing Congress[11] and also the Co-President of Honour of the International Sailing Federation with the King Constantine II of Greece.[12]

Health

On 1 December 2003, King Harald was announced to be suffering from bladder cancer. A successful operation took place on 8 December at Norway's National Hospital, *Rikshospitalet*, in Oslo: his bladder was removed and a new one constructed. The King was then on sick leave from all official duties. Crown Prince Haakon was Norway's regent during King Harald's illness and convalescence. The King resumed his duties on 13 April 2004.

The King was once known to be a chain-smoker, but quit that habit entirely when he was diagnosed with cancer.

On 1 April 2005, Harald underwent successful heart surgery, an aortic valve replacement, correcting his aortic stenosis. It had been known for some time that he had this condition; however, until early 2005 it had only been of a moderate degree. During the three-hour operation at *Rikshospitalet* the doctors also performed a coronary bypass procedure on the King. On 10 April, it was announced that the King had also undergone a pericardiocentesis to treat a complication of surgery, a pericardial effusion (an accumulation of fluid around the heart).

After the two operations in the spring of 2005, King Harald remained on sick leave for almost two months, Crown Prince Haakon again substituting as the country's regent. The King returned to work on 7 June, a date which carried particular significance in 2005, with Norway celebrating the centennial of the dissolution of the 1814–1905 union with Sweden. The King recuperated well enough to win the European Championships in ocean sailing just

three months after his latest operation.

Following advice from his personal physician, King Harald finally decided in late 2005 to scale down his official duties, primarily effected by taking Wednesdays off and trying to keep weekends free as much as possible. However, he planned to continue attending weekend sports events of interest, and to lead Friday Cabinet meetings and carry out other constitutional duties.

Ancestors

Patrilineal descent

Patrilineal descent
Harald's patriline is the line from which he is descended father to son. Patrilineal descent is the principle behind membership in royal houses, as it can be traced back through the

generations – which means that if Harald V were to choose an historically accurate house name it would be Oldenburg, as all his male-line ancestors have been of that house.

House of Oldenburg

1. Egilmar I of Lerigau, dates unknown
2. Egilmar II of Lerigau, d. 1142
3. Christian I of Oldenburg, d. 1167
4. Moritz of Oldenburg, d. 1209
5. Christian II of Oldenburg, d. 1233
6. John I, Count of Oldenburg, d. 1275
7. Christian III, Count of Oldenburg, d. 1285
8. John II, Count of Oldenburg, d. 1314
9. Conrad I, Count of Oldenburg, 1300–1347
10. Christian V, Count of Oldenburg, 1340–1423
11. Dietrich, Count of Oldenburg, 1398–1440
12. Christian I of Denmark, 1426–1481
13. Frederick I of Denmark, 1471–1533
14. Christian III of Denmark, 1503–1559
15. John II, Duke of Schleswig-Holstein-Sonderburg, 1545–1622
16. Alexander, Duke of Schleswig-Holstein-Sonderburg, 1573–1627
17. August Philipp, Duke of Schleswig-Holstein-Sonderburg-Beck, 1612–1675
18. Frederick Louis, Duke of Schleswig-Holstein-Sonderburg-Beck, 1653–1728
19. Peter August, Duke of Schleswig-Holstein-Sonderburg-Beck, 1696–1775
20. Prince Karl Anton August of Schleswig-Holstein-Sonderburg-Beck, 1727–1759

House of Glücksburg

From Wikipedia, the free encyclopedia

The **House of Schleswig-Holstein-Sonderburg-Glücksburg** (Danish: *Slesvig-Holsten-Sønderborg-Lyksborg*, the latter name is also spelled *Glücksborg*), known as the **House of Glücksburg** (or *House of Glücksborg*) for short, is a German ducal house, junior branches of which include the royal houses of Denmark and Norway, the deposed royal house of Greece, and the heir to the thrones of the Commonwealth realms[1][2] (although in the latter case, they are, by royal proclamation, declared to be members of the House of Windsor[3]). The family is named after Glücksburg in northernmost Germany, and is a cadet branch of the House of Oldenburg that is descended from King Christian III of Denmark. However, as the elder line of the House of Oldenburg and the line of the House of Schleswig-Holstein-Sonderburg-Augustenburg became extinct in 1863 and 1931, respectively, the House of Glücksburg is now the senior surviving branch of the House of Oldenburg.

House of Schleswig-Holstein-Sonderburg-Glücksburg

Country	Germany, Denmark, Norway, Greece and Iceland
Ancestral house	House of Oldenburg
Titles	Duke of Schleswig-Holstein, King of Denmark, King of Norway, King of the Hellenes, and King of Iceland
Founder	Friedrich Wilhelm, Duke of Glücksburg
Current head	Christopher, Duke of Schleswig-Holstein
Founding	1825

This particular line comes from the Dukes of Schleswig-Holstein-Sonderburg-Beck. The last of them became Duke of Glücksburg and changed his title accordingly to Friedrich Wilhelm, Duke of Schleswig-Holstein-Sonderburg-Glücksburg. He was married to Princess Louise Caroline of Hesse-Kassel, a granddaughter of King Frederick V of Denmark.

The family's ancestral castle, Glücksburg Castle, in Glücksburg, Schleswig-Holstein

Neither the Dukes of Beck nor of Glücksburg were sovereign rulers - they held their lands in fief to the sovereign dukes of Schleswig and Holstein (who were also the Kings of Denmark in personal union) and, before 1773, the Dukes of Holstein-Gottorp.

Christian IX of Denmark, the fourth son of Friedrich Wilhelm, was chosen by the childless King Frederick VII of Denmark to be his heir, as Christian was married to Frederick's first cousin, Luise of Hesse-Kassel. Wilhelm, the second son of Crown Prince Christian and Crown Princess Luise, was elected King of the Hellenes on March 30, 1863 to succeed the deposed Wittelsbach Otto of Greece and took the name George I of Greece. His father became King of Denmark as Christian IX on November 15, 1863. Prince Carl, the second son of Frederick VIII of Denmark, Christian IX's eldest son, became King of Norway on November 18, 1905 as Haakon VII of Norway. Christian IX's daughters, Alexandra of Denmark and Dagmar of Denmark (who became Maria Feodorovna), married Edward VII of the United Kingdom and Alexander III of Russia, respectively. As a result, by 1914, descendants of King Christian IX were nearly as prevalent on European thrones as those of Queen Victoria; Christian IX became known as the Father-in-law of Europe.

Senior line, Dukes of Schleswig-Holstein-Sonderburg-Glücksburg (1825–*present*)

Ducal Family of Schleswig-Holstein

The Dukes of Schleswig-Holstein-Sonderburg-Glücksburg constitute the senior male line of the family, who hold the headship of both the House of Glücksburg and the entire House of Oldenburg.

- 1816–31 Friedrich Wilhelm, Duke of Schleswig-Holstein-Sonderburg-Glücksburg
- 1831–78 Karl, Duke of Schleswig-Holstein-Sonderburg-Glücksburg

- 1878–85 Friedrich, Duke of Schleswig-Holstein-Sonderburg-Glücksburg
- 1885–1934 Friedrich Ferdinand, Duke of Schleswig-Holstein-Sonderburg-Glücksburg, from 1931 Duke of Schleswig-Holstein
- 1934–65 Wilhelm Friedrich, Duke of Schleswig-Holstein
- 1965–80 Peter, Duke of Schleswig-Holstein
- 1980 – present Christoph, Duke of Schleswig-Holstein (b. 1949)
- Heir: Friedrich Ferdinand, Hereditary Prince of Schleswig-Holstein (b. 1985)
- Present line of succession

Junior branches

Junior branches of the House of Glücksburg are descended notably from Duke Friedrich Wilhelm's younger son, who became Christian IX of Denmark.

Monarchs of Denmark, 1863–*present*

The agnatic lineage is *continued* from Friedrich Wilhelm, Duke of Schleswig-Holstein-Sonderburg-Glücksburg.

- Christian IX of Denmark (1818–1906, reigned 1863–1906)
- Frederick VIII of Denmark (1843–1912, reigned 1906–12)
- Christian X of Denmark (1870–1947, reigned 1912–47), also king of Iceland 1918–1944
- Frederick IX of Denmark (1899–1972, reigned 1947–72)
- Margrethe II of Denmark (b. 1940, incumbent since 1972)

Kings of the Hellenes (Greece), 1863–1973

The Greek line is descended from Prince Vilhelm, a son of Prince Christian of Schleswig-Holstein-Sonderburg-Glücksburg (the later Christian IX of Denmark), who became King of the Hellenes as George I. The agnatic lineage is continued from Christian IX of Denmark.

- George I of Greece (1845–1913, reigned 1863–1913)
- Constantine I of Greece (1868–1923, reigned 1913–17, 1920–22)
- Alexander of Greece (1893–1920, reigned 1917–20)
- George II of Greece (1890–1947, reigned 1922–24, 1935–47)
- Paul of Greece (1901–1964, reigned 1947–64)
- Constantine II of Greece (b. 1940, reigned 1964–73)
- Present line of succession

Thirty-drachma coin of 1963,

Heirs to the Commonwealth realms and their ancestors

The heirs to the Commonwealth realms are descended from Prince Philip of Greece and Denmark, a paternal grandson of George I of Greece. However, by Letters Patent of 8 February 1960, Queen Elizabeth II declared that her

children with Prince Philip would belong to the House of Windsor, as would any agnatic descendants who enjoy the style of Royal Highness, and the title of Prince or Princess. (Those who do not have that style and title would bear the surname Mountbatten-Windsor.)[3]

commemorating the centennial of the reign of the House of Glücksburg in Greece. Clockwise from the top: Paul, George II, Alexander, Constantine I and George I.

The agnatic lineage is *continued* from Friedrich Wilhelm, Duke of Schleswig-Holstein-Sonderburg-Glücksburg.

- Christian IX of Denmark
- George I of Greece
- Prince Andrew of Greece and Denmark
- Prince Philip of Greece and Denmark[2]
- Charles, Prince of Wales[2]
- Prince William, Duke of Cambridge[2]

Kings of Norway, 1905–*present*

The Norwegian branch is descended from Prince Carl of Glücksburg, a younger son of Frederick VIII of Denmark. He took the name Haakon as king.

- Haakon VII of Norway (1872–1957, reigned 1905–57)
- Olav V of Norway (1903–1991, reigned 1957–91)
- Harald V of Norway (b. 1937, incumbent since 1991)
- Heir: Crown Prince Haakon of Norway (b. 1973)
- Present line of succession

Other notable members

Main article: List of members of the House of Schleswig-Holstein-Sonderburg-Glücksburg

- Princess Ingeborg of Denmark (1878–1958). Daughter of Frederick VIII of Denmark, wife of Prince Carl, Duke of Västergötland, mother of Princess Margaretha of Sweden, Märtha of Sweden and Astrid of Sweden and Prince Carl, Duke of Östergötland (who themselves are not members of this house, but of that of Bernadotte).
- Princess Elena of Greece and Denmark (1896–1982). Wife of Carol II of Romania and mother of Michael I of Romania.
- Princess Olga of Greece and Denmark (1903–1997). Wife of the Regent Prince Paul of Yugoslavia.
- Princess Irene of Greece and Denmark, Duchess of Aosta (1904–1974). Wife of Aimone of Savoy, Duke of Spoleto.
- Princess Marina, Duchess of Kent (1906–1968). Wife of Prince George, Duke of Kent.
- Princess Cecilie of Greece and Denmark (1911–1937). Wife of Georg Donatus, Hereditary Grand Duke of Hesse and sister of Philip, later the Duke of Edinburgh. She died with her husband and two sons in the crash of Sabena Airlines Junkers JU52 (OO-AUB) at Ostend.
- Alexandra of Greece and Denmark (1921–1993). Wife of Peter II of Yugoslavia.
- Prince Philip, Duke of Edinburgh (b. 1921), grandson to George I of Greece, son to Prince Andrew of Greece, consort to Elizabeth II of the United Kingdom.
- Queen Sofia of Spain (b. 1938). Wife of King Juan Carlos I of Spain, sister of King Constantine II of Greece.
- Prince Michael of Greece and Denmark (b. 1939). Son of Prince Christopher of Greece and Denmark and Princess Françoise of Orléans (1902–1953); grandson of King George I of the Hellenes.

Spain

From Wikipedia, the free encyclopedia

Spain (/ˈspeɪn/ ***SPAYN***; Spanish: *España*, pronounced: [esˈpaɲa] (listen)), officially the **Kingdom of Spain** (Spanish: *Reino de España*),[note 7][5] is a sovereign state and a member of the European Union located in southwestern Europe on the Iberian Peninsula. Its mainland is bordered to the south and east by the Mediterranean Sea except for a small land boundary with the British Overseas Territory of Gibraltar; to the north by France, Andorra, and the Bay of Biscay; and to the northwest and west by the Atlantic Ocean and Portugal.

Spanish territory also includes the Balearic Islands in the Mediterranean, the Canary Islands in the Atlantic Ocean off the African coast, and two autonomous cities in North Africa, Ceuta and Melilla, that border Morocco. Furthermore, the town of Llívia is a Spanish exclave situated inside French territory. With an area of 504,030 square kilometres (194,610 sq mi), it is the second largest country in Western Europe and the European Union after France, and the fourth largest country in Europe after Russia, Ukraine and France.

Because of its location, the territory of Spain was subject to many external influences since prehistoric times and through to its dawn as a country. Spain emerged as a unified country in the 15th century, following the marriage of the Catholic Monarchs and the completion of the reconquest, or *Reconquista*, of the Iberian peninsula in 1492. Conversely, it has been an important source of influence to other regions, chiefly during the modern era, when it became a global empire that has left a legacy of over 500 million Spanish speakers today, making it the world's second most spoken first language.

Spain is a democracy organised in the form of a parliamentary government under a constitutional monarchy. It is a developed country with the twelfth largest economy in the world by nominal GDP, and very high living standards, including the tenth-highest quality of life index rating in the world, as of 2005. It is a member of the United Nations, European Union, NATO, OECD, and WTO.

Etymology

The true origins of the name *España* and its cognates "Spain" and "Spanish" are disputed. The ancient Roman name for Iberia, *Hispania*, may derive from poetic use of the term *Hesperia* to refer to Spain, reflecting the Greek perception of Italy as a "western land" or "land of

the setting sun" (*Hesperia*, *Εσπερία* in Greek) and Spain, being still further west, as *Hesperia ultima*.[6]

It may also be a derivation of the Punic *Ispanihad*, meaning "land of rabbits" or "edge", a reference to Spain's location at the end of the Mediterranean; Roman coins struck in the region from the reign of Hadrian show a female figure with a coney at her feet.[7] There are also claims that *España* derives from the Basque word *Ezpanna* meaning "edge" or "border", another reference to the fact that the Iberian peninsula constitutes the southwest of the European continent.[6]

Date formats	dd.mm.yyyy (Spanish; CE)

ISO 3166 code	ES
Internet TLD	.es[note 6]
Calling code	34

The humanist Antonio de Nebrija proposed that the word *Hispania* evolved from the Iberian word Hispalis, meaning "city of the western world". Jesús Luis Cunchillos argues that the root of the term *span* is the Phoenecian word *spy*, meaning "to forge metals". Therefore *i-spn-ya* would mean "the land where metals are forged".[8]

History

Main article: History of Spain

The Iberian peninsula enters written records as a land populated largely by the Iberians, Basques and Celts. After an arduous conquest, the peninsula came under the rule of Rome. During the early Middle Ages it came under Germanic rule but later, it was conquered by Moorish invaders from North Africa. In a process that took centuries, the small Christian kingdoms in the north gradually regained control of the peninsula. The last Moorish kingdom fell in the same year Columbus reached the Americas. A global empire began which saw Spain become the strongest kingdom in Europe and the leading world power for a century and a half and the largest overseas empire for three centuries.

Continued wars and other problems eventually led to a diminished status. The Napoleonic invasions of Spain led to chaos, triggering independence movements that tore apart most of the empire and left the country politically unstable. Prior to the Second World War, Spain suffered a devastating civil war and came under the rule of an authoritarian government, whose rule oversaw a period of stagnation but that finished with a powerful economic surge. Eventually democracy was peacefully restored in the form of a parliamentary constitutional monarchy. In 1986, Spain joined the European Union, experiencing a cultural renaissance and steady economic growth.

Prehistory and pre-Roman peoples

Main article: Prehistoric Iberia

Archaeological research at Atapuerca indicates the Iberian Peninsula was populated by hominids 1.2 million years ago.[9] Modern humans first arrived in Iberia, from the north on foot, about 32,000 years ago.[10] The best known artifacts of these prehistoric human settlements are the famous paintings in the Altamira cave of Cantabria in northern Iberia, which were created about 15,000 BCE by cro-magnons.[11]

Altamira Cave paintings,[11] in Cantabria

Archaeological and genetic evidence strongly suggests that the Iberian Peninsula acted as one of several major refugia from which northern Europe was repopulated following the end of the last ice age.

The two main historical peoples of the peninsula were the Iberians and the Celts. The Iberians inhabited the Mediterranean side from the northeast to the southeast. The Celts inhabited the Atlantic side, in the north, center (Celtiberian), northwest and southwest part of the peninsula. Basques occupied the western area of the Pyrenees mountain range and adjacent areas.

In the south of the peninsula appeared the semi-mythical city of Tartessos (c.1100 BC), whose flourishing trade in items made of gold and silver with the Phoenicians and Greeks is documented by Strabo and the Book of Solomon. Between about 500 BC and 300 BC, the seafaring Phoenicians and Greeks founded trading colonies along the Mediterranean coast. The Carthaginians briefly exerted control over much of the Mediterranean side of the peninsula, until defeated in the Punic Wars by the Romans.[12]

Roman Empire and the Gothic Kingdom

Main article: Hispania

Roman Theatre of Mérida, Badajoz

During the Second Punic War, an expanding Roman Empire captured Carthaginian trading colonies along the Mediterranean coast from roughly 210 BC to 205 BC. It took the Romans nearly two centuries to complete the conquest of the Iberian peninsula, though they had control of much of it for over six centuries. Roman rule was bound together by law, language, and the Roman road.[13]

The cultures of the Celt and Iberian populations were gradually romanized (Latinized) at differing rates in different parts of Hispania. Local leaders were admitted into the Roman aristocratic class.[note 8][12] Hispania served as a granary for the Roman market, and its harbors exported gold, wool, olive oil, and wine. Agricultural production increased with the introduction of irrigation projects, some of which remain in use. Emperors Trajan, Theodosius I, and the philosopher Seneca were born in Hispania.[note 9] Christianity was introduced into Hispania in the 1st century CE and it became popular in the cities in the 2nd century CE.[12] Most of Spain's present languages and religion, and the basis of its laws, originate from this period.[13]

The weakening of the Western Roman Empire's jurisdiction in Hispania began in 409, when the Germanic Suevi and Vandals, together with the Sarmatian Alans crossed the Rhine and ravaged Gaul until the Visigoths drove them into Iberia that same year. The Suevi established a kingdom in what is today modern Galicia and northern Portugal. As the western empire disintegrated, the social and economic base became greatly simplified: but even in modified form, the successor regimes maintained many of the institutions and laws of the late empire, including Christianity.

Cathedral of the Holy Saviour, Asturias

The Alans' allies, the Hasdingi Vandals, established a kingdom in Gallaecia, too, occupying largely the same region but extending farther south to the Duero river. The Silingi Vandals occupied the region that still bears a form of their name –*Vandalusia*, modern Andalusia, in Spain. The Byzantines established an enclave, Spania, in the south, with the intention of reviving the Roman empire throughout Iberia. Eventually, however, Hispania was reunited under Visigothic rule.

Muslim Iberia

Main article: Al-Andalus

In the 8th century, nearly all of the Iberian Peninsula was conquered (711–718) by largely Moorish Muslim armies from North Africa. These conquests were part of the expansion of the Umayyad Islamic Empire. Only a small area in the mountainous north-west of the peninsula managed to resist the initial invasion.

Under Islamic law, Christians and Jews were given the subordinate status of dhimmi. This status permitted Christians and Jews to practice their religions as *people of the book* but they were required to pay a special tax and to be subject to certain discriminations.[14][15]

Conversion to Islam proceeded at a steadily increasing pace. The *muladies* (Muslims of ethnic Iberian origin) are believed to have comprised the majority of the population of Al-Andalus by the end of the 10th century.[16][17]

The Muslim community in the Iberian peninsula was itself diverse and beset by social tensions. The Berber people of North Africa, who had provided the bulk of the invading armies,

La Giralda, the bell tower of Seville Cathedral

clashed with the Arab leadership from the Middle East.[note 10] Over time, large Moorish populations became established, especially in the Guadalquivir River valley, the coastal plain of Valencia, the Ebro River valley and (towards the end of this period) in the mountainous region of Granada.[17]

The Alhambra, Granada.

Córdoba, the capital of the caliphate, was the largest, richest and most sophisticated city in western Europe. Mediterranean trade and cultural exchange flourished. Muslims imported a rich intellectual tradition from the Middle East and North Africa. Muslim and Jewish scholars played an important part in reviving and expanding classical Greek learning in Western Europe. The Romanized cultures of the Iberian peninsula interacted with Muslim and Jewish cultures in complex ways, thus giving the region a distinctive culture.[17] Outside the cities, where the vast majority lived, the land ownership system from Roman times remained largely intact as Muslim leaders rarely dispossessed landowners, and the introduction of new crops and techniques led to a remarkable expansion of agriculture.[*citation needed*]

In the 11th century, the Muslim holdings fractured into rival Taifa kingdoms, allowing the small Christian states the opportunity to greatly enlarge their territories.[17] The arrival from North Africa of the Islamic ruling sects of the Almoravids and the Almohads restored unity upon the Muslim holdings, with a stricter, less tolerant application of Islam, and saw a revival in Muslim fortunes. This re-united Islamic state, experienced more than a century of successes that partially reversed Christian gains.

Fall of Muslim rule and unification

Main article: Reconquista

The *Reconquista* ("Reconquest") is the centuries-long period of expansion of Iberia's Christian kingdoms. The Reconquista is viewed as beginning with the Battle of Covadonga in 722, and was concurrent with the period of Muslim rule on the Iberian peninsula. The Christian army's victory over Muslim forces led to the creation of the Christian Kingdom of Asturias along the northwestern coastal mountains. Shortly after, in 739, Muslim forces were driven from Galicia, which was to eventually host one of medieval Europe's holiest sites, Santiago de Compostela and was incorporated into the new Christian kingdom. Muslim armies had also moved north of the Pyrenees, but they were defeated by Frankish forces at the Battle of Poitiers, Frankia. Later, Frankish forces established Christian counties on the southern side of the Pyrenees. These areas were to grow into the kingdoms of Navarre, Aragon and Catalonia.[18] For several centuries, the fluctuating frontier between the Muslim and Christian controlled areas of Iberia was along the Ebro and Duero valleys.

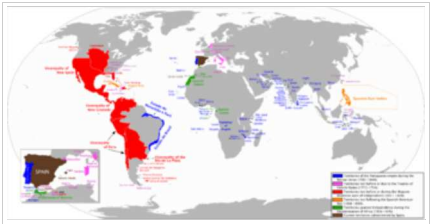
Loarre Castle, Huesca

Ávila city walls

The breakup of Al-Andalus into the competing taifa kingdoms helped the long embattled Iberian Christian kingdoms gain the initiative. The capture of the strategically central city of Toledo in 1085 marked a significant shift in the balance of power in favour of the Christian kingdoms. Following a great Muslim resurgence in the 12th century, the great Moorish strongholds in the south fell to Christian Spain in the 13th century—Córdoba in 1236 and Seville in 1248—leaving only the Muslim enclave of Granada as a tributary state in the south.[19]

In the 13th and 14th centuries, the Marinids Muslim sect based in North Africa invaded and established some enclaves on the southern coast but failed in their attempt to re-establish Muslim rule in Iberia and were soon driven out. The 13th century also witnessed the Crown of Aragon, centred in Spain's north east, expand its reach across islands in the Mediterranean, to Sicily and even Athens.[20] Around this time the universities of Palencia (1212/1263) and Salamanca (1218/1254) were established. The Black Death of 1348 and 1349 devastated Spain.[21]

In 1469, the crowns of the Christian kingdoms of Castile and Aragon were united by the marriage of Isabella I of Castile and Ferdinand II of Aragon. 1478 commenced the completion of the conquest of the Canary Islands and in 1492, the combined forces of Castile and Aragon captured the Emirate of Granada, ending the last remnant of a 781-year presence of Islamic rule in Iberia. The Treaty of Granada guaranteed religious tolerance toward Muslims.[22] The year 1492 also marked the arrival in the New World of Christopher Columbus, during a voyage funded by Isabella. That same year, Spain's Jews were ordered to convert to Catholicism or face expulsion from Spanish territories during the Spanish Inquisition.[23] A few years later, following social disturbances, Muslims were also expelled under the same conditions.[note 11][24]



Burgos Cathedral

As Renaissance New Monarchs, Isabella and Ferdinand centralized royal power at the expense of local nobility, and the word *España*, whose root is the ancient name *Hispania*, began to be commonly used to designate the whole of the two kingdoms.[24] With their wide-ranging political, legal, religious and military reforms, Spain emerged as the first world power.

Imperial Spain

Main article: Spanish Empire

The unification of the crowns of Aragon and Castile laid the basis for modern Spain and the Spanish Empire.[25] Spain was Europe's leading power throughout the 16th century and most of the 17th century, a position reinforced by trade and wealth from colonial possessions. It reached its apogee during the reigns of the first two Spanish Habsburgs – Charles I (1516–1556) and Philip II (1556–1598). This period saw the Italian Wars, the revolt of the comuneros, the Dutch revolt, the Morisco revolt, clashes with the Ottomans, the Anglo-Spanish war and wars with France.[26]

The Spanish Empire's historical influence

The Spanish Empire expanded to include great parts of the Americas, islands in the Asia-Pacific area, areas of Italy, cities in Northern Africa, as well as parts of what are now France, Germany, Belgium, Luxembourg, and the Netherlands. It was the first empire of which it was said that the sun never set.

This was an age of discovery, with daring explorations by sea and by land, the opening-up of new trade routes across oceans, conquests and the beginnings of European colonialism. Along with the arrival of precious metals, spices, luxuries, and new agricultural plants, Spanish explorers brought back knowledge from the New World, and played a leading part in transforming the European understanding of the globe.[27] The cultural efflorescence witnessed is now referred to as the Spanish Golden Age. The rise of humanism, the Protestant Reformation and new geographical discoveries raised issues addressed by the influential intellectual movement now known as the School of Salamanca.

In the late 16th century and first half of the 17th century, Spain was confronted by unrelenting challenges from all sides. Barbary pirates under the aegis of the rapidly growing Ottoman empire, disrupted life in many coastal areas through their slave raids and renewed the threat of an Islamic invasion.[28] This at a time when Spain was often at war with France.

The Protestant Reformation schism from the Catholic Church dragged the kingdom ever more deeply into the mire of religiously charged wars. The result was a country forced into ever expanding military efforts across Europe and in the Mediterranean.[29]

By the middle decades of a war- and plague-ridden 17th century Europe the Spanish Habsburgs had enmeshed the country in the continent-wide religious-political conflicts. These conflicts drained it of resources and undermined the European economy generally. Spain managed to hold on to most of the scattered Habsburg empire, and help the imperial forces of the Holy Roman Empire reverse a large part of the advances made by Protestant forces, but it was finally forced to recognise the separation of Portugal (with whom it had been united in a personal union of the crowns from 1580 to 1640) and the Netherlands, and eventually suffered some serious military reverses to France in the latter stages of the immensely destructive, Europe-wide

A 17th century galleon

Thirty Years War.[30]

In the latter half of the 17th century, Spain went into a gradual relative decline, during which it surrendered a number of small territories to France. However it maintained and enlarged its vast overseas empire, which remained intact until the beginning of the 19th century.

El Escorial, central Spain.

The decline culminated in a controversy over succession to the throne which consumed the first years of the 18th century. The War of Spanish Succession was a wide ranging international conflict combined with a civil war, and was to cost the kingdom its European possessions and its position as one of the leading powers on the Continent.[31]

During this war, a new dynasty originating in France, the Bourbons, was installed. Long united only by the Crown, a true Spanish state was established when the first Bourbon king, Philip V, united the crowns of Castile and Aragon into a single state, abolishing many of the old regional privileges and laws.[32]

The 18th century saw a gradual recovery and an increase in prosperity through much of the empire. The new Bourbon monarchy drew on the French system of modernising the administration and the economy. Enlightenment ideas began to gain ground among some of the kingdom's elite and monarchy. Military assistance for the rebellious British colonies in the American War of Independence improved the kingdom's international standing.[33]

Napoleonic rule and its consequences

Second of May 1808: the people revolt against the Bonapartist regime

In 1793, Spain went to war against the new French Republic, which had overthrown and executed its Bourbon king, Louis XVI. The war polarised the country in an apparent reaction against the gallicised elites. Defeated in the field, peace was made with France in 1795 and it effectively became a client state of that country; In 1807, the secret treaty of Fontainebleau between Napoleon and the deeply unpopular Godoy led to a declaration of war against Britain and Portugal. French troops entered the kingdom unopposed, supposedly to invade Portugal, but instead they occupied Spanish fortresses. This invasion by trickery led to the abdication of the ridiculed Spanish king in favour of Napoleon's brother, Joseph Bonaparte.

This foreign puppet monarch was widely regarded with scorn. The 2 May 1808 revolt was one of many nationalist uprisings against the Bonapartist regime across the country.[34] These revolts marked the beginning of what is known to the Spanish as the War of Independence, and to the British as the Peninsular War.[35] Napoleon was forced to intervene personally, defeating several badly coordinated Spanish armies and forcing a British army to retreat. However, further military action by Spanish guerrillas and armies, and Wellington's British-Portuguese forces, combined with Napoleon's disastrous invasion of Russia, led to the ousting of the French imperial armies from the Spain in 1814, and the return of King Ferdinand VII.[36]

The French invasions devastated the economy, and left Spain a deeply divided country prone to political instability. The power struggles of the early 19th century led to the loss of all of its colonies in the Americas (which stretched from Las Californias to Patagonia), with the sole exception of Cuba and Puerto Rico.

Spanish–American War

Main article: Spanish–American War

Amid the instability and economic crisis that afflicted Spain in the 19th century there arose nationalist movements in the Philippines and Cuba. Wars of independence ensued in those colonies and eventually the United States became involved. Despite the commitment and ability shown by some military units, they were so mismanaged by the highest levels of command that the Spanish–American War, fought in the Spring of 1898, did not last long. "El Desastre" (The Disaster), as the war became known, helped give impetus to the Generation of 98 who were already conducting much critical analysis concerning the country. It also weakened the stability that had been established during Alfonso XII's reign.

Spanish Civil War

Main article: Spanish Civil War

The 20th century brought little peace; Spain played a minor part in the scramble for Africa, with the colonisation of Western Sahara, Spanish Morocco and Equatorial Guinea. The heavy losses suffered during the Rif war in Morocco helped to undermine the monarchy. A period of authoritarian rule under General Miguel Primo de Rivera (1923–1931) ended with the establishment of the Second Spanish Republic. The Republic offered political autonomy to the Basque Country, Catalonia and Galicia and gave voting rights to women.

Francisco Franco and US President Eisenhower, Madrid, 1959

The Spanish Civil War (1936–39) ensued. Three years later the Nationalist forces, led by General Francisco Franco, emerged victorious with the support of Nazi Germany and Fascist Italy. Popular Front government side was supported by the Soviet Union and Mexico and International Brigades, including the American Abraham Lincoln Brigade, but it was not supported officially by the Western powers due to the British-led policy of Non-Intervention.

The Civil War claimed the lives of over 500,000 people[37] and caused the flight of up to a half-million citizens.[38] Most of their descendants now live in Latin American countries, with some 300,000 in Argentina alone.[39] The Spanish Civil War has been called the first battle of the Second World War.

Spain under Franco

Main article: Spain under Franco

The Spanish State established by Franco was nominally neutral in the Second World War, although sympathetic to the Axis. The only legal party under Franco's post civil war regime was the *Falange Española Tradicionalista y de las JONS*, formed in 1937; the party emphasised anti-Communism, Catholicism and nationalism. Given Franco's opposition to competing political parties, the party was renamed the National Movement (*Movimiento Nacional*) in 1949.

After World War II Spain was politically and economically isolated, and was kept out of the United Nations. This changed in 1955, during the Cold War period, when it became strategically important for the U.S. to establish a military presence on the Iberian peninsula as a counter to any possible move by the U.S.S.R into the Mediterranean basin. In the 1960s, Spain registered an unprecedented rate of economic growth in what became known as the Spanish miracle, which resumed the much interrupted transition towards a modern economy.

Post Franco

Further information: Spanish society after the democratic transition

With Franco's death in November 1975, Juan Carlos succeeded to the position of King of Spain and head of state in accordance with the law. With the approval of the new Spanish Constitution of 1978 and the arrival of democracy, the State devolved much authority to the regions and created an internal organization based on autonomous communities.

In the Basque Country, moderate Basque nationalism has coexisted with a radical nationalist movement led by the armed organisation ETA. The group was formed in 1959 during Franco's

Spanish Constitution of 1978

rule but has continued to wage its violent campaign even after the restoration of democracy and the return of a large measure of regional autonomy.

On 23 February 1981, rebel elements among the security forces seized the Cortes in an attempt to impose a military backed government. King Juan Carlos took personal command of the military and successfully ordered the coup plotters, via national television, to surrender.

On 30 May 1982 Spain joined NATO, following a referendum. That year the Spanish Socialist Workers Party (PSOE) came to power, the first left-wing government in 43 years. In 1986 Spain joined the European Community; what became the European Union. The PSOE was replaced in government by the Partido Popular (PP) after the latter won the 1996 General Elections; at that point the PSOE had served almost 14 consecutive years in office.

On 1 January 2002, Spain ceased to use the peseta as currency replacing it with the euro, which it shares with 15 other countries in the Eurozone. Spain has also seen strong economic growth, well above the EU average, but well publicised concerns issued by many economic commentators at the height of the boom that the extraordinary property prices and high foreign trade deficits of the boom were likely to lead to a painful economic collapse were confirmed by a severe property led recession that struck the country in 2008/9.[40]

Spanish euros, 2002

A series of bombs exploded in commuter trains in Madrid, Spain on 11 March 2004. After a five month trial in 2007 it was concluded the bombings were perpetrated by a local Islamist militant group inspired by al-Qaeda.[41] The bombings killed 191 people and wounded more than 1800, and the intention of the perpetrators may have been to influence the outcome of the Spanish general election, held three days later.[42]

Though initial suspicions focused on the Basque group ETA, evidence soon emerged indicating possible Islamist involvement. Because of the proximity of the election, the issue of responsibility quickly became a political controversy, with the main competing parties PP and PSOE exchanging accusations over the handling of the aftermath.[43] At 14 March elections, PSOE, led by José Luis Rodríguez Zapatero, obtained a plurality, enough to form a new cabinet with Rodríguez Zapatero as the new *Presidente del Gobierno* or Prime Minister of Spain, thus succeeding the former PP administration.[44]

Geography

Main article: Geography of Spain

Bossòst, Lérida, a Pyrenean town

At 504,782 km^2 (194,897 sq mi), Spain is the world's 51st-largest country. It is some 47,000 km^2 (18,000 sq mi) smaller than France and 81,000 km^2 (31,000 sq mi) larger than the U.S. state of California. Mt. Teide (Tenerife, Canary Islands) has the highest mountain peak of Spain and the third largest volcano in the world from its base.

Spain lies between latitudes 26° and 44° N, and longitudes 19° W and 5° E.

On the west, Spain borders Portugal; on the south, it borders Gibraltar (a British overseas territory) and Morocco, through its exclaves in North Africa (Ceuta, Melilla, and Peñón de Vélez de la Gomera). On the northeast, along the Pyrenees mountain range, it borders France and the tiny principality of Andorra. Along the Pyrenees in Gerona, a small exclave town called Llívia is surrounded by France.

El Sardinero beach, Santander, Cantabria

Islands

Spain also includes the Balearic Islands in the Mediterranean Sea, the Canary Islands in the Atlantic Ocean and a number of uninhabited islands on the Mediterranean side of the Strait of Gibraltar, known as *Plazas de soberanía*, such as the Chafarine islands, the isle of Alborán, Alhucemas, and the tiny Isla Perejil. The little Pheasant Island in the River Bidasoa is a Spanish-French condominium.

Islander population:[45]

- 1. Tenerife 899,833
- 2. Mallorca 862,397
- 3. Gran Canaria 838,397
- 4. Lanzarote 141,938
- 5. Ibiza 125,053
- 6. Fuerteventura 103,107
- 7. Menorca 92,434
- 8. La Palma 85,933
- 9. La Gomera 22,259
- 10. El Hierro 10,558
- 11. Formentera 7,957
- 12. Arosa 4,889
- 13. La Graciosa 658
- 14. Tabarca 105
- 15. Ons 61

Mt. Teide, Tenerife, Canary Islands is the tallest mountain in Spain

Palma de Mallorca, Balearic Islands

Mountains and rivers

Mainland Spain is a mountainous country, dominated by high plateaus and mountain chains. After the Pyrenees, the main mountain ranges are the Cordillera Cantábrica, Sistema Ibérico, Sistema Central, Montes de Toledo, Sierra Morena and the Sistema Penibético whose highest peak, the 3,478 m high Mulhacén, located in Sierra Nevada, is the highest elevation in the Iberian peninsula, while the highest point in Spain is the Teide, a 3,718 m high active volcano in the Canary Islands. The Meseta Central is a vast plateau in the heart of peninsular Spain.

There are several major rivers in Spain such as the Tagus, the Ebro, the Duero, the Guadiana and the Guadalquivir. Alluvial plains are found along the coast, the largest of which is that of the Guadalquivir in Andalusia.

Climate

Main article: Climate of Spain

Three main climatic zones can be separated, according to geographical situation and orographic conditions:[46][47][48]

- The Mediterranean climate, characterized by dry and warm summers. According to the Köppen climate classification, it is dominant in the peninsula, with two varieties: *Csa* and *Csb*.
- The semiarid climate (*Bsh*, *Bsk*), located in the southeastern quarter of the country, especially in the region of Murcia and in the Ebro valley. In contrast with the Mediterranean

climate, the dry season extends beyond the summer.
- The oceanic climate (*Cfb*), located in north quarter of the country, especially in the region of Basque Country, Asturias, Cantabria and partly Galicia. In contrary to the Mediterranean climate, winter and summer temperatures are influenced by the ocean, and have no seasonal drought.

Köppen climate classification of Spain

Apart from these main types, other sub-types can be found, like the alpine climate in the Pyrenees and Sierra Nevada, and a typical subtropical climate in the Canary Islands.

Politics

Main articles: Politics of Spain and Spanish Constitution of 1978

HM the King Juan Carlos I

The **Spanish Constitution of 1978** is the culmination of the Spanish transition to democracy. The constitutional history of Spain dates back to the constitution of 1812. Impatient with the pace of democratic political reforms in 1976 and 1977, Spain's new King Juan Carlos, known for his formidable personality, dismissed Carlos Arias Navarro and appointed the reformer Adolfo Suárez as Prime Minister.[49][50] The resulting general election in 1977 convened the *Constituent Cortes* (the Spanish Parliament, in its capacity as a constitutional assembly) for the purpose of drafting and approving the constitution of 1978.[51] After a national referendum on 6 December 1978, 88% of voters approved of the new constitution.

As a result, Spain is now composed of 17 autonomous communities and two autonomous cities with varying degrees of autonomy thanks to its Constitution, which nevertheless explicitly states the indivisible unity of the Spanish nation as well as that Spain has today no official religion but all are free to practice and believe as they wish.

As of November 2009, the government of Spain keeps a balanced gender equality ratio. Nine out of the 18 members of the government are women. Under the administration of José Luis Rodríguez Zapatero, Spain has been described as being "at the vanguard" in gender equality issues and also that "[n]o other modern, democratic, administration outside Scandinavia has taken more steps to place gender issues at the centre of government".[52] The Spanish administration has also promoted gender-based positive discrimination by approving gender equality legislation in 2007 aimed at providing equality between genders in Spanish political and economic life (Gender Equality Act).[53][54] However, in the legislative branch, as of July 2010 only 128 of the 350 members of the Congress are women (36.3%).[55] It places Spain 13th on a list of countries ranked by proportion of women in the lower house. In the Senate, the ratio is even lower, since there are only 79 women out of 263 (30.0%).[56] The Gender Empowerment Measure of Spain in the United Nations Human Development Report is 0.794, 12th in the world.[57]

Branches of government

Spain is a constitutional monarchy, with a hereditary monarch and a bicameral parliament, the *Cortes Generales*. The executive branch consists of a Council of Ministers of Spain presided over by the Prime Minister, nominated and appointed by the monarch and confirmed by the Congress of Deputies following legislative elections. By political custom established by King Juan Carlos since the ratification of the 1978 Constitution, the king's nominees have all been from parties who maintain a plurality of seats in the Congress.

Mariano Rajoy, Prime minister.

The legislative branch is made up of the Congress of Deputies (*Congreso de los Diputados*) with 350 members, elected by popular vote on block lists by proportional representation to serve four-year terms, and a Senate (*Senado*) with 259 seats of which 208 are directly elected by popular vote and the other 51 appointed by the regional legislatures to also serve four-year terms.

- **Head of State**
  - King Juan Carlos I, since 22 November 1975
- **Head of Government**
  - Prime Minister of Spain (Spanish *Presidente del Gobierno* literally *President of the Government*): Mariano Rajoy Brey, elected 20 November 2011.
    - Deputy Prime Minister and Minister for the Presidency: Soraya Sáenz de Santamaría.
- **Cabinet**
  - Council of Ministers (Spanish *Consejo de Ministros*) designated by the Prime Minister.

The Spanish nation is organizationally composed in the form of called *Estado de las Autonomías* ("State of Autonomies"); it is one of the most decentralized countries in Europe, along with Switzerland, Germany and Belgium;[58] for example, all Autonomous Communities have their own elected parliaments, governments, public administrations, budgets, and resources; therefore, health and education systems among others are managed regionally, besides, the Basque Country and Navarre also manage their own public finances based on foral provisions. In Catalonia and the Basque Country, a full fledged autonomous police corps replaces some of the State police functions (see Mossos d'Esquadra, Ertzaintza, Policía Foral and Policía Canaria).

See also: List of Spanish monarchs and Monarchs of Spain family tree

Administrative divisions

Main article: Political divisions of Spain

The Spanish State is integrated by 17 autonomous communities and 2 autonomous cities, both groups being the highest or first-order administrative division in the country. Autonomous communities are integrated by provinces, of which there are 50 in total, and in turn, provinces are integrated by municipalities. In Catalonia, two additional divisions exist, the *comarques* (sing. *comarca*) and the *vegueries* (sing. *vegueria*) both of which have administrative powers; *comarques* being aggregations of municipalities, and the *vegueries* being aggregations of *comarques*. The concept of a *comarca* exists in all autonomous communities, however, unlike Catalonia, these are merely historical or geographical subdivisions.

Autonomous communities and autonomous cities

Main article: Autonomous communities of Spain

See also: Nationalities and regions of Spain

Autonomous communities are the first level administrative division in the country. These were created after the 1979 and current constitution came into effect in recognition of the right to self-government to the "nationalities and regions of Spain".[59] Autonomous communities were to be integrated by adjacent provinces with common historial, cultural, and economical traits. This territorial organization, based on devolution, is known in Spain as the "State of Autonomies".

The basic institutional law of each autonomous community is the Statute of Autonomy. The Statutes of Autonomy establish the name of the community according to its historical identity, the limits of their territories, the name and organization of the institutions of government and the rights they enjoy according the constitution.[60]

The government of all autonomous communities must be based on a division of powers comprising:

- a Legislative Assembly whose members must be elected by universal suffrage according to the system of proportional representation and in which all areas that integrate the territory are fairly represented;
- a Government Council, with executive and administrative functions headed by a president, elected by the Legislative Assembly and nominated by the King of Spain;
- a Supreme Court of Justice, under the Supreme Court of the State, which head the judicial organization within the autonomous community.

Catalonia, Galicia and the Basque Country, which identified themselves as "nationalities" were granted self-government through a rapid process. Andalusia also took that denomination in its first Statute of Autonomy, even though it followed the longer process stipulated in the constitution for the rest of the country. Progressively, other communities in revisions to their Statutes of Autonomy have also taken that denomination in accordance to their historical regional identity, such as the Valencian Community,[61] the Canary Islands,[62] the Balearic Islands,[63] and Aragon.[64]

The autonomous communities have wide legislative and executive autonomy, with their own parliaments and regional governments. The distribution of powers may be different for every community, as laid out in their Statutes of Autonomy, since devolution was intended to be asymmetrical. Only two communities—the Basque Country and Navarre—have full fiscal autonomy. Aside of fiscal autonomy, the "historical" nationalities—Andalusia, the Basque Country, Catalonia, and Galicia—were devolved more powers than the rest of the communities, amongst them the ability of the regional president to dissolve the parliament and call for elections at any time. In addition, the Basque Country, Catalonia and Navarre have police corps of their own: Ertzaintza, Mossos d'Esquadra and the Policía Foral respectively. Other communities have more limited forces or none at all (like the *Policía Autónoma Andaluza*[65] in Andalusia or the BESCAM in Madrid.

Nonetheless, recent amendments to existing Statutes of Autonomy or the promulgation of new Statutes altogether, have reduced the asymmetry between the powers originally granted to the "historical nationalities" and the rest of the regions.

Finally, along with the 17 autonomous communities, two autonomous cities are also part of the State of Autonomies and are first-order territorial divisions: Ceuta and Melilla. These are two exclaves located in the northern African coast.

Provinces and municipalities

Main article: Provinces of Spain

Provinces of Spain

Autonomous communities are subdivided into provinces (*provincias*), which served as their territorial building blocks. In turn, provinces are integrated by municipalities (*municipios*). The existence of both the provinces and the municipalities is guaranteed and protected by the constitution, not necessarily by the Statutes of Autonomy themselves. Municipalities are granted autonomy to manage their internal affairs, and provinces are the territorial divisions designed to carry out the activities of the State.[66]

The current provincial division structure is based—with minor changes—on the one created in 1833 by Javier de Burgos, and in all, the Spanish territory is divided into 50 provinces. The communities of Asturias, Cantabria, La Rioja, the Balearic Islands, Madrid, Murcia and Navarre are the only communities that are integrated by a single province, which is coextensive with the community itself. In this cases, the administrative institutions of the province are replaced by the governmental institutions of the community.

Foreign relations

Main article: Foreign relations of Spain

European Union membership, 1986

After the return of democracy following the death of Franco in 1975, Spain's foreign policy priorities were to break out of the diplomatic isolation of the Franco years and expand diplomatic relations, enter the European Community, and define security relations with the West.

As a member of NATO since 1982, Spain has established itself as a major participant in multilateral international security activities. Spain's EU membership represents an important part of its foreign policy. Even on many international issues beyond western Europe, Spain prefers to coordinate its efforts with its EU partners through the European political cooperation mechanisms.

With the normalization of diplomatic relations with North Korea in 2001, Spain completed the process of universalizing its diplomatic relations.

Spain has maintained its special identification with Latin America. Its policy emphasizes the concept of an Iberoamerican community, essentially the renewal of the historically liberal concept of *hispanoamericanismo*, or Hispanism as it is often referred to in English, which has sought to link the Iberian peninsula with Latin America through language, commerce, history and culture. Spain has been an effective example of transition from dictatorship to democracy for formerly non-democratic Latin American states, as shown in the many trips that Spain's King and Prime Ministers have made to the region.[*citation needed*]

Territorial disputes

Spain claims Gibraltar, a six square km Overseas Territory of the United Kingdom in the southernmost part of the Iberian Peninsula. Then a Spanish town, it was conquered by an Anglo-Dutch force in 1704 during the War of the Spanish Succession on behalf of Archduke Charles, pretender to the Spanish throne.

Port of Melilla

The legal situation concerning Gibraltar was settled in 1713 by the Treaty of Utrecht, in which Spain ceded the territory in perpetuity to the British Crown[67] stating that, should the British abandon this post, it would be offered to Spain first. Since the 1940s Spain has called for the return of Gibraltar. The overwhelming majority of Gibraltarians strongly oppose this, along with any proposal of shared sovereignty.[68] UN resolutions call on the United Kingdom and Spain, both EU members, to reach an agreement over the status of Gibraltar.[69][70]

However, the Spanish claim makes a distinction between the isthmus that connects the Rock to the Spanish mainland on the one hand, and the Rock and city of Gibraltar on the other. While the Rock and city were ceded by the Treaty of Utrecht, Spain asserts that the "occupation of the isthmus is illegal and against the principles of International Law".[71] The United Kingdom relies on *de facto* arguments of possession by prescription in relation to the isthmus,[72] as there has been "continuous possession [of the isthmus] over a long period".[73]

Another claim by Spain is about the Savage Islands, not recognized by Portugal.

Spain claims the sovereignty over the Perejil Island, a small, uninhabited rocky islet located in the South shore of the Strait of Gibraltar. The island lies 250 meters just off the coast of Morocco, 8 km from Ceuta and 13.5 km from mainland Spain. Its sovereignty is disputed between Spain and Morocco. It was the subject of an armed incident between the two countries in 2002. The incident ended when both countries agreed to return to the status quo ante which existed prior to the Moroccan occupation of the island. The islet is now deserted and without any sign of sovereignty.

Besides the Perejil Island, the Spanish-held territories claimed by other countries are two: Morocco claims the Spanish cities of Ceuta and Melilla and the *plazas de soberanía* islets off the northern coast of Africa; and Portugal does not recognise Spain's sovereignty over the territory of Olivenza.

Military

Main article: Spanish Armed Forces

The armed forces of Spain are known as the Spanish Armed Forces (Spanish: *Fuerzas Armadas Españolas*). Their Commander-in-chief is the King of Spain, Juan Carlos I.[74]

The Spanish Armed Forces are divided into three branches:[75]

- Army (*Ejército de Tierra*)
- Navy (*Armada*)
- Air Force (*Ejército del Aire*)

Emblem of Spanish Armed Forces

Economy

Main article: Economy of Spain

Spain's capitalist mixed economy is the twelfth largest worldwide and the fifth largest in the European Union, as well as the Eurozone's fourth largest.

The centre-right government of former prime minister José María Aznar worked successfully to gain admission to the group of countries launching the euro in 1999. Unemployment stood at 7.6% in October 2006, a rate that compared favorably to many other European countries, and especially with the early 1990s when it stood at over 20%. Perennial weak points of Spain's economy include high inflation,[76] a large underground economy,[77] and an education system which OECD reports place among the poorest for developed countries, together with the United States and UK.[78]

Madrid: Cuatro Torres Business Area

However, the property bubble that begun building from 1997, fed by historically low interest rates and an immense surge in immigration, imploded in 2008, leading to a rapidly weakening economy and soaring unemployment. By the end of May 2009, unemployment reached 18.7% (37% for youths).[79][80]

Before the current crisis, the Spanish economy was credited for having avoided the virtual zero growth rate of some of its largest partners in the EU.[81] In fact, the country's economy created more than half of all the new jobs in the European Union over the five years ending 2005, a process that is rapidly being reversed.[82] The Spanish economy has been until recently regarded as one of the most dynamic within the EU, attracting significant amounts of foreign investment.[83]

Barcelona: finance centre

The most recent economic growth benefited greatly from the global real estate boom, with construction representing an astonishing 16% of GDP and 12% of employment in its final year.[84]

According to calculations by the German newspaper *Die Welt* in 2007, Spain was on course to overtake Germany in per capita income by 2011.[85] But the collapse of the housing boom in 2008 brought this to an end. According to the IMF, the PPP GDP per capita of Spain had, by 2010, slipped to USD 29,830; this compared to Germany at 36,081, UK 35,059, France 33,910, Italy 29,480, Greece 28,496, and Portugal 23,262.[86]

The Eurozone

Research about quality of life by the Economist Intelligence Unit's quality of life survey placed Spain as the country among the top 10 best quality of life in the world for 2005, ahead of other economically and technologically advanced countries like France, Germany, the United Kingdom and South Korea.[87]

Valencia: finance centre

Before the collapse of the real estate boom there had been a corresponding rise in the levels of personal debt as prospective home owners struggled to meet asking prices. The average level of household debt tripled in less than a decade. This placed great pressure upon lower to middle income groups; by 2005 the median ratio of indebtedness to income had grown to 125%, due primarily to expensive boom time mortgages.[88]

The 2008/2009 credit crunch and world recession manifested itself in Spain through a massive downturn in the property sector. Fortunately, Spain's banks and financial services avoided the more severe problems of their counterparts in the USA and UK, due mainly to a stringently enforced conservative financial regulatory regime. The Spanish financial authorities had not forgotten the country's own banking crisis of 1979 and an earlier real-estate-precipitated banking crisis of 1993. Indeed, Spain's largest bank, Banco Santander, participated in the UK government's bail-out of part of the UK banking sector.[89]

A European Commission forecast predicted Spain would enter a recession by the end of 2008.[90] According to Spain's Finance Minister, "Spain faces its deepest recession in half a century".[91] Spain's government forecast the unemployment rate would rise to 16% in 2009. The ESADE business school predicted 20%.[92]

Tourism

Main article: Tourism in Spain

During the last four decades the Spanish tourism industry has grown to become the second biggest in the world, worth approximately 40 billion Euros, about 5% of GDP, in 2006.[84][93] Today, the climate of Spain, historical and cultural monuments and its geographic position together with its facilities make tourism one of Spain's main national industries and a large source of stable employment and development. The Spanish hotel star rating system has requirements much more demanding than other European countries, so at a given rating Spanish accommodations worth higher.[94]

Energy

Main article: Renewable energy in Spain

PS10 Seville solar power tower

Spain is one of the world's leading countries in the development and production of renewable energy. In 2010 Spain became the solar power world leader when it overtook the United States with a massive power station plant called La Florida, near Alvarado, Badajoz.[95][96] Spain is also Europe's main producer of wind energy. In 2010 its wind turbines generated 42,976 GWh, which accounted for 16.4% of all the energy produced in Spain.[97][98][99] On November 9, 2010, wind energy reached an instantaneous historic peak covering 53% of mainland electricity demand[100] and generating an amount of energy that is equivalent to that of 14 nuclear reactors.[101] Other renewable energies used in Spain are hydroelectric, biomass and marine (2 power plants under construction).[102]

Non-renewable energy sources used in Spain are nuclear (8 operative reactors), gas, coal, and oil.

Transport

Main article: Transport in Spain

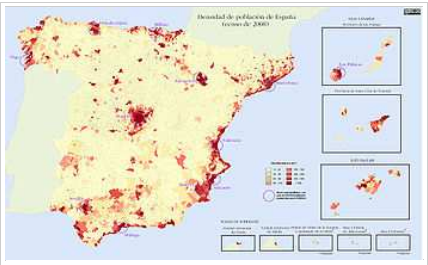
The Spanish road system is mainly centralized, with 6 highways connecting Madrid to the Basque Country, Catalonia, Valencia, West Andalusia, Extremadura and Galicia. Additionally, there are highways along the Atlantic (Ferrol to Vigo), Cantabrian (Oviedo to San Sebastián) and Mediterranean (Girona to Cádiz) coasts.

Spain has the most extensive high-speed rail network in Europe, and the second most extensive in the world after China.[103][104][105] As of October 2010 Spain has a total of 3,500 km (2,174.80 mi) of high speed tracks linking Málaga, Seville, Madrid, Barcelona, Valencia and Valladolid, with the trains reaching speeds up to 300 km/h (187 mph). On average, the Spanish

AVE Barcelona-Madrid

high-speed train is the fastest one in the world followed by the Japanese bullet train and the French TGV.[106] Regarding punctuality, it is the second one in the world (98.54% on-time arrival) after the Japanese Shinkansen (99%). [107] Should the aims of the ambitious AVE program (Spanish high speed trains) be met, by 2020 Spain will have 7000 km (4300 mi) of high-speed trains linking almost all provincial cities to Madrid in less than 3 hours and Barcelona within 4 hours.

There are 47 public airports in Spain. The busiest one is the airport of Madrid (Barajas), with 50 million passengers in 2011, being the world's 15th busiest airport, as well as the European Union's fourth busiest. The airport of Barcelona (El Prat) is also important, with 35 million passengers in 2011, being the world's 31th busiest airport. Other main airports are located in Majorca (23 million passengers), Málaga (13 million passengers), Las Palmas (Gran Canaria) (11 million passengers), Alicante (10 million passengers) and smaller, with the number of passengers between 4 and 10 million, for example Tenerife (two airports), Valencia, Seville, Bilbao, Ibiza, Lanzarote, Fuerteventura. Also, more than 30 airports with the number of passengers below 4 million.



Spain aims to put 1 million electric cars on the road by 2014 as part of the government's plan to save energy and boost energy efficiency.[108] The Minister of Industry Miguel Sebastian said that "the electric vehicle is the future and the engine of an industrial revolution."[109]

Demographics

Main article: Demographics of Spain

See also: List of Spanish autonomous communities by population

In 2008 the population of Spain officially reached 46 million people, as recorded by the *Padrón municipal*.[110] Spain's population density, at 91/km² (235/sq mi), is lower than that of most Western European countries and its distribution across the country is very unequal. With the exception of the region surrounding the capital, Madrid, the most populated areas lie around the coast. The population of Spain more than doubled since 1900, when it stood at 18.6 million, principally due to the spectacular demographic boom in the 1960s and early 1970s.[111]

Geographical distribution of the Spanish population in 2008

Native Spaniards make up 88% of the total population of Spain. After the birth rate plunged in the 1980s and Spain's population growth rate dropped, the population again trended upward, based initially on the return of many Spaniards who had emigrated to other European countries during the 1970s, and more recently, fuelled by large numbers of immigrants who make up 12% of the population. The immigrants originate mainly in Latin America (39%), North Africa (16%), Eastern Europe (15%), and Sub-Saharan Africa (4%).[112] In 2005, Spain instituted a three-month amnesty program through which certain hitherto undocumented aliens were granted legal residency.

In 2008, Spain granted citizenship to 84,170 persons, mostly to people from Ecuador, Colombia and Morocco.[113] A sizeable portion of foreign residents in Spain also comes from other Western and Central European countries. These are mostly British, French, German, Dutch, and Norwegian. They reside primarily on the Mediterranean coast and the Balearic islands, where many choose to live their retirement or telecommute.

Substantial populations descended from Spanish colonists and immigrants exist in other parts of the world, most notably in Latin America. Beginning in the late 15th century, large numbers of Iberian colonists settled in what became Latin America and at present most white Latin Americans (who make up about one-third of Latin America's population) are of Spanish or Portuguese origin. In the 16th century perhaps 240,000 Spaniards emigrated, mostly to Peru and Mexico.[114] They were joined by 450,000 in the next century.[115] Between 1846 and 1932 it is estimated that nearly 5 million Spaniards emigrated to the Americas, especially to Argentina and Brazil.[116] Approximately two million Spaniards migrated to other Western European countries between 1960 to 1975. During the same period perhaps 300,000 went to Latin America.[117]

Peoples

Main articles: Spanish people and Nationalisms and regionalisms of Spain

The city of Girona

The Spanish Constitution of 1978, in its second article, recognises historic entities ("nationalities", a carefully chosen word in order to avoid the more politically charged "nations") and regions, within the context of the Spanish nation. For some people, Spain's identity consists more of an overlap of different regional identities than of a sole Spanish identity. Indeed, some of the regional identities may even conflict with the Spanish one. Distinct traditional regional identities within Spain include the Basques, Catalans, Galicians and Castilians, among others.[119]

It is this last feature of "shared identity" between the more local level or Autonomous Community and the Spanish level which makes the identity question in Spain complex and far from univocal.

Minority groups

The city of Toledo

Spain has a number of descendants of populations from former colonies (especially Equatorial Guinea) and immigrants from several Sub-Saharan and Caribbean countries have been recently settling in Spain. There are also sizeable numbers of Asian immigrants, most of whom are of Chinese, Indian, Filipino, Middle Eastern and South Asian origins; the population of Latin Americans is sizable as well and a fast growing segment. Other growing groups are Britons, 760,000 in 2006, Germans and other immigrants from the rest of Europe.[120]

The arrival of the *Gitanos*, a Romani people, began in the 16th century; estimates of the Spanish Gitano population fluctuate around 700,000.[121] The *Mercheros* (also Quinquis) are a minority group, formerly nomadic, that share a lot of the way of life of Gitanos. Their origin is unclear.

Immigration

Main article: Immigration to Spain

According to the Spanish government there were 5.7 million foreign residents in Spain in 2011, or 12.2% of the total population. According to residence permit data for 2011, more than 860,000 were Romanian, about 770,000 were Moroccan, approximately 390,000 were British, and 360.000 were Ecuadorian.[122] Other sizeable foreign communities are Colombian, Bolivian, German, Italian, Bulgarian, and Chinese. There are more than 200,000 migrants from Sub-Saharan Africa living in Spain, principally Senegaleses and Nigerians.[123] Since 2000, Spain has experienced high population growth as a result of immigration flows, despite a birth rate that is only half the replacement level. This sudden and ongoing inflow of immigrants, particularly those arriving clandestinely by sea, has caused noticeable social tension.[124]

Marbella, Málaga, where Britons —who are the third immigrant community in Spain— reside in large numbers.

Within the EU, Spain had the second highest immigration rate in percentage terms after Cyprus, but by a great margin, the highest in absolute numbers, up to 2008.[125] The number of immigrants in Spain had grown up from 500,000 people in 1996 to 5.2 million in 2008 out of a total population of 46 million.[126][127] In 2005 alone, a regularisation programme increased the legal immigrant population by 700,000 people.[128] There are a number of reasons for the high level of immigration, including Spain's cultural ties with Latin America, its geographical position, the porosity of its borders, the large size of its underground economy and the strength of the agricultural and construction sectors, which demand more low cost labour than can be offered by the national workforce.

Another statistically significant factor is the large number of residents of EU origin typically retiring to Spain's Mediterranean coast. In fact, Spain was Europe's largest absorber of migrants from 2002 to 2007, with its immigrant population more than doubling as 2.5 million people arrived.[129] According to the Financial Times, Spain is the most favoured destination for West Europeans considering a move from their own country and seeking jobs elsewhere in the EU.[130]

In 2008, the government instituted a *Plan of Voluntary Return* which encouraged unemployed immigrants from outside the EU to return to their home countries and receive several incentives, including the right to keep their unemployment benefits and transfer whatever they contributed to the Spanish Social Security.[131] The program had little effect; during its first two months, just 1,400 immigrants took up the offer.[132] What the program failed to do, the sharp and prolonged economic crisis has done from 2010 to 2011 in that tens of thousands of immigrants have left the country due to lack of jobs. In 2011 alone, more than half a million people have left Spain.[133] For the first time in decades the net migration rate is expected to be negative, and 9 out 10 emigrants are foreigners.[133]

Languages

Main article: Languages of Spain

The languages of Spain (simplified)

Spanish official and spoken all over the country
Catalan/Valencian, co-official
Basque, co-official
Galician, co-official
Aranese, co-official (dialect of Occitan)
Asturian, recognised
Aragonese, recognised
Leonese, unofficial
Extremaduran, unofficial
Fala, unofficial

Spain is openly multilingual,[134] and the constitution establishes that the nation will protect "all Spaniards and the peoples of Spain in the exercise of human rights, their cultures and traditions, languages and institutions."[135]

Spanish (*español*) — officially recognized in the constitution as Castilian (*castellano*) — is the official language of the entire country, and it is the right and duty of every Spaniard to know the language. The constitution also establishes that "all other Spanish languages" — that is, all other languages of Spain — will also be official in their respective autonomous communities in accordance to their Statutes, their organic regional legislations, and that the "richness of the distinct linguistic modalities of Spain represents a patrimony which will be the object of special respect and protection."[136]

The other official languages of Spain, co-official with Spanish are:

- Basque (*euskera*) in the Basque Country and Navarre;
- Catalan (*català*) in Catalonia, the Balearic Islands and in the Valencian Community, where its distinct modality of the language is officially known as Valencian (*valencià*); and
- Galician (*galego*) in Galicia

As a percentage of the general population, Basque is spoken by 2%, Catalan (or Valencian) by 17%, and Galician by 7% of all Spaniards. [137]

In Catalonia, Aranese, a local variety of the Occitan language has been declared co-official along with Catalan and Spanish since 2006. It is spoken only in the *comarca* of *Val d'Aran* by roughly 6,700 people. Other Romance minority languages, though not official, have special recognition, such as the Astur-Leonese group (Asturian, also called "*Bable*"in Asturias[138] and Leonese in Castile and León) and Aragonese in Aragon.

In the North African Spanish autonomous city of Melilla, Riff Berber is spoken by a significant part of the population. In the tourist areas of the Mediterranean coast and the islands, English and German are widely spoken by tourists, foreign residents, and tourism workers.

Education

Main article: Education in Spain

State education in Spain is free and compulsory from the age of 6 to 16. The current education system was established by an educational law of 2006, Ley Orgánica de Educación, or

Fundamental Law of Education.[139]

Religion

Main article: Religion in Spain

Further information: History of the Jews in Spain, Bahá'í Faith in Spain, and Hinduism in Spain

Roman Catholicism has long been the main religion of Spain, and although it no longer has official status by law, in all public schools in Spain students have to choose either religion or ethics and Catholic is the only religion officially taught. According to a July 2009 study by the Spanish Center of Sociological Research about 73% of Spaniards self-identify as Catholics, 2.1% other faith, and about 22% identify with no religion among which 7.3% are atheists. Most Spaniards do not participate regularly in religious services. This same study shows that of the Spaniards who identify themselves as religious, 58% hardly ever or never go to church, 17% go to church some times a year, 9% some time per month and 15% every Sunday or multiple times per week.[140]

Religions in Spain

Catholicism	76%
Non-religious	13%
Atheism	7.3%
No answer	1.6%
Others	2.1%

Numbers from the following source:[140]

Santiago de Compostela Cathedral, A Coruña; terminus of the Way of St. James

But according to a December 2006 study, 48% of the population declared a belief in a supreme being, while 41% described themselves as atheist or agnostic.[141] Altogether, about 22% of the entire Spanish population attends religious services at least once per month.[142] Though Spanish society has become considerably more secular in recent decades, the influx of Latin American immigrants, who tend to be strong Catholic practitioners, has helped the Catholic Church to recover.

Protestant churches have about 1,200,000 members.[143] There are about 105,000 Jehovah's Witnesses. The Church of Jesus Christ of Latter-day Saints has approximately 46,000 adherents in 133 congregations in all regions of the country and has a temple in the Moratalaz District of Madrid.[144]

The recent waves of immigration have also led to an increasing number of Muslims, who number approximately one million in Spain. Presently, Islam is the second largest religion in Spain, accounting for approximately 2.3% of the total population.[145] After their expulsion in 1492, Muslims did not live in Spain for centuries. Late 19th-century colonial expansion in northwestern Africa gave a number of residents in Spanish Morocco and Western Sahara full citizenship. Their ranks have since been bolstered by recent immigration, especially from Morocco and Algeria.[146]

Judaism was practically non-existent in Spain from the 1492 expulsion until the 19th century, when Jews were again permitted to enter the country. Currently there are around 62,000 Jews in Spain, or 0.14% of the total population. Most are arrivals in the past century, while some are descendants of earlier Spanish Jews. Approximately 80,000 Jews are thought to have lived in Spain on the eve of the Spanish Inquisition.[147]

Culture

Main articles: Culture of Spain and UNESCO World Heritage Sites in Spain

Ciudad de las Artes y las Ciencias, Valencia

Culturally, Spain is a Western country. Because of the great strength of its Roman heritage in almost every aspect of Spanish life, Spain is often described as a Latin country. Nevertheless, there have been many influences on many aspects of Spanish life, from art and architecture to cuisine and music, from many countries across Europe and from around the Mediterranean, through its long history.

The number of UNESCO World Heritage Sites in Spain, 40, is exceeded only by the number in Italy.[148]

Literature

Main article: Spanish literature

.The term Spanish literature refers to literature written in the Spanish language, including literature composed in Spanish by writers not necessarily from Spain. For literature from Spain in languages other than the Spanish, see Catalan literature, Basque literature and Galician literature. Equally, for Spanish-American literature specifically, see Latin American literature. Due to historic, geographic and generational diversity, Spanish literature has known a great number of influences and it is very diverse. Some major literary movements can be identified within it.

Miguel de Cervantes' novel *Don Quixote* [149]

Miguel de Cervantes is probably Spain's most famous author and his Don Quixote is considered the most emblematic work in the canon of Spanish literature and a founding classic of Western literature.[149]

Language institutions

Main articles: Royal Spanish Academy, Institute for Catalan Studies, Royal Galician Academy, and Royal Academy of the Basque language

The Royal Spanish Academy (*Real Academia Española* or *RAE*, in Spanish) is the institution responsible for regulating the Spanish language. It is based in Madrid, but is affiliated with national language academies in 21 Spanish-speaking nations through the Association of Spanish Language Academies. Its emblem is a fiery crucible, and its motto is *Limpia, fija y da esplendor* ("It cleans, sets, and gives splendor").[150]

With the same policy, the Royal Galician Academy (*Real Academia Galega* or *RAG*, in Galician) was created in 1906 in A Coruña with the help of Havana emigrated Galicians. Its work is based in a Lexicography (the main results are the official and standard *Dicionario da Real Academia* and the *Vocabulario ortográfico da lingua galega*), Terminology (through Termigal since 1997), Sociolinguistics, Onomastics and Grammar approaches from the Linguistics point of view, and another two sections for History and Literature.[151] The Academy works closely with the government as an advice institution, and its resolutions are almost binding about language standard. It had though recently demonstrated criticism about the developement of the Galician language policy by the Government.[152]

Book of Games, c. 1285

The Institute of Catalan Studies (*Institut d'Estudis Catalans* or *IEC*, in Catalan) is an academic institution which seeks to undertake research and study into "all elements of Catalan culture". The IEC is known principally for its work in standardizing the Catalan language. The IEC is based in Barcelona, the capital of Catalonia. Officially the IEC provides standards for Catalonia proper, Northern Catalonia (located in France), the Balearic Islands, and the Principality of Andorra (the only country where Catalan is the sole official language). The Valencian Community has its own language academy, the Acadèmia Valenciana de la Llengua. In an area known as the Franja de Ponent, the eastern edge of Aragon adjacent to Catalonia where Catalan is spoken, the rules are used de facto although Catalan is not an official language.

Art

Main article: Spanish art

Artists from Spain have been highly influential in the development of various European artistic movements. Due to historical, geographical and generational diversity, Spanish art has known a great number of influences. The Moorish heritage in Spain, especially in Andalusia, is still evident today in cities like Córdoba, Seville, and Granada. European influences include Italy, Germany and France, especially during the Baroque and Neoclassical periods.

Cinema

Main article: Cinema of Spain

Guggenheim Museum, Bilbao, Biscay

Spanish cinema has achieved major international success including Oscars for recent films such as *Pan's Labyrinth* and *Volver*.[153] In the long history of Spanish cinema, the great filmmaker Luis Buñuel was the first to achieve world recognition, followed by Pedro Almodóvar in the 1980s. Spanish cinema has also seen international success over the years with films by directors like Segundo de Chomón, Florián Rey, Luis García Berlanga, Carlos Saura, Julio Medem and Alejandro Amenábar.

Architecture

Main article: Spanish architecture

The Plaza de Cibeles, Madrid

Spanish architecture refers to architecture carried out during any era in what is now modern-day Spain, and by Spanish architects worldwide. The term includes buildings within the current geographical limits of Spain before this name was given to those territories, whether they were called Hispania, Al-Andalus, or were formed of several Christian kingdoms.

The Sagrada Família, Barcelona

Due to its historical and geographical diversity, Spanish architecture has drawn from a host of influences. An important provincial city founded by the Romans and with an extensive Roman era infrastructure, Córdoba became the cultural capital, including fine Arabic style architecture, during the time of the Islamic Umayyad dynasty.[154] Later Arab style architecture continued to be developed under successive Islamic dynasties, ending with the Nasrid, which built its famed palace complex in Granada.

Simultaneously, the Christian kingdoms gradually emerged and developed their own styles; developing a pre-Romanesque style when for a while isolated from contemporary mainstream European architectural influences during the earlier Middle Ages, they later integrated the Romanesque and Gothic streams. There was then an extraordinary flowering of the gothic style that resulted in numerous instances being built throughout the entire territory. The Mudéjar style, from the 12th to 17th centuries, was developed by introducing Arab style motifs, patterns and elements into European architecture.

The arrival of Modernism in the academic arena produced much of the architecture of the 20th century. An influential style centered in Barcelona, known as modernisme, produced a number of important architects, of which Gaudí is one. The International style was led by groups like GATEPAC. Spain is currently experiencing a revolution in contemporary architecture and Spanish architects like Rafael Moneo, Santiago Calatrava, Ricardo Bofill as well as many others have gained worldwide renown.

Auditorio de Tenerife, Santa Cruz de Tenerife

Music and dance

Main article: Music of Spain

The guitar, an iconic spanish instrument, is now popular worldwide.

Spanish music is often considered abroad to be synonymous with flamenco, a West Andalusian musical genre, which, contrary to popular belief, is not widespread outside that region. Various regional styles of folk music abound in Aragon, Catalonia, Valencia, Castile, the Basque Country, Galicia and Asturias. Pop, rock, hip hop and heavy metal are also popular. In the field of classical music, Spain has produced a number of noted composers such as Isaac Albéniz, Manuel de Falla and Enrique Granados and singers and performers such as Plácido Domingo, José Carreras, Montserrat Caballé, Alicia de Larrocha, Alfredo Kraus, Pablo Casals, Ricardo Viñes, José Iturbi, Pablo de Sarasate, Jordi Savall and Teresa Berganza. In Spain there are over forty professional orchestras, including the Orquestra Simfònica de Barcelona, Orquesta Nacional de España and the Orquesta Sinfónica de Madrid. Major opera houses include the Teatro Real,the Gran Teatre del Liceu, Teatro Arriaga and the El Palau de les Arts Reina Sofía.

Thousands of music fans also travel to Spain each year for internationally recognised summer music festivals Sonar which often features the top up and coming pop and techno acts, and Benicàssim which tends to feature alternative rock and dance acts .[155] Both festivals mark Spain as an international music presence and reflect the tastes of young people in the country.

The most popular traditional musical instrument, the guitar, originated in Spain.[156] Typical of the north are the traditional bag pipers or *gaiteros*, mainly in Asturias and Galicia.

Cuisine

Main article: Spanish cuisine

Paella, a traditional Valencian dish[157]

Spanish cuisine consists of a great variety of dishes which stem from differences in geography, culture and climate. It is heavily influenced by seafood available from the waters that surround the country, and reflects the country's deep Mediterranean roots. Spain's extensive history with many cultural influences has led to a unique cuisine. In particular, three main divisions are easily identified:

- *Mediterranean* Spain – all such coastal regions, from Catalonia to Andalusia: heavy use of seafood, such as *pescaíto frito*; several cold soups like gazpacho; and many rice-based dishes like paella from Valencia[157] and arroz negro from Catalonia.[158]
- *Inner* Spain – Castile: hot, thick soups such as the bread and garlic-based *Castilian soup*, along with substantious stews such as cocido madrileño. Food is traditionally conserved by salting, like Spanish ham, or immersed in olive oil, like Manchego cheese.
- *Atlantic* Spain – the whole Northern coast, including Asturian, Basque, Cantabrian and Galician cuisine: vegetable and fish-based stews like *pote gallego* and marmitako. Also, the lightly cured lacón ham. The most known North countries cuisine often rely on the captures from close or distant seas, like the Basque-style cod, albacore or anchovy or the Galician octopus-based polbo á feira and shellfish dishes.

Science and technology

In the 19th and 20th centuries science in Spain was held back by severe political instability and consequent economic underdevelopment. Despite the conditions, some noted scientists and engineers emerged. Among the most notable were Miguel Servet, Santiago Ramón y Cajal, Narcís Monturiol i Estarriol, Celedonio Calatayud, Juan de la Cierva and Severo Ochoa.

Sport

Main article: Sport in Spain

Sport in Spain has been dominated by football since the early 20th century. Real Madrid C.F. and FC Barcelona are two of the most successful football clubs in the world. The country's national football team won the UEFA European Football Championship in 1964 and 2008 and the FIFA World Cup in 2010.

Basketball, tennis, cycling, handball, motorcycling and, lately, Formula One are also important due to the presence of Spanish champions in all these disciplines. Today, Spain is a major

world sports powerhouse, especially since the 1992 Summer Olympics that were hosted in Barcelona, which stimulated a great deal of interest in sports in the country. The tourism industry has led to an improvement in sports infrastructure, especially for water sports, golf and skiing.

Rafael Nadal is the leading Spanish tennis player and has won several Grand Slam titles including the Wimbledon 2010 men's singles. In north Spain, the game of pelota is very popular. Alberto Contador is the leading Spanish cyclist and has won several Grand Tour titles including three Tour de France titles.

Camp Nou, Barcelona: the largest football stadium in Europe

Public holidays

Main article: Public holidays in Spain

Public holidays celebrated in Spain include a mix of religious (Roman Catholic), national and regional observances. Each municipality is allowed to declare a maximum of 14 public holidays per year; up to nine of these are chosen by the national government and at least two are chosen locally.[159] Spain's National Day (Fiesta Nacional de España) is 12 October, the anniversary of the Discovery of America and commemorate Our Lady of the Pillar feast, patroness of Aragón and throughout Spain.

History of Spain

From Wikipedia, the free encyclopedia

The **history of Spain** involves all the other peoples and nations within the Iberian peninsula formerly known as *Hispania*, and includes still today the nations of Andorra, Portugal and Spain, and the British overseas territory of Gibraltar. It spans from prehistoric Iberia, through the rise and decline of a global empire, to the recent history of Spain as a member of the European Union. Modern humans entered the Iberian Peninsula about 32,000 years ago. Different populations and cultures followed over the millennia, including the Iberians, the Tartessians, Celts and Celtiberians, Phoenicians, Greeks, Carthaginians, Romans, Suebi and Visigoths. In 711, the Moors, a Berber and Arab army, invaded and conquered nearly the entire peninsula. During the next 750 years, independent Muslim states were established, and the entire area of Muslim control became known as Al-Andalus. Meanwhile the Christian kingdoms in the north began the long and slow recovery of the peninsula, a process called the *Reconquista*, which was concluded in 1492 with the fall of Granada.

The Kingdom of Spain was created in 1492 with the unification of the Kingdom of Castile and the Kingdom of Aragon.[1] The first voyage of Christopher Columbus to the New World took place that same year, beginning the development of the Spanish Empire. The Inquisition was established and Jews and Muslims who refused to convert were expelled from the country.

For the next century and a half it was the most powerful state in Europe and the largest overseas empire in the world for three centuries. Spanish literature and fine arts, scholarship and philosophy flourished during the sixteenth and seventeenth centuries. Spain established a vast empire in the Americas, stretching from California to Patagonia, and colonies in the western Pacific. Financed in part by the riches pouring in from its colonies, Spain became embroiled in the religiously charged wars and intrigues of Europe, including, for example, through its possessions in western Europe, engaging in wars with France, England, Sweden, and the Ottomans and in the Mediterranean and northern Africa. Spain's European wars, however, led to economic damage, and the latter part of the 17th century saw a gradual decline of power under an increasingly neglectful and inept Habsburg regime. The decline culminated in the War of Spanish Succession, which ended with the relegation of Spain to the status of a second rate western power, although it remained, with Russia, the leading colonial power of the eighteenth century.

The 18th century saw a new dynasty, the Bourbons, which directed considerable efforts towards the renewal of state institutions, with some success, finishing in a successful involvement in the American War of Independence. However, as the century ended, a reaction set in with the accession of a new monarch. The end of the eighteenth and the start of the 19th centuries saw turmoil unleashed throughout Europe by the French

Revolutionary and Napoleonic Wars, which finally led to a French occupation of much of the continent, including Spain. This triggered a successful but devastating war of independence that shattered the country and created an opening for what would ultimately be the successful independence of Spain's mainland American colonies. Shattered by the war, Spain was destabilised as different political parties representing "liberal", "reactionary" and "moderate" groups throughout the remainder of the century fought for and won short-lived control without any being sufficiently strong to bring about lasting stability. Nationalist movements emerged in the last significant remnants of the old empire (Cuba and the Philippines) which led to a brief war with the United States and the loss of the remaining old colonies at the end of the century.

Following a period of growing political instability in the early 20th century, in 1936 Spain was plunged into a bloody civil war. The war ended in a nationalist dictatorship, led by Francisco Franco which controlled the Spanish government until 1975. Spain was officially neutral during World War II, although many Spanish volunteers fought on both sides. The post-war decades were relatively stable (with the notable exception of an armed independence movement in the Basque Country), and the country experienced rapid economic growth in the 1960s and early 1970s. The death of Franco in 1975 resulted in the return of the Bourbon monarchy headed by Prince Juan Carlos. While tensions remain (for example, with Muslim immigrants and in the Basque region), modern Spain has seen the development of a robust, modern democracy as a constitutional monarchy with popular King Juan Carlos, one of the fastest-growing standards of living in Europe, entry into the European Community, and the 1992 Summer Olympics.

Early history

Main article: Prehistoric Iberia

The earliest record of hominids living in Europe has been found in the Spanish cave of Atapuerca; fossils found there date to roughly 1.2 million years ago.[2] Modern humans in the form of Cro-Magnons began arriving in the Iberian Peninsula from north of the Pyrenees some 35,000 years ago. The most conspicuous sign of prehistoric human settlements are the famous paintings in the northern Spanish cave of Altamira, which were done c. 15,000 BC and are regarded as paramount instances of cave art.[3] Furthermore, archeological evidence in places like Los Millares in Almería and in El Argar in Murcia suggests developed cultures existed in the eastern part of the Iberian Peninsula during the late Neolithic and the Bronze Age.[4]

The seafaring Phoenicians, Greeks and Carthaginians successively settled along the Mediterranean Sea near Tartessos, modern day Cádiz. According to John Koch,[5] Cunliffe, Karl, Wodtko and other scholars, Celtic culture may have developed first in far Southern Portugal and Southwestern Spain, approximately 500 years prior to anything recorded in Central Europe.[6][7] The Tartessian language from the southwest of the Iberian peninsula, written in a version of the Phoenician script in use around 825 BC, which John T. Koch has claimed to be able to readily translate, has been accepted by a number of philologists and other linguists as the first attested Celtic language,[5][8][9] but the linguistic mainstream continues to treat Tartessian as an unclassified (Pre-Indo-European?) language,[10][11] and Koch's view of the evolution of Celtic is not generally accepted. In the 9th century BC, the first Greek colonies, such as Emporion (modern Empúries), were founded along the Mediterranean coast on the east, leaving the south coast to the Phoenicians. The Greeks are responsible for the name *Iberia*, apparently after the river Iber (Ebro in Spanish). In the 6th century BC, the Carthaginians arrived in Iberia, struggling first with the Greeks, and shortly after, with the newly arriving Romans for control of the Western Mediterranean. Their most important colony was Carthago Nova (Latin name of modern day Cartagena).[12]

The native peoples whom the Romans met at the time of their invasion in what is now known as Spain were the Iberians, inhabiting an area stretching from the southwest part of the Peninsula through the northeast part of it, and then the Celts, mostly inhabiting the north and northwest part of the Peninsula. In the inner part of the Peninsula, where both groups were in contact, a mixed, distinctive, culture arose, called Celtiberian.[2] The Celtiberian Wars or Spanish Wars were fought between the advancing legions of the Roman Republic and the Celtiberian tribes of Hispania Citerior from 181 to 133 BC.[13][14]

Roman *Hispania*

Main article: Hispania

Further information: Roman conquest of Hispania

Further information: Romanization of Hispania

Hispania was divided: Hispania Ulterior and Hispania Citerior during the late Roman Republic; and, during the Roman Empire, Hispania Taraconensis in the northeast, Hispania Baetica in the south (roughly corresponding to Andalucia), and Lusitania in the southwest (corresponding to modern Portugal).[15]

The base Celtiberian population remained in various stages of Romanisation,[16] and local leaders were admitted into the Roman aristocratic class.[17]

The Romans improved existing cities, such as Tarragona (*Tarraco*), and established others like Zaragoza (*Caesaraugusta*), Mérida (*Augusta Emerita*), Valencia (*Valentia*), León ("Legio Septima"), Badajoz ("Pax Augusta"), and Palencia.[18] The peninsula's economy expanded under Roman tutelage. Hispania supplied Rome with food, olive oil, wine and metal. The emperors Trajan, Hadrian, Theodosius I, the philosopher Seneca and the poets Martial, Quintilian and Lucan were born in Spain. The Spanish Bishops held the Council at Elvira in 306.

Roman bridge in Córdoba

The first Germanic tribes to invade Hispania arrived in the 5th century, as the Roman Empire decayed.[19] The Visigoths, Suebi, Vandals and Alans arrived in Spain by crossing the Pyrenees mountain range.[20] The Romanized Visigoths entered Hispania in 415. After the conversion of their monarchy to Roman Catholicism, the Visigothic Kingdom eventually encompassed a great part of the Iberian Peninsula after conquering the disordered Suebic territories in the northwest and Byzantine territories in the southeast.[17][21]

The collapse of the Western Roman Empire did not lead to the same wholesale destruction of Western classical society as happened in areas like Roman Britain, Gaul and Germania Inferior during the Dark Ages, even if the institutions, infrastructure and economy did suffer considerable degradation. Spain's present languages, its religion, and the basis of its laws originate from this period. The centuries of uninterrupted Roman rule and settlement left a deep and enduring imprint upon the culture of Spain.

Germanic Occupation of Hispania (5th–8th centuries)

Further information: Kingdom of Toledo, Suebic Kingdom of Galicia, and Spania

After the decline of the Roman Empire, Germanic tribes invaded the former empire. Several turned sedentary and created successor-kingdoms to the Romans in various parts of Europe. Iberia was taken over by the Visigoths after 410.[22]

Visigothic Hispania and its regional divisions in 700, prior to the Muslim conquest.

In the Iberian peninsula, as elsewhere, the Empire fell not with a bang but with a whimper. Rather than there being any convenient date for the "fall of the Roman Empire" there was a progressive "de-Romanization" of the Western Roman Empire in Hispania and a weakening of central authority, throughout the 3rd, 4th and 5th centuries.[23] At the same time, there was a process of "Romanization" of the Germanic and Hunnic tribes settled on both sides of the *limes* (the fortified frontier of the Empire along the Rhine and Danube rivers). The Visigoths, for example, were converted to Arian Christianity around 360, even before they were pushed into imperial territory by the expansion of the Huns.[24] In the winter of 406, taking advantage of the frozen Rhine, the (Germanic) Vandals and Sueves, and the (Sarmatian) Alans invaded the empire in force. Three years later they crossed the Pyrenees into Iberia and divided the Western parts, roughly corresponding to modern Portugal and western Spain as far as Madrid, between them.[25] The Visigoths meanwhile, having sacked Rome two years earlier, arrived in the region in 412 founding the Visigothic kingdom of Toulouse (in the south of modern France)

and gradually expanded their influence into the Iberian peninsula at the expense of the Vandals and Alans, who moved on into North Africa without leaving much permanent mark on Hispanic culture. The Visigothic Kingdom shifted its capital to Toledo and reached a high point during the reign of Leovigild.

Importantly, Spain never saw a decline in interest in classical culture to the degree observable in Britain, Gaul, Lombardy and Germany. The Visigoths tended to maintain more of the old Roman institutions, and they had a unique respect for legal codes that resulted in continuous frameworks and historical records for most of the period between 415, when Visigothic rule in Spain began, and 711, when it is traditionally said to end. The proximity of the Visigothic kingdoms to the Mediterranean and the continuity of western Mediterranean trade, though in reduced quantity, supported Visigothic culture. Arian Visigothic nobility kept apart from the local Catholic population. The Visigothic ruling class looked to Constantinople for style and technology while the rivals of Visigothic power and culture were the Catholic bishops— and a brief incursion of Byzantine power in Córdoba.

The period of rule by the Visigothic Kingdom saw the spread of Arianism briefly in Spain.[26] In 587, Reccared, the Visigothic king at Toledo, having been converted to Catholicism put an end to dissension on the question of Arianism and launched a movement in Spain to unify the various religious doctrines that existed in the land. The Council of Lerida in 546 constrained the clergy and extended the power of law over them under the blessings of Rome.

Greatest extent of the Visigothic Kingdom of Toulouse, c. 500, showing Territory lost after Vouillé in light orange.

The Visigoths inherited from Late Antiquity a sort of feudal system in Spain, based in the south on the Roman villa system and in the north drawing on their vassals to supply troops in exchange for protection. The bulk of the Visigothic army was composed of slaves, raised from the countryside. The loose council of nobles that advised Spain's Visigothic kings and legitimized their rule was responsible for raising the army, and only upon its consent was the king able to summon soldiers.

The impact of Visigothic rule was not widely felt on society at large, and certainly not compared to the vast bureaucracy of the Roman Empire; they tended to rule as barbarians of a mild sort, uninterested in the events of the nation and economy, working for personal benefit, and little literature remains to us from the period. They did not, until the period of Muslim rule, merge with the Spanish population, preferring to remain separate, and indeed the Visigothic language left only the faintest mark on the modern languages of Iberia. The most visible effect was the depopulation of the cities as they moved to the countryside. Even while the country enjoyed a degree of prosperity when compared to the famines of France and Germany in this period, the Visigoths felt little reason to contribute to the welfare, permanency, and infrastructure of their people and state. This contributed to their downfall, as they could not count on the loyalty of their subjects when the Moors arrived in the 8th century.[27]

Muslim Era—al-Andalus (8th–15th centuries)

Main articles: Muslim conquests, Umayyad conquest of Hispania, Al-Andalus, and Reconquista

The Arab Islamic conquest dominated most of North Africa by 640 AD. In 711 an Islamic Arab and Berber raiding party, led by Tariq ibn-Ziyad, was sent to Iberia to intervene in a civil war in the Visigothic Kingdom. Crossing the Strait of Gibraltar, they won a decisive victory in the summer of 711 when the Visigothic King Roderic was defeated and killed on July 19 at the Battle of Guadalete. Tariq's commander, Musa bin Nusair quickly crossed with substantial reinforcements, and by 718 the Muslims dominated most of the Iberian Peninsula. The advance into Western Europe was stopped in north-central France by the West Germanic Franks under Charles Martel at the Battle of Tours in 732.

A decisive victory for the Christian kingdoms took place at Covadonga, Asturias, in the summer of 722. Known as the Battle of Covadonga, the Muslims were stopped by a king, Pelagius of Asturias, who started the monarchy of the Kingdom of Asturias (which later developed into the Kingdom of Castilla). The battle was one of the first stages of the Reconquista.

Caliph Al-Walid I paid great attention to the expansion of an organized military, building the strongest navy in the Umayyad Caliphate (second major Arab dynasty after Mohammad and the first Arab dynasty of Al-Andalus) era. It was this tactic that supported the ultimate expansion to Spain. Caliph Al-Walid I's reign is considered as the apex of Islamic power[*citation needed*], though Islamic power in Spain specifically climaxed in the tenth century under Abd-ar-Rahman III.[28]

The rulers of Al-Andalus were granted the rank of Emir by the Umayyad Caliph Al-Walid I in Damascus. Emir Abd-ar-rahman I challenged the Abbasids. The Umayyad Caliphate, with origin in Hejaz, Arabian peninsula *or Emirate* was overthrown by the Abbasid Caliphate *or Emirate* (second Arab dynasty), some of the remaining Umayyad leaders escaped to Castile and declared Córdoba an independent emirate. Al-Andalus was rife with internal conflict between the Islamic Umayyad rulers and people and the Christian Visigoth-Roman leaders and people.

In the 10th century Abd-ar-rahman III, from Hejaz, Arabian peninsula, grandson of the last caliph of Damascus, Syria declared the Caliphate of Córdoba, effectively breaking all ties with the Egyptian and Syrian caliphs. The Caliphate was mostly concerned with maintaining its power base in North Africa, but these possessions eventually dwindled to the Ceuta province. The first navy of the Caliph of Córdoba *or Emir* was built after the humiliating Viking ascent of the Guadalquivir in 844 when they sacked Seville. In 942, pagan Magyars (present day Hungary) raided across Europe as far west as Al-Andalus.[29] Meanwhile, a slow but steady migration of Christian subjects to the northern kingdoms in Christian Hispania was slowly increasing the latter's power. Even so, Al-Andalus remained vastly superior to all the northern kingdoms combined in population, economy and military might; and internal conflict between the Christian kingdoms contributed to keep them relatively harmless.[*citation needed*]

Limits of the Kingdom of Castile and Kingdom of Aragon in 1210.

Al-Andalus coincided with *La Convivencia*, an era of relative religious tolerance, and with the Golden age of Jewish culture in the Iberian Peninsula. (See: Emir Abd-ar-Rahman III 912 ; the Granada massacre 1066).[30]

Muslim interest in the peninsula returned in force around the year 1000 when Al-Mansur (known as *Almanzor*), sacked Barcelona (985). Under his son, other Christian cities were subjected to numerous raids.[31] After his son's death, the caliphate plunged into a civil war and splintered into the so-called "Taifa Kingdoms". The Taifa

kings competed against each other not only in war, but also in the protection of the arts, and culture enjoyed a brief upswing. The Taifa kingdoms lost ground to the Christian realms in the north and, after the loss of Toledo in 1085, the Muslim rulers reluctantly invited the Almoravides, who invaded Al-Andalus from North Africa and established an empire. In the 12th century the Almoravid empire broke up again, only to be taken over by the Almohad invasion, who were defeated in the decisive battle of Las Navas de Tolosa in 1212.

Medieval Spain was the scene of almost constant warfare between Muslims and Christians. The Almohads, who had taken control of the Almoravids' Maghribi and Andalusian territories by 1147, far surpassed the Almoravides in fundamentalist outlook, and they treated the *dhimmis* harshly. Faced with the choice of death, conversion, or emigration, many Jews and Christians left.[32] The Christian kingdoms to the North had also, at times, treated Muslims harshly. The treatment towards Jews at this time in Iberia varied greatly between and within the different Muslim and Christian kingdoms. By the mid-13th century Emirate of Granada was the only independent Muslim realm in Spain, which would last until 1492. Despite the decline in Muslim-controlled kingdoms, it is important to note the lasting effects exerted on the peninsula by Muslims in technology, culture, and society.

The Kings of Aragón ruled territories that consisted of not only the present administrative region of Aragon but also Catalonia, and later the Balearic Islands, Valencia, Sicily, Naples and Sardinia (see Crown of Aragon). Considered by most to have been the first mercenary company in Western Europe, the Catalan Company proceeded to occupy the Duchy of Athens, which they placed under the protection of a prince of the House of Aragon and ruled until 1379.[33]

Dynastic Union

Iberian polities circa 1360

As the *Reconquista* continued over the years, small parts of the Iberian Peninsula were captured from the Moors at any one time. These small parts were formed into individual Christian kingdoms and principalities.[34] Within these individual principalities popular laws and customs were engendered which distributed the political power to the various local nobles. In this way political power was distributed and not concentrated in the royalty of Spain.[35] Additionally, the merchants in the towns of the interior of Spain grew in wealth and position during this time. Based in the interior towns and cities of Spain, the merchants caused the towns and cities to develop an independence from the Spanish throne.[35]

The Cortes, now bicameral, dates from 1188, when first established in the Kingdom of León. At first dominated by nobles in the rural regions of Spain, the Cortes by the fourteenth century saw its greatest power exercised by the growing towns.[36] Both the independent power of the towns and the independence of the local nobles were circumstances of the Spanish feudal structure, which limited the power of the royal throne.[35]

In the 15th century, the most important among all of the separate kingdoms that made up the country of Spain were the Kingdoms of Castile (occupying northern and central portions of the Iberian Peninsula) and Aragon (occupying northeastern portions of the peninsula). The rulers of these two kingdoms were allied with dynastic families in Portugal, France, and other neighboring kingdoms. The death of Henry IV in 1474 set off a struggle

for power between contenders for the throne of Castile, including Joanna La Beltraneja, supported by Portugal and France, and Queen Isabella I, supported by the Kingdom of Aragon, and by the Castilian nobility. Isabella married King Ferdinand II of Aragon in 1469.[37] Following the death of her half-brother, Henry IV, King of Castile in 1474 and the resulting War of the Castilian Succession, Isabella retained the throne, and ruled jointly with her husband, King Ferdinand II pursuant to an agreement signed by Isabella and Ferdinand on January 15, 1474.[38] Under the terms of this agreement, Isabella held more authority over the newly unified Spain than her husband, although their rule was shared.[38]

Isabella of Castile and Ferdinand of Aragon were known as the "Catholic Monarchs" (Spanish: *los Reyes Católicos*), a title bestowed on them by Pope Alexander VI. They married in 1469 in Valladolid, uniting both crowns and setting the stage for the creation of the Kingdom of Spain, at the dawn of the modern era. That union, however, was a union in title only, as each region retained its own political and judicial structure, and even today Spain remains internally divided. The monarchs also oversaw the final stages of the Reconquista of Iberian territory from the Moors with the conquest of Granada, conquered the Canary Islands and expelled the Jews and Muslims from Spain under the Alhambra decree, though Muslim (Morisco) culture remained influential. They authorized the expedition of Christopher Columbus, who became the first known European to reach the New World since Leif Ericson, which led to an influx of wealth into Spain, supplementing income from within Castile for the state that would prove to be a dominant power of Europe for the next two centuries.

Isabella ensured long-term political stability in Spain by arranging strategic marriages for each of her five children. Her firstborn, a daughter named Isabella, married Alfonso of Portugal, forging important ties between these two neighboring countries and hopefully to ensure future alliance, but Isabella soon died before giving birth to an heir. Juana, Isabella's second daughter, married into the Habsburg dynasty when she wed Philip the Handsome, the son of Maximilian I, King of Bohemia (Austria) and entitled to the crown of the Holy Roman Emperor. This ensured alliance with the Habsburgs and the Holy Roman Empire, a powerful, far-reaching territory that assured Spain's future political security. Isabella's first and only son, Juan, married Margaret of Austria, further maintaining ties with the Habsburg dynasty. Her fourth child, Maria, married Manuel I of Portugal, strengthening the link forged by her older sister's marriage. Her fifth child, Catherine, married Henry VIII, King of England and was mother to Queen Mary I.

Although until the 13th century religious minorities (Jews and Muslims) had enjoyed considerable tolerance in Castilla and Aragon - the only Christian kingdoms where Jews were not restricted from any professional occupation - the situation of the Jews collapsed over the 14th century, reaching a climax in 1391 with large scale massacres in every major city, with the exception of Ávila. Over the next century, half of the estimated 200,000 Spanish Jews converted to Christianity (becoming "conversos"). The final step was taken by the Catholic Monarchs, who, in 1492, ordered the remaining Jews to convert or face expulsion from Spain. Depending on different sources, the number of Jews actually expelled is estimated to be anywhere from 40,000 to 120,000 people. Over the following decades, Muslims faced the same fate and about 60 years after the Jews, they were also compelled to convert ("moriscos") or be expelled. Jews and Muslims were not the only people to be persecuted during this time period. Gypsies also endured a tragic fate: all Gypsy males were forced to serve in galleys between the age of 18 and 26 - which was equivalent to a death sentence - but the majority managed to hide and avoid arrest.

The Spanish language and universities

In the 13th century, there were many languages spoken in the Christian sections of what is now Spain, among them Castilian, Aragonese, Catalan, Basque, Galician, Aranese, Asturian and Leonese. But throughout the century, Castilian (what is also known today as Spanish) gained more and more prominence in the Kingdom of Castile as the language of culture and communication. One example of this is the *El Cid*. In the last years of the reign of Ferdinand III of Castile, Castilian began to be used for certain types of documents, but it was during the

reign of Alfonso X that it became the official language. Henceforth all public documents were written in Castilian, likewise all translations were made into Castilian instead of Latin.

Furthermore, in the 13th century many universities were founded in León and in Castile, some, like those of the Leonese Salamanca and the Castilian Palencia were among the earliest universities in Europe. In 1492, under the Catholic Monarchs, the first edition of the *Grammar of the Castilian Language* by Antonio de Nebrija was published.

Imperial Spain

Main article: Spanish Empire

See also: Habsburg Spain

The Spanish Empire was one of the first modern global empires. It was also one of the largest empires in world history. In the 16th century, Spain and Portugal were in the vanguard of European global exploration and colonial expansion. The two kingdoms on the conquest and Iberian Peninsula competed with each other in opening of trade routes across the oceans. Spanish imperial conquest and colonization began with two Castilian expeditions. The first was an expedition of a Castilian fleet led by a Genoese, Lanzarotto Malocello. The second was another expedition in 1402 led by French adventurers, Jean de Bethancourt, Lord of Grainville in Normandy and Gadifer de la Salle of Poitou.[39] In the fifteenth and sixteenth centuries, trade flourished across the Atlantic between Spain and the Americas and across the Pacific between East Asia and Mexico via the Philippines. Conquistadors deposed the Aztec, Inca and Maya governments with extensive help from local factions and laid claim to vast stretches of land in North and South America. For a time, the Spanish Empire dominated the oceans with its experienced navy and ruled the European battlefield with its fearsome and well trained infantry, the famous *tercios*: in the words of the prominent French historian Pierre Vilar, "enacting the most extraordinary epic in human history". Spain enjoyed a cultural golden age in the 16th and 17th centuries.

A map of the Spanish and Portuguese Empires in the period of Iberian Union under the personal union of the Spanish monarchs (1580–1640).

This American empire was at first a disappointment, as the natives had little to trade, though settlement did encourage trade. The diseases such as smallpox and measles that arrived with the colonizers devastated the native populations, especially in the densely populated regions of the Aztec, Maya and Inca civilizations, and this reduced economic potential of conquered areas.[40]

In the 1520s, large-scale extraction of silver from the rich deposits of Mexico's Guanajuato began, to be greatly augmented by the silver mines in Mexico's Zacatecas and Bolivia's Potosí from 1546. These silver shipments re-oriented the Spanish economy, leading to the importation of luxuries and grain. They also became indispensable in financing the military capability of Habsburg Spain in its long series of European and North

Columbus setting foot in the New World

African wars, though, with the exception of a few years in the 17th century, Spain itself (Castile in particular) was by far the most important source of revenue. The financial burden within the peninsula was on the backs of the peasant class while the nobility enjoyed an increasingly lavish lifestyle. From the time beginning with the incorporation of the Portuguese Empire in 1580 (lost in 1640) until the loss of its American colonies in the 19th century, Spain maintained the largest empire in the world even though it suffered fluctuating military and economic fortunes from the 1640s. Confronted by the new experiences, difficulties and suffering created by empire-building, Spanish thinkers formulated some of the first modern thoughts on natural law, sovereignty, international law, war, and economics; there were even questions about the legitimacy of imperialism – in related schools of thought referred to collectively as the School of Salamanca. Despite these innovations, many motives for the empire were rooted in the Middle Ages. Religion played a very strong role in the spread of the Spanish empire. The thought that Spain could bring Christianity to the new world certainly played a strong role in the expansion of Spain's empire.[*citation needed*]

Spanish Kingdoms under the Habsburgs (16th–17th centuries)

Main article: Habsburg Spain

Spain's powerful world empire of the 16th and 17th centuries reached its height and declined under the Habsburgs. The Spanish Empire reached its maximum extent in Europe under Charles I of Spain, as he was also Emperor Charles V of the Holy Roman Empire.

Charles I of Spain (better known in the English-speaking world at the Holy Roman Emperor Charles V) was the most powerful European monarch of his day.[41]

Charles V became king in 1516, and the history of Spain became even more firmly enmeshed with the dynastic struggles in Europe. The king was not often in Spain, and as he approached the end of his life he made provision for the division of the Habsburg inheritance into two parts: on the one hand Spain, and its possessions in the Mediterranean and overseas, and the Holy Roman Empire itself on the other. The Habsburg possessions in the Netherlands also remained with the Spanish crown.

This was to prove a difficulty for his successor Philip II of Spain, who became king on Charles V's abdication in 1556. Spain largely escaped the religious conflicts that were raging throughout the rest of Europe, and remained firmly Roman Catholic. Philip saw himself as a champion of Catholicism, both against the Ottoman Turks and the heretics. In the 1560s, plans to consolidate control of the Netherlands led to unrest, which gradually led to the Calvinist leadership of the revolt and the Eighty Years' War. This conflict consumed much Spanish expenditure, and led to an attempt to conquer England – a cautious supporter of the Dutch – in the unsuccessful Spanish Armada, an early battle in the Anglo-Spanish War (1585–1604) and war with France (1590–1598).

Despite these problems, the growing inflow of American silver from mid 16th century, the justified military reputation of the Spanish infantry and even the navy quickly recovering from its Armada disaster, made Spain the leading European power, a novel situation of which its citizens were only just becoming aware. The Iberian Union with Portugal in 1580 not only unified the peninsula, but added that country's worldwide resources to the Spanish crown. However, economic and administrative problems multiplied in Castile, and the weakness of the native economy became evident in the following century: rising inflation, financially draining wars in Europe, the

ongoing aftermath of the expulsion of the Jews and Moors from Spain, and the growing dependency of Spain on the gold and silver imports, combined to cause several bankruptcies that caused economic crisis in the country, especially in heavily burdened Castile.

The coastal villages of Spain and of the Balearic Islands were frequently attacked by Barbary pirates from North Africa. Formentera was even temporarily left by its population. This occurred also along long stretches of the Spanish and Italian coasts, a relatively short distance across a calm sea from the pirates in their North African lairs. The most famous corsair was the Turkish Barbarossa ("Redbeard"). According to Robert Davis between 1 million and 1.25 million Europeans were captured by North African pirates and sold as slaves in North Africa and Ottoman Empire between the 16th and 19th centuries This was gradually alleviated as Spain and other Christian powers began to check Muslim naval dominance in the Mediterranean after the 1571 victory at Lepanto, but it would be a scourge that continued to afflict the country even in the next century.[42]

The great plague of 1596–1602 killed 600,000 to 700,000 people, or about 10% of the population. Altogether more than 1,250,000 deaths resulted from the extreme incidence of plague in 17th century Spain.[43] Economically, the plague destroyed the labor force as well as creating a psychological blow to an already problematic Spain.[44]

Philip II died in 1598, and was succeeded by his son Philip III, in whose reign a ten year truce with the Dutch was overshadowed in 1618 by Spain's involvement in the European-wide Thirty Years' War. Government policy was dominated by favorites, but it was also the reign in which the geniuses of Cervantes and El Greco flourished.

Map of Europe in 1648, after the Peace of Westphalia.

Philip III was succeeded in 1621 by his son Philip IV of Spain. Much of the policy was conducted by the minister Gaspar de Guzmán, Count-Duke of Olivares. In 1640, with the war in central Europe having no clear winner except the French, both Portugal and Catalonia rebelled. Portugal was lost to the crown for good, in Italy and most of Catalonia, French forces were expelled and Catalonia's independence suppressed. In the reign of Philip's developmentally disabled son and successor Charles II, Spain was essentially left leaderless and was gradually being reduced to a second-rank power.

The Habsburg dynasty became extinct in Spain and the War of the Spanish Succession ensued in which the other European powers tried to assume control of the Spanish monarchy. King Louis XIV of France eventually "won" the War of Spanish Succession, and control of Spain passed to the Bourbon dynasty but the peace deals that followed included the relinquishing of the right to unite the French and Spanish thrones and the partitioning of Spain's European empire.

The Golden Age (*Siglo de Oro*)

Main article: Spanish Golden Age

The Spanish Golden Age (in Spanish, *Siglo de Oro*) was a period of flourishing arts and letters in the Spanish Empire (now Spain and the Spanish-speaking countries of Latin America), coinciding with the political decline and fall of the Habsburgs (Philip III, Philip IV and Charles II). It is interesting to note how arts during the Golden Age flourished despite the decline of the empire in the 17th century. The last great writer of the age, Sor Juana Inés de la Cruz, died in New Spain in 1695.[45]

The Habsburgs, both in Spain and Austria, were great patrons of art in their countries. *El Escorial*, the great

royal monastery built by King Philip II, invited the attention of some of Europe's greatest architects and painters. Diego Velázquez, regarded as one of the most influential painters of European history and a greatly respected artist in his own time, cultivated a relationship with King Philip IV and his chief minister, the Count-Duke of Olivares, leaving us several portraits that demonstrate his style and skill. El Greco, a respected Greek artist from the period, settled in Spain, and infused Spanish art with the styles of the Italian renaissance and helped create a uniquely Spanish style of painting. Some of Spain's greatest music is regarded as having been written in the period. Such composers as Tomás Luis de Victoria, Luis de Milán and Alonso Lobo helped to shape Renaissance music and the styles of counterpoint and polychoral music, and their influence lasted far into the Baroque period.

Toledo by El Greco

Spanish literature blossomed as well, most famously demonstrated in the work of Miguel de Cervantes, the author of *Don Quixote de la Mancha*. Spain's most prolific playwright, Lope de Vega, wrote possibly as many as one thousand plays over his lifetime, over four hundred of which survive to the present day.

Enlightenment: Spain under the Bourbons (18th century)

Main article: Enlightenment Spain

Charles II, having no direct heir, was succeeded by his great-nephew Philip V, a French prince. Concern among other European powers that Spain and France united under a single Bourbon monarch would upset the balance of power led to the War of Spanish Succession between 1701 and 1714. It pitted powerful France and weak Spain against the Grand Alliance of England, the Netherlands and Austria. After many battles, especially in Spain, the Grand Alliance finally won.[46]

Philip V signed the *Decreto de Nueva Planta* in 1715, a new law that revoked most of the historical rights and privileges of the different kingdoms that formed the Spanish Crown, specially Crown of Aragon, unifying them under the laws of Castile, where the Cortes had been more receptive to the royal wish.[47] Spain became culturally and politically a follower of absolutist France. Lynch says Philip V advanced the government only marginally over that of his predecessors and was more of a liability than the incapacitated Charles II. When a conflict came up between the interests of Spain and France, he usually favored France. However Philip did make some reforms in government, and strengthened the central authorities relative to the provinces. Merit became more important, although most senior positions still went to the landed aristocracy. Below the elite level inefficiency and corruption was as widespread as ever. The reforms started by Philip V culminated in much more important reforms of Charles III.[48] The economy, on the whole, improved over the depressed 1650–1700 era, with greater productivity, and fewer famines and epidemics.[49]

The rule of the Spanish Bourbons continued under Ferdinand VI and Charles III. Elisabeth of Parma, Philip V's widow, exerted great influence on Spain's foreign policy. Her principal aim was to have Spain's lost territories in Italy restored. She eventually received Franco-British support for this after the Congress of Soissons.[50]

Under the rule of Charles III and his ministers, Leopoldo de Gregorio, Marquis of Esquilache and José Moñino, Count of Floridablanca, Spain embarked on a program of enlightened despotism that brought Spain a new prosperity in the middle of the 18th century. Fearing that Britain's victory over France in the Seven Years War threatened the European balance of power, Spain allied themselves to France but suffered a series of military defeats and ended up having to cede Florida to the British at the Treaty of Paris. Despite losing alongside France

against the British in the Seven Years' War, Spain recouped most of her territorial losses in the American Revolutionary War, and gained an improved international standing.

An 18th century map of the Iberian Peninsula

However, the reforming spirit of Charles III was extinguished in the reign of his son, Charles IV, seen by some as mentally handicapped. Dominated by his wife's lover, Manuel de Godoy, Charles IV embarked on policies that overturned much of Charles III's reforms. After briefly opposing Revolutionary France early in the French Revolutionary Wars, Spain was cajoled into an uneasy alliance with its northern neighbor, only to be blockaded by the British. Charles IV's vacillation, culminating in his failure to honour the alliance by neglecting to enforce the Continental System led to Napoleon I, Emperor of the French, invading Spain in 1808, thereby triggering Spain's War of Independence.

Attacking Spanish infantry (about 1740)

During most of the 18th century Spain had arrested its relative decline of the latter part of the 17th century. But despite the progress, it continued to lag in the political and mercantile developments then transforming other parts of Europe, most notably in Great Britain, the Low Countries and France. The chaos unleashed by the Napoleonic intervention would cause this gap to widen greatly.

Napoleonic Wars: War of Spanish Independence (1808–1814)

Main article: Peninsular War

See also: Spanish American wars of independence

The Third of May 1808 by Francisco Goya, showing Spanish resisters being executed by Napoleon's troops.

Spain initially sided against French in the Napoleonic Wars, but the defeat of her army early in the war led to Charles IV's pragmatic decision to align with the revolutionary French. Spain was put under a British blockade, and her colonies—for the first time separated from their colonial rulers—began to trade independently with Britain. The defeat of the British invasions of the River Plate in South America emboldened an independent attitude in Spain's American colonies. A major Franco-Spanish fleet was annihilated, at the decisive Battle of Trafalgar in 1805, prompting the vacillating king of Spain to reconsider his alliance with France. Spain broke off from the Continental System temporarily, and Napoleon—aggravated with the Bourbon kings of Spain—invaded Spain in 1808 and deposed Ferdinand VII, who had just been on the throne forty-eight days after his father's abdication in March 1808. On July 20, 1808, Joseph Bonaparte, eldest brother of Napoleon Bonaparte, entered Madrid and established a government by which he became King of Spain—serving as a surrogate for Napoleon.[51]

The Spanish monarchy may have been destroyed but the people of Spain vigorously resisted Napoleon's attempt to conquer his former ally.[52] *Juntas* were formed all across Spain that pronounced themselves in favor of Ferdinand VII. On September 26, 1808, a Central Junta was formed in the town of Aranjuez to coordinate the

nationwide struggle against the French.[53] Initially, the Central Junta declared support for Ferdinand VII, and convened a "General and Extraordinary Cortes" for all the kingdoms of the Spanish Monarchy. On February 22 and 23, 1809, a popular insurrection against the French occupation broke out all over Spain.[54]

The Cortes assembled on September 24, 1810 on the Isle of Leon.[55] The Cortes removed itself to Cádiz on February 20, 1811.[56] On March 19, 1812, the Cádiz Cortes created the first modern Spanish constitution, the Constitution of 1812 (informally named *La Pepa*). This constitution provided for a separation of the powers of the executive and the legislative branches of government. The Cortes was to be elected by universal suffrage —albeit by an indirect method. Each member of the Cortes was to represent 70,000 people.[57] Members of the Cortes were to meet in annual sessions. King was prevented from either convening or proroguing the Cortes. Members of the Cortes were to serve single two-year terms. They could not serve consecutive terms. They could only serve a second term by allowing someone else to serve a single intervening term in office.

This attempt at the development of a modern constitutional government from 1808 until 1814, became known as the first bourgeois revolution in Spain.[58] Leaders of the liberals or reformist forces during this revolution were Jose Menino, Count of Floridablanca, Gaspar Melchor de Jovellanos and Pedro Rodriguez, Conde de Campomanes.[59] Born in 1728, Floridablanca was eighty years of age at the time of the revolutionary outbreak in 1808. He had served as Prime Minister under King Charles III of Spain from 1777 until 1792.[60] Now he served as President of the Central Junta.[61] However, he tended to be suspicious of the popular spontaneity.[62] Consequently, Floridablanca tended to prevent development of the revolution.[63]

Born in 1744, Jovellanos was somewhat younger than Floridablanco. A writer and follower of the philosophers of the Enlightenment tradition of the previous century, Jovellanos had served as Minister of Justice from 1797–1798 under King Charles IV of Spain.[64] Now, Jovellanos commanded a substantial and influential group within the Central Junta.[65] However, Jovellanos had been imprisoned by Manuel de Godoy, Duke of Alcudia, who had served as Prime Minister of Spain and virtually ran the country as a dictator from 1792 until 1798 and from 1801 until 1808.[66] Accordingly, even Jovellanos tended to by somewhat overly cautious in his approach to the revolutionary upsurge that was sweeping Spain in 1808.

The Spanish Army tried to fight the French invasion in the traditional "set-piece" style of warfare. They lost every battle they fought with the French. After the disastrous battle of Ocana fought on November 19, 1809, the Spanish Army confined itself to guerilla warfare against the French.[67] However, it was the Spanish people, themselves, that really led the fight in carrying out the guerilla war against the French. In this war, Spain was aided by the British and Portuguese, led by the Duke of Wellington. The duke of Wellington fought Napoleon's forces in the Peninsular War, with Joseph Bonaparte ruling as Napoleon's surrogate king at Madrid. The brutal war was one of the first guerrilla wars in modern Western history; French supply lines stretching across Spain were mauled repeatedly by Spanish guerrillas. The war in the Iberian Peninsula fluctuated repeatedly, with Wellington spending several years behind his fortresses in Portugal while launching occasional campaigns into Spain. The French were decisively defeated at the Battle of Vitoria in 1813, and the following year, Ferdinand VII was restored as King of Spain.

Spain in the nineteenth century (1814–1873)

Main article: Mid-nineteenth century Spain

Although the *juntas*, that had forced the French to leave Spain, had sworn by the liberal Constitution of 1812, Ferdinand VII openly believed that it was too liberal for the country. On his return to Spain on April 16, 1814,[68] he refused to swear by the constitution himself, and he continued to rule in the authoritarian fashion of

his forebears.[69] Thus, the first bourgeois revolution ended in 1814.[58]

The Constitution of 1812 had eliminated all discrimination in the American colonies between the Spaniards who were born in Spain and those Spanish citizens that happened to be born in the colonies of New Spain. Consequently, although Spain accepted the rejection of the Constitution, the rejection of the Constitution was not as calmly accepted in Spain's empire in the New World. Revolution broke out in the colonies of "New Spain" in the Americas in 1820. Spain, nearly bankrupt from the war with France and the reconstruction of the country, was unable to pay her soldiers, and in 1819 was forced to sell Florida to the United States for 5 million dollars. In 1820, an expedition intended for the colonies (which, at the time, were on the verge of being lost themselves, to rebels and the Monroe Doctrine) revolted in Cadiz. When armies throughout Spain pronounced themselves in sympathy with the revolters, led by Rafael del Riego, Ferdinand relented and was forced to accept the liberal Constitution of 1812. This was the start of the second bourgeois revolution in Spain, which would last from 1820–1823.[70] Once again in the revolution of 1820, it was the independent towns that led the drive for constitutional change in Spain.[71] Ferdinand himself was placed under effective house arrest for the duration of the liberal experiment.

The tumultuous three years of liberal rule that followed were marked by various absolutist conspiracies. The liberal government, which reminded European statesmen entirely too much of the governments of the French Revolution, was looked on with hostility by the Congress of Verona in 1822, and France was authorized to intervene. France crushed the liberal government with massive force in the so-called Spanish expedition, and Ferdinand was restored as absolute monarch in 1823, marking the end of the second Spanish bourgeois revolution. In the American colonies of New Spain, however, revolutions led to independence. In 1824, the last Spanish army on the American mainland was defeated at the Battle of Ayacucho in southern Peru. Only Cuba and Puerto Rico remained.

In Spain, the failure of the revolution was followed by a period of uneasy peace for the next decade. Having borne only a female heir presumptive, it appeared that Ferdinand would be succeeded by his brother, Infante Carlos of Spain. While Ferdinand aligned with the conservatives, fearing another national insurrection, he did not view the reactionary policies of his brother as a viable option. Ferdinand — resisting the wishes of his brother — decreed the Pragmatic Sanction of 1830, enabling his daughter Isabella to become Queen. Carlos, who made known his intent to resist the sanction, fled to Portugal.

Ferdinand's death in 1833 and the accession of Isabella (only three years old at the time) as Queen of Spain sparked the First Carlist War. Carlos invaded the Basque country in the north of Spain and attracted support from absolutist reactionaries and conservatives. These forces were known as the "Carlist" forces. Isabella's mother, Maria Cristina of Bourbon-Two Sicilies, was named regent until her daughter came of age. The supporters of reform and of limitations on the absolutist rule of the Spanish throne rallied behind Isabella and the regent, Maria Christina. These reformists were called "Cristinos."

Though Cristino resistance to the insurrection seemed to have been overcome by the end of 1833, Maria Cristina's forces suddenly drove the Carlist armies from most of the Basque country. Carlos then named the Basque general Tomás de Zumalacárregui his commander-in-chief. Zumalacárregui resuscitated the Carlist cause, and by 1835 had driven the Cristino armies to the Ebro River and transformed the Carlist army from a demoralized band into a professional army of 30,000 of quality superior to the government forces.

Zumalacárregui's death in 1835 changed the Carlists' fortunes. The Cristinos found a capable general in Baldomero Espartero. His victory at the Battle of Luchana (1836) turned the tide of the war, and in 1839, the Convention of Vergara put an end to the first Carlist insurrection. The period of time from 1834 until 1843 is known as Spain's third bourgeois revolution.[72]

Espartero, operating on his popularity as a war hero and his sobriquet "Pacifier of Spain", demanded liberal reforms from Maria Cristina. The Queen Regent, who resisted any such idea, preferred to resign and let Espartero become regent instead. Espartero's liberal reforms were then opposed by moderates, and the former general's heavy-handedness caused a series of sporadic uprisings throughout the country from various quarters, all of which were bloodily suppressed. He was overthrown as regent in 1843 by Ramón María Narváez, a moderate, who was in turn perceived as too reactionary. Another Carlist uprising, the Matiners' War, was launched in 1846 in Catalonia, but it was poorly organized and suppressed by 1849.

Isabella II of Spain took a more active role in government after she came of age, but she was immensely unpopular throughout her reign. She was viewed as beholden to whoever was closest to her at court, and to care little for the people of Spain. As a result there was a fourth bourgeois revolutionary insurrection in the summer of 1854.[73] This uprising began in the spring of 1854 as expressions of dissatisfaction on the part of the people against the government.[74] The people were protesting the growing economic hardship under which they had been suffering. On June 28, 1854, a military coup occurred in Madrid.[74] The military coup was led by General Domingo Dulce y Garay and General Leopoldo O'Donnell y Jarris. Their coup overthrew the dictatoriship of Luis Jose Sartorius, 1st Count of San Luis. As the result of the popular insurrection, the Progresista Party obtained widespread support in Spain and came to power in the government in 1854.[75]

In 1856, Isabella attempted to form a pan-national coalition, the Union Liberal, under the leadership of Leopoldo O'Donnell who had already marched on Madrid that year and deposed another Espartero ministry. Isabella's plan failed and cost Isabella more prestige and favor with the people.
In 1860, Isabella launched a successful war against Morocco, waged by generals O'Donnell and Juan Prim that stabilized her popularity in Spain. However, a campaign to reconquer Peru and Chile during the Chincha Islands War proved disastrous and Spain suffered defeat before the determined South American powers.

In 1866, a revolt led by Juan Prim was suppressed, but in 1868 there was a further revolt, known as the Glorious Revolution. The *progresista* generals Francisco Serrano and Juan Prim revolted against Isabella and defeated her *moderado* generals at the Battle of Alcolea. Isabella was driven into exile in Paris.

Two years of revolution and anarchy followed, until in 1870 the Cortes declared that Spain would again have a king. Amadeus of Savoy was selected, and duly crowned King of Spain early the following year. This selection of the King of Spain turned out to play an important role in European and world history, since France opposed a German prince's candidacy to the Spanish throne, and this served as the immediate motive for the Franco-Prussian War. Amadeus — a liberal who swore by the liberal constitution the Cortes promulgated — was faced immediately with the incredible task of bringing the disparate political ideologies of Spain to one table. The country was plagued by internecine strife, not merely between Spaniards but within Spanish parties.

First Spanish Republic (1873–1874)

Main article: First Spanish Republic

Following the Hidalgo affair, Amadeus famously declared the people of Spain to be ungovernable, and fled the country. In his absence, a government of radicals and Republicans was formed that declared Spain a republic. The republic was immediately under siege from all quarters. The Carlists were the most immediate threat, launching a violent insurrection after their poor showing in the 1872 elections. There were calls for socialist revolution from the International Workingmen's Association, revolts and unrest in the autonomous regions of Navarre and Catalonia, and pressure from the Catholic Church against the fledgling republic.[76]

The Restoration (1874–1931)

Main article: Spain under the Restoration

Although the former queen, Isabella II was still alive, she recognized that she was too divisive as a leader, and abdicated in 1870 in favor of her son, Alfonso, who was duly crowned Alfonso XII of Spain. After the tumult of the First Spanish Republic, Spaniards were willing to accept a return to stability under Bourbon rule. The Republican armies in Spain — which were resisting a Carlist insurrection — pronounced their allegiance to Alfonso in the winter of 1874–1875, led by Brigadier General Martínez-Campos. The Republic was dissolved and Antonio Cánovas del Castillo, a trusted advisor to the king, was named Prime Minister on New Year's Eve, 1874. The Carlist insurrection was put down vigorously by the new king, who took an active role in the war and rapidly gained the support of most of his countrymen.[77]

A system of *turnos* was established in Spain in which the liberals, led by Práxedes Mateo Sagasta and the conservatives, led by Antonio Cánovas del Castillo, alternated in control of the government. A modicum of stability and economic progress was restored to Spain during Alfonso XII's rule. His death in 1885, followed by the assassination of Canovas del Castillo in 1897, destabilized the government, though constitutional monarchy continued under King Alfonso XIII.[78]

Disaster of 1898

Cuba rebelled against Spain in the Ten Years' War beginning in 1868, resulting in the abolition of slavery in Spain's colonies in the New World. American interests in the island, coupled with concerns for the people of Cuba, aggravated relations between the two countries. The explosion of the USS *Maine* launched the Spanish-American War in 1898, in which Spain fared disastrously. Cuba gained its independence and Spain lost its remaining New World colony, Puerto Rico, which together with Guam and the Philippines were ceded to the United States for 20 million dollars. In 1899, Spain sold its remaining Pacific islands—the Northern Mariana Islands, Caroline Islands and Palau—to Germany and Spanish colonial possessions were reduced to Spanish Morocco, Spanish Sahara and Spanish Guinea, all in Africa.[79]

The "disaster" of 1898 created the Generation of '98, a group of statesmen and intellectuals who demanded liberal change from the new government. However both Anarchism on the left and fascism on the right grew rapidly in Spain in the early 20th century. A revolt in 1909 in Catalonia was bloodily suppressed.[80] Jensen (1999) argues that the defeat of 1898 led many military officers to abandon the liberalism that had been strong in the officer corps and turn to the right. They interpreted the American victory in 1898 as well as the Japanese victory against Russia in 1905 as proof of the superior value of willpower and moral values over technology. Over the next three decades, Jensen argues, these values shaped the outlook of Francisco Franco and other Falangists.[81]

World War I

Spain's neutrality in World War I allowed it to become a supplier of material for both sides to its great advantage, prompting an economic boom in Spain. The outbreak of Spanish influenza in Spain and elsewhere, along with a major economic slowdown in the postwar period, hit Spain particularly hard, and the country went into debt. A major worker's strike was suppressed in 1919.

Mistreatment of the indigenous population in Spanish Morocco led to an uprising and the loss of this North African possession except for the enclaves of Ceuta and Melilla in 1921. (See Muhammad Ibn 'Abd al-Karim al-Khattabi, Annual). In order to avoid accountability, King Alfonso XIII decided to support the dictatorship of General Miguel Primo de Rivera, ending the period of constitutional monarchy in Spain.

In joint action with France, the Moroccan territory was recovered (1925–1927), but in 1930 bankruptcy and

massive unpopularity left the king no option but to force Primo de Rivera to resign. Disgusted with the king's involvement in his dictatorship, the urban population voted for republican parties in the municipal elections of April 1931. The king fled the country without abdicating and a republic was established.

Second Spanish Republic (1931–1939)

Main article: Second Spanish Republic

See also: Catholicism in the Second Spanish Republic

Under the Second Spanish Republic, women were allowed to vote in general elections for the first time. The Republic devolved substantial autonomy to the Basque Country and to Catalonia.

The first governments of the Republic, were center-left, headed by Niceto Alcalá-Zamora, and Manuel Azaña. Economic turmoil, substantial debt inherited from the Primo de Rivera regime, and fractious, rapidly changing governing coalitions led to serious political unrest. In 1933, the right-wing Spanish Confederation of the Autonomous Right (CEDA) won power; an armed rising of workers of October 1934, which reached its greatest intensity in Asturias and Catalonia, was forcefully put down by the CEDA government. This in turn energized political movements across the spectrum in Spain, including a revived anarchist movement and new reactionary and fascist groups, including the Falange and a revived Carlist movement.

Spanish Civil War (1936–1939)

Main article: Spanish Civil War

In the 1930s, Spanish politics were polarized at the left and right of the political spectrum. The left-wing favored class struggle, land reform, autonomy to the regions and reduction in church and monarchist power. The right-wing groups, the largest of which was CEDA, a right wing Roman Catholic coalition, held opposing views on most issues. In 1936, the left united in the Popular Front and was elected to power. However, this coalition, dominated by the centre-left, was undermined both by the revolutionary groups such as the anarchist Confederación Nacional del Trabajo (CNT) and Federación Anarquista Ibérica (FAI) and by anti-democratic far-right groups such as the Falange and the Carlists. The political violence of previous years began to start again. There were gunfights over strikes, landless labourers began to seize land, church officials were killed and churches burnt. On the other side, right wing militias (such as the Falange) and gunmen hired by employers assassinated left wing activists. The Republican democracy never generated the consensus or mutual trust between the various political groups that it needed to function peacefully. As a result, the country slid into civil war. The right wing of the country and high ranking figures in the army began to plan a coup, and when Falangist politician José Calvo-Sotelo was shot by Republican police, they used it as a signal to act.[82]

On 17 July 1936, General Francisco Franco led the colonial army from Morocco to attack the mainland, while another force from the north under General Sanjurjo moved south from Navarre. Military units were also mobilised elsewhere to take over government institutions. Franco's move was intended to seize power immediately, but successful resistance by Republicans in places such as Madrid, Barcelona, Valencia, the Basque country and elsewhere meant that Spain faced a prolonged civil war. Before long, much of the south and west was under the control of the Nationalists, whose regular Army of Africa was the most professional force available to either side. Both sides received foreign military aid, the Nationalists, from Nazi Germany, Fascist Italy and Portugal, the Republic from organised far-left volunteers in the International Brigades.

The Siege of the Alcázar at Toledo early in the war was a turning point, with the Nationalists winning after a long siege. The Republicans managed to hold out in Madrid, despite a Nationalist assault in November 1936, and

frustrated subsequent offensives against the capital at Jarama and Guadalajara in 1937. Soon, though, the Nationalists began to erode their territory, starving Madrid and making inroads into the east. The north, including the Basque country fell in late 1937 and the Aragon front collapsed shortly afterwards. The bombing of Guernica was probably the most infamous event of the war and inspired Picasso's painting. It was used as a testing ground for the German Luftwaffe's Condor Legion. The Battle of the Ebro in July–November 1938 was the final desperate attempt by the Republicans to turn the tide. When this failed and Barcelona fell to the Nationalists in early 1939, it was clear the war was over. The remaining Republican fronts collapsed and Madrid fell in March 1939.[83]

The war, which cost between 300,000 to 1,000,000 lives, ended with the destruction of the Republic and the accession of Francisco Franco as dictator of Spain. Franco amalgamated all the right wing parties into a reconstituted Falange and banned the left-wing and Republican parties and trade unions.[84]

The conduct of the war was brutal on both sides, with massacres of civilians and prisoners being widespread. After the war, many thousands of Republicans were imprisoned and up to 151,000 were executed between 1939 and 1943. Many other Republicans remained in exile for the entire Franco period.

The dictatorship of Francisco Franco (1936–1975)

Main article: Francoist Spain

During Franco's rule, Spain was officially neutral in World War II and remained largely economically and culturally isolated from the outside world. Under a right-wing military dictatorship, Spain saw its political parties banned, except for the official party (Falange). Labor unions were banned and all political activity using violence or intimidation to achieve its goals was forbidden.

Under Franco, Spain actively sought the return of Gibraltar by the UK, and gained some support for its cause at the United Nations. During the 1960s, Spain began imposing restrictions on Gibraltar, culminating in the closure of the border in 1969. It was not fully reopened until 1985.

Spanish rule in Morocco ended in 1967. Though militarily victorious in the 1957–1958 Moroccan invasion of Spanish West Africa, Spain gradually relinquished its remaining African colonies. Spanish Guinea was granted independence as Equatorial Guinea in 1968, while the Moroccan enclave of Ifni had been ceded to Morocco in 1969.

The latter years of Franco's rule saw some economic and political liberalization, the Spanish Miracle, including the birth of a tourism industry. Spain began to catch up economically with its European neighbors.[85]

Franco ruled until his death on 20 November 1975, when control was given to King Juan Carlos.[86] In the last few months before Franco's death, the Spanish state went into a paralysis. This was capitalized upon by King Hassan II of Morocco, who ordered the 'Green March' into Western Sahara, Spain's last colonial possession.

Spain since 1975

Main article: History of Spain (1975–present)

Transition to democracy

Main article: Spanish transition to democracy

The Spanish transition to democracy or new Bourbon restoration was the era when Spain moved from the dictatorship of Francisco Franco to a liberal democratic state. The transition is usually said to have begun with Franco's death on 20 November 1975, while its completion is marked by the electoral victory of the socialist PSOE on 28 October 1982.

Between 1978 and 1982, Spain was led by the *Unión del Centro Democrático* governments.

In 1981 the 23-F coup d'état attempt took place. On 23 February Antonio Tejero, with members of the Guardia Civil entered the Congress of Deputies, and stopped the session, where Leopoldo Calvo Sotelo was about to be named prime minister of the government. Officially, the coup d'état failed thanks to the intervention of King Juan Carlos. Spain joined NATO before Calvo-Sotelo left office.

Along with political change came radical change in Spanish society. Spanish society had been extremely conservative under Franco, but the transition to democracy also began a liberalization of values and societal mores.

Modern Spain

Main article: Modern Spain

From 1982 until 1996, the social democratic PSOE governed the country, with Felipe González as prime minister. In 1986, Spain joined the European Economic Community (EEC, now European Union), and the country hosted the 1992 Barcelona Olympics and Seville Expo '92.

In 1996, the centre-right *Partido Popular* government came to power, led by José María Aznar. On 1 January 1999, Spain exchanged the *peseta* for the new Euro currency. The peseta continued to be used for cash transactions until January 1, 2002. On 11 March 2004 a number of terrorist bombs exploded on busy commuter trains in Madrid during the morning rush-hour days before the general election, killing 191 persons and injuring thousands. Although José María Aznar and his ministers were quick to accuse ETA of the atrocity, soon afterwards it became apparent that the bombing was the work of an extremist Islamic group linked to Al-Qaeda. Many people believe that the fact that qualified commentators abroad were beginning to doubt the official Spanish version the very same day of the attacks while the government insisted on ETA's implication directly influenced the results of the election. Opinion polls at the time show that the difference between the two main contenders had been too close to make any accurate prediction as to the outcome of the elections. The election, held three days after the attacks, was won by the PSOE, and José Luis Rodríguez Zapatero replaced Aznar as prime minister.

On 3 July 2005, the country became the first country in the world to give full marriage and adoption rights to homosexual couples (Belgium has allowed same-sex marriage since 2003 and co-parenting since April 2006, and the Netherlands has allowed same-sex marriage since 2001 and now has a law in preparation to provide full adoption rights in equal conditions to opposite-sex marriages).

At present, Spain is a constitutional monarchy, and comprises 17 autonomous communities (Andalucía, Aragón, Asturias, Islas Baleares, Islas Canarias, Cantabria, Castile and León, Castile–La Mancha, Cataluña, Extremadura, Galicia, La Rioja, Community of Madrid, Region of Murcia, País Vasco, Comunidad Valenciana, Navarra) and two autonomous cities (Ceuta and Melilla).

Monarchy of Spain

From Wikipedia, the free encyclopedia

The **Monarchy of Spain**, constitutionally referred to as **The Crown** and commonly referred to as the **Spanish monarchy** or (historically) **Hispanic Monarchy**, is a constitutional institution and a historic office of Spain.[1] The monarchy comprises a reigning King or Queen of Spain, their family, and the royal household organization which supports and facilitates the monarch in the exercise of his royal duties and prerogatives.[2][3][4] The monarchy is currently represented by King Juan Carlos I, his wife Queen Sofia, and their children and grandchildren.[2][4] Opinion polls routinely reveal that the monarchy remains popular by a wide majority of citizens in contemporary Spain,[5] with as many as 75% of Spanish citizens ranking the monarchy above any other public institution in the country.[6] In 2010, the budget for the Spanish monarchy was 7.4 million euros, one of the lowest public expenditures for the institution of monarchy in Europe.[7][8]

King of Spain

MONARCHY

Arms of His Majesty the King of Spain

Incumbent:
Juan Carlos I

Style:	His Majesty
Heir apparent:	Felipe, Prince of Asturias
First monarch:	Carlos I of Spain
Formation:	1516
Residence:	Royal Palace of Madrid

The Spanish Constitution of 1978 reestablished [1][9] a constitutional monarchy as the form of government for Spain. The 1978 constitution affirmed the role of the King of Spain as the personification and embodiment of the Spanish State and a symbol of Spain's enduring unity and permanence.[2][10] Constitutionally, the king is the head-of-state and commander-in-chief of the Spanish Armed Forces.[2][10] The constitution codifies the use of royal styles and titulary, royal prerogatives, hereditary succession to the crown, compensation, and a regency-guardianship contingency in cases of the monarch's minority or incapacitation.[2][10] According to the constitution, the monarch is also instrumental in promoting Ibero-American relations, the "nations of its historical community".[2][10] In this capacity, the King of Spain serves as the president of the Ibero-American States Organization, representing over 700,000,000 people in twenty-four member nations worldwide. In 2008, Juan Carlos I was considered the most popular leader in all Ibero-America.[6][11]

The Spanish monarchy has its roots in the Visigothic Kingdom founded in Spain and Aquitainia[12] in the 5th century, and its Christian successor states which fought the Reconquista following the Umayyad invasion of Hispania in the 8th century. A dynastic marriage between Isabel I of Castile and Ferdinand II of Aragon united Spain in the 15th century. The Spanish Empire became one of the first global powers as Queen Isabella and King Ferdinand funded Christopher Columbus's exploratory voyage across the Atlantic Ocean. This led to the rediscovery of America by Europeans, which became the focus of Spanish colonization. Juan Carlos I, current King of Spain, is descended directly from Robert of Hesbaye (770-807) through the male line, thus making the Spanish Royal Line the longest lived in the world, second only to the Japanese.

History

Dynastic line from the first Visigothic kings to Juan Carlos I.

The Spanish monarchy has its roots in the Visigothic Kingdom and its Christian successor states of Navarra, Asturias and Aragon, which fought the *Reconquista* or Reconquest of the Iberian peninsula following the Umayyad invasion of Hispania in the 8th century. One of the earliest influential dynasties was the House of Jiménez which united much of Christian Iberia under its leadership in the 11th century. From Sancho III of Navarre (r. 1000-1035) until Urraca of León and Castile (r.1106-1125), members of the Jiménez family claimed the historic Visigothic title *Imperator totius Hispaniae* or *Emperor of All Spain*. The Jiménez rulers sought to bring their kingdoms into the European mainstream and often engaged in cross-Pyrenees alliances and marriages, and became patrons to Cluniac Reforms (c. 950–c.1130). Uracca's son and heir Alfonso VII of León and Castile, the first of the Spanish branch of the Burgundy Family, was the last to claim the imperial title *of Spain*, but divided his empire among his sons. The Castilian Civil War (1366 to 1369) ended with the death of King Peter (r. 1334-1369) at the hands of his illegitimate half-brother Henry, 1st Count of Trastámara who ruled as Henry II (r. 1369–1379). Henry II became the first of the House of Trastámara to rule over a Spanish kingdom. King Peter's heiress, his granddaughter Catherine of Lancaster, married Henry III, reuniting the dynasties in the person of their son, King John II.

In the 15th century, the marriage between Isabel I of Castile and Ferdinand II of Aragon, both members of the House of Trastámara, known as the Catholic Monarchs, united most of the Iberian peninsula. In 1492 the Catholic Monarchs conquered the Kingdom of Granada in southern Spain, the last moorish territory in the Iberian peninsula. This date marks the unification of Spain.

In the early 16th century, the Spanish monarchy controlled several territories in Europe under the Habsburg King Charles I (also Holy Roman Emperor as Charles V), son of Queen Joanna of Castile. His reign ushered in the Spanish Golden Age (1492–1659) a period of great colonial expansion and trade. In 1700, Charles II, the last of the Spanish Habsburgs, designated his sister Maria Theresa's grandson, Philip of France, Duke of Anjou, as his heir. The possible unification of Spain with France sparked the Spanish War of Succession in the 18th century, culminating in the treaties of Utrecht (1713) and Rastatt (1714) which preserved the European balance of power. Philip V was the first member of the House of Bourbon (Spanish: *Borbón*) to rule Spain, the dynasty that still rules today under Juan Carlos I.

During the Napoleonic Wars, the French Emperor Napoleon Bonaparte forced Ferdinand VII to abdicate in 1808 and the Bourbons became a focus of popular resistance against French rule. However, Ferdinand's rejection of the liberal Spanish Constitution of 1812, his ministerial appointments, particularly the exclusion of liberals, gradually eroded popular support for the Spanish monarchy. With the Pragmatic Sanction of 1830, Ferdinand set aside the Salic Law, introduced by Philip V, that prohibited women from becoming sovereigns of Spain. Thereby, as had been customary before the arrival of the Bourbons, the King's eldest daughter Isabella became his heiress presumptive. Opponents of the Pragmatic Sanction argued that it was never officially promulgated, claiming the King's younger brother, Prince Carlos, the rightful heir to the Crown according to the Salic Law.

Thus began a series of civil wars known as the Carlist Wars, named after the Carlists, who supported Prince Carlos' claim. Queen Isabel II, whose main support came from centrists and moderates, was beset by Carlisti forces on the extreme right and radicals on the extreme left. Faced with these challenges, Isabel's rule became increasingly reactionary in her dealings with the polorized Cortes, and her authoritarian rule became increasingly dependent on the army. Isabella II's reliance on the military eroded her popular support from the moderates and centrists until 1868 when she was forced to abdicate. In September 1873 the First Spanish Republic was founded.

A coup d'état restored the Borbón dynasty to the throne in 1874. However, in 1931 local and municipal elections produced victories (particularly in urban areas) for candidates favoring an end to the monarchy and the establishment of a republic. Faced with unrest in the cities, King Alfonso XIII went into exile, but did not abdicate. The ensuing provisional government evolved into the relatively short-lived Second Spanish Republic. The Spanish Civil War began in 1936 and ended on 1 April 1939 with the victory of General Francisco Franco and his coalition of allied organizations commonly referred to as the Nationalists.

General Franco ruled Spain as Regent to the King of Spain. However, without a king on the throne, he ruled through a coalition of allied organizations from the Spanish Civil War including, but not limited to, the fascist Falange political party, the supporters of the Borbon royal family, and the Carlists, until his death in 1975. Despite Franco's alliance with the Carlists, Franco appointed Juan Carlos I de Borbón as his successor, who is credited with presiding over Spain's transition from dictatorship to democracy by fully endorsing political reforms.

Impatient with the pace of democratic reforms, the new king, known for his formidable personality, dismissed Carlos Arias Navarro and appointed the reformer Adolfo Suárez as President of the Government in 1977.[13][14]

The next year the king signed into law the new liberal democratic Constitution of Spain, which was approved by 88% of voters. Juan Carlos' "quick wit and steady nerve" cut short the attempted military coup in 1981 when the king used a specially designed command communications center in the Zarzuela Palace to denounce the coup and command the military's eleven captain-generals to stand down.[15]

Following the events of 1981, Juan Carlos has led a less eventful life, according to author John Hooper.[15] The king does not preside over ceremonies such as the opening of hospitals and bridges as often as monarchs in other nations. Instead, he has worked towards establishing reliable political customs when transitioning one government administration to another, emphasizing constitutional law and protocol, and representing the Spanish State domestically and internationally, all the while maintaining a professionally non-partisan yet independent monarchy.[6][15]

The Crown, constitution, and royal prerogatives

The historic Crown of Spain, (*la Corona de España*) with its roots in the Visigothic kingdom from the 5th century and subsequent successor states, is recognized in Title II *The Crown*, Articles 56 through 65 of the Spanish Constitution of 1978.[1] Constitutionally the monarch embodies and personifies the unity and permanace of the Spanish State, and represents the legal personality of the State and by extension fulfills the role of "Father of the Nation". As a unifying figure for the nation, in 2010 King Juan Carlos worked towards "bridging the gap" between Spain's rival polarized political parties to develop a unified strategy in response to the country's on-going late-2000's economic crisis.[6]

According to the Spanish Constitution voted in referendum, the sovereignty power emanates from the people, so it's the very same people who give the king the power to reign:[2][4]

> National sovereignty belongs to the Spanish people, from whom all State powers emanate.
>
> —Title I, Article 2, the Spanish Constitution of 1978[16]

The monarch "arbitrates and moderates the regular functioning of the institutions" and assumes the highest representation of the Spanish State in international relations.[1] The monarch exercises the functions expressly conferred on him by the constitution and the laws.[2][4]

> The King is Head of State, the symbol of its unity and permanence. He arbitrates and moderates the regular functioning of the institutions, assumes the highest representation of the Spanish State in international relations, especially with the nations of its historical community, and exercises the functions expressly conferred on him by the Constitution and the laws.
>
> —Title II *the Crown*, Article 56, the Spanish Constitution of 1978[17]

Upon accession to the crown and being proclaimed before the Cortes Generales, the king swears an oath to faithfully carry out his constitutional duties and to abide by the constitution and laws of the state. Additionally, the constitution gives the king the added responsibility to ensure that the constitution is obeyed. Lastly, the king swears to respect the rights of Spanish citizens and of the self governing communities. The Prince of Asturias, upon reaching the age of majority, in addition to any regent(s) upon assuming the office, swears the same oath as that of the king along with a further oath of loyalty to the monarch.

> (1) The King, on being proclaimed before the Cortes Generales, will swear to faithfully carry out his duties, to obey the Constitution and the laws and ensure that they are obeyed, and to respect the rights of the citizens and the Self-governing Communities (2) The Crown Prince, on coming of age, and the Regent or Regents, on assuming office, will swear the same oath as well as that of loyalty to the King.
>
> —Title II *The Crown*, Article 61, the Spanish Constitution of 1978

The oath reads as follows:

> “ I swear faithfully to discharge my functions, to sustain and see to it that the Constitution and the Laws are sustained, and to respect the rights of the citizens and of the autonomous communities. ”

The 1978 Constitution, Title II *The Crown*, Article 62, delineates the powers of the king, while Title IV *Government and Administration*, Article 99, defines the king's role in government.[2][4][18] Title VI *Judicial Power*, Article 117, Articles 122 through 124, outlines the king's role in the country's independent judiciary.[19] However, by constitutional convention established by Juan Carlos I, the king exercises his prerogatives having solicited government advice while maintaining a politically non-partisan and independent monarchy. Receiving government advice does not necessarily bind the monarch into executing the advice, except where prescribed by the constitution.

> It is incumbent upon the King:
>
> - a. To Sanction and promulgate the laws
> - b. To summon and dissolve the Cortes Generales and to call for elections under the terms provided for in the Constitution.
> - c. To Call for a referendum in the cases provided for in the Constitution.
> - e. To appoint and dismiss members of the Government on the President of the Government's proposal.
> - f. To issue the decrees approved in the Council of Ministers, to confer civil and military honours and distinctions in conformity with the law.
> - g. To be informed of the affairs of State and, for this purpose, to preside over the meetings of the Council of Ministers whenever, he sees fit, at the President of the Government's request.
> - h. To exercise supreme command of the Armed Forces
> - i. To exercise the right of clemency in accordance with the law, which may not authorize general pardons.
> - j. To exercise the High Patronage of the Royal Academies.
>
> —Title II *The Crown*, Article 62, the Spanish Constitution of 1978[2][4]

Styles, titles, and the 'Fount of Honour'

See also: List of titles and honours of the Spanish Crown, Spanish nobility, and List of military decorations#Spain

The 1978 constitution confirms the title of the monarch is *King of Spain*, but that he may also use other titles historically associated with the Crown.[2][4][20] The titles used by Alfonso XIII before his exile in 1931 which, with this provision of the constitution, the king is entitled to use include:

> *His Catholic Majesty, the King of Spain, King of Castile, of León, of Aragón, of the Two Sicilies, of Jerusalem, of Navarre, of Granada, of Seville, of Toledo, of Valencia, of Galicia, of Sardinia, of Córdoba, of Corsica, of Murcia, of Jaén, of the Algarves, of Algeciras, of Gibraltar, of the Canary Islands, of the East and West Indies, of the Islands and Mainland of the Ocean Sea; Archduke of Austria; Duke of Burgundy, of Brabant, of Milan, of Athens and Neopatria; Count of Habsburg, of Flanders, of Tyrol, of Roussillon, and of Barcelona; Lord of Biscay and of Molina; Captain-General and Supreme Commander of the Royal Armed Forces; Sovereign Grand-Master of the Order of the Golden Fleece and of the orders awarded by the Spanish state.*
>
> —*Title II* The Crown, *Article 56 (2), the Spanish Constitution of 1978.*[2][4][20]

Royal Standard

According to the royal decree published in 1987, the king and the queen consort will formally be addressed as "His Majesty and Her Majesty" (*Their Majesties*, Spanish: *Su Majestad*, *Su* represents *His or Her*) rather than the traditional "Catholic Majesty" (*Su Católica Majestad*). A prince consort of a regnant Queen of Spain will have the style "His Royal Highness" (*Su Alteza Real*).[4] Additionally, a widowed and unmarried queen consort, now a queen dowager, will continue to be addressed as "Her Majesty".[4] A widowed and unmarried prince consort will continue to be addressed as "His Royal Highness".[4] The heir from birth shall hold the title of Prince of Asturias and the other titles historically associated with the heir apparent.[2][4] These additional titles include *Prince of Viana*, historically associated with the heir apparent to the Kingdom of Navarre; with the titles *Prince of Girona* and *Duke of Montblanc* historically associated with the heir apparent for the Crown of Aragon, among others. Other children of the monarch, and the children of the heir apparent, shall have the title and rank of Infante or Infanta (prince or princess), and styled *His or Her Royal Highness* (*Su Alteza Real*).[4] Children of an Infante or Infanta of Spain "shall have the consideration of Spanish Grandees", and the address of "Your Excellency".[4] The royal decree further limits the ability of any regent to use or create titles during the minority or incapacitation of a monarch.[4] No further constitutional language prescribes titles or forms of address to the fourth generation, or great grandchildren, of a reigning monarch.

The monarch's position as the "Fount of honour" within Spain is codified in Article 62 (f); It is incumbent upon the monarch to "[...] confer civil and military positions and award honors and distinctions in conformity of the law".[2][21] According to the Spanish Ministry of Justice, nobility and grandee titles are created by the "sovereign grace of the king", and may be passed on to the recipient's heirs, who may not sell the title.[21] Titles may revert back to the Crown when their vacancy is observed.[21] Succession of titles may follow one of several courses listed on the *Title of Concession* when the title is created.[21] As a general rule, most titles are now inherited by absolute Cognatic Primogeniture (as of 2006), in which the first born inherits all titles regardless of gender. However, a title holder may designate his successor, *Succession by Assignment*, or disperse his titles among his children – with the eldest getting the highest ranking title, *Succession by Distribution*.[21]

The insignia of the Order of Charles III.

The king awarded peerages to two of his former prime ministers who have retired from active politics: Adolfo Suárez, who was created 1st Duke of Suárez; and Leopoldo Calvo-Sotelo who was created 1st Marquess of la Ría de Ribadeo. The king's third prime minister Felipe González declined a title, while José María Aznar's tenure was mired in controversies making a peerage unlikely.[22][23][24][25] All successive politicians remain active within politics.

The king grants military and civil orders and awards of distinction, customarily on the advice of government. The most distinguished order the king may award is the Order of Charles III to "citizens who, with their effort, initiative and work, have brought a distinguished and extraordinary service to the Nation".[26][27] The Laureate Cross of Saint Ferdinand is Spain's highest military award for gallantry. Other historic awards and distinctions include the Spanish Order of the Golden Fleece, the Order of Isabella the Catholic, the Order of Alfonso X, the Order of Marie Louise, the Order of Saint Raimundo de Penafort, the Order of Military Merit, the Order of Naval Merit, the Order of Aerial Merit, the Order of Civil Merit, the Order of Cultural Merit, the Order of Calatrava, the Order of the Knights of Santiago, the Order of Sant Jordi d'Alfama, and the Order of Alcántara, among others.

Inviolablity and lèse majesté

The Spanish monarch is personally immune from prosecution for acts committed by government ministers in the king's name.[2][4] This legal convention mirrors the concept of sovereign immunity which evolved in similar constitutional monarchies. The legal concept of sovereign immunity evolved into other aspects of immunity law in similar liberal democracies, such as parliamentary immunity, judicial immunity, and qualified immunity in the United States.

> The Person of the King of Spain is inviolable and shall not be held accountable. His acts shall always be countersigned in the manner established in section 64. Without such countersignature they shall not be valid, except as provided under section 65(2).
>
> —Title II *The Crown*, Article 56, the Spanish Constitution of 1978.[2][4][28]

The concept of lèse majesté (*lesa majestad*) exists in Spanish jurisprudence, which is the crime or offense violating the dignity of the head-of-state or the State itself. According to Article 56 of the 1978 Constitution the monarch and the dignity of the Spanish State are one and the same: "The King is Head of State, the symbol of its unity and permanence".[2][4] Breaching Spain's *lèse majesté* laws may carry fines and up to two years in prison.[29] The concept is within the same legal sphere as legislation prohibiting flag desecration in other democratic countries. Additionally, *lèse majesté*

extends to any foreign heads-of-state visiting Spain, and other members of the royal family, and to the Spanish President of the Government as the king's appointed officer.

The Spanish satirical magazine *El Jueves* was fined for violation of Spain's *lèse majesté* laws after publishing an issue with a caricature of the Prince and Princess of Asturias engaging in sexual intercourse on their cover in 2007.[30] In 2008, 400 Catalonia separatists burned images of the king and queen in Madrid,[31] and in 2009 two Galician separatists were fined for burning effigies of the king.[32]

Succession and regency

Statue of Queen Urraca in the Parque del Buen Retiro in Madrid. Urraca succeeded as queen in 1108, becoming Europe's first queen regnant.

According to Article 57 the Crown of Spain is inherited by the successors of King Juan Carlos I de Borbón through *male preference primogeniture*[2][4] Article 57 is also significant in that it omits entirely the Franconist era designation of Juan Carlos as Franco's successor.[1] While drafting the new constitution, lawyer and liberal congressman Joaquín Satrústegui (1909–1992) insisted that the phrase *the legitimate heir of the historic dynasty* be included in the text to underscore that the monarchy was an historic institution predating the constitution or the prior regime.[1] Additionally, Satrústegui was "anxious to remove" notions that the constitutional monarchy had any Francoist origins, according to author Charles Powell.[1]

> The Crown of Spain shall be inherited by the successors of HM Juan Carlos I de Borbón, the legitimate heir of the historic dynasty. Succession to the throne shall follow the regular order of primogeniture and representation, the first line having preference over subsequent lines; and within the same line the closer grade over the more remote; and within the same grade the male over female, and in the same sex, the elder over the younger..
>
> —Title II *the Crown*, Article 57 (1), the Spanish Constitution of 1978.[2][4][33]

Male preference cognatic primogeniture has been practiced in Spain since the 11th century in the various Visigothic successor states and codified in the *Siete Partidas*, with women able to inherit in certain circumstances.[34] However, with the succession of Philip V in 1700, the first of the Spanish Bourbons, women were barred from succession until Ferdinand VII reintroduced the right and designated his eldest daughter Isabella as his heiress presumptive by 1833.

With the birth of Infanta Leonor of Spain on 31 October 2005 to the Prince and Princess of Asturias, President Zapatero reaffirmed his government's intention to amend the Spanish constitution by introducing full and equal cognatic primogeniture, also known in French as *aînesse intégrale*, which is a gender neutral succession law already adopted in Norway, Sweden, the Netherlands, Belgium, and Denmark. Zapatero's proposal was supported by the leader of the main opposition party, the conservative Partido Popular, making its passage likely. The rights of the current heir apparent Felipe, Prince of Asturias, would be maintained. With full or equal cognatic primogentiture, the first born would be the heir apparent regardless of gender. Paving the way, in 2006 the king issued a decree reforming the succession to noble titles from male preference primogeniture to absolute and equal cognatic primogeniture.[21] However, as succession to the Crown is codified explicitly in the constitution, its reform mandates an amendment to the constitution, a somewhat more complicated process than issuing a royal decree. Prince Felipe has counseled reformers that there is plenty of time before the constitutional amendment would need to be enacted as he is next in line, and after him his daughters.

If all lines designated by law become extinct, the constitution reserves the right for the Cortes Generales to provide for the succession "in the manner most suitable for Spain".[2][4] The 1978 constitution disinherits members of the royal family from succession if they marry against the expressed prohibition of the monarch and the Cortes Generales, as well as their descendants.[2][4] Lastly, Article 57 further provides that "Abdications and renunciations and any doubt in fact or in law that may arise in connection with the succession to the Crown shall be settled by an organic act".[2]

Constitutionally, the current heirs of Juan Carlos I;[2][4][35]

1. HRH The Prince of Asturias, son of King Juan Carlos.
2. HRH The Infanta Leonor, elder daughter of The Prince and Princess of Asturias
3. HRH The Infanta Sofía, younger daughter of The Prince and Princess of Asturias
4. HRH The Infanta Elena, Duchess of Lugo, eldest daughter of King Juan Carlos.
5. HE Felipe Juan Froilán de Marichalar y de Borbón, son of Infanta Elena.
6. HE Victoria Federica de Marichalar y de Borbón, daughter of Infanta Elena.
7. HRH The Infanta Cristina, Duchess of Palma de Mallorca, younger daughter of King Juan Carlos.
8. HE Juan Urdangarín y de Borbón, eldest son of Infanta Cristina.
9. HE Pablo Urdangarín y de Borbón, middle son of Infanta Cristina.
10. HE Miguel Urdangarín y de Borbón, youngest son of Infanta Cristina.
11. HE Irene Urdangarín y de Borbón, daughter of Infanta Cristina.

The constitution outlines the regency of the monarchy and guardianship of the person of the monarch in the event of his minority or incapacitation.[2][4] The office of Regent(s) and the Guardianship of the monarch (whether the monarch is in his minority or incapacitated), may not necessarily be the same person. In the event of the minority of the monarch, the surviving mother or father, or oldest relative of legal age who is nearest in line to the throne, would immediately assume the office of Regent, who in any case must be Spanish.[2][4] If a monarch becomes incapacitated, and that incapacitation is recognized by the Cortes Generales, then the Prince of Asturias (the heir apparent), shall immediately become Regent, if he is of age. If the Prince of Asturias is himself a minor, then the Cortes Generals shall appoint a Regency which may be composed of one, three, or five

persons.[2][4] The person of the king in his minority shall fall under the guardianship of the person designated in the will of the deceased monarch, provided that he or she be of age and of Spanish nationality.[2][4] If no guardian has been appointed in the will, then the father or mother will then assume the guardianship, as long as they remain widowed. Otherwise, the Cortes Generales shall appoint both the Regent(s) and the guardian, who in this case may not be held by the same person, except by the father or mother of direct relation of the king.[2][4]

The king, the government, and the Cortes Generales

The constitution defines the government's responsibilities.[18] The government consists of the President of the Government and ministers of state. The government conducts domestic and foreign policy, civil and military administration, and the defense of the nation all in the name of the king. Additionally, the government exercises executive authority and statutory regulations.[18] The most direct prerogative the monarch exercises in the formation of Spanish governments is in the nomination and appointment process of the President of the Government (*Presidente del Gobierno de España*).[18][36][37] Following the General Election of the Cortes Generales (*Cortes*), and other circumstances provided for in the constitution, the king meets with and interviews the political party leaders represented in the Cortes, and then consults with the Speaker of the Congress (who, in this instance, represents the *whole* of the Cortes Generalas).

A copy of the Spanish Constitution, signed by King Juan Carlos, is held at the Palace of the Cortes.

- (1) *After each renewal of the Congress and the other cases provided for under the Constitution, the King shall, after consultation with the representatives appointed by the political groups with parliamentary representation, and through the Speaker of the Congress, nominate for the Presidency of the Government.*
- (2) *The candidate nominated in accordance with the provisions of the foregoing subsection shall submit to the Congress the political program of the Government he or she intends to form and shall seek the confidence of the House.*

—Title II *Government and Administration*, Article 99 (1) & (2), the Spanish Constitution of 1978.[2][18][38]

Constitutionally, the monarch may nominate anyone he sees fit as his prerogative. However, it remains pragmatic for him to nominate the person most likely to enjoy the confidence of the Cortes and form a government, usually the political leader whose party commands the most seats in the Cortes.[18] For the Crown to nominate the political leader whose party controls the Cortes can be seen as a royal endorsement of the democratic process, a fundamental concept enshrined in the 1978 constitution. By political custom, the king's nominees have all been from parties who hold the most seats in the Cortes. The king is normally able announce his nominee the day following a General Election.

The king's nominee is presented before the Cortes by the Speaker where the nominee and his political agenda are debated and submitted for a Vote of Confidence (*Cuestión de confianza*) by the Cortes.[18] A simple majority confirms the nominee and his program.[18] After the nominee is deemed confirmed by the Speaker of the Congress of Deputies, the king appoints him as the new President of the Government in a ceremony performed at the *Salón de Audiencias* in the la Zarzuela Palace, the official residence of the king.[18] During the inauguration ceremony, the President of the Government takes an oath of office over an open Constitution next to the Holy Bible. The oath as taken by President Zapatero on his second term in office on 17 April 2004 was;[39]:

> I swear, under my conscience and honor, to faithfully execute the duties of the office of President of the Government with loyalty to the King, obey and enforce the Constitution as the main law of the State, and preserve in secret the deliberations of the Council of Ministers.
>
> —Oath of office of President Rodríguez Zapatero, given before the king 17, April, 2004, La Zarzeula.[40]

However, if no overall majority was obtained on the first vote of confidence, then the same nominee and program is resubmitted for a second vote within forty-eight hours.[18] Following the second vote, if confidence by the Cortes is still unreached, then the monarch again meets with political leaders and the Speaker, and submits a new nominee for a vote of confidence.[18] If, within two months, no candidate has won the confidence of the Cortes then the king dissolves the Cortes and calls for a new General Election.[18] The king's royal decree is countersigned by the Speaker of the Congress.[18]

In the political life of Spain, the king would already be familiar with the various political leaders in a professional capacity, and perhaps less formally in a more social capacity, facilitating their meeting following a General Election. Conversely, nominating the party leader whose party maintains a plurality and who are already familiar with their party manifesto facilitates a smoother nomination process. In the event of coalitions, the political leaders would customarily have met beforehand to hammer out a coalition agreements before their meeting with the king. Once appointed, the President of the Government forms an administration whose ministers are appointed and removed by the king on the president's advice. No minister may take up his appointment until after they give their oath of office to obey the constitution with loyalty to the king.[1]

As early as 1975, Juan Carlos expressed his view that his role in the government of a "crowned democracy" would be for him to counsel and orient an administration's "thrust in action", but for the government to take the initiative without the need for it to involve the king unnecessarily in its decisions.[1] Therefore, Juan Carlos has abstained from presiding over cabinet meetings except under special occasions or circumstances.[1] Generally, the king presides over cabinet meetings once or twice a year (more regularly if needed) to be directly informed by ministers of non-partisan national and international concerns.[1] However, the king does meet weekly with the President of the Government, usually on Tuesday mornings.[1][41] During the late-2000's economic recession which gripped the nation, the king discretly used his influence to facilitate a bi-partisan

response to the crisis.[6]

Governments and the Cortes sit for a term no longer than four years when the president tenders his resignation to the king and advises the king to dissolve the Cortes, prompting a General Election. It remains within the king's prerogative to dissolve the Cortes if, at the conclusion of the four years, the president has not asked for its dissolution, according to Title II Article 56.[42] The president may call for earlier elections, but no sooner than a year after the prior General Election. Additionally, if the Government loses the confidence of the Cortes, then it must resign. In the event that a president dies or becomes incapacitated while in office, then the government as a whole resigns and the process of royal nomination and appointment takes place. The vice president would take over the day to day operations in the meantime, even while vice president himself may be nominated by the king.

Royal assent, judiciary, and promulgation of the laws

The constitution vests the sanction (Royal Assent) and promulgation (publication) of the laws with the king, while Title III *The Cortes Generals*, Chapter 2 *Drafting of Bills* outlines the method with which bills are passed. According to Article 91, within fifteen days that a bill has been passed by the Cortes Generales, the king shall give his assent and publish the new law. Article 92 invests the king with the right to call for referendum on the advice of the president and the previous authorization of Congress.[2]

No provision within the constitution invests the king with the ability to veto legislation directly, however no provision prohibits the king from withholding royal assent, effectively a veto. When the media asked King Juan Carlos if he would endorse the 2005 bill legalizing gay marriages (the implication implied that he may not endorse the bill), he answered "Soy el Rey de España y no el de Bélgica" ("I am the King of Spain, not of Belgium")– a reference to King Baudouin I of Belgium who had refused to sign the Belgian law legalising abortion in Belgium.[43]

According to Title VI of the constitution, Justice in Spain "emanates from the people and is administered on behalf of the King by judges and magistrates members of the Judicial Power..."[19] It remains a royal prerogative for the king to appoint the twenty members to the General Council of the Judicial Power of Spain (Spain's Supreme Court), and then appoint the President of the Supreme Court nominated by the General Council, according to Article 122, Subsection 3, of the constitution.[2][19] However, by convention the king's nominations have been with the advice of the government of the day.

> The General Council of the Judicial Power shall consist of the President of the Supreme Court, who shall preside over it, and of twenty members appointed by the King for a five-year period, of which twelve shall be judges and magistrates of all the judicial categories, under the terms provided for by the organic act; four nominated by the Congress and four by the Senate, elected in both cases by three-fifths of their members amongst lawyers and other jurists of acknowledged competence with more than fifteen years of professional practice.
>
> —Title VI *Judicial Power*, Article 122 (3).[2][44]

Additionally, the king appoints the State Public Prosecutor on the advice of the government, according to Article 124.[19] The king may grant clemency in accordance with the law, however the king may not authorize a general pardon of government ministers who have been found criminally liable or guilty of treason by the Criminal Article of the Supreme Court, according to Articles 62 and 102.[19]

The king and international diplomacy

Constitutionally the king accredits Spanish ambassadors to international states and governments, and foreign representatives to Spain are accredited before him. However, the government of the day manages diplomatic policy on behalf of the monarch.[2][10] Additionally, it remains the responsibility for the monarch to express the state's assent to international commitments and treaties, which must be in conformity with the Spanish constitution.[2][10]

Members of the Organization of Ibero-American States
King Juan Carlos I serves as president

Juan Carlos followed a foreign policy during the first decade of his kingship coined *Reencounter and Reconciliation*, which greatly improved Spain's standing on the world stage.[1] The king reconciled long standing historic tensions with the Netherlands and cultivated relationships with France and Germany which led directly to Spain's entry into the European Community and into NATO.[1] Following the tensions between Franco and the Papacy over the reforms of the Second Vatican Council, Juan Carlos' personal relations with successive popes greatly improved diplomatic relations between the Holy See and Spain, and with Pope Paul VI blessing Juan Carlos' democratic reforms.[1][45] According to historian Charles Powell, it was the king's goal to win Spain's full acceptance by other European powers.[1] The king, a self described *Europeanist*, was awarded the prestigious Charlemagne Award in 1982 for his steadfast work towards democracy and for supporting European unity.[1] The constitution gives the monarch special responsibility in promoting Spanish relations with members of its historic community, the nations formerly part of the Spanish Empire and also relations with Portugal and Brazil.[2][10] Fulfilling this responsibility, the King of Spain serves as president of the twenty-four member Ibero-American States Organization. With his support of democracy, various elements within Ibero-America political society have sought the king's advice on how to transition from a dictatorship to a democracy.[1] For his efforts, by 2008 the king was voted the most popular leader in all of the Ibero-America community.[11]

The king is assisted in his diplomatic missions by the Foreign Ministry, and high-ranking members of the Foreign Ministry are made available to the

king when he is abroad representing Spain.[46] The Royal Household coordinates with the Foreign Ministry to ensure successful diplomatic engagements. Additionally, other members of the royal family, most notably the Prince of Asturias, may represent the Spanish State internationally. Though the Spanish monarchy is independent of the government, it is important that royal speeches are compatible with government foreign policy to project a unified diplomatic effort. To achieve balance, Royal Household speechwriters confer with the Foreign Ministry to ensure that the official speeches strike the desired diplomatic tone between the king's views and government policy.[1][47][48] When necessary and appropriate, the king and his government may focus on two different aspects in a diplomatic engagement. The king may emphasize one aspect, such as the promotion of democracy and historic relations; while the government focuses on the details of strategic planning and bilateral coordination.

The king and members of the royal family have represented Spain in Europe, Latin America, in the United States and in Canada, nations in the Middle East and North Africa, in China, Japan, the Philippines, Australia, New Zealand and many countries in sub-Sahara Africa. The king and Prince of Asturias have addressed many international organizations which include the United Nations, the institutions of the European Union, the Council of Europe, the Organization of American States, UNESCO, the International Labour Organization, and the Arab League. Since 2000, Prince Felipe has represented Spain in half of all diplomatic engagements.

The king as Commander-in-Chief

The role of the Crown in the Spanish armed forces is rooted in tradition and patriotism as demonstrated in the symbols and the history of the military. The role of the Spanish monarch in the chain of command of the forces is established by the constitution of 1978, and other statutory law (Acts of Parliament, Royal Decrees etc.).[2]

Emblem of Spanish Armed Forces

> It is incumbent upon the King [...] to exercise Supreme Command of the Armed Forces.
> —Title II *The Crown*, Article 62 (H), the Spanish Constitution of 1978.[2]

> The King exercises Supreme Command of the Armed Forces and other powers regarding national defense that are provided for in the constitution and other laws.
> —Title 1 *the Crown*, Article 3, National Defense Act, November 17, 2005

However, Title IV of the constitution vests the administration of the armed forces and formulation of national defense policy with the President of the Government, a civilian authority who is nominated and appointed by the king, confirmed by the elected Congress of Deputies and, as such, is representative of the Spanish people.

Royal Decree #1310 of Oct 5, 2007 requires the National Defence Council to report to the monarch, and that the king is to be the Chairman of the Council when he attends its sessions. The National Defence Council is Spain's highest advisory body on security and defense matters and performs the same basic function as the US National Security Council. King Juan Carlos chaired the first full meeting of the council on Nov 10 2007, at which the newly proposed National Defence Directive was reviewed along with the ongoing peace missions in Afghanistan, Kosovo, Bosnia and Lebanon.[49]

The king inspecting the troops in a military parade, 2009

As Commander-in-Chief of the armed forces, the king holds the highest ranking office in the military chain of command. The king's ranks include Captain General of the Army, the Navy and the Air Force. The king is the only officer in the military to hold this 5 Star General rank. The king takes a keen interest in all aspects of military policy as evidenced by "his direct participation in the life of the Spanish Armed Forces".[50] The king's participation in Spanish military life stems from his constitutional duty to "arbitrate and moderate" the regular working of state institutions. Serving in the armed forces is considered an expectation of the heir apparent, and Juan Carlos served in the various branches of the armed forces before he became king. Likewise, Prince Felipe, Prince of Asturias, has served in the armed forces.

The monarch has made his desire for a strong raport with the armed forces clear in speeches to his officer corp:

> I do not feel a stranger in your company, and my functions are not limited to being your king and to holding the Supreme Command of the Armed Forces. I am also your companion... I feel one more among you... because my youth has been formed, as yours and with many of you, in military academies where virtues are praised and qualities infused which are not modified by time or by the changes that may occur in society [...] In my heart, in all my being, side by side with my love for the country, palpitates military spirit, and I feel always identified with my companions in the army, with your concerns, your sorrows, your satisfactions and your hopes. So when I see you joyful, I am joyful. When I feel You sad, I am sad. And all, absolutely all of your worries, all absolutely all of your problems gravitate on your king and Captain General-your companion-with the same intensity that is felt by you.
> —Juan Carlos Easter Military Address, 1980[51]

Contemporary monarchy

Popularity and criticism

The Spanish monarchy continues to enjoy wide support and popularity by Spanish citizens since its constitutional restoration in 1978, according to Fernando Villespin,[52] president of the *Centro de Investigaciones Sociológicas* (CIS, *English: Sociological Research Center*) in 2008.[53][54][55]

According to Villespin, the king's average approval rating of over 70% through the years consistently out-performs those of elected political leaders, and a similar percentage of respondents consider that the king plays an important role in maintaining Spanish democracy.[53] Public trust in Juan Carlos' kingship "comes only behind that of the National Ombudsman," Villespin continued.[53] Members of the royal family are routinely voted among the most respected public figures in Spain,[56] and in 2010 as many as 75% of Spanish citizens ranked the monarchy as "above any other public institution in the country", according to Dr Juan Díez-Nicolás, a former president of the CIS and founder of the private consulting firm ASEP (*Análisis Sociológicos Económicos y Políticos*).[6][57] The CIS, a non-partisan government funded independent research institution, has been researching public opinion of the monarchy since 1984 and tracks three basic lines of inquiry; *what is public confidence in the monarchy, what is the role of the monarchy in a democratic system, and to what degree has the king contributed to the democratic process.*[53]

The king is routinely considered one of the top ten most popular figures in Spain,[6] with as many as 80% of Spanish believing Spain's transition to democracy would not have been made possible without the king's personal intervention.[53] Historian and royal biographer Charles Powell told BBC News in 2008 that "There's a deep-rooted feeling of gratitude for the king's role in the transition to democracy [and] Polls show that he is the individual to whom democratisation is most closely attributed, and the sense of gratitude cuts across class and ideological lines."[14]

Part of the monarchy's appeal may lay in the personal characteristics of Juan Carlos, whose philosophy on his family, on personal integrity, and on a selfless work ethic were revealed in intimate private letters of fatherly advice to his son Felipe, Prince of Asturias, between 1984 and 1985, when Felipe was then attending university in Canada.[58][59] According to Juan Carlos a monarch must not take his position for granted but work for the people's welfare, be kind, attentive and helpful, and "appear animated even when you are tired; kind even when you don't feel like it; attentive even when you are not interested; helpful even when it takes an effort [...] You need to appear natural, but not vulgar; cultivated and aware of problems, but not pedantic or conceited".[58][59]

The king continued;

> Those whom God has chosen to be kings and to be at the head of the destiny of a country do not have any other choice than to start to understand the importance and the special characteristics of the position, because one can say that they start to become adults long before other boys of their age. If in this life it is as important to form and strengthen character enough to permit us to lead, it is not any less to know how to obey. In spite of the high positions that we hold in life, it will always be vital to know we also have duties to perform and obedience always involves real honour [...] We have to build a closely united family, without fissures or contradictions, we must not forget that on all and on each one of us are fixed the eyes of Spaniards whom we should serve with body and soul. I do not want to prolong my first letter any more in order not to tire you, but I would hope that this as well as the succeeding ones I send you leave a profound impression on you and are read calmly and thought about seriously.
>
> —King Juan Carlos I to Prince Felipe, 1984.[58][59]

"I have had to stand snubs and contempt, incomprehension and annoyances that you, thank God, have not known", reminded the king to his son in one letter.[58][59] The private letters from father to son remain within the royal household, but were copied and released into the public domain without any approval or foreknowledge, according to a Zarzuela palace official who confirmed the letter's authenticity.[58][59]

Despite the high approval ratings from the Spanish mainstream, and in particular the personal popularity enjoyed by the current king and queen, the monarchy has been the focus of acute criticism from the extreme left and extreme right of the Spanish political spectrum, and by regional separatists. As many as 22% of Spanish citizens feel that a republic would be the better form of government for Spain, while separatists and independence supporters in the Basque Country and Catalonia routinely protest the monarchy as the living symbol of a *united* Spain.[14][31][32][60] The extreme left criticize the institution of monarchy as anachronistic, while the far right criticize King Juan Carlos personally because he has given his royal assent and tacit approval to what they perceive to be a liberal agenda in Spain and a secularism of Spanish life.[14][61][62]

Charitable, cultural, and religious patronage

Members of the royal family, "the royals", are often asked by non-profit charitable, cultural, or religious organizations within Spain or internationally to become their patrons, a role the Spanish constitution recognizes.[63] Royal patronage conveys a sense of official credibility as the organization is vetted for suitability. A royal presence often greatly raises the profile of the organization and attracts public interest and media coverage that the organization may not have otherwise garnered, aiding in the charitable cause or cultural event. Royals use their considerable celebrity to assist the organization to raise funds or to affect or promote government policy.

Members of the royal family also pursue charitable and cultural causes of special interest to themselves. Queen Sofía devotes much of her time to the Queen Sofia Foundation (*Fundación Reina Sofia*).[64] Established in 1977 out of the queen's private funds, the non-profit aims to assist, promote, and develop the spiritual and physical needs of men and women from diverse backgrounds, with a particular focus on progress, welfare, and justice.[64]

Prince Felipe chairs the Prince of Asturias Foundation (*Fundación Príncipe de Asturias*), which aims to promote "scientific, cultural and humanistic values that form part of mankind's universal heritage."[65] The Prince of Asturias Foundation holds annual awards ceremonies acknowledging the contributions of individuals, entities, and organizations which make notable achievements in the sciences, humanities, or public affairs. Prince Felipe serves as president of the Codespa Foundation, which finances specific economic and social development activities in Ibero-America and other countries, and serves as president of the Spanish branch of the Association of European Journalists, which is composed of achieving communications professionals.[66][67] Prince Felipe also serves as honorary chair of the Ministry of Culture National Awards Ceremonies.[68]

Infanta Elena, Duchess of Lugo, the king's eldest daughter, is the Director of Cultural and Social Projects of Mapfre Foundation,[69] while Infanta Cristina, Duchess of Palma de Mallorca, the king's youngest daughter, served as the Goodwill Ambassador to the United Nations for the 2nd World Assembly on Ageing, and is a member of the Dali Foundation Board of Trustees, president of the International Foundation for Disabled Sailing, and Director of Social Welfare at the La Caixa Foundation in Barcelona where she lives with her family.[70]

The king, queen, and Infanta Cristina are all members of the Bilderberg Group, an informal think-tank centered on United States and European relations, and other world issues.[71][72][73]

The king gives annual Christmas Eve National Speeches entitled "Mensaje de S.M. Juan Carlos I" which are broadcast by radio and television through various media outlets.[74] The king usually refers to social or economic challenges facing the nation as well as positive messages of charity, good will, and religious faith. In 2004, the speech was highly related to the 2004 Madrid train bombings; in 2006 he talked about the need to become a united nation against terrorism (in implicit support of Zapatero's anti-terrorist policies), and he mentioned the increasing force of immigrants in Spain and appreciated their contribution to the economy.

Main article: Royal Household of Spain

Royal Palace of Madrid

The royal household organization, constitutionally *La Casa de Su Majestad el Rey*,[75] supports and facilitates the monarch and members of the royal family in fulfilling their constitutionally hereditary responsibilities and obligations.[2][76] The royal household is funded through yearly budgets drafted by the government of the day in consultation with the monarch, and brought before the Cortes for approval, and then paid directly to the monarch. The royal household coordinates with various government administration ministries, and receives their advice and support where needed, though in no way does the royal household form part of the government administration.[76] Royal household staff serve at the pleasure of the monarch, and does not resign when the Spanish government resigns during election cycles. The royal household is managed by the *Head of the Household* who inspects and supervises all household operations through various bureaus or offices of the General Secretariat. The Head of the Household is assisted by a Secretary General.[76] The General Secretariat is divided into various departments which includes planning and coordination, the secretariat (bureau) of H.M. the Queen, the secretariat (bureau) of H.R.H. the Prince of Asturias, security services, public relations and the media, protocol, administration, Infrastructure and Services.[76]

The Spanish Armed Forces are represented by the *Head of the Military Chamber*, who does not advise the king on matters of national defense, which is the portfolio of the Minister of Defence and President of the Government to advise the king. Rather, the *Head of the Military Chamber* coordinates royal military operations and ceremonies, and prepares the royal family for any military activities.[76] The Military Chamber is directed by a commander who must be an active lieutenant-general or a general within the Spanish military, and is under the direct orders of the king.[76] The commander maintains an office with a military legal advisor, an auditor, and section heads for staffing, protocol, operations and logistics.[76] The king is assigned personal aides-de-camp for his assistance, and by extension to the queen and Infantas Doña Elena and Doña Cristina during their official activities.[76] Aides-de-camp are drawn from all of the services, with four from the Army, two from the Navy, two from the Air Force, and one from the Civil Guard.[76] The Prince of Asturias is entitled to personal aides-de-camp assigned to him and the Princess of Asturias, with one drawn each from the army, the navy and the air force.[76]

The Head of the Household, Secretary General, and Head of the Military Chamber are considered senior management staff and are compensated at the level of senior government administration officials.[76] In 2004, the royal household employed 100 staff members.

The royal household's public relations department manages and maintaines an official website on behalf of the royal family known as *Casa de S.M. El Rey (http://www.casareal.es/index-iden-idweb.html)* . The website lists biographical information on members of the immediate royal family, charts their activities, records speeches given at events, and publishes their expected diary of upcoming events, among other information. Additionally, the public relations department publishes the king's diary of his private meetings and the meeting minutes, so long as the other party agrees.[6]

Residences and royal sites

See also: Spanish royal sites

The king and queen officially reside at the Oriente Palace in Madrid.[77] However, the couple have spent the majority of their time at the modest La Zarzuela Palace, a former hunting lodge on the El Pardo estate on the outskirts of Madrid. The Prince of Asturias and his family reside at the *Prince's House* (also known as the *Pavilion*) near the La Zaruela, also on the El Pardo estate.[15][78] The El Pardo Palace itself has served as the "guest house" for visiting heads of state since the 1980s.

The Oriente Palace and the palaces of the El Pardo estate form part of the "Spanish royal sites", a term used to denote the set of palaces, monasteries, and convents built under royal patronage throughout history. Royal sites are owned by the state and administered by the *Patrimonio Nacional* (National Heritage) on behalf of the government of the day, and made available for the king as the head of state. Whenever a member of

the royal family is not in residence, the royal site is made available for public visitations. The royal household coordinates directly with the National Heritage Council and releavent government ministries or other interests in their planning and staging of state events, with royal sites often providing the setting.

The king and his family regularly vacation on Palma de Mallorca making use of the Marivent Palace there since the 1960s.[15] In 2001 the king, known as a keen yachtman, was given a yacht by the Balearic Islands and a consortium of local business leaders as part of an effort to further associate the royal family with the islands, and to promote the islands as a tourist destination.[79] The yacht, known as the *Fortuna*, is also owned by the State and administered by the Patrimonio Nacional.[79]

Annual budget and taxation

Constitutionally the monarch is entitled to compensation from the annual state budget for the maintenance of his family and household administration, and freely distributes these funds in accordance with the laws.[2][76] According to the Royal Household, "[T]he purpose of these resources is to ensure that the Head of State may carry out his tasks with the independence which is inherent to his constitutional functions, as well as with due effectiveness and dignity".[76] The annual budget pays the remunerations for senior management staff, management staff and career civil servants, other minor staffing positions, and for general office expenses.[76] The Head of Household, Secretary General, and other management staff salaries must be comparable to other administration ministers within the government, though in no way do they form part of the government or administration.[76] As such, the management staff experience increases, decreases, or freezes to their pay in accordance with the fluctuations of government minister salaries.[76] Additionally, the annual budget pays for the maintenance and expenses of senior members of the royal family who undertake royal duties; which includes grocery, clothing, and toiletries allotments.[76] The budget approved by the Cortes for 2010 was just under 7.4 million euros, a budget only slightly larger than that spent on the Luxembourg monarchy.[8][76] Not included in the annual budget is the maintenance and upkeep of Spanish royal sites, which are owned by the state and made available to the king as the head-of-state, but administered by Patrimonio Nacional on behalf of the government of the day. Spanish royal sites are open to the public when members of the royal family are not in residence. Maintenance and upkeep includes groundskeeping, domestic staffing and catering.[76] The budget is administered with professional Public Administration accounting procedures, and is audited by government auditors.[76] All members of the royal family are subject to taxation and annually submit Income Tax and Wealth Tax returns and effect the relevant payments.[76]

Juan Carlos I of Spain

From Wikipedia, the free encyclopedia

Juan Carlos I (Spanish pronunciation: ['xwaŋ 'karlos], baptized as *Juan Carlos Alfonso Víctor María de Borbón y Borbón-Dos Sicilias*[note 1] and born 5 January 1938) is the reigning King of Spain.[3] He is a direct descendant through the male line of Robert of Hesbaye (770-807), currently making the Spanish Royal Line one of the longest lived in the world, second only to the Japanese.

On 22 November 1975, two days after General Franco's death, Juan Carlos was designated king according to the law of succession promulgated by Franco. Spain had no monarch for 38 years in 1969 when Franco named Juan Carlos as the next head of state.[4] The Spanish Constitution of 1978, voted in referendum, acknowledges him expressly as King of Spain. The Spanish Constitution, Title II: the Crown, Article 56, Subsection 1, affirms the role of the Spanish monarch as the personification and embodiment of the Spanish nation, a symbol of Spain's enduring unity and permanence; and as such, the monarch is the head-of-state and commander-in-chief of the Spanish Armed Forces in a system known in Spanish as *monarquía parlamentaria* (constitutional monarchy).[5][6]

King Juan Carlos successfully oversaw the transition of Spain from dictatorship to parliamentary monarchy.

Juan Carlos married Sophia of Greece and Denmark in 1962. The couple have three children and eight grandchildren.

Polls from 2000 show that he is widely approved of by Spaniards.[7] According to the Spanish Constitution, the monarch is also instrumental in promoting Ibero-American relations, the "nations of its historical community".[5][6] In this capacity, the King of Spain serves as the president of the Ibero-American States Organization, representing over 700,000,000 people in 24 member nations worldwide. In 2008 he was considered the most popular leader in all Ibero-America.[8]

Mother	Princess María de las Mercedes of Bourbon-Two Sicilies
Born	5 January 1938 Rome, Italy
Signature	

Spanish Royal Family

Early life

Juan Carlos of Spain was born to the Infante Juan, Count of Barcelona, and the Princess María Mercedes of Bourbon-Two Sicilies in Rome, Italy, where his grandfather, King Alfonso XIII, and other members of the Spanish royal family had settled following the proclamation of the Second Spanish Republic in 1931. His early life was dictated largely by the political concerns of his father and General Franco. He moved to Spain in 1948 to be educated there after his father persuaded Franco to allow it. He began his studies in San Sebastián and finished them in 1954 at the San Isidro Institute in Madrid. He then joined the army, doing his officer training from 1955 to 1957 at the Military Academy of Zaragoza.

Juan Carlos has two sisters and one brother: Infanta Pilar, Duchess of Badajoz (born 1936), and Infanta Margarita, Duchess of Soria (born 1939) and his younger brother Alfonso.

In March 1956, Juan Carlos's younger brother Alfonso died in a gun accident at the family's home Villa Giralda in Estoril, Portugal. The Spanish Embassy in Portugal issued an official communiqué:[9]

> Whilst His Highness Prince Alfonso was cleaning a revolver last evening with his brother, a shot was fired hitting his forehead and killing him in a few minutes. The accident took place at 20.30 hours, after the Infante's return from the Maundy Thursday religious service, during which he had received holy communion.

Very quickly, however, rumours appeared in newspapers that the gun had actually been held by Juan Carlos at the moment the shot was fired. Josefina Carolo, dressmaker to Juan Carlos's mother, said that Juan Carlos pointed the pistol at Alfonso and pulled the trigger, unaware that the pistol was loaded. Bernardo Arnoso, a Portuguese friend of Juan Carlos, also said that Juan Carlos fired the pistol not knowing that it was loaded, and adding that the bullet ricocheted off a wall hitting Alfonso in the face. Helena Matheopoulos, a Greek author who spoke with Juan Carlos's sister Pilar, said that Alfonso had been out of the room and when he returned and pushed the door open, the door knocked Juan Carlos in the arm causing him to fire the pistol.[10]

In 1957 Juan Carlos spent a year in the naval school at Marin, Pontevedra, and another in the Air Force school in San Javier in Murcia. In 1960–1 he studied Law, International Political Economy and Public Finance at Complutense University.[11] He then went to live in the Palace of Zarzuela, and began carrying out official engagements.

Prince of Spain, 1969–1975

The dictatorial regime of Francisco Franco had come to power during the Spanish Civil War, which had pitted democrats, anarchists, socialists, and communists, supported in part by the Soviet Union and by international volunteers, against conservatives, monarchists, nationalists, and fascists, with the latter group ultimately emerging successful with the support of neighbouring Portugal and the major European Axis powers of Fascist Italy and Nazi Germany. Despite his alliance with monarchists, Franco was not eager to restore the deposed Spanish monarchy once in power, preferring to head a regime with himself as head of state for life. Though Franco's partisan supporters generally accepted this arrangement for the present, much debate quickly ensued over who would replace Franco upon his death. The far right factions demanded the return of a hardline absolute monarchy, and eventually Franco agreed that his successor would be a monarch. Franco, a Carlist by some accounts, had no intention of restoring the constitutional form of monarchy known during the 19th century or the republican form of government created by the Spanish Constitution of 1931.

The heir to the throne of Spain was Juan de Borbón *(Count of Barcelona)*, the son of the late Alfonso XIII. However, General Franco viewed the heir with extreme suspicion, believing him to be a liberal who was opposed to his regime. In 1961, Franco offered the crown to Archduke Otto of Austria, but he declined on account of the Habsburg dynasty's long absence from the Spanish throne, and recommended Juan Carlos.[12] Franco then considered giving the Spanish throne to Juan Carlos's cousin Alfonso, Duke of Anjou and

Cádiz. Alfonso was known to be an ardent Francoist and would marry Franco's granddaughter, Doña María del Carmen Martínez-Bordiú y Franco in 1972. In response, Juan Carlos started to use his second name *Carlos* to assert his claim to the heritage of the Carlist branch of his family.

Ultimately, Franco decided to skip a generation and name Juan de Borbón's son, Prince Juan Carlos, as his personal successor. Franco hoped the young prince could be groomed to take over the nation while still maintaining the ultraconservative nature of his regime. In 1969, Juan Carlos was officially designated heir-apparent and was given the new title of Prince of Spain (not the traditional Prince of Asturias). As a condition of being named heir-apparent, he had to swear loyalty to Franco's Movimiento Nacional, which he did with little outward hesitation.

Prince Juan Carlos met and consulted Franco many times while heir apparent and often took part in official and ceremonial state functions standing alongside the dictator, much to the anger of hardline republicans and more moderate liberals, who had hoped that Franco's death would bring in an era of reform. During 1969–1975, Juan Carlos publicly supported Franco's regime. Although Franco's health worsened during those years, whenever he did appear in public, from state dinners to military parades, it was in Juan Carlos's company as he continued to praise Franco and his government for the economic growth and positive changes in Spain. However, as the years progressed, Juan Carlos began meeting secretly with political opposition leaders and exiles, who were fighting to bring liberal reform to the country. He also had secret conversations with his father over the telephone. Franco, for his part, remained largely oblivious to the prince's actions and denied allegations from his ministers and advisors that Juan Carlos was in any way disloyal to his vision of the regime.

During periods of Franco's temporary incapacity in 1974 and 1975 Juan Carlos was acting head of state. Near death, on 30 October 1975, Franco gave full control to Juan Carlos. On 22 November, following Franco's death, the Cortes Generales proclaimed Juan Carlos King of Spain and on 27 November, Juan Carlos was anointed king in a ceremony called *Holy Spirit Mass*, which was the equivalent of a coronation, at the Jerónimos Church in Madrid. He opted not to call himself **John III** or **Charles V**, but **Juan Carlos I**.

Restoration of the monarchy

Juan Carlos quickly instituted reforms, to the great displeasure of Falangist and conservative (monarchist) elements, especially in the military, who had expected him to maintain the authoritarian state. He appointed Adolfo Suárez, a former leader of the Movimiento Nacional, as Prime Minister of Spain.

Royal trips of King Juan Carlos I from 1975 until today.

Juan Carlos greeting Nicolae Ceauşescu, President of Romania, during his visit to Spain in 1979

On 20 May 1977, the leader of the only recently legalized Spanish Socialist Workers' Party (PSOE) Felipe González, accompanied by Javier Solana, visited Juan Carlos in the Zarzuela Palace. The event represented a key endorsement of the monarchy from Spain's political left, who had been historically republican. Left-wing support for the monarchy grew when the Communist Party of Spain was legalized shortly thereafter, a move Juan Carlos had pressed for, despite enormous right-wing military opposition at that time, during the Cold War.

On 15 June 1977, Spain held its first post-Franco democratic elections. In 1978, a new Constitution was promulgated that acknowledged Juan Carlos as rightful heir of the Spanish dynasty and King; specifically, Title II, Section 57 asserted Juan Carlos' right to the throne of Spain by dynastic succession in the Borbón tradition, as "the legitimate heir of the historic dynasty" rather than as the designated successor of Franco.[5][13] The Constitution was passed by the democratically elected Constituent Cortes, ratified by the people in a referendum (6 December) and then signed into law by the King before a solemn meeting of the Cortes.

Further legitimacy had been restored to Juan Carlos' position on 14 May 1977, when his father, Don Juan (whom many monarchists had recognized as the legitimate, exiled King of Spain during the Franco era), formally renounced his claim to the Throne and recognized his son as the sole head of the Spanish Royal House, transferring to him the historical heritage of the Spanish monarchy, thus making Juan Carlos both the *de facto* and the *de jure* (rightful) King in the eyes of the traditional monarchists. Juan Carlos, who had already been King since Franco's death, gave an acceptance address after his father's resignation speech and thanked him by confirming the title of Count of Barcelona that Don Juan had assumed in exile. It was a sovereign title associated to the crown.

An attempted military coup, known as 23-F, occurred on 23 February 1981, when the Cortes were seized by members of the Guardia Civil in the parliamentary chamber. Believed to be a major factor in foiling the coup was the public television broadcast by the king, calling for unambiguous support for the legitimate democratic government. Certainly, in the hours before his speech, he had personally called many senior military figures to tell them that he was opposed to the coup and that they had to defend the democratic government.

When Juan Carlos became king, Communist leader Santiago Carrillo nicknamed him *Juan Carlos the Brief*, predicting that the monarchy would soon be swept away with the other remnants of the Franco era. After the collapse of the attempted coup mentioned above, however, in an emotional statement, Carrillo told television viewers: "God save the king." The Communist leader also remarked: "Today, we are all monarchists." If public support for the monarchy among democrats and leftists before 1981 had been limited, following the king's handling of the coup, it became significantly greater. According to a poll in the newspaper *El Mundo* in November 2005, 77.5% of Spaniards thought Juan Carlos was "good or very good", 15.4% "not so good", and only 7.1% "bad or very bad". Even so, the issue of the monarchy re-emerged on 28 September 2007 as photos of the king were burnt in public in Catalonia by small groups of protesters wanting the restoration of the Republic.[14]

In July 2000, Juan Carlos was the target of an enraged protester when Juan María Fernández y Krohn,[15] who had previously tried to take the life of Pope John Paul II, began shouting "Murderer! Murderer!" at the king and then approached him in a very threatening manner.

Role in contemporary Spanish politics

The election of socialist leader Felipe González to the Spanish prime ministership in 1982 marked the effective end of the King's active involvement in Spanish politics. González would govern for over a decade, and his administration helped consolidate the democratic gains and thus maintained the stability of the nation. While the king is generally reckoned as having a merely ceremonial role in politics, he commands great moral authority as an essential symbol of the country's unity.

Under the constitution, the King has immunity from prosecution in matters relating to his official duties. This is so because every act of the King as such (and not as a citizen) needs to be undersigned by a government official, thus making the undersigner responsible instead of the king. The honour of the Royal Family is specially protected from offences by the Spanish Penal Code. Under this protection, Basque independentist Arnaldo Otegi[16] and cartoonists from *El Jueves* were tried and punished.

5000 Spanish peseta note with image of King Juan Carlos.

The King gives an annual speech to the nation on Christmas Eve. He is the commander-in-chief of the Spanish armed forces.

When the media asked Juan Carlos in 2005 if he would endorse the bill legalising gay marriage that was then being debated in the *Cortes Generales*, he answered *"Soy el Rey de España y no el de Bélgica"* ("I am the King of Spain, not of Belgium") – a reference to King Baudouin I of Belgium, who refused to sign the Belgian law legalising abortion.[17] The King gave his Royal Assent to Law 13/2005 on 1 July 2005; the law legalising gay marriage was gazetted in the *Boletín Oficial del Estado* on 2 July, and came into effect on 3 July.[18]

In November 2007 at the Ibero-American Summit in Santiago de Chile, during a heated exchange, Juan Carlos interrupted Venezuelan President Hugo Chávez and asked him, "*¿Por qué no te callas?*" ("Why don't you shut up?" using the familiar "tu" you form to underline the disdain). Chávez had been interrupting the Spanish Prime Minister, José Luis Rodríguez Zapatero, while the latter was defending his predecessor and political opponent, José María Aznar, after Chávez had referred to Aznar as a fascist and "less human than snakes". The King shortly afterwards left the hall when President Daniel Ortega of Nicaragua accused Spain of intervention in his country's elections and complained about some Spanish energy companies working in Nicaragua.[19] This was an unprecedented diplomatic incident and a rare display of public

The King (left of centre, in grey suit) standing with the presidents of all the other Iberoamerican Nations present at the XVIII Ibero-American

anger by the King.[20]

Summit.

Family and private life

Juan Carlos was married in Athens at the Church of Saint Dennis on 14 May 1962, to HRH Princess Sophia of Greece and Denmark, daughter of King Paul. She was Greek Orthodox but converted to Roman Catholicism in order to become Spain's queen. Also in 1962, a Roman Catholic wedding was performed in the Pauline Chapel the Basilica of Santa Maria Maggiore in Rome.

They have two daughters and a son.

- Infanta **Elena** María Isabel Dominica
- Infanta **Cristina** Federica Victoria Antonia
- **Felipe** Juan Pablo Alfonso, Prince of Asturias

King Juan Carlos, Queen Sofía and the former Prime Minister José Luis Rodríguez Zapatero at the XV Ibero-American Summit (Salamanca, 2005).

In 1972, Juan Carlos, a keen sailor, competed in the Dragon class event at the Olympic Games, finishing 15th. In their summer holidays, the whole family meets in Marivent Palace (Palma de Mallorca) and the Fortuna yacht, where they take part in sailing competitions. The king has manned the Bribón series of yachts. In winter, they usually go skiing in Baqueira-Beret and Candanchú (Pyrenees), where the king has occasionally ended with a broken leg.

Juan Carlos also enjoys bear hunting. In October 2004, he angered environmental activists by killing nine bears (of which one was a pregnant female) in central Romania.[21] In August 2006, it is alleged that Juan Carlos shot a drunken tame bear (Mitrofan) during a private hunting trip to Russia. The Office of the Spanish Monarchy denies this claim, which was made by the Russian regional authorities.[22]

Juan Carlos and Sophia are fluent in several languages. They both speak Spanish, English, and French. The king also speaks fluent Italian and Catalan. Unlike the queen, Juan Carlos does not speak any German, nor her native language, Greek, a fact he regrets.

Juan Carlos is an amateur radio operator and holds the call sign EA0JC. His fondness of incognito motorbike riding has raised urban legends of people finding him on lonely roads. For example, one story says that a biker out of petrol stranded on a hot sunny day was assisted by a fellow motorcyclist, who returned with a small container of petrol. The good-Samaritan, on removing his helmet, turned out to be Juan Carlos.

Juan Carlos is member of the World Scout Foundation.[23]

His net worth is only valued at $5 million, but the Royal Family have a net worth over $1.7 billion (December 2011).[24][25]

Health

A benign tumour was removed from King Juan Carlos' lung in an operation carried out in the "Hospital Clínic" of Barcelona on Saturday 8 May 2010. The 72-year-old Monarch was expected to be allowed home in three or four days, and able to renew full physical activity in a fortnight. The operation came as a result of the King's latest annual check-up, and doctors said the procedure went well and Juan Carlos would not need any further follow-up treatment. At a press convention the operating team said that the 17-19mm tumour which had been removed under a general anaesthetic from the right lung contained no malignant cells. 'This is good news', said doctor Laureano Molins, who had directed the operation.

Budget of the royal house

In the wake of the Urdangarin affair (the husband of his daughter is accused of corruption), the King decided in 2011 to detail the yearly royal budget of 8.3 millions euros for the first time.[26][27] However, some spending such as the electricity bill are not included in the 8.3 budget since they are paid by the State.[26]

Titles, styles, honours and arms

Titles

Main articles: List of titles and honours of Juan Carlos I of Spain and List of titles and honours of the Spanish Crown

The current Spanish constitution refers to the monarchy as "the Crown of Spain" and the constitutional title of the monarch is simply *Rey/Reina de España*: that is, "king/queen of Spain". However, the constitution allows for the use of other historic titles pertaining to the Spanish monarchy, without specifying them. A decree promulgated 6 November 1987 at the Council of Ministers regulates the titles further, and on that basis the monarch of Spain has a right to use ("may use") those other titles appertaining to the Crown. Contrary to some belief, the long titulary that contains the list of over 20 kingdoms, etc., is not in state use, nor is it used in Spanish diplomacy. In fact, it has never been in use in that form, as "Spain" was never a part of the list in pre-1837 era when the long list was officially used.

This feudal style was last used officially in 1836, in the titulary of Isabella II of Spain before she became constitutional Queen.

Juan Carlos's titles include that of King of Jerusalem, as successor to the royal family of Naples.

Titles in official use

Other honours

The king has been the recipient of numerous honorary degrees,[31] including from University of Santo Tomas, Philippines;[31] Harvard University;[31] Southern Methodist University[31] (where, in 2001, he formally opened the Meadows Museum, housing the largest collection of Spanish art outside Spain), and Georgetown University.[31] Juan Carlos also has received honorary Doctor of Laws degrees from New York University,[31] the University of Cambridge[31] and the University of Utrecht[31] in the Netherlands (25 October 2001).[32]

In 1997, NYU opened the King Juan Carlos I of Spain Center (to promote research and teaching on Spain and the Spanish-speaking world) in the historic Judson Hall and adjacent buildings on Washington Square in New York City. He is also a member of the Sons of the American Revolution organization.[33] In 1996, he received the Jean Monnet award of the Jean Monnet Foundation for Europe for his work on integrating Spain into the European Community.[34] Juan Carlos I Park, the main municipal park of Madrid, was named after the king.[35] The Spanish Antarctic Base on Livingston Island in the South Shetland Islands, Antarctica is named for King Juan Carlos I of Spain. The multi-purpose warship Juan Carlos I of the Spanish navy is named for King Juan Carlos I.[36] Juan Carlos also was awarded the Charlemagne Prize in 1982.

Ancestors

Main article: Ancestry of Juan Carlos I of Spain

The Coat of arms of the King of Spain.

King Juan Carlos is a direct descendant of many famous European rulers from different countries. He is a descendant of Queen Victoria of the United Kingdom through his grandmother, Victoria Eugenie; of Louis XIV of France through the House of Bourbon; of the Emperor Charles V, who belonged to the Habsburg dynasty of the Holy Roman Empire. The Capetian dynasty, to which he also belongs, is the oldest in Europe. Some of his distant ancestors include Joan, Duchess of Burgundy and queen consort of Philip VI of France. He is a descendant of Maria Leszczyńska, daughter of King Stanislaus Leszczynski of Poland, and Queen Consort of France through an unbroken line of Bourbon princesses who married within the Bourbon house. He's also a descendant of Pelagius, first king (718–737 a.C) during the Reconquista, as descendant of the kings of Castile and Leon, and through him the Visigothic kings. The King is a direct descendent of Ferdinand II of Aragon and Isabella I of Castile.

Patrilineal descent

Patrilineal descent

Juan Carlos' patriline is the line from which he is descended father to son.

Patrilineal descent is the principle behind membership in royal houses, as it can be traced back through the generations, which means that Juan Carlos I is a member of the House of Bourbon, the senior-surviving cadet branch of the Capetian dynasty.

House of Bourbon

From Wikipedia, the free encyclopedia

The **House of Bourbon** (English /ˈbʊərbən/; French pronunciation: [bu.bɔ̃]) is a European royal house, a branch of the Capetian dynasty (/kəˈpiːʃən/). Bourbon kings first ruled Navarre and France in the 16th century. By the 18th century, members of the Bourbon dynasty also held thrones in Spain, Naples, Sicily, and Parma. Spain and Luxembourg currently have Bourbon monarchs.

Bourbon monarchs ruled Navarre (from 1555) and France (from 1589) until the 1792 overthrow of the monarchy during the French Revolution. Restored briefly in 1814 and definitively in 1815 after the fall of the First French Empire, the senior line of the Bourbons was finally overthrown in the July Revolution of 1830. A cadet branch, the House of Orléans, then ruled for 18 years (1830–1848), until it too was overthrown. The Princes of Condé (Bourbon-Condé) were a cadet branch of the Bourbon-Vendômes and, in turn, were senior to the Princes of Conti (Bourbon-Conti). Both these lines became extinct in the early nineteenth century.

Philip V of Spain was the first Bourbon ruler of Spain, from 1700. The Spanish Bourbons (in Spain the name is spelled **Borbón** and rendered into English as **Borbon**[1][2]) have been overthrown and restored several times, reigning 1700–1808, 1813–1868, 1875–1931, and 1975 to the present day. From this Spanish line comes the royal line of the Kingdom of the Two Sicilies (1734–1806 and 1815–1860, and Sicily only in 1806–1816), the Bourbon-Sicilies family, and the Bourbon rulers of the Duchy of Parma.

Grand Duchess Charlotte of Luxembourg married a cadet of the Bourbon-Parma line and thus her successors, who have ruled Luxembourg since her abdication in 1964, have also been members of the House of Bourbon. Isabel, Princess Imperial, the declared heiress and thrice-regent of the now-defunct Empire of Brazil, married twenty years before their deposition Gaston, comte d'Eu a prince of Orléans, and their descendants, known as the Orléans-Braganza, would have ascended to that throne had the empire not ended in 1889.

From the time of Hugh Capet to Charles X (987–1830), the senior Capets were also the Kings of France. In 1589, Henry IV, Head of the House of Bourbon, became the senior Capet, following the extinction of male line of the House of Valois. All members of the House of Bourbon and its cadet branches

House of Bourbon

Country	France, Navarre, Spain, Luxembourg
Ancestral house	Capetian Dynasty

Origins

The pre-Capetian House of Bourbon was a noble family, dating at least from the beginning of the 13th century, when the estate of Bourbon was ruled by a Lord who was a vassal of the King of France.

In 1268, Robert, Count of Clermont, sixth son of King Louis IX of France, married Beatrix of Bourbon, heiress to the lordship of Bourbon. Their son Louis was made Duke of Bourbon in 1327. His descendant, the Constable of France Charles de Bourbon, was the last of the senior Bourbon line when he died in 1527. Because he chose to fight under the banner of Holy Roman Emperor Charles V and lead a life of exile, his title was discontinued after his death.

However the junior line of La Marche-Vendôme remained, the ruling house of the Dukedom of Vendôme. The Bourbon-Vendôme branch were to become rulers of the Kingdom of Navarre on the northern side of the Pyrenees in 1555 and then of France, with Henry III of Navarre becoming Henry IV of France. From then on, they were simply called Bourbon, until the creation of cadet branches.

France

The rise of Henry IV

Main article: Henry IV of France's succession

The first Bourbon King of France was Henry IV. He was born on 13 December 1553 in the Kingdom of Navarre. Antoine de Bourbon, his father, was a ninth generation descendant of King Louis IX of France. Jeanne d'Albret, his mother, was the Queen of Navarre and the niece of King Francis I of France. He was baptized Catholic, but raised Calvinist. After his father was killed in 1563, he became Duke of Vendôme at the age of 10, with Admiral Gaspard de Coligny (1519–1572) as his regent. Five years later, the young duke became the nominal leader of the Huguenots after the death of his uncle the Prince of Condé in 1569.

Henry succeeded to Navarre as Henry III when his mother died in 1572. That same year Catherine de' Medici, the influential mother of King Charles IX of France, arranged for the marriage of her daughter, Margaret of Valois, to Henry as a peace offering between the Catholics and Huguenots. Many Huguenots had gathered for the wedding held on 24 August and were massacred by the Catholics in the St. Bartholomew's Day Massacre. Henry saved his own life by converting to Catholicism. He repudiated his conversion in 1576 and resumed his leadership of the Huguenots.

France Portal

The period from 1576 to 1584 was relatively calm in France, with the Huguenots consolidating control of much of the south with only occasional interference from the royal government. Extended civil war erupted again in 1584, when François, Duke of Anjou, younger brother of King Henry III of France, died, leaving Navarre next in line for the throne. Thus began the War of the Three Henries, as Henry of Navarre, Henry III, and the ultra-Catholic leader, Henry of Guise, fought a confusing three-cornered struggle for dominance. When Henry III was

assassinated on 31 July 1589, Navarre became the first Bourbon king of France as Henry IV.

Much of Catholic France, organized into the Catholic League, refused to recognize a Protestant monarch and instead recognized Henry IV's uncle, Charles, Cardinal de Bourbon, as king as Charles X, and the civil war continued. Henry won a crucial victory at Ivry on 14 March 1590, and following the death of the Cardinal the same year, the forces of the League lacked an obvious Catholic candidate for the throne and divided into various factions. Nevertheless, as a Protestant, Henry IV was unable to take Paris, a Catholic stronghold, or to decisively defeat his enemies, now supported by the Spanish. He reconverted to Catholicism in 1593—he is said to have remarked, "Paris is well worth a mass"[3]—and was crowned King of France at the Cathedral of Chartres on 27 February 1594.

Early Bourbons in France

Henry granted the Edict of Nantes on 13 April 1598, establishing Catholicism as an official state religion, but otherwise assuring the Huguenots the right to practice their religion. However, it did not grant full civil and religious equality to the Huguenots. This compromise ended the religious wars in France. That same year the Treaty of Vervins ended the war with Spain, adjusted the Spanish-French border, and resulted in a belated recognition by Spain of Henry as king of France.

Ably assisted by Maximilien de Béthune, duc de Sully, Henry reduced the land tax known as the *taille*; promoted agriculture, public works, construction of highways, and the first French canal; started such important industries as the tapestry works of the Gobelins; and intervened in favor of Protestants in the duchies and earldoms along the German frontier. This last was to be the cause of his assassination.

Henry IV of France, the first Bourbon King of France

Henry's marriage to Margaret, which had produced no heir, was annulled in 1599 and he married Marie de Medici, the niece of the grand duke of Tuscany. A son, Louis, was born to them in 1601. Henry IV was assassinated on 14 May 1610 in Paris. Louis XIII was only nine years old when he succeeded his father. He was to prove a weak ruler; his reign was effectively a series of distinct regimes, depending who held the effective reins of power. At first, Marie de Medici, his mother, served as regent and advanced a pro-Spanish policy. To deal with the financial troubles of France, Louis summoned the Estates General in 1614; this would be the last time that body met until the eve of the French Revolution. Marie arranged the 1615 marriage of Louis to Anne of Austria, the daughter of King Philip III of Spain.

In 1617, however, Louis conspired with Charles d'Albert, duc de Luynes to dispense with her influence, having her favorite Concino Concini assassinated on 26 April of that year. After some years of weak government by Louis's favorites, the King made Armand Jean du Plessis, Cardinal Richelieu, a former protégé of his mother, the chief minister of France in 1624.

Richelieu advanced an anti-Habsburg policy. He arranged for Louis' sister, Henrietta Maria, to marry King Charles I of England, on 11 May 1625. Her pro-Catholic propaganda in England was one of the contributing factors for the English Civil War. Richelieu, as ambitious for France and the French monarchy as for himself, laid the ground for the absolute monarchy that would last in France until the Revolution. He wanted to establish a dominating position for France in Europe, and he wanted to unify France under the monarchy. He established the role of *intendants*, non-noble men whose arbitrary powers were granted by (and revocable by) the monarchy and superseded many of the traditional duties and privileges of the noble governors.

Although it required a succession of internal military campaigns, he abolished the fortified Huguenot towns that Henry had allowed. He involved France in the Thirty Years' War (1618–1648) against the Habsburgs by concluding an alliance with Sweden in 1631 and, actively, in 1635. He died in 1642 before the conclusion of that conflict, having groomed Cardinal Jules Mazarin as a successor. Louis XIII outlived him but by one year, dying in 1643 at the age of forty-two. After a childless marriage for twenty-three years he had a son with Anne on 5 September 1638, whom he named after himself.

Louis XIV and Louis XV

Main article: Louis XIV of France

Main article: Louis XV of France

Royal Coat of Arms of the Kingdom of France and Navarre.

When Louis XIV succeeded his father he was only four years old; he would become the most powerful king in French history. His mother Anne served as his regent with her favorite Jules Mazarin as chief minister. Mazarin continued the policies of Richelieu, bringing the Thirty Years' War to a successful conclusion in 1648 and defeating the noble challenge to royal absolutism in a series of civil wars known as the Fronde. He continued to war with Spain until 1659.

In that year the Treaty of the Pyrenees was signed signifying a significant shift in power, France had replaced Spain as the dominant state in Europe. One of the terms of the treaty arranged the marriage of Louis to his cousin Maria Theresa, the daughter of King Philip IV of Spain, by his first wife Elizabeth, the sister of Louis XIII. They were married in 1660 and had a son, Louis, in 1661. Mazarin died on 9 March 1661 and it was expected that Louis would appoint another chief minister, as had become the tradition, but instead he shocked the country by announcing he would rule alone.

Louis intended to glorify France by making war on his neighbors. For six years he reformed the finances of his state and built formidable armed forces. France fought three wars between 1667 and 1697 and gained some minor territory. Maria Theresa died in 1683 and the next year he married Françoise d'Aubigné, marquise de Maintenon. She had great influence over him especially in matters of religion. Louis XIV was staunchly Catholic and he revoked the Edict of Nantes on 18 October 1685, undoing the religious tolerance established by grandfather, Henry IV, almost a hundred years before.

The last war waged by Louis XIV proved to be one of the most important to dynastic Europe. In 1700, King Charles II of Spain died without a son. Louis's son the Grand Dauphin, as nephew to the late king, was closest heir, and Charles willed the kingdom to the Dauphin's second son, the Duke of Anjou. Other powers, particularly the Austrian Habsburgs, who had the next closest claims, objected to such a vast increase in French power.

Initially, most of the other powers were willing to accept Anjou's reign as Philip V, but Louis's arrogance and blunders soon made the English, the Dutch, and other powers join the Austrians in a coalition against France. The War of the Spanish Succession began in 1701 and raged for 12 years. In the end Louis's grandson was recognized as King of Spain, but the Habsburg's other European territories were largely ceded to Austria, and France was nearly bankrupted by the cost of the struggle. Louis died on 1 September 1715 ending his seventy-two year reign, the longest in European history.

The reign of Louis XIV was so long that he had outlived both his son and eldest grandson. He was succeeded by his great-grandson Louis XV. Louis XV was born on 15 February 1710 and was thus aged only five at his

Dynastic group portrait of Louis XIV (seated) with his son *le Grand Dauphin* (to the left), his grandson Louis, Duke of Burgundy (to the right), his great-grandson the duc d'Anjou, later Louis XV, and Madame de Ventadour, his governess, who commissioned this painting some years later; busts of Henry IV and Louis XIII in the background.

ascension, the third Louis in a row to become king of France before the age of ten. Initially, the regency was held by Philip, Duke of Orléans, Louis XIV's nephew, as nearest adult male to the throne. This Regency period was seen as one of debauchery and loose morals following the austere nature of the latter years of Louis XIV's reign, which had seen a series of cripplingly expensive wars and the King's turn to religiosity.

Following Orléans's death in 1723, another junior Bourbon, the Duke of Bourbon, the representative of the Bourbon-Condé line, became Prime Minister. It was expected that Louis would marry his cousin, the daughter of King Philip V of Spain, but this marriage was cancelled by the duke in 1725 so that Louis could marry Maria Leszczynska, the daughter of Stanislas, former king of Poland. Bourbon's motive appears to have been a desire to produce an heir as soon as possible so as to reduce the chances of a succession dispute between Philip V and the Duke of Orléans in the event of the sickly king's death. Maria was already an adult woman at the time of the marriage, while the Infanta was still a young girl.

A posthumous painting commissioned around 1670 by Philippe de France.It shows the French Bourbon Family around that time. It includes: Henrietta Maria of France (d 1669), exiled Queen of England; Philippe I, Duke of Orléans, founder of the House of Orléans; his first wife Princess Henriette (d 1670); the couples first daughter Marie Louise d'Orléans (later Queen of Spain);Anne of Austria (d 1666); the Orléans daughters of Gaston de France; Louis XIV; the Dauphin of France with his wife Maria Theresa of Spain with her third daughter Marie-Thérèse de France, called Madame Royale (d 1672) and her

Nevertheless, Bourbon's action brought a very negative response from Spain, and for his incompetence Bourbon was soon replaced by Cardinal Andre Hercule de Fleury, the young king's tutor, in 1726. Fleury was a peace loving man who intended to keep France out of war, but circumstances presented themselves that made this impossible.

The first cause of these wars came in 1733 when Augustus II, the elector of Saxony and king of Poland died. With French backing Stanislas was again elected king. This brought France into conflict with Russia and Austria who supported Augustus III, duke of Saxony and son of Augustus II.

Stanislas lost the Polish crown, but he was given the Duchy of Lorraine as compensation, which would pass to France after his death. Next came the War of the Austrian Succession in 1740 in which France supported King Frederick II of Prussia against Maria Theresa of Austria, archduchess of Austria. Fleury died in 1743 before the conclusion of the war.

second son *Philippe-Charles de France, duc d'Anjou* (d1671). The first daughter of Gaston stands on the far right:Anne Marie Louise d'Orléans. The picture frame with the 2 children are the other 2 daughters of Louis and Maria Theresa who died in 1662 and 1664.

Shortly after Fleury's death in 1745 Louis was most influenced by his mistress the Marquise de Pompadour. She reversed the policy of France in 1756 by creating an alliance with Austria against Prussia in the Seven Years' War. The war was a disaster for France, losing most of her overseas possessions to the British in the Treaty of Paris in 1763. Louis' only son died in 1765 making his grandson the Dauphin. Maria, his wife, died in 1768 and Louis himself died on 10 May 1774.

French Revolution

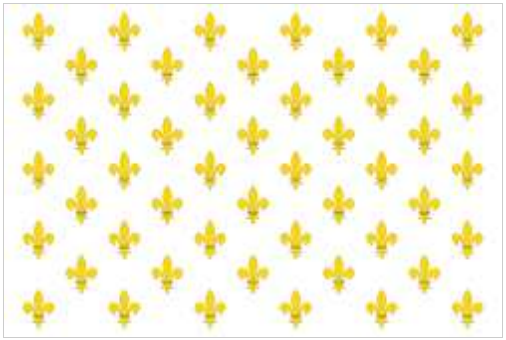
Main article: French Revolution

Louis XVI had become the dauphin of France upon the death of his father, the son of Louis XV, in 1765. He married Marie Antoinette of Austria, a daughter of Maria Theresa, in 1770. Louis intervened in the American Revolution against Britain in 1778, but he is most remembered for his role in the French Revolution. France was in financial turmoil and Louis was forced to convene the Estates-General on 5 May 1789.

They formed the National Assembly and forced Louis to accept a constitution that limited his powers on 14 July 1790. He tried to flee France in June 1791, but was captured. The French monarchy was abolished on 21 September 1792 and a republic was proclaimed. The chain of Bourbon monarchs begun in 1589 was broken. Louis XVI was executed on 21 January 1793.

Marie Antoinette and her son, Louis, were held as prisoners. Many French royalists proclaimed him Louis XVII, but he never reigned. She was executed on 16 October 1793. He died of tuberculosis on 8 June 1795 at the age of ten while in captivity.

The French Revolutionary Wars and Napoleonic Wars spread nationalism and anti-absolutism throughout Europe, and the other Bourbon monarchs were threatened. Ferdinand was forced to flee from Naples in 1806 when Napoleon Bonaparte deposed him and installed his brother, Joseph, as king. Ferdinand continued to rule from Sicily until 1815.



Napoleon conquered Parma in 1800 and compensated the Bourbon duke with Etruria, a new kingdom he created from the Grand Duchy of Tuscany. It was short-lived, as Napoleon annexed Etruria in 1807.

King Charles IV of Spain had been an ally of France. He succeeded his father, Charles III, in 1788. At first he declared war on France on 7 March 1793, but he made peace on 22 June 1795. This peace became an alliance on 19 August 1796. His chief minister, Manuel de Godoy convinced Charles that his son, Ferdinand, was plotting to overthrow him. Napoleon exploited the situation and invaded Spain in March 1808. This led to an uprising that forced Charles to abdicate on 19 March in favor of his son, Ferdinand VII. Napoleon forced Ferdinand to return the crown to Charles on 30 April and then convinced Charles to relinquish it to him on 10 May. In turn, he gave it to his brother, Joseph, king of Naples on 6 June. Joseph abandoned Naples to Joachim Murat, the husband of Napoleon's sister. This was very unpopular in Spain and resulted in the Peninsular War, a struggle that would contribute to the downfall of Napoleon.

The Bourbon Restoration

Main article: Bourbon Restoration

With the abdication of Napoleon on 11 April 1814 the Bourbon Dynasty was restored to the kingdom of France

The standard of the French royal family under the *Ancien Régime* and the restoration period.

in the person of Louis XVIII, brother of Louis XVI. Napoleon escaped from exile and Louis fled in March 1815. Louis was again restored after the Battle of Waterloo on 7 July.

The conservative elements of Europe dominated the post-Napoleonic age, but the values of the French Revolution could not be easily swept aside. Louis granted a constitution on 14 June 1814 to appease the liberals, but the ultra-royalist party, led by his brother, Charles, continued to influence his reign.[*citation needed*] When he died in 1824 his brother became king as Charles X much to the dismay of French liberals. In a saying ascribed to Talleyrand, "they had learned nothing and forgotten nothing".[4]

Aftermath

Charles passed several laws that appealed to the upper class, but angered the middle class. The situation came to a head when he appointed a new minister on 8 August 1829 who did not have the confidence of the chamber. The chamber censured the king on 18 March 1830 and in response Charles proclaimed five ordinances on 26 July intended to silence criticism against him.[*citation needed*] This almost resulted in another revolution as dramatic as the one in 1789, but moderates were able to control the situation.[*citation needed*] As a compromise the crown was offered to Louis-Philippe, duke of Orléans, a descendant of the brother of Louis XIV, and the head of the Orleanist cadet branch of the Bourbons. He was proclaimed King of the French on 7 August. The resulting regime, known as the July monarchy, lasted until the Revolution of 1848. The Bourbon monarchy in France ended on 24 February 1848, when Louis-Philippe was forced to abdicate and the short-lived French Second Republic was established.

Some legitimists refused to recognize the Orleanist monarchy. After the death of Charles in 1836 his son was proclaimed Louis XIX, though this title was never formally recognized. Charles' grandson Henri, comte de Chambord, the last Bourbon claimant of the French crown, was proclaimed by some Henry V, but the French monarchy was never restored.

Following the 1870 collapse of the empire of Emperor Napoleon III, Henri was offered a restored throne. However Chambord refused to accept the throne unless France abandoned the revolution-inspired tricolour and accepted what he regarded as the true Bourbon flag of France. The tricolour, originally associated with the French Revolution and the First French Republic, had been used by the July Monarchy, the Second Republic and both Empires; the French National Assembly could not possibly agree.

A *temporary* Third Republic was established, while monarchists waited for the comte de Chambord to die and for the succession to pass to the Comte de Paris, who was willing to accept the tricolour. Henri lived until 1883, by which time public opinion had come to accept the republic as the "form of government that divides us least." His death without issue marked the extinction of the French Bourbons. Thus head of the House of Bourbon became the now eldest male heir of the dynasty Juan, Count of Montizón of the Spanish line of the house who was also Carlist claimant to the throne of Spain. His heir as eldest Bourbon and head of the house is today Louis Alphonse, Duke of Anjou.

By an ordinance of Louis Philippe I of France of 13 August 1830, it was decided that the king's children (and his sister) would continue to bear the arms of Orléans, that Louis-Philippe's eldest son, as Prince Royal, would bear the title of duc d'Orléans, that the younger sons would continue to have their existing titles, and that the sister and daughters of the king would only be styled "princesses d'Orléans", which meant the Orléans royalty did not take the name "of France".

Bourbons of Spain and Italy

Philip V

The Spanish branch of the House of Bourbon was founded by Philip V. He was born in 1683 in Versailles, the second son of the Grand Dauphin, son of Louis XIV. He was Duke of Anjou and probably never expected to be raised to a rank higher than that. However King Charles II of Spain, dying without issue, willed the throne to his grand-nephew the Duke of Anjou, younger grandson of his eldest sister Marie-Thérèse, daughter of King Philip IV of Spain who had married Louis XIV of France.

The prospect of Bourbons on both the French and Spanish thrones was resisted as creating an imbalance of power in Europe by its dominant regimes and, upon Charles II's death on 1 November 1700, a Grand Alliance of European nations united against Philip. This was known as the War of Spanish Succession. In the Treaty of Utrecht, signed on 11 April 1713, Philip was recognized as king of Spain but his renunciation of succession rights to France was affirmed and, of the Spanish Empire's other European territories, Sicily was ceded to Savoy, and the Spanish Netherlands, Milan and Naples were alloted to the Austrian Habsburgs.

Philip had two sons by his first wife. After her death he married Elizabeth Farnese, niece of Francesco Farnese, Duke of Parma, in 1714. She presented Philip with three sons, for whom she had ambitions of securing Italian crowns. Thus she induced Philip to occupy Sardinia and Sicily in 1717.

A Quadruple Alliance of Britain, France, Austria and the Netherlands was organized on 2 August 1718 to stop him. In the Treaty of The Hague, signed on 17 February 1720, Philip renounced his conquests of Sardinia and Sicily, but assured the ascension of his eldest son by Elizabeth to the Duchy of Parma upon the reigning duke's death. Philip abdicated in January 1724 in favor of Louis I, his eldest son with his first wife, but Louis died in August and Philip resumed the crown.

When the War of the Polish Succession began in 1733, Philip and Elisabeth saw another opportunity to advance the claims of their sons and recover at least part of the former possessions of the Spanish crown on the Italian peninsula. Philip signed the Family Compact with Louis XV, his nephew and king of France. Charles, Duke of Parma since 1731, invaded Naples. At the conclusion of peace on 13 November 1738, control of Parma and Piacenza was ceded to Austria, which had occupied the duchies but was now forced to recognise Charles as King of Naples and Sicily. Philip also used the War of the Austrian Succession to win more territory in Italy. He did not live to see it to its conclusion, however, dying in 1746.

Ferdinand VI and Charles III

Ferdinand VI, second son of Philip V and his first wife, succeeded his father. He was a peace-loving monarch who kept Spain out of the Seven Years' War. He died in 1759 in the midst of that conflict and was succeeded by his half-brother Charles III. Charles was the eldest son of Philip and Elizabeth Farnese. He was born in 1716 and had become Duke of Parma when the last Farnese duke died in 1731.

Following Spain's victory over the Austrians at the battle of Bitonto, it proved inexpedient to reunite Naples and Sicily to Spain, so as a compromise Charles became King of Naples, as Charles IV and VII of Sicily. Following Charles' accession to the Spanish throne in 1759 he was required, by the Treaty of Naples of 3 October 1759, to abdicate Naples and Sicily to his third son, Ferdinand, thus initiating the branch known as the Neapolitan Bourbons.

Charles revived the Family Compact with France on 15 August 1761 and joined in the Seven Years' War against Britain in 1762; the reformist policies he had espoused in Naples were pursued with similar energy in Spain,

where he completely overhauled the cumbersome bureaucracy of the state. As a French ally he opposed Britain during the American Revolution in June 1779, supplying large quantities of weapons and munitions to the rebels and keeping one third of all the British forces in the Americas occupied defending Florida and what is now Alabama, which were ultimately recaptured by Spain. Charles died in 1788.

Bourbon-Parma

Elizabeth Farnese's ambitions were realized at the conclusion of the War of the Austrian Succession in 1748 when the Duchy of Parma and Piacenza, already occupied by Spanish troops, were ceded by Austria to her second son, Philip, and combined with the former Gonzaga duchy of Guastalla.

Elizabeth died in 1766.

Later Bourbon monarchs outside France

Upon the fall of the Napoleonic empire, Ferdinand I was restored to the throne of the kingdom of the Two Sicilies in 1815. His subjects revolted on 2 July 1820 and he was forced to grant a constitution on 13 July. Austria invaded in March 1821 and revoked the constitution. He was succeeded by his son, Francis I, in 1825 and by his grandson, Ferdinand II, in 1830. Another revolution erupted on 12 January 1848 and Ferdinand was also forced to grant a constitution on 10 February. This constitution was revoked in 1849. Ferdinand was succeeded by his son, Francis II, in May 1859.

When Giuseppe Garibaldi captured Naples on 7 September 1860 Francis restored the constitution on 2 July in an attempt to save his sovereignty. He fled to the fortress of Gaeta, which was captured by the Piedmontese troops on 13 February 1861; his kingdom was incorporated in the Kingdom of Italy on 17 March 1861, after the fall the fortress of Messina (surrendered on 12 March 1861), although the Neapolitan troops in Civitella del Tronto resisted until 20 March.

After the fall of Napoleon, Napoleon's wife, Maria Louisa, was made Duchess of Parma. As compensation, Charles Louis, the former king of Etruria, was made the Duke of Lucca. When Maria Louisa died in 1847 he was restored to Parma as Charles II. Lucca was incorporated into Tuscany. He was succeeded by his son, Charles III, and grandson, Robert I, in 1854. The people of Parma voted for a union with the kingdom of Sardinia on 13 March 1860. After Italian unification in 1861 the Bourbon dynasty in Italy was no more.

Ferdinand VII was restored to the throne of Spain after the fall of Napoleon in March 1814. Like his Italian Bourbon counterpart his subjects revolted against him in January 1820 and he was forced to grant a constitution. A French army invaded in 1823 and the constitution was revoked. Ferdinand married his fourth wife, Maria Christina, the daughter of Francis I, the Bourbon king of Sicily, in 1829. Despite his many marriages he did not have a son so on 30 June 1833 he was influenced by his wife to abolish the Salic Law so that her daughter, Isabella, could become queen depriving his brother, Don Carlos, of the throne.

Isabella II succeeded her father when he died on 29 September 1833. She was only three years old and Maria Cristina, her mother, served as regent. Maria knew that she needed the support of the liberals to oppose Don Carlos so she granted a constitution in 1834. Don Carlos found his greatest support in Catalonia and the Basques country because the constitution centralized the provinces thus denying them the autonomy they sought. He was defeated and fled the country in 1839. Isabella was declared of age in 1843 and she married her cousin Francisco de Asis, the son of her father's brother, on 10 October 1846. A military revolution broke out against Isabella in 1868 and she was deposed on 29 September. She abdicated in favor of her son, Alfonso, in 1870, but Spain was proclaimed a republic for a brief time.

When the First Spanish Republic failed the crown was offered to Isabella's son who accepted on 1 January 1875 as Alfonso XII. Don Carlos, who returned to Spain, was again defeated and resumed his exile in February 1876. Alfonso granted a new constitution on July 1876 that was more liberal than the one granted by his grandmother. His reign was cut short when he died in 1885 at the age of twenty-eight.

Alfonso XIII was born on 17 May 1886 after the death of his father. His mother, Maria Christina, the second wife of Alfonso XII served as regent. Alfonso XIII was declared of age in 1902 and he married Victoria Eugénie Julia Ena of Battenberg, the granddaughter of the British queen Victoria, on 31 May 1906. He remained neutral during World War I, but supported the military coup of Miguel Primo de Rivera on 13 September 1923. A movement towards the establishment of a republic began in 1930 and Alfonso fled the country on 14 April 1931. He never formally abdicated, but lived the rest of his life in exile. He died in 1941.

The Bourbon dynasty seemed finished in Spain as in the rest of the world, but it would be resurrected. The Second Spanish Republic was overthrown in the Spanish Civil War, leading to the dictatorship of Francisco Franco. He named Juan Carlos de Borbón, a grandson of Alfonso XIII, his successor on 22 July 1969. When Franco died on 20 November 1975 a Bourbon monarch was restored to the throne of Spain two days later as Juan Carlos I. The new king oversaw the Spanish transition to democracy; the Spanish Constitution of 1978, approved on 28 September 1978, recognized the monarchy.

Though it is not as powerful as it once was under Louis XIV and it no longer reigns in its native country of France, it is by no means extinct, and the House of Bourbon has survived to the present-day world of republics. The birth of a male heir to the Prince of Asturias in Spain is expected to trigger a change in the law of succession from male primogeniture to equal primogeniture.[*citation needed*] Since 1964 the Bourbon-Parma line has reigned agnatically in Luxembourg through Grand Dukes Jean and his son Henri. In June 2011, Luxembourg adopted equal primogeniture, replacing the old Semi-Salic law that might have guaranteed the survival of Bourbon rule for generations. The European phenomenon of equal primogeniture has doomed the security that the Bourbon monarchs once had.

List of Bourbons

Main articles: Descendants of Henry IV of France, Descendants of Louis XIV of France, Descendants of Philip V of Spain, Descendants of Charles III of Spain, and List of living legitimate male Capetians

List of Bourbon rulers

France

Monarchs of France

Dates indicate reigns, not lifetimes.

- Henry IV, the Great (1589–1610)
- Louis XIII, the Just (1610–1643)
- Louis XIV, the Sun King (1643–1715)
- Louis XV, the Well-Beloved (1715–1774)
- Louis XVI (1774–1792)

Claimants to the throne of France

Dates indicate claims, not lifetimes.

- Louis XVI (1792–1793)
- Louis XVII (1793–1795)
- Louis XVIII (1795–1814)

Monarchs of France

Dates indicate reigns, not lifetimes.

- Louis XVIII (1814–1824)
- Charles X (1824–1830)
- Louis-Philippe (House of Bourbon-Orléans) (1830–1848)

Legitimist claimants in France

Dates indicate claims, not lifetimes.

- Charles X (1830–1836)
- Louis-Antoine, Duke of Angoulême (Louis XIX) (1836–1844)
- Henry, Count of Chambord (Henri V) (1844–1883)

Legitimist claimants in France (Spanish branch)

Dates indicate claims, not lifetimes.

- Juan, Count of Montizón (Jean III) (1883–1887)
- Carlos, Duke of Madrid (Charles XI) (1887–1903)
- Jaime, Duke of Anjou and Madrid (Jacques I) (1903–1931)
- Alfonso Carlos, Duke of San Jaime (Charles XII)(1931–1936)
- Alfonso XIII of Spain (Alphonse I) (1936–1941) (did not claim the Throne of France[5])
- Jaime, Duke of Segovia (Henri VI) (1941–1975)
- Alfonso, Duke of Anjou and Cádiz (Alphonse II) (1975–1989)
- Louis Alphonse, Duke of Anjou (Louis XX) (1989–present)

Orléanist and Unionist claimants in France

Dates indicate claims, not lifetimes.

- Philippe, Count of Paris (Philippe VII) (1883–1894)
- Philippe, Duke of Orléans (Philippe VIII) (1894–1926)
- Jean, Duke of Guise (Jean III) (1926–1940)
- Henri, Count of Paris (Henry VI) (1940–1999)
- Henri, Count of Paris (Henry VII) (1999 – Present)

Spain

Monarchs of Spain

Dates indicate seniority, not lifetimes. Where reign as king or queen of Spain is different, this is noted.

- Philip V (1700–1746) [abdicated 1724, resumed throne on death of son]
  - Louis I [King 1724; ruled less than one year]
- Ferdinand VI (1746–1759)
- Charles III (1759–1788)
- Charles IV (1788–1808)
- Ferdinand VII, *El Deseado* (1808–1833) [King 1808, 1813–1833]
- Isabella II (1833–1870) [Queen 1833–1868]
- Alfonso XII (1870–1885) [King 1874–1885]
- Alfonso XIII (1886–1941) [King 1886–1931]
- Juan, Count of Barcelona (1941–1977) [did not become King]
- Juan Carlos I (1977–present) [King 1975–present]

Carlist claimants in Spain

Dates indicate claims, not lifetimes.

- Infante Carlos, Count of Molina (Carlos V) (1833–1845)
- Infante Carlos, Count of Montemolin (Carlos VI) (1845–1861)
- Juan, Count of Montizón (Juan II) (1861–1868)
- Carlos, Duke of Madrid (Carlos VII) (1868–1909)
- Jaime, Duke of Madrid (Jaime III) (1909–1931)
- Alfonso Carlos of Bourbon, Duke of San Jaime (Alfonso Carlos I) (1931–1936)
- Xavier, Duke of Parma (Xavier I) (1936–1952–1977)
- Carlos Hugo of Bourbon, Duke of Parma (Carlos Hugo I) (1977–1979)
- Prince Sixtus Henry of Bourbon-Parma (Sixto Enrique I) (1979–present)

Luxembourg

Grand Dukes of Luxembourg

Dates indicate reigns, not lifetimes.

- Jean (1964–2000)
- Henri (2000–present)

Other significant Bourbon titles

- Dukes of Bourbon
- Dukes of Montpensier
- Dukes of Vendôme
- Dukes of Anjou
- Kings of the Two Sicilies
- Dukes of Parma
- Dukes of Orléans
- Princes of Orléans-Braganza
- Princes of Condé
- Princes of Conti

Bourbon branches

Notable legitimate branches

- House of Bourbon-Orléans
  - Called the House of Orléans and holders of the title Duke of Orléans. This house was founded by the younger brother of Louis XIV: Philippe I, Duke of Orléans. This is the oldest (and thus, the most genealogically junior) surviving cadet branch of the House of Bourbon.
- House of Bourbon-Two Sicilies
- House of Bourbon-Parma
- House of Bourbon-Braganza (also called Branch of the Infant Gabriel)
- House of Bourbon-Orléans-Braganza (called the House of Orléans-Braganza and now representing the Brazilian Imperial Family)
- House of Bourbon-Montpensier (extinct)
- House of Bourbon-Condé (extinct)
- House of Bourbon-Conti (extinct)
- **House of Bourbon-La Marche** (extinct)
- **House of Bourbon-Soissons** (extinct)

Notable morganatic branches

- **House of Bourbon-Orléans-Galliera** (called the *House of Orléans-Galliera*)

Notable illegitimate branches

- Bourbon-Busset
  - an illegitimate branch senior to the Henry IV's House of Bourbon
- Bourbon-Vendôme
  - (extinct at the death of Louis Joseph de Bourbon, duc de Vendôme, great grandson of Henry IV of France) – 1598–1712
- Bourbon-Maine
  - (extinct at the death of *Louis Charles de Bourbon, comte d'Eu*, grandson of Louis XIV) – 1672–1775
- Bourbon-Penthièvre
  - (extinct at the death of Louis Jean Marie de Bourbon, duc de Penthièvre in 1793 but his daughter Louise Marie Adélaïde de Bourbon-Penthièvre who died in 1821 inherited all of the Bourbon-Penthièvre wealth) – 1725–1793/1821
- Bourbon-Bhopal

Surnames used

Officially, the King of France had no family name. A prince with the rank of *fils de France* (Son of France) are surnamed "*de France*"; all his descendants, however, had his main title (whether an appanage or a courtesy title) as their family or last name.

Members of the House of Bourbon-Conde and its cadet branches, which never ascended to the throne, used the surname "de Bourbon" until their extinction in 1830.

The daughters of Gaston, Duke of Orleans, were the first members of the House of Bourbon since the accession of Henry IV to take their surname from the appanage of their father (d'Orleans). Gaston died without a male heir; his titles reverted to the crown. It was given to his nephew, Philippe I, Duke of Orleans, brother of Louis

XIV, whose descendants still bear the surname.

When Philippe, grandson of Louis XIV, became King of Spain as Philip V, he gave up his French titles. As a Son of France, his actual surname was "de France". However, since such surname cannot be passed to a descendant with a rank lower than Son of France, and since Philippe had already given up his French titles, his descendants simply took the name of their royal house as their surname ("de Bourbon", rendered in Spanish as "de Borbón").

The children of Philippe's brother, Charles, Duke of Berry (all of whom died in infancy), were given the surname "d'Alencon". He was Duke of Berry only by name, so the surname of his children were taken from his first substantial duchy.

The children of Charles Philippe, Count of Artois, brother of Louis XVI, were surnamed "d'Artois". When Charles succeeded to the throne as Charles X, his son Louis Antoine became a Son of France, with the corresponding change in surname. His grandson, Henri d'Artois, being merely a Grandson of France, would use the surname until his death.

Sweden

From Wikipedia, the free encyclopedia

Sweden (/ˈswiːdən/ *SWEE-dən*; Swedish: *Sverige* ['sværjɛ] (listen)), officially the **Kingdom of Sweden** (Swedish: *Konungariket Sverige*), is a Nordic country on the Scandinavian Peninsula in Northern Europe. Sweden borders with Norway and Finland, and is connected to Denmark by a bridge-tunnel across the Öresund.

At 450,295 square kilometres (173,860 sq mi), Sweden is the third largest country in the European Union by area, with a total population of about 9.4 million.[5] Sweden has a low population density of 21 inhabitants per square kilometre (54 /sq mi) with the population mostly concentrated to the southern half of the country. About 85% of the population live in urban areas.[12] Sweden's capital is Stockholm, which is also the largest city.

Sweden emerged as an independent and unified country during the Middle Ages. In the 17th century, the country expanded its territories to form the Swedish Empire. The empire grew to be one of the great powers of Europe in the 17th and early 18th century. Most of the conquered territories outside the Scandinavian Peninsula were lost during the 18th and 19th centuries. The eastern half of Sweden, present-day Finland, was lost to Russia in 1809. The last war in which Sweden was directly involved was in 1814, when Sweden by military means forced Norway into a personal union. Since then, Sweden has been at peace, adopting a non-aligned foreign policy in peacetime and neutrality in wartime.[13]

Today, Sweden is a constitutional monarchy with a parliamentary democracy of government and a highly developed economy. In 2010, it ranked fourth in the world in *The Economist*'s Democracy Index and ninth in the United Nations' Human Development Index. In 2010, the World Economic Forum ranked Sweden as the second most competitive country in the world, after Switzerland.[14] According to the UN, it has the third lowest infant mortality rate in the world. Sweden also has the lowest Gini coefficient of all countries (0.23) which makes Sweden the most equal country on earth in terms of economic division. Sweden has been a member of the European Union since 1 January 1995 and is a member of the OECD.

a. ^ *För Sverige – I tiden* has been adopted by Carl XVI Gustaf as his personal motto.

b. ^ *Du gamla, Du fria* has never been officially adopted as national anthem, but is so by convention.

c. ^ Since 1 July 2009.[8][9] Five other languages are officially recognized as minority languages.[10] They are: Finnish, Meänkieli, Romani, Sami and Yiddish. The Swedish Sign Language also has a special status.

d. ^ As of 2008, 18% of the population had foreign origins (13% if excluding Finns and 9% if also excluding other Scandinavians), with 14% foreign-born and another 4% born in Sweden of two foreign-born parents.[11]

Etymology

Main article: Name of Sweden

The modern name *Sweden* is derived through back-formation from Old English *Swēoþēod*, which meant "people of the Swedes" (Old Norse *Svíþjóð*, Latin *Suetidi*). This word is derived from *Sweon/Sweonas* (Old Norse *Sviar*, Latin S*uiones*). The Swedish name *Sverige* (a conjunction of the words *Svea* and *Rike*, first recorded as *Swēorice* in Beowulf, with the consonant 'k' softened to 'g'[15] – compare "rige" in modern Danish) literally means "Kingdom of the Swedes", excluding the Geats in Götaland.

e. ^ Since 3 September 1967.

f. ^ The .eu domain is also used, as it is shared with other European Union member states. The .nu domain is another commonly used top-level domain ("nu" means "now" in Swedish).

Variations of the name *Sweden* are used in most languages, with the exception of Danish and Norwegian using *Sverige*, Icelandic *Svíþjóð*, and the more notable exception of some Finno-Ugric languages where *Ruotsi* (Finnish) and *Rootsi* (Estonian) are used, names commonly considered etymologically related to the English name for Russia, referring to the people, *Rus'*, originally from the coastal areas of Roslagen, Uppland.

The etymology of *Swedes*, and thus *Sweden*, is generally not agreed upon but may derive from Proto-Germanic *Swihoniz* meaning "one's own",[16] referring to one's own Germanic tribe.

History

Main article: History of Sweden

Prehistory

Main article: Prehistoric Sweden

Sweden's prehistory begins in the Allerød warm period c. 12,000 BC with Late Palaeolithic reindeer-hunting camps of the Bromme culture at the edge of the ice in what is now the country's southernmost province. This period was characterized by small bands of hunter-gatherer-fishers using flint technology.

Sweden enters proto-history with the *Germania* of Tacitus in AD 98. In Germania 44, 45 he mentions the Swedes (*Suiones*) as a powerful tribe (*distinguished not merely for their arms and men, but for their powerful fleets*) with ships that had a prow in both ends (longships). Which kings (*kuningaz*) ruled these Suiones is unknown, but Norse mythology presents a long line of legendary and semi-legendary kings going back to the last centuries BC. As for literacy in Sweden itself, the runic script was in use among the south Scandinavian elite by at least the 2nd century AD, but all that has come down to the present from the Roman Period is curt inscriptions on artefacts, mainly of male names, demonstrating that the people of south Scandinavia spoke Proto-Norse at the time, a language ancestral to Swedish and other North Germanic languages.

In the 6th century Jordanes named two tribes he calls the *Suehans* and the *Suetidi* who lived in Scandza. These two names are both considered to refer to the same tribe. The *Suehans*, he says, has very fine horses just as the "Thyringi" tribe (*alia vero gens ibi moratur Suehans, quae velud Thyringi equis utuntur eximiis*). Snorri Sturluson wrote that the contemporary Swedish king Adils (Eadgils) had the finest horses of his days. The Suehans were the suppliers of black fox skins for the Roman market. Then Jordanes names the *Suetidi* which is considered to be the Latin form of *Svitjod*. He writes that the Suetidi are the tallest of men together with the Dani who were of the same stock. Later he mentions other Scandinavian tribes for being of the same height.

Originating in semi-legendary Scandza, believed to be somewhere in modern Götaland, Sweden, a Gothic population had crossed the Baltic Sea before the 2nd century AD, reaching Scythia at the coast of the Black Sea in modern Ukraine where Goths left their archaeological traces in the Chernyakhov culture. In the 5th and 6th

centuries, they became divided as the Visigoths and the Ostrogoths, and established powerful successor-states of the Roman Empire in the Iberian peninsula and Italy.[17] Crimean Gothic communities appear to have survived intact in Crimea until the late 18th century.[18]

Viking and Middle Ages

See also: Early Swedish history, Foundation of Modern Sweden, and Varangians

The Swedish Viking Age lasted roughly between the 8th and 11th centuries. It is believed that Swedish Vikings and Gutar mainly travelled east and south, going to Finland, the Baltic countries, Russia, Belarus, Ukraine the Black Sea and further as far as Baghdad. Their routes passed through the Dnieper down south to Constantinople, on which they did numerous raids. The Byzantine Emperor Theophilos noticed their great skills in war and invited them to serve as his personal bodyguard, known as the varangian guard. The Swedish Vikings, called "Rus" are also believed to be the founding fathers of Kievan Rus. The Arabic traveller "Ibn Fadlan" described these Vikings as following:

> *I have seen the Rus as they came on their merchant journeys and encamped by the Itil. I have never seen more perfect physical specimens, tall as date palms, blond and ruddy; they wear neither tunics nor caftans, but the men wear a garment which covers one side of the body and leaves a hand free. Each man has an axe, a sword, and a knife, and keeps each by him at all times. The swords are broad and grooved, of Frankish sort.*[19]

The adventures of these Swedish Vikings are commemorated on many runestones in Sweden, such as the Greece Runestones and the Varangian Runestones. There was also considerable participation in expeditions westwards, which are commemorated on stones such as the England Runestones. The last major Swedish Viking expedition appears to have been the ill-fated expedition of Ingvar the Far-Travelled to Serkland, the region south-east of the Caspian Sea. Its members are commemorated on the Ingvar Runestones, none of which mentions any survivor. What happened to the crew is unknown, but it is believed that they died of sickness.

The Kingdom of Sweden

It is not known when and how the kingdom of Sweden was born, but the list of Swedish monarchs is drawn from the first kings known to have ruled both Svealand (Sweden) and Götaland (Gothia) as one province, beginning with Erik the Victorious. Sweden and Gothia were two separate nations long before that into antiquity. It is not known how long they existed, *Beowulf* described semi-legendary Swedish-Geatish wars in the 6th century.

Cultural advances

Gamla Uppsala, a site of religious and political importance in the early days of Sweden.

During the early stages of the Scandinavian Viking Age, Ystad in Scania and Paviken on Gotland, in present-day Sweden, were flourishing trade centres. Remains of what is believed to have been a large market have been found in Ystad dating from 600–700 AD.[20] In Paviken, an important centre of trade in the Baltic region during the 9th and 10th century, remains have been found of a large Viking Age harbour with shipbuilding yards and handicraft industries. Between 800 and 1000, trade brought an abundance of silver to Gotland, and according to some scholars, the Gotlanders of this era hoarded more silver than the rest of the population of Scandinavia combined.[20]

St. Ansgar is usually credited for introducing Christianity in 829, but the new religion did not begin to fully

replace paganism until the 12th century. During the 11th century, Christianity became the most prevalent religion, and from 1050 Sweden is counted as a Christian nation. The period between 1100 and 1400 was characterized by internal power struggles and competition among the Nordic kingdoms. Swedish kings also began to expand the Swedish-controlled territory in Finland, creating conflicts with the Rus who no longer had any connection with Sweden.[21]

Feudal institutions in Sweden

Except for the province of Skane, on the southernmost tip of Sweden which was under Danish control during this time, feudalism never developed in Sweden as it did in the rest of Europe.[22] Therefore, the peasantry remained largely a class of free farmers throughout most of Swedish history. Slavery (also called thralldom) was not common in Sweden,[23] and what slavery there was tended to be driven out of existence by the spread of Christianity, the difficulty in obtaining slaves from the lands east of the Baltic Sea, and by the development of cities before the 16th century[24] Indeed, both slavery and serfdom were abolished altogether by a decree of King Magnus Erickson in 1335. Former slaves tended to be absorbed into the peasantry and some became labourers in the towns. Still, Sweden remained a poor and economically backward country in which barter was the means of exchange. For instance, the farmers of the province of Dalsland would transport their butter to the mining districts of Sweden and exchange it there for iron, which they would then take down to the coast and trade the iron for fish they needed for food while the iron would be shipped abroad.[25]

The Plague in Sweden

In the 14th century, Sweden was struck by the Black Death. The population of Sweden was decimated.[26] During this period the Swedish cities also began to acquire greater rights and were strongly influenced by German merchants of the Hanseatic League, active especially at Visby. In 1319, Sweden and Norway were united under King Magnus Eriksson, and in 1397 Queen Margaret I of Denmark effected the personal union of Sweden, Norway, and Denmark through the Kalmar Union. However, Margaret's successors, whose rule was also centred in Denmark, were unable to control the Swedish nobility.

Valdemar IV takes control over Swedish Gotland. The final fight outside the walls of Visby ended with a total massacre of 1,800 Gotlanders.

Minors and Regents

A large number of children inherited the Swedish crown over the course of the kingdom's existence, consequently — real power was held for long periods by regents (notably those of the Sture family) chosen by the Swedish parliament. King Christian II of Denmark, who asserted his claim to Sweden by force of arms, ordered a massacre in 1520 of Swedish nobles at Stockholm. This came to be known as the "Stockholm blood bath" and stirred the Swedish nobility to new resistance and, on 6 June (now Sweden's national holiday) in 1523, they made Gustav Vasa their king.[27] This is sometimes considered as the foundation of modern Sweden. Shortly afterwards he rejected Catholicism and led Sweden into the Protestant Reformation. Economically, Gustav Vasa broke the monopoly of the Hanseatic League over Swedish Baltic Sea trade.[28]

The Hanseatic League had been officially formed at Lübeck on the sea coast of Northern Germany in 1356. The Hanseatic League sought civil and commercial privileges from the princes and royalty of the countries and cities along the coasts of the Baltic Sea.[29] In exchange they offered a certain amount of protection. Having their own navy the Hansa were able to sweep the Baltic Sea free of pirates.[30] The privileges obtained by the Hansa included assurances that only Hansa citizens would be allowed to trade from the ports where they were located. They also sought agreement to be free of all customs and taxes. With these concessions, Lübeck merchants

flocked to Stockholm, Sweden and soon came to dominate the economic life of that city and made the port city of Stockholm into the leading commercial and industrial city of Sweden.[31] Under the Hanseatic trade 2/3rds of Stockholm's imports consisted of textiles and 1/3 of salt. Exports from Sweden consisted of iron and copper.[32]

However, the Swedes began to resent the monopoly trading position of the Hansa (mostly German citizens) and to resent the income they felt they lost to the Hansa. Consequently, when Gustav Vasa or Gustav I broke the monopoly power of the Hanseatic League he was regarded as a hero to the Swedish people. History now views Gustav I as the father of the modern Swedish nation. The foundations laid by Gustav would take time to develop. Furthermore, when Sweden did develop, freed itself from the Hanseatic League and entered its golden era, the fact the peasantry had traditionally been free meant that more of the economic benefits flowed back to them rather than going to a feudal landowning class.[33] This was not the case in other countries of Europe like Poland where the peasantry was still bound by serfdom and a strong feudalistic land owning system.

Swedish Empire

See also: History of Sweden (1611–1648), Swedish Empire, Swedish overseas colonies, Sweden and the Great Northern War, Absolute Monarchy in Sweden, Sweden-Finland, and Union between Sweden and Norway

The Swedish Empire between 1560 and 1815

During the 17th century Sweden emerged as a European great power. Before the emergence of the Swedish Empire, Sweden was a very poor and scarcely populated country on the fringe of European civilization, with no significant power or reputation. Sweden rose to prominence on a continental scale during the tenure of king Gustavus Adolphus, seizing territories from Russia and Poland–Lithuania in multiple conflicts, including the Thirty Years' War.

During the Thirty Years' War, Sweden conquered approximately half of the Holy Roman states. Gustav Adolphus planned to become the new Holy Roman Emperor, ruling over a united Scandinavia and the Holy Roman states, but he died at the Battle of Lützen in 1632. After the Battle of Nördlingen, Sweden's only significant military defeat of the war, pro-Swedish sentiment among the German states faded. These German provinces excluded themselves from Swedish power one by one, leaving Sweden with only a few northern German territories: Swedish Pomerania, Bremen-Verden and Wismar. The Swedish armies may have destroyed up to 2,000 castles, 18,000 villages and 1,500 towns in Germany, one-third of all German towns.[34]

Stockholm in mid-17th century

In the middle of the 17th century Sweden was the third largest country in Europe by land area, only surpassed by Russia and Spain. Sweden reached its largest territorial extent under the rule of Charles X after the treaty of Roskilde in 1658.[35][36] The foundation of Sweden's success during this period is credited to Gustav I's major changes on the Swedish economy in the 16th century, and his introduction of Protestantism.[37] In the 17th century, Sweden was engaged in many wars, for example with the Polish-Lithuanian Commonwealth with both sides competing for territories of today's Baltic states, with the disastrous Battle of Kircholm being one of the highlights.[38] One-third of the Finnish population died in the devastating famine that struck the country in 1696.[39] Famine also hit Sweden,[40] killing roughly 10% of Sweden's population.[41]

The Swedes conducted a series of invasions into the Polish-Lithuanian Commonwealth, known as the Deluge.

After more than half a century of almost constant warfare, the Swedish economy had deteriorated. It became the lifetime task of Charles' son, Charles XI, to rebuild the economy and refit the army. His legacy to his son, the coming ruler of Sweden Charles XII, was one of the finest arsenals in the world, a large standing army and a great fleet. Sweden's largest threat at this time, Russia, had a larger army but was far behind in both equipment and training.

After the Battle of Narva in 1700, one of the first battles of the Great Northern War, the Russian army was so severely decimated that Sweden had an open chance to invade Russia. However, Charles did not pursue the Russian army, instead turning against Poland-Lithuania and defeating the Polish king Augustus II and his Saxon allies at the Battle of Kliszow in 1702. This gave Russia time to rebuild and modernize its army.

Death of Gustav II Adolf at the Battle of Lützen

After the success of invading Poland, Charles decided to make an invasion attempt of Russia which ended in a decisive Russian victory at the Battle of Poltava in 1709. After a long march exposed to Cossack raids, Russian Tsar Peter the Great's scorched-earth techniques and the cold Russian climate, the Swedes stood weakened with a shattered morale and enormously outnumbered against the Russian army at Poltava. The defeat meant the beginning of the end for the Swedish Empire.

The Battle of Poltava in 1709. In the years following Poltava, Russia occupied all the Swedish annexations on the Baltic coast and even Finland.

Charles XII attempted to invade Norway 1716; however, he was shot dead at Fredriksten fortress in 1718. The Swedes were not militarily defeated at Fredriksten, but the whole structure and organization of the Norwegian campaign fell apart with the king's death, and the army withdrew.

Forced to cede large areas of land in the Treaty of Nystad in 1721, Sweden also lost its place as an empire and as the dominant state on the Baltic Sea. With Sweden's lost influence, Russia emerged as an empire and became one of Europe's dominant nations. As the war finally ended in 1721, Sweden had lost an estimated 200,000 men, 150,000 of those from the area of present-day Sweden and 50,000 from the Finnish part of Sweden.[42]

In the 18th century, Sweden did not have enough resources to maintain its territories outside Scandinavia, and most of them were lost, culminating with the 1809 loss of eastern Sweden to Russia which became the highly autonomous Grand Principality of Finland in Imperial Russia.

In interest of re-establishing Swedish dominance in the Baltic Sea, Sweden allied itself against its traditional ally and benefactor, France, in the Napoleonic Wars. Sweden's role in the Battle of Leipzig gave it the authority to force Denmark-Norway, an ally of France, to cede Norway to the King of Sweden on 14 January 1814 in exchange for northern German provinces, at the Treaty of Kiel. The Norwegian attempts to keep their status as a sovereign state were rejected by the Swedish king, Charles XIII. He launched a military campaign against Norway on 27 July 1814, ending in the Convention of Moss, which forced Norway into a personal union with Sweden under the Swedish crown, which lasted until 1905. The 1814 campaign was the last war in which Sweden participated as a combatant. Swedish troops partake in peace-keeping missions and currently have forces deployed in Afghanistan and Kosovo.

Modern history

See also: Modernization of Sweden and Swedish emigration to the United States

There was a significant population increase during the 18th and 19th centuries, which the writer Esaias Tegnér in 1833 attributed to *"the peace, the (smallpox) vaccine, and the potatoes"*.[43] Between 1750 and 1850, the population in Sweden doubled. According to some scholars, mass emigration to America became the only way to prevent famine and rebellion; over 1% of the population emigrated annually during the 1880s.[44] Nevertheless, Sweden remained poor, retaining a nearly entirely agricultural economy even as Denmark and Western European countries began to industrialize.[44][45]

Swedish emigrants boarding ship in Gothenburg in 1905

Illustration of starvation in northern Sweden, Famine of 1866–1868

Many looked towards America for a better life during this time. It is believed that between 1850 and 1910 more than one million Swedes moved to the United States.[46] In the early 20th century, more Swedes lived in Chicago than in Gothenburg (Sweden's second largest city).[47] Most Swedish immigrants moved to the Midwestern United States, with a large population in Minnesota, with a few others moving to other parts of the United States and Canada.

Despite the slow rate of industrialization into the 19th century, many important changes were taking place in the agrarian economy because of innovations and the large population growth.[48] These innovations included government-sponsored programs of enclosure, aggressive exploitation of agricultural lands, and the introduction of new crops such as the potato.[48] Because the Swedish peasantry had never been enserfed as elsewhere in Europe,[49] the Swedish farming culture began to take on a critical role in the Swedish political process, which has continued through modern times with modern Agrarian party (now called the Centre Party).[50] Between 1870 and 1914, Sweden began developing the industrialized economy that exists today.[51]

Strong grassroots movements sprung up in Sweden during the latter half of the 19th century (trade unions, temperance groups, and independent religious groups), creating a strong foundation of democratic principles. In 1889 The Swedish Social Democratic Party was founded. These movements precipitated Sweden's migration into a modern parliamentary democracy, achieved by the time of World War I. As the Industrial Revolution progressed during the 20th century, people gradually began moving into cities to work in factories and became involved in socialist unions. A communist revolution was avoided in 1917, following the re-introduction of parliamentarism, and the country was democratized.

World Wars

See also: Sweden during World War II

Sweden remained officially neutral during World War I and World War II, although its neutrality during World War II has been disputed.[52][53] Sweden was under German influence for much of the war, as ties to the rest of the world were cut off through blockades.[52] The Swedish government felt that it was in no position to openly contest Germany,[54] and therefore made some concessions.[55] Sweden also supplied steel and machined parts to Germany throughout the war. However, Sweden supported Norwegian resistance, and in 1943 helped rescue Danish Jews from deportation to concentration camps. Sweden also supported Finland in the Winter War and the Continuation War

Swedish soldier during World War II

with volunteers and materiel.

Toward the end of the war, Sweden began to play a role in humanitarian efforts and many refugees, among them many Jews from Nazi-occupied Europe, were saved partly because of the Swedish involvement in rescue missions at the internment camps and partly because Sweden served as a haven for refugees, primarily from the Nordic countries and the Baltic states.[54] The Swedish diplomat Raoul Wallenberg and his colleagues may have saved up to 100,000 Hungarian Jews.[56] Nevertheless, internal and external critics have argued that Sweden could have done more to resist the Nazi war effort, even if risking occupation.[54]

Post-war era

Sweden was officially a neutral country and remained outside NATO or Warsaw pact membership during the cold war, but privately Sweden's leadership had strong ties with the United States and other western governments.

Following the war, Sweden took advantage of an intact industrial base, social stability and its natural resources to expand its industry to supply the rebuilding of Europe.[57] Sweden was part of the Marshall Plan and participated in the Organization of Economic Co-operation and Development (OECD). During most of the post-war era, the country was governed by the Swedish Social Democratic Party largely in cooperation with trade unions and industry. The government actively pursued an internationally competitive manufacturing sector of primarily large corporations.[58]

A typical red house in Tällberg, Sweden

Sweden, like countries around the globe, entered a period of economic decline and upheaval, following the oil embargoes of 1973–74 and 1978–79.[59] In the 1980s pillars of Swedish industry were massively restructured. Shipbuilding was discontinued, wood pulp was integrated into modernized paper production, the steel industry was concentrated and specialized, and mechanical engineering was robotized.[60]

Between 1970 and 1990 the overall tax burden rose by over 10%, and the growth was low compared to other countries in Western Europe. Eventually government spent over half of the country's gross domestic product. Sweden GDP per capita ranking declined during this time.[58]

Recent history

See also: History of Sweden (since 1989)

A bursting real estate bubble caused by inadequate controls on lending combined with an international recession and a policy switch from anti-unemployment policies to anti-inflationary policies resulted in a fiscal crisis in the early 1990s.[61] Sweden's GDP declined by around 5%. In 1992, there was a run on the currency, with the central bank briefly jacking up interest to 500%.[62][63]

Sweden joined the European Union in 1995 and signed the Lisbon Treaty in 2007.

The response of the government was to cut spending and institute a multitude of reforms to improve Sweden's competitiveness, among them reducing the welfare state and privatising public services and goods. Much of the political establishment promoted EU membership, and the

Swedish referendum passed with 52% in favour of joining the EU on 13 November 1994. Sweden joined the European Union on 1 January 1995.

Sweden remains non-aligned militarily, although it participates in some joint military exercises with NATO and some other countries, in addition to extensive cooperation with other European countries in the area of defence technology and defence industry. Among others, Swedish companies export weapons that are used by the American military in Iraq.[64] Sweden also has a long history of participating in international military operations, including most recently, Afghanistan, where Swedish troops are under NATO command, and in EU sponsored peacekeeping operations in UN protectorate Kosovo, Bosnia and Herzegovina, and Cyprus. Sweden held the chair of the European Union from 1 July to 31 December 2009.

Geography

Main article: Geography of Sweden

View of the Stora Sjöfallet National Park

Situated in Northern Europe, Sweden lies west of the Baltic Sea and Gulf of Bothnia, providing a long coastline, and forms the eastern part of the Scandinavian Peninsula. To the west is the Scandinavian mountain chain (Skanderna), a range that separates Sweden from Norway. Finland is located to its northeast. It has maritime borders with Denmark, Germany, Poland, Russia, Lithuania, Latvia and Estonia, and it is also linked to Denmark (southwest) by the Öresund Bridge.

Sweden lies between latitudes 55° and 70° N, and mostly between longitudes 11° and 25° E (part of Stora Drammen island is just west of 11°).

At 449,964 km^2 (173,732 sq mi), Sweden is the 55th largest country in the world,[65] the 4th largest country entirely in Europe, and the largest in Northern Europe. The lowest elevation in Sweden is in the bay of Lake Hammarsjön, near Kristianstad at −2.41 m (−7.91 ft) below sea level. The highest point is Kebnekaise at 2,111 m (6,926 ft) above sea level.

Sweden has 25 provinces or *landskap* (landscapes), based on culture, geography and history. While these provinces serve no political or administrative purpose, they play an important role for people's self-identification. The provinces are usually grouped together in three large *lands*, parts, the northern Norrland, the central Svealand and southern Götaland. The sparsely populated Norrland encompasses almost 60% of the country.

Lake landscape at the outskirts of Ramsjö

About 15% of Sweden lies north of the Arctic Circle. Southern Sweden is predominantly agricultural, with increasing forest coverage northward. Around 65% of Sweden's total land area is covered with forests. The highest population density is in the Öresund Region in southern Sweden, along the western coast up to central Bohuslän, and in the valley of lake Mälaren and Stockholm. Gotland and Öland are Sweden's largest islands; Vänern and Vättern are its largest lakes. Vänern is the third largest in Europe, after Lake Ladoga and Lake Onega in Russia.

Climate

The Scandinavian Mountains

Most of Sweden has a temperate climate, despite its northern latitude, with four distinct seasons and mild temperatures throughout the year. The country can be divided into three types of climate; the southernmost part has an oceanic climate, the central part has a humid continental climate and the northernmost part has a subarctic climate. However, Sweden is much warmer and drier than other places at a similar latitude, and even somewhat farther south, mainly because of the Gulf Stream.[66][67] For example, central and southern Sweden has much warmer winters than many parts of Russia, Canada, and the northern United States.[68] Because of its high latitude, the length of daylight varies greatly. North of the Arctic Circle, the sun never sets for part of each summer, and it never rises for part of each winter. In the capital, Stockholm, daylight lasts for more than 18 hours in late June but only around 6 hours in late December. Sweden receives between 1,100 to 1,900 hours of sunshine annually.[69][70]

Temperatures vary greatly from north to south. Southern and central parts of the country have warm summers and cold winters, with average high temperatures of 20 to 25 °C (68 to 77 °F)[71] and lows of 12 to 15 °C (54 to 59 °F)[72] in the summer, and average temperatures of -4 to 2 °C (25 to 36 °F) in the winter,[73] while the northern part of the country has shorter, cooler summers and longer, colder and snowier winters, with temperatures that often drop below freezing from September through May.[74][75] The highest temperature ever recorded in Sweden was 38 °C (100 °F) in Målilla in 1947, while the coldest temperature ever recorded was −52.6 °C (−62.7 °F) in Vuoggatjålme in 1966.[76][77]

On average, most of Sweden receives between 500 and 800 mm (20 and 31 in) of precipitation each year, making it considerably drier than the global average. The southwestern part of the country receives more precipitation, between 1000 and 1200 mm (39 and 47 in), and some mountain areas in the north are estimated to receive up to 2000 mm (79 in). Despite northerly locations, southern and central Sweden may have almost no snow in some winters.[78][79]

Politics

Main article: Politics of Sweden

Sweden is a constitutional monarchy, in which King Carl XVI Gustaf is head of state, but royal power has long been limited to official and ceremonial functions.[81] The Economist Intelligence Unit, while acknowledging that democracy is difficult to measure, listed Sweden in fourth place in 2010 in its index of democracy assessing 167 countries.

The nation's legislative body is the riksdag (Swedish Parliament), with 349 members, which chooses the Prime Minister. Parliamentary elections are held every four years, on the third Sunday of September.

Administrative divisions

Sweden municipal borders

Main articles: Counties of Sweden and Municipalities of Sweden

Sweden is a unitary state, currently divided into twenty-one counties (*län*): Stockholm, Uppsala, Södermanland, Östergötland, Jönköping, Kronoberg, Kalmar, Gotland, Blekinge, Skåne, Halland, Västra Götaland, Värmland, Örebro, Västmanland, Dalarna, Gävleborg, Västernorrland, Jämtland, Västerbotten and Norrbotten.

Each county has a County Administrative Board or *länsstyrelse*, which is a Government appointed board. It is led by a Governor or *Landshövding* appointed for a term of six years and the list of succession, in most cases, stretches back to 1634 when the counties were created by the Swedish Lord High Chancellor Axel Oxenstierna. The main responsibility of the County Administrative Board is to coordinate the development of the county in line with goals set in national politics. In each county there is also a County Council or *landsting* which is a policy-making assembly elected by the residents of the county.

Each county further divides into a number of municipalities or *kommuner*, with a total of 290 municipalities in 2004. Municipal government in Sweden is similar to city commission government and cabinet-style council government. A legislative municipal assembly *(kommunfullmäktige)* of between 31 and 101 members (always an uneven number) is elected from party-list proportional representation at municipal elections, held every four years in conjunction with the national parliamentary elections.

The municipalities are divided into a total of 2,512 parishes, or *församlingar*. These have traditionally been a subdivision of the Church of Sweden but still have importance as districts for census and elections. There are older historical divisions, primarily the twenty-five provinces and three lands, which still retain cultural significance.

Further information: Subdivisions of Sweden and National Areas of Sweden

Political history

The actual age of the kingdom of Sweden is unknown.[82] It depends mostly on whether Sweden should be considered a nation when the *Svear* (Sweonas) ruled Svealand or if the emergence of the nation started with the *Svear* and the *Götar* (Geats) of Götaland being united under one ruler. In the first case, Sweden was first mentioned as having one single ruler in the year 98 by Tacitus, but it is almost impossible to know for how long it had been this way. However, historians usually start the line of Swedish monarchs from when Svealand and

Kingdoms of Svear (Sweonas) and Götar (Geats) in the 12th century, with modern borders in grey

Götaland were ruled under the same king, namely Erik the Victorious (Geat) and his son Olof Skötkonung in the 10th century. These events are often described as the consolidation of Sweden, although substantial areas were conquered and incorporated later.

Earlier kings, for which no reliable historical sources exist, can be read about in mythical kings of Sweden and semi-legendary kings of Sweden. Many of these kings are only mentioned in various saga and blend with Norse mythology.

The title *Sveriges och Götes Konung* was last used for Gustaf I of Sweden, after which the title became "King of Sweden, of the Goths and of the Wends" (*Sveriges, Götes och Vendes Konung*) in official documentation. Up until the beginning of the 1920s, all laws in Sweden were introduced with the words, "We, the king of Sweden, of the Goths and Wends". This title was used up until 1973.[83] The present King of Sweden, Carl XVI Gustaf, was the first monarch officially proclaimed "King of Sweden" (*Sveriges Konung*) with no additional peoples mentioned in his title.

The term *riksdag* was used for the first time in the 1540s, although the first meeting where representatives of different social groups were called to discuss and determine affairs affecting the country as a whole took place as early as 1435, in the town of Arboga.[84] During the assemblies of 1527 and 1544, under King Gustav Vasa, representatives of all four estates of the realm (clergy, nobility, townsmen and peasants) were called on to participate for the first time.[84] The monarchy became hereditary in 1544.

Executive power was historically shared between the King and a noble Privy Council until 1680, followed by the King's autocratic rule initiated by the common estates of the Parliament. As a reaction to the failed Great Northern War, a parliamentary system was introduced in 1719, followed by three different flavours of constitutional monarchy in 1772, 1789 and 1809, the latter granting several civil liberties. The monarch remains as the formal, but merely symbolic, head of state with ceremonial duties.

The Riksdag of the Estates consisted of two chambers. In 1866 Sweden became a constitutional monarchy with a bicameral parliament, with the First Chamber indirectly elected by local governments, and the Second Chamber directly elected in national elections every four years. In 1971 the parliament became unicameral. Legislative power was (symbolically) shared between king and parliament until 1975. Swedish taxation is controlled by the Parliament of Sweden (riksdagen).

Sweden has a history of strong political involvement by ordinary people through its "popular movements" (*Folkrörelser*), the most notable being trade unions, the independent Christian movement, the temperance movement, the women's movement and more recently the sports and intellectual property pirate movements.

Sweden is currently leading the EU in statistics measuring equality in the political system and equality in the education system.[85] The *Global Gender Gap Report 2006* ranked Sweden as the number one country in terms of gender equality.[86]

Political system

Constitutionally, the 349-member riksdag (Parliament) holds supreme authority in modern Sweden. The riksdag is responsible for choosing the prime minister, who then appoints the government department heads (cabinet

ministers). Legislative power is only exercised by the riksdag. Executive power is exercised by the prime minister and the cabinet, while the judiciary is independent. Sweden lacks compulsory judicial review, although the non-compulsory review carried out by *lagrådet* (Law Council) is mostly respected in technical matters but less so in controversial political matters. Acts of the parliament and government decrees can be made inapplicable at every level if they are manifestly against constitutional laws. However, because of the restrictions in this form of judicial review and a weak judiciary, this has had little practical consequence.

The Parliament House in Stockholm.

Legislation may be initiated by the cabinet or by members of Parliament. Members are elected on the basis of proportional representation to a four-year term. The Constitution of Sweden can be altered by the riksdag, which requires a simple but absolute majority with two separate votes, separated by general elections in between. Sweden has three other constitutional laws: the Act of Royal Succession, the Freedom of Press Act and the Fundamental Law on Freedom of Expression.

Carl XVI Gustaf, the King of Sweden and ceremonial head of state

The Swedish Social Democratic Party has played a leading political role since 1917, after Reformists had confirmed their strength and the revolutionaries left the party. After 1932, cabinets have been dominated by the Social Democrats. Only five general elections (1976, 1979, 1991, 2006 and 2010) have given the centre-right bloc enough seats in Parliament to form a government. However, due to poor economic performance since the beginning of the 1970s, and especially since the fiscal crisis of the early 1990s, Sweden's political system has become less one-sided, and more like other European countries.

In the 2006 general election the Moderate Party, allied with the Centre Party, Liberal People's Party, and the Christian Democrats formed the centre-right Alliance for Sweden and won a majority of the votes. Together they formed a majority government under the leadership of the Moderate party's leader Fredrik Reinfeldt. In the September 2010 election the Alliance contended against a unified left block consisting of the Social Democrats, the Greens and the Left Party. It also saw the first election of the Sweden Democrats into the riksdag.[87]

Following is the current party lineup in the Swedish parliament, as of October 2011, organized by voting blocks:[88]

English name	Swedish name	Abbr.	Seats
Moderate Party	Moderata samlingspartiet	(M)	107
Liberal People's Party	Folkpartiet liberalerna	(FP)	24
Centre Party	Centerpartiet	(C)	23
Christian Democrats	Kristdemokraterna	(KD)	19
Total centre-right block			**173**
Social Democrats	Socialdemokraterna	(S)	112
The Greens	Miljöpartiet	(MP)	25
Left Party	Vänsterpartiet	(V)	19
Total left-of-centre[89] block			**156**

Sweden Democrats	Sverigedemokraterna	(SD)	19
Independent member	utan partibeteckning		1
Total parliament			**349**

The Alliance won a plurality of 173 seats, but remained two seats short of a 175-seat majority. Nevertheless, neither the Alliance, nor the left block chose to form a coalition with the Sweden Democrats, and the Alliance is currently governing as a minority government.[90]

Election turnout in Sweden has always been high by international comparison, although it has declined in recent decades, and is currently around 80% (80.11 in 2002, and 81.99% in 2006). Swedish politicians enjoyed a high degree of confidence from the citizens in the 1960s, However, that confidence level has since declined steadily, and is now at a markedly lower level than in its Scandinavian neighbours.[91]

Some Swedish political figures have become known worldwide, among these are: Raoul Wallenberg, Folke Bernadotte, former Secretary General of the United Nations Dag Hammarskjöld, former Prime Minister Olof Palme, former Prime Minister and Foreign minister Carl Bildt, former President of the General Assembly of the United Nations Jan Eliasson, and former International Atomic Energy Agency Iraq inspector Hans Blix.

Law, law enforcement, and judicial system

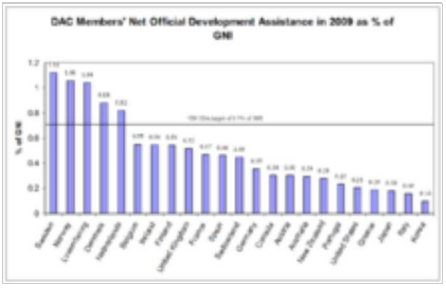
Main article: Judicial system of Sweden

The Supreme Court of Sweden is the third and final instance in all civil and criminal cases in Sweden. Before a case can be decided by the Supreme Court, leave to appeal must be obtained, and with few exceptions, leave to appeal can be granted only when the case is of interest as a precedent. The Supreme Court consists of 16 Councillors of Justice or *justitieråd* which are appointed by the government, but the court as an institution is independent of the Parliament of Sweden, and the government is not able to interfere with the decisions of the court.

Law enforcement in Sweden is carried out by several government entities. The Swedish Police Service is a Government agency concerned with police matters. The National Task Force is a national SWAT unit within the National Criminal Investigation Department. Swedish Security Service's responsibilities are counter-espionage, anti-terrorist activities, protection of the constitution and protection of sensitive objects and people.

According to a victimization survey of 1,201 residents in 2005, Sweden has above average crime rates compared to other EU countries. Sweden has high or above average levels of assaults, sexual assaults, hate crimes, and consumer fraud. Sweden has low levels of burglary, car theft and drug problems. Bribe seeking is rare.[92]

Foreign relations



Main article: Foreign relations of Sweden

Throughout the 20th century, Swedish foreign policy was based on the principle of non-alignment in peacetime and neutrality in wartime. Sweden's government pursued an independent course of nonalignment in times of peace so that neutrality would be possible in the event of war.[57]

Sweden's doctrine of neutrality is often traced back to the 19th century as the country has not been in a state of war since the end of the Swedish campaign against Norway in 1814. During World War II Sweden joined neither the allied nor axis powers. This has sometimes been disputed since in effect Sweden allowed in select cases the

Nazi regime to use its railroad system to transport troops and goods,[52][54] especially iron ore from mines in northern Sweden, which was vital to the German war machine.[54][93] However, Sweden also indirectly contributed to the defence of Finland in the Winter War, and permitted the training of Norwegian and Danish troops in Sweden after 1943.

During the early Cold War era, Sweden combined its policy of non-alignment and a low profile in international affairs with a security policy based on strong national defence.[94] The function of the Swedish military was to deter attack.[95] At the same time, the country maintained relatively close informal connections with the Western bloc, especially in the realm of intelligence exchange. In 1952, a Swedish DC-3 was shot down over the Baltic Sea by a Soviet MiG-15 jet fighter. Later investigations revealed that the plane was actually gathering information for NATO.[96] Another plane, a Catalina search and rescue plane, was sent out a few days later and shot down by the Soviets as well. Olof Palme, the former prime minister of Sweden, visited Cuba during the 1970s and showed his support for Cuba in his speech.

Development aid measured in GNI in 2009. Source: OECD. As a percentage Sweden is the largest donor.

Beginning in the late 1960s, Sweden for a period attempted to play a more significant and independent role in international relations. This involved significant activity in international peace efforts, especially through the United Nations, and in support to the Third World. Since the assassination of Olof Palme in 1986 and the end of the Cold War, this has been significantly toned down, although Sweden remains comparatively active in peace keeping missions and maintains a generous foreign aid budget.

In 1981 a Soviet Whiskey class submarine ran aground close to the Swedish naval base at Karlskrona in the southern part of the country. It has never been clearly established whether the submarine ended up on the shoals through a navigational mistake or if it was a matter of espionage against Swedish military potential. The incident triggered a diplomatic crisis between Sweden and the Soviet Union.

Since 1995 Sweden has been a member of the European Union, and as a consequence of a new world security situation the country's foreign policy doctrine has been partly modified, with Sweden playing a more active role in European security co-operation.

Military

Main article: Swedish Armed Forces

Försvarsmakten (Swedish Armed Forces) is a government agency reporting to the Swedish Ministry of Defence and responsible for the peacetime operation of the armed forces of Sweden. The primary task of the agency is to train and deploy peace support forces abroad, while maintaining the long-term ability to refocus on the defence of Sweden in the event of war. The armed forces are divided into Army, Air Force and Navy. The head of the armed forces is the Supreme Commander (*Överbefälhavaren*, ÖB), the most senior officer in the country. Up to 1974 the head of state (=the King) was *pro forma* Commander-in-Chief, but in reality it was clearly understood all through the 20th century that the Monarch would have no *active* role as a military leader.

The JAS 39 Gripen is an advanced Swedish multi-role fighter aircraft of the Swedish Air Force.

When King Gustav V asserted his right to decide and bypass the

government in military matters just before the First World War (*"borggårdskrisen"*, the Castle Court Crisis) it was seen as a deliberate provocation against established terms of how the country would be ruled. The office of an appointed Supreme Commander was set up in 1939; before that date, from the late 19th century onwards, the leading men of the army and navy would report directly to the cabinet (and the king), and no fully unified command existed in the professional military sphere itself.

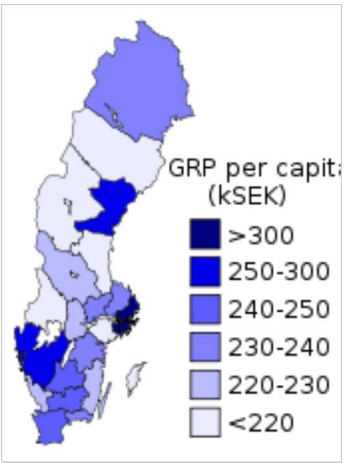
The Infantry fighting vehicle Strf 90 produced and used by Sweden.

Until the end of the Cold War, nearly all males reaching the age of military service were conscripted. In recent years, the number of conscripted males has shrunk dramatically, while the number of female volunteers has increased slightly. Recruitment has generally shifted towards finding the most motivated recruits, rather than solely those otherwise most fit for service. All soldiers serving abroad must by law be volunteers. In 1975 the total number of conscripts was 45,000. By 2003 it was down to 15,000.

On 1 July 2010 Sweden stopped routine conscription, switching to an all volunteer force unless otherwise required for defence readiness.[97][98][99] The need to recruit only the soldiers later prepared to volunteer for international service will be emphasized. The total forces gathered would consist of about 60,000 men. This could be compared with the 80s before the fall of the Soviet Union, when Sweden could gather up to 1,000,000 men.

Swedish units have taken part in peacekeeping operations in the Democratic Republic of Congo, Cyprus, Bosnia and Herzegovina, Kosovo, Liberia, Lebanon, Afghanistan and Chad.

Currently, one of the most important tasks for the Swedish Armed Forces has been to form a Swedish-led EU Battle Group to which Norway, Finland, Ireland and Estonia will also contribute.[100] The Nordic Battle Group (NBG) had a 10-day deployment readiness during the first half of 2008 and, although Swedish-led, had its Operational Headquarters (OHQ) in Northwood, outside London.

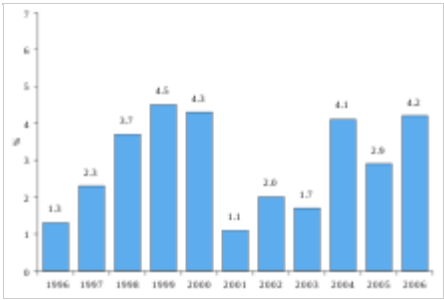


Economy

Main article: Economy of Sweden

Nordstan is one of the largest shopping malls in northern Europe

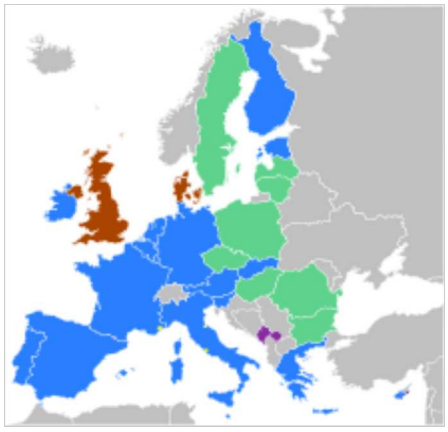
Sweden is an export-oriented mixed economy featuring a modern distribution system, excellent internal and external communications, and a skilled labour force. Timber, hydropower and iron ore constitute the resource base of an economy heavily oriented toward foreign trade. Sweden's engineering sector accounts for 50% of output and exports. Telecommunications, the automotive industry and the pharmaceutical industries are also of great importance. Agriculture accounts for 2% of GDP and employment. Income is relatively flatly distributed, Sweden has the lowest Gini coefficient (0.23) of any country.



Gross Regional Product (GRP) per capita in thousands of kronor (2004).

In terms of structure, the Swedish economy is characterised by a large,

knowledge-intensive and export-oriented manufacturing sector, an increasing, but comparatively small, business service sector, and by international standards, a large public service sector. Large organisations both in manufacturing and services dominate the Swedish economy.[101]



The 20 largest (by turnover in 2007) companies registered in Sweden are Volvo, Ericsson, Vattenfall, Skanska, Sony Ericsson Mobile Communications AB, Svenska Cellulosa Aktiebolaget, Electrolux, Volvo Personvagnar, TeliaSonera, Sandvik, Scania, ICA, Hennes & Mauritz, IKEA, Nordea, Preem, Atlas Copco, Securitas, Nordstjernan and SKF.[102] Sweden's industry is overwhelmingly in private control; unlike some other industrialised Western countries, such as Austria and Italy, publicly owned enterprises have always been of minor importance.

Real GDP growth in Sweden, 1996–2006.

Some 4.5 million residents are working, out of which around a third has tertiary education. GDP per hour worked is the world's 9th highest at 31 USD in 2006, compared to 22 USD in Spain and 35 USD in United States.[103] GDP per hour worked is growing 2½ per cent per year for the economy as a whole and the trade-terms-balanced productivity growth is 2%.[103] According to OECD, deregulation, globalisation, and technology sector growth have been key productivity drivers.[103] Sweden is a world leader in privatised pensions and pension funding problems are relatively small compared to many other Western European countries.[104]

The typical worker receives 40% of his or her income after the tax wedge. The slowly declining overall taxation, 51.1% of GDP in 2007, is still nearly double of that in the United States or Ireland. The share of employment financed via tax income amounts to a third of Swedish workforce, a substantially higher proportion than in most other countries. Overall, GDP growth has been fast since reforms in the early 1990s, especially in manufacturing.[105]

Sweden is part of the Schengen Area and the EU single market.

The World Economic Forum 2009–2010 competitiveness index ranks Sweden the 4th most competitive economy in the world.[106] In the World Economic Forum 2010–2011 Global Competitiveness Report, Sweden climbed two positions, and is now ranked 2nd in the world.[107] Sweden is ranked 6th in the IMD Competitiveness Yearbook 2009, scoring high in private sector efficiency.[108] According to the book, *The Flight of the Creative Class*, by the U.S. economist, Professor Richard Florida of the University of Toronto, Sweden is ranked as having the best creativity in Europe for business and is predicted to become a talent magnet for the world's most purposeful workers. The book compiled an index to measure the kind of creativity it claims is most useful to business—talent, technology and tolerance.[109]

Sweden maintains its own currency, the Swedish krona (SEK), a result of the Swedes having rejected the euro in a referendum. The Swedish Riksbank—founded in 1668 and thus making it the oldest central bank in the world—is currently focusing on price stability with an inflation target of 2%. According to the *Economic Survey of Sweden 2007* by the OECD, the average inflation in Sweden has been one of the lowest among European countries since the mid-1990s, largely because of deregulation and quick utilisation of globalisation.[103]

The largest trade flows are with Germany, the United States, Norway, the United Kingdom, Denmark and Finland.

Energy

See also: Nordic energy market, Nuclear power phase-out in Sweden, and Oil phase-out in Sweden

Sweden's energy market is largely privatized. The Nordic energy market is one of the first liberalized energy markets in Europe and it is traded in NASDAQ OMX Commodities Europe and Nord Pool Spot. In 2006, out of a total electricity production of 139 TWh, electricity from hydropower accounted for 61 TWh (44%), and nuclear power delivered 65 TWh (47%). At the same time, the use of biofuels, peat etc. produced 13 TWh (9%) of electricity, while wind power produced 1 TWh (1%). Sweden was a net importer of electricity by a margin of 6 TWh.[110] Biomass is mainly used to produce heat for district heating and central heating and industry processes.

The 1973 oil crisis strengthened Sweden's commitment to decrease dependence on imported fossil fuels. Since then, electricity has been generated mostly from hydropower and nuclear power. The use of nuclear power has been limited, however. Among other things, the accident of Three Mile Island Nuclear Generating Station (United States) prompted the Swedish parliament to ban new nuclear plants. In March 2005, an opinion poll showed that 83% supported maintaining or increasing nuclear power.[111] Politicians have made announcements about oil phase-out in Sweden, decrease of nuclear power, and multi-billion dollar investments in renewable energy and energy efficiency.[112][113] The country has for many years pursued a strategy of indirect taxation as an instrument of environmental policy, including energy taxes in general and carbon dioxide taxes in particular.[112]

Transport

Main article: Transport in Sweden

Stockholm metro.

The Stockholm Central Station

The Öresund Bridge between Malmö and Copenhagen in Denmark.

Sweden has 162,707 km (101,101 mi) of paved road and 1,428 km (887 mi) of expressways. Motorways run through Sweden, Denmark and over the Öresund Bridge to Stockholm, Gothenburg, Uppsala and Uddevalla. The system of motorways is still under construction and a new motorway from Uppsala to Gävle was finished on 17 October 2007. Sweden had left-hand traffic (Vänstertrafik in Swedish) from approximately 1736 and continued to do so well into the 20th century. Voters rejected right-hand traffic in 1955, but after the riksdag passed legislation in 1963 changeover took place in 1967, known in Swedish as Dagen H.

The Stockholm metro is the only subway system in Sweden and serves the city of Stockholm, 100 metro stations are in use.

The rail transport market is privatized, but while there are many privately owned enterprises, many operators are still owned by state. The counties have financing, ticket and marketing responsibility for local trains. For other trains the operators handle tickets and marketing themselves. Operators include SJ, Veolia Transport, DSB, Green Cargo, Tågkompaniet and Inlandsbanan. Most of the railways are owned and operated by Trafikverket.

The largest airports include Stockholm-Arlanda Airport (16.1 million passengers in 2009) 40 km (25 mi) north of Stockholm, Gothenburg-Landvetter Airport (4.3 million passengers in 2008), and Stockholm-Skavsta Airport (2.0 million passengers). Sweden hosts the two largest port companies in Scandinavia, Port of Göteborg AB (Gothenburg) and the transnational company Copenhagen Malmö Port AB.

Public policy

See also: Nordic model and Swedish welfare

Sweden has one of the most highly developed welfare states in the world. The country has a higher level of social spending to GDP than any other nation. Additionally it provides equal as well as comprehensive access to education and health care.

Historically, Sweden provided solid support for free trade (except agriculture) and mostly relatively strong and stable property rights (both private and public), though some economists have pointed out that Sweden promoted industries with tariffs and used publicly subsidised R&D during the country's early critical years of industrialisation.[114] After World War II a succession of governments expanded the welfare state by raising the tax level. During this period Sweden's economic growth was also one of the highest in the industrial world. A series of successive social reforms transformed the country into one of the most equal and developed on earth. The consistent growth of the welfare state led to Swedes achieving unprecedented levels of social mobility and quality of life—to this day Sweden consistently ranks at the top of league tables for health, literacy and Human Development—far ahead of some wealthier countries (for example the United States).[115]

However, from the 1970s and onwards Sweden's GDP growth fell behind other industrialised countries and the country's per capita ranking fell from the 4th to 14th place in a few decades.[116] From the mid 90s until today Sweden's economic growth has once again accelerated and has been higher than in most other industrialised countries (including the US) during the last 15 years.[117]

Sweden began slowing the expansion of the welfare state in the 1980s, or even trimming it back, and according to the OECD and McKinsey, Sweden has recently been relatively quick to adopt neo-liberal policies, such as deregulation, compared to countries such as France.[103][118] The current Swedish government is continuing the trend of moderate rollbacks of previous social reforms.[103][119] Growth has been higher than in many other EU-15 countries.

Sweden adopted neo-liberal agricultural policies in 1990. Since the 1930s, the agricultural sector had been subject to price controls. In June 1990, the Parliament voted for a new agricultural policy marking a significant shift away from price controls. As a result, food prices fell somewhat. However, the liberalizations soon became moot because EU agricultural controls supervened.[120]

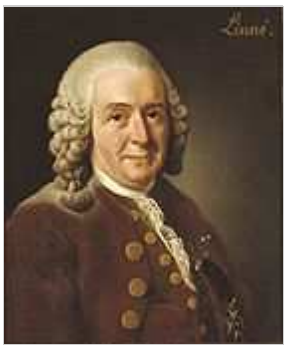
Since the late 1960s, Sweden has had the highest tax quota (as percentage of GDP) in the industrialised world, although today the gap has narrowed and Denmark has surpassed Sweden as the most heavily taxed country among developed countries. Sweden has a two step progressive tax scale with a municipal income tax of about 30% and an additional high-income state tax of 20–25% when a salary exceeds roughly 320,000 SEK per year. Payroll taxes amount to 32%. In addition, a national VAT of 25% is added to many things bought by private citizens, with the exception of food (12% VAT), transportation, and books (6% VAT). Certain items are subject to additional taxes, e.g. electricity, petrol/diesel and alcoholic beverages.

As of 2007, total tax revenue was 47.8% of GDP, the second highest tax burden among developed countries, down from 49.1% 2006.[121] Sweden's inverted tax wedge – the amount going to the service worker's wallet – is

approximately 15% compared to 10% in Belgium, 30% in Ireland, and 50% in United States.[116] Public sector spending amounts to 53% of the GDP. State and municipal employees total around a third of the workforce, much more than in most Western countries. Only Denmark has a larger public sector (38% of Danish workforce). Spending on transfers is also high.

Eighty percent of the workforce is organised in trade-unions which also have the right to elect two representatives to the board in all Swedish companies with more than 25 employees. Sweden has a relatively high amount of sick leave per worker in OECD: the average worker loses 24 days due to sickness.[105] In December 2008, the number employed in age group 16–64 was 75.0%. The employment tendency was very strong in 2007. The positive trend continued during the first half of 2008, but the rate of increase slackened. According to Statistics Sweden, the unemployment rate in December 2008 was at 6.4%.[122]

Science



Altogether, the public and the private sector in Sweden allocate nearly four per cent of GDP to research & development (R&D) per year, which makes Sweden one of the countries that invest most in R&D in terms of percentage of GDP. The standard of Swedish research is high and Sweden is a world leader in a number of fields. [*citation needed*] Sweden tops Europe in comparative statistics both in terms of research investments as a percentage of GDP as well as in the number of published scientific works per capita.[123]

Though a relatively small country, Sweden has long been at the forefront of research and development. [*citation needed*] For several decades the Swedish government has prioritized scientific and R&D activities. This strong engagement has helped make Sweden a leading country in terms of innovation. In international comparison, high-technology manufacturing is relatively large in all high-technology segments, and particularly in telecommunications and pharmaceuticals.[*citation needed*]

Sweden ranked either as the first or second country publishing the highest number of scientific publications in the fields of medical science, natural science and engineering in 2001.[*citation needed*] Sweden was world-leading in medical science and second only to Switzerland in natural science and engineering in terms of the number of publications per capita.

Technology

Main article: Swedish inventions

Carl Linnaeus laid the foundations for the modern scheme of binomial nomenclature.

In the 18th century Sweden's scientific revolution took off. Previously, technical progress had mainly come from mainland Europe. In 1739, the Royal Swedish Academy of Sciences was founded, with people such as Carolus Linnaeus and Anders Celsius as early members. Many of the companies founded by early pioneers are still remain major international brands. Gustaf Dalén founded AGA, and received the Nobel Prize for his sun valve. Alfred Nobel invented dynamite and instituted the Nobel Prizes. Lars Magnus Ericsson started the company bearing his name, Ericsson, still one of the largest telecom companies in the world. Jonas Wenström was an early pioneer in alternating current and is along with Serbian inventor Nikola Tesla credited

Alfred Nobel, inventor of dynamite and institutor of

He is known as the father of modern taxonomy, and is also considered one of the fathers of modern ecology.

as one of the inventors of the three-phase electrical system.[124]

the Nobel Prize.

The traditional engineering industry is still a major source of Swedish inventions, but pharmaceuticals, electronics and other high-tech industries are gaining ground. Tetra Pak was an invention for storing liquid foods, invented by Erik Wallenberg. Losec, an ulcer medicine, was the world's best-selling drug in the 1990s and was developed by AstraZeneca. More recently Håkan Lans invented the Automatic Identification System, a worldwide standard for shipping and civil aviation navigation. A large portion of the Swedish economy is to this day based on the export of technical inventions, and many large multinational corporations from Sweden have their origins in the ingenuity of Swedish inventors.[124]

Swedish inventors hold a total of 33,523 patents in the United States as of 2007, according to the United States Patent and Trademark Office. As a nation, only ten other countries hold more patents than Sweden.[125]

Demographics

Main articles: Demographics of Sweden and Swedish people

As of 2009, the total population of Sweden was estimated to be 9,325,429.[126] The population exceeded 9 million for the first time on approximately 12 August 2004 according to Statistics Sweden. The population density is 20.6 people per km² (53.3 per square mile) and it is substantially higher in the south than in the north. About 85% of the population live in urban areas.[12] The capital city Stockholm has a population of about 800,000 (with 1.3 million in the urban area and 2 million in the metropolitan area). The second and third largest cities are Gothenburg and Malmö.

Between 1820 and 1930, approximately 1.3 million Swedes, a third of the country's population, emigrated to North America, and most of them to the United States. There are more than 4.4 million Swedish Americans according to a 2006 U.S. Census Bureau estimate.[127] In Canada, the community of Swedish ancestry is 330,000 strong.[128]

Language

Main articles: Swedish language and Languages of Sweden

See also: Swedish dialects

Distribution of speakers of the Swedish language

The official language of Sweden is Swedish,[8][9] a North Germanic language, related and very similar to Danish and Norwegian, but differing in pronunciation and orthography. Norwegians have little difficulty understanding Swedish, and Danes can also understand it, with slightly more difficulty than the Norwegians. The dialects spoken in Scania, the southernmost part of the country, are influenced by Danish because the region traditionally was a part of Denmark and is nowadays situated closely to it. Sweden Finns are Sweden's largest linguistic minority, comprising about 5% of Sweden's population,[2] and Finnish is recognized as a minority language.[9]

Along with Finnish, four other minority languages are also recognized: Meänkieli, Sami, Romani and Yiddish. Swedish became Sweden's official language on 1 July 2009, when a new language law was implemented.[9] The issue of whether Swedish should be declared the official language has been raised in the past, and the parliament voted on the matter in 2005, but the proposal narrowly failed.[130]

In varying degrees, depending largely on frequency of interaction with English, a majority of Swedes, especially those born after World War II, understand and speak English due to trade links, the popularity of overseas travel, a strong Anglo-American influence and the tradition of subtitling rather than dubbing foreign television shows and films, and the relative similarity of the two languages which makes learning English easier. In a 2005 survey by Eurobarometer, 89% of Swedes reported the ability to speak English.[131]

English became a compulsory subject for secondary school students studying natural sciences as early as 1849, and has been a compulsory subject for all Swedish students since the late 1940s.[132] Depending on the local school authorities, English is currently a compulsory subject between first grade and ninth grade, with all students continuing in secondary school studying English for at least another year. Most students also study one and sometimes two additional languages. These include (but are not limited to) German, French and Spanish. Some Danish and Norwegian is at times also taught as part of Swedish courses for native speakers.

Religion

Main article: Religion in Sweden

Before the 11th century, Swedes adhered to Norse paganism, worshiping Æsir gods, with its centre at the Temple in Uppsala. With Christianization in the 11th century, the laws of the country were changed, forbidding worship of other deities into the late 19th century.

After the Protestant Reformation in the 1530s, a change led by Martin Luther's Swedish associate Olaus Petri, the authority of the Roman Catholic Church was abolished. The church and state were separated, allowing Lutheranism to prevail. This process was completed by the Uppsala Synod of 1593. Lutheranism became Sweden's official religion. During the era following the Reformation, usually known as the period of Lutheran Orthodoxy, small groups of non-Lutherans, especially Calvinist Dutchmen, the Moravian Church and Walloons

or French Huguenots from Belgium, played a significant role in trade and industry, and were quietly tolerated as long as they kept a low religious profile. The Sami originally had their own shamanistic religion, but they converted to Lutheranism by the work of Swedish missionaries in the 17th and 18th centuries.

With religious liberalizations in the late 18th century believers of other faiths, including Judaism and Roman Catholicism, were allowed to openly live and work in the country. However, until 1860 it remained illegal for Lutheran Swedes to convert to another religion. The 19th century saw the arrival of various evangelical free churches, and, towards the end of the century, secularism, leading many to distance themselves from Church rituals. Leaving the Church of Sweden became legal with the so-called dissenter law of 1860, but only under the provision of entering another Christian denomination. The right to stand outside any religious denomination was formally established in the Law on Freedom of Religion in 1951. In 2000 the Church of Sweden was separated from the state and Sweden ceased to have any official church.

Uppsala Cathedral

Church of Sweden[133][134]

Year	Population	Church members	Percentage
1972	8,146,000	7,754,784	95.2%
1980	8,278,000	7,690,636	92.9%
1990	8,573,000	7,630,350	89.0%
2000	8,880,000	7,360,825	82.9%
2005	9,048,000	6,967,498	77.0%
2006	9,119,000	6,893,901	75.6%
2007	9,179,000	6,820,161	74.3%
2008	9,262,000	6,751,952	72.9%
2009	–	6,664,064	71.3% [135]

At the end of 2009, 71.3% of Swedes belonged to the Church of Sweden (Lutheran); this number has been decreasing by about one percentage point a year for the last two decades.[135][136] However, only approximately 2% of the church's members regularly attend Sunday services.[137] The reason for the large number of inactive members is partly that until 1996, children automatically became members at birth if at least one of the parents was a member. Since 1996, only children that are christened become members. Some 275,000 Swedes are today members of various free churches (where congregation attendance is much higher), and, in addition, immigration has meant that there are now some 92,000 Roman Catholics and 100,000 Eastern Orthodox Christians living in Sweden.[138]

Because of immigration, Sweden also has a significant Muslim population. They number about 500,000, but only approximately 5% (25,000) of these actively practice Islam (in the sense of attending Friday prayer and praying five times a day).[139]

Despite a high formal membership rate in the Church of Sweden, some studies have found Sweden to be one of the least religious countries in the world, with one of the highest levels of atheism. According to different studies, between 46% and 85% of Swedes do not believe in God.[140] In the Eurostat survey, 23% of Swedish citizens responded that "they believe there is a God", whereas 53% answered that "they believe there is some sort of spirit or life force" and 23% that "they do not believe there is any sort of spirit, God, or life force". Nevertheless, despite a lack of belief in God, these individuals resented the term atheist, and still called themselves Christians, being content with remaining in the Church of Sweden.[141] Other research has shown that religion in Sweden continues to play a role in cultural identity.[142] This is evidenced by the fact that around 80 percent of adults continue to remain members of the Lutheran Church despite having to pay a church tax; moreover, rates of baptism remain high and church weddings are increasing in Sweden.[142]

Health

See also: Healthcare in Sweden and Swedish National Board of Health and Welfare

Healthcare in Sweden is similar in quality to other developed nations. Sweden ranks in the top five countries with respect to low infant mortality. It also ranks high in life expectancy and in safe drinking water. A person seeking care first contacts a clinic for a doctor's appointment, and may then be referred to a specialist by the clinic physician, who may in turn recommend either in-patient or out-patient treatment, or an elective care option. The health care is governed by the 21 landsting of Sweden and is mainly funded by taxes, with nominal fees for patients.

Education

Main article: Education in Sweden

Uppsala University (established 1477)

Children aged 1–5 years old are guaranteed a place in a public kindergarten (Swedish: *förskola* or, colloquially, *dagis*). Between the ages of 6 and 16, children attend compulsory comprehensive school. In the Programme for International Student Assessment (PISA), Swedish 15-year-old pupils score close to the OECD average.[143] After completing the 9th grade, about 90% of the students continue with a three-year upper secondary school (*gymnasium*), which can lead to both a job qualification or entrance eligibility to university. The school system is largely financed by taxes.

The Swedish government treats public and independent schools equally[144] by introducing education vouchers in 1992 as one of the first countries in the world after The Netherlands. Anyone can establish a for-profit school and the municipality must pay new schools the same amount as municipal schools get. School lunch is free for all students in Sweden, and usually includes one or two different kinds of hot meals, a vegetarian meal, salad bar, fruit, bread, milk and water. Some schools, especially kindergartens and middle schools, even serve breakfast for free[*citation needed*] to those who want to eat before school starts.

There are a number of different universities and colleges in Sweden, the oldest and largest of which are situated in Uppsala, Lund, Gothenburg and Stockholm. Only a few countries such as Canada, the United States, Japan and South Korea have higher levels of tertiary education degree holders.[*citation needed*] Along with several other European countries, the government also subsidises tuition of international students pursuing a degree at Swedish institutions, although a recent bill passed in the Swedish parliament will limit this subsidy to students from EEA countries and Switzerland.[145]

Immigration

Main article: Immigration to Sweden

Immigration has been a major source of population growth and cultural change throughout much of the history of Sweden. Sweden has been transformed from a nation of emigration ending after World War I to a nation of immigration from World War II onwards. The economic, social, and political aspects of immigration have caused controversy regarding ethnicity, economic benefits, jobs for non-immigrants, settlement patterns, impact on upward social mobility, crime, and voting behaviour.

According to Eurostat, in 2010, there were 1.33 million foreign-born residents in Sweden, corresponding to 14.3% of the total population. Of these, 859 000 (9.2%) were born outside the EU and 477 000 (5.1%) were

born in another EU Member State.[146][147][148]

In 2009, immigration reached its highest level since records began with 102,280 people emigrating to Sweden.[149] Immigrants in Sweden are mostly concentrated in the urban areas of Svealand and Götaland.[148] Since the early 1970s, immigration to Sweden has been mostly due to refugee migration and family reunification from countries in the Middle East, Africa and Latin America.[150]

Immigrants and emigrants, Sweden 1850–2007

The largest groups in 2010 were:[148]

1. Finland (172,218)
2. Former Yugoslavia (152,268)
3. Iraq (117,919)
4. Poland (67,518)
5. Iran (59,922)
6. Germany (47,803)
7. Denmark (46,002)
8. Norway (43,819)
9. Turkey (40,766)
10. Somalia (31,734)

Culture

Main article: Culture of Sweden

Nationalmuseum in Stockholm.

Sweden has many authors of worldwide recognition including August Strindberg, Astrid Lindgren, and Nobel Prize winners Selma Lagerlöf and Harry Martinson. In total seven Nobel Prizes in Literature have been awarded to Swedes. The nation's most well-known artists are painters such as Carl Larsson and Anders Zorn, and the sculptors Tobias Sergel and Carl Milles.

Swedish 20th-century culture is noted by pioneering works in the early days of cinema, with Mauritz Stiller and Victor Sjöström. In the 1920s–1980s, the filmmaker Ingmar Bergman and actors Greta Garbo and Ingrid Bergman became internationally noted people within cinema. More recently, the films of Lukas Moodysson and Lasse Hallström have received international recognition.

Throughout the 1960s and 1970s Sweden was seen as an international leader in what is now referred to as the "sexual revolution", with gender equality having particularly been promoted.[151] At the present time, the number of single people is one of the highest in the world. The early Swedish film *I Am Curious (Yellow)* (1967) reflected a liberal view of sexuality, including scenes of love making that caught international attention, and introduced the concept of the "Swedish sin".

Sweden has also become very liberal towards homosexuality, as is reflected in the popular acceptance of films

such as *Show Me Love*, which is about two young lesbians in the small Swedish town of Åmål. Since 1 May 2009, Sweden repealed its "registered partnership" laws and fully replaced them with gender-neutral marriage,[152] Sweden also offers domestic partnerships for both same-sex and opposite-sex couples. Cohabitation (*sammanboende*) by couples of all ages, including teenagers as well as elderly couples, is widespread. Recently, Sweden is experiencing a baby boom.[153]

Music

Main article: Music of Sweden

Agnetha Fältskog of Swedish band ABBA performing in 1977.

Sweden has a rich musical tradition, ranging from mediaeval folk ballads to hip hop music. The music of the pre-Christian Norse has been lost to history, although historical re-creations have been attempted based on instruments found in Viking sites. The instruments used were the *lur* (a sort of trumpet), simple string instruments, wooden flutes and drums. It is possible that the Viking musical legacy lives on in some of the old Swedish folk music. Sweden has a significant folk-music scene, both in the traditional style as well as more modern interpretations which often mix in elements of rock and jazz. Väsen is more of a traditionalist group, using a unique, traditional Swedish instrument called the *nyckelharpa* while Garmarna, Nordman and Hedningarna have more modern elements. There is also Sami music, called the *joik*, which is actually a type of chant which is part of the traditional Saami animistic spirituality but has gained recognition in the international world of folk music. Sweden's most classic and notable composers includes Carl Michael Bellman and Franz Berwald.

Sweden also has a prominent choral music tradition, deriving in part from the cultural importance of Swedish folk songs. In fact, out of a population of 9.2 million, it is estimated that five to six hundred thousand people sing in choirs.[154]

In 2007, with over 800 million dollars in revenue, Sweden was the third largest music exporter in the world and surpassed only by the US and the UK.[155][156][*citation needed*] ABBA was one of the first internationally well-known popular music bands from Sweden, and still ranks among the most prominent bands in the world, with about 370 million records sold. With ABBA, Sweden entered into a new era, in which Swedish pop music gained international prominence.

The Gothenburg Opera.

There have been many other internationally successful bands since, such as Roxette, Ace of Base, Europe, A-teens, The Cardigans and The Hives, to name some of the biggest, and recently there has been a surge of Swedish Indie pop bands such as Loney, Dear, Shout Out Louds, The Radio Dept. and Dungen, a group which incorporates many elements of Swedish traditional folk music in their sound. One of the biggest bands in Sweden is the rock band Kent.

Sweden has also become known for a large number of heavy metal (mostly death metal and melodic death metal) as well as progressive- and power metal bands. Some of the most popular being In Flames, Amon Amarth, HammerFall, Pain of Salvation, Dark Tranquillity, Opeth, Arch Enemy and Meshuggah. The renowned neoclassical power metal guitarist Yngwie Malmsteen is also from Sweden.

Sweden has a rather lively jazz scene. During the last sixty years or so it has attained a remarkably high artistic

standard, stimulated by domestic as well as external influences and experiences. The Centre for Swedish Folk Music and Jazz Research has published an overview of jazz in Sweden by Lars Westin.[157]

Architecture

Main article: Architecture of Sweden

Djurgårdsbron.

Before the 13th century most buildings were made of brick, but a shift began towards stone. Early Swedish stone buildings are the Romanesque churches on the country side. As so happens, many of them were built in Scania and are in effect Danish churches. This would include the magnificent Lund Cathedral from the 11th century and the somewhat younger church in Dalby, but also many early Gothic churches built through influences of the Hanseatic League, such as in Ystad, Malmö and Helsingborg.

Cathedrals in other parts of Sweden were also built as seats of Sweden's bishops. The Skara Cathedral is of bricks from the 14th century, and the Uppsala Cathedral in the 15th. In 1230 the foundations of the Linköping Cathedral were made, the material was there limestone, but the building took some 250 years to finish.

Among older structures are also some significant fortresses and other historical buildings such as at Borgholm Castle, Halltorps Manor and Eketorp fortress on the island Öland, the Nyköping fortress and the Visby ring wall.

Around 1520 Sweden was out of the Middle Ages and united under King Gustav Vasa, who immediately initiated grand mansions, castles and fortresses to be built. Some of the more magnificent include the Kalmar fortress, the Gripsholm Castle and the one at Vadstena.

The Kalmar Cathedral.

In the next two centuries, Sweden was designated by Baroque architecture and later the rococo. Notable projects from that time include the city Karlskrona, which has now also been declared a World Heritage Site and the Drottningholm Palace.

1930 was the year of the great Stockholm exhibition, which marked the breakthrough of Functionalism, or "funkis" as it became known. The style came to dominate in the following decades. Some notable projects of this kind were the Million Programme, offering affordable but anti-human living in large apartment complexes.

Media

Main article: Media in Sweden

Swedes are among the greatest consumers of newspapers in the world, and nearly every town is served by a local paper. The country's main quality morning papers are Dagens Nyheter (liberal), Göteborgs-Posten (liberal), Svenska Dagbladet (liberal conservative) and Sydsvenska Dagbladet (liberal). The two largest evening tabloids are Aftonbladet (social democratic) and Expressen (liberal). The ad-financed, free international morning paper, Metro International, was originally founded in Stockholm, Sweden. The country's news is reported in English by, among others, The Local (liberal).

The public broadcasting companies held a monopoly on radio and television for a long time in Sweden. Licence funded radio broadcasts started in 1925. A second radio network was started in 1954 and a third opened 1962 in

response to pirate radio stations. Non-profit community radio was allowed in 1979 and in 1993 commercial local radio started.

The licence funded television service was officially launched in 1956. A second channel, TV2, was launched in 1969. These two channels (operated by Sveriges Television since the late '70s) held a monopoly until the 1980s when cable and satellite television became available. The first Swedish language satellite service was TV3 which started broadcasting from London in 1987. It was followed by Kanal 5 in 1989 (then known as Nordic Channel) and TV4 in 1990.

In 1991 the government announced it would begin taking applications from private television companies wishing to broadcast on the terrestrial network. TV4, which had previously been broadcasting via satellite, was granted a permit and began its terrestrial broadcasts in 1992, becoming the first private channel to broadcast television content from within the country.

Around half the population are connected to cable television. Digital terrestrial television in Sweden started in 1999 and the last analogue terrestrial broadcasts were terminated in 2007.

Literature

Main article: Swedish literature

Writer and playwright August Strindberg.

The first literary text from Sweden is the Rök Runestone, carved during the Viking Age c. 800 AD. With the conversion of the land to Christianity around 1100 AD, Sweden entered the Middle Ages, during which monastic writers preferred to use Latin. Therefore there are only a few texts in the Old Swedish from that period. Swedish literature only flourished when the Swedish language was standardized in the 16th century, a standardization largely due to the full translation of the Bible into Swedish in 1541. This translation is the so-called Gustav Vasa Bible.

With improved education and the freedom brought by secularization, the 17th century saw several notable authors develop the Swedish language further. Some key figures include Georg Stiernhielm (17th century), who was the first to write classical poetry in Swedish; Johan Henric Kellgren (18th century), the first to write fluent Swedish prose; Carl Michael Bellman (late 18th century), the first writer of burlesque ballads; and August Strindberg (late 19th century), a socio-realistic writer and playwright who won worldwide fame. The early 20th century continued to produce notable authors, such as Selma Lagerlöf, (Nobel laureate 1909), Verner von Heidenstam (Nobel laureate 1916) and Pär Lagerkvist (Nobel laureate 1951).

In recent decades, a handful of Swedish writers have established themselves internationally, including the detective novelist Henning Mankell and the writer of spy fiction Jan Guillou. The Swedish writer to have made the most lasting impression on world literature is the children's book writer Astrid Lindgren, and her books about Pippi Longstocking, Emil, and others. In 2008, the second best-selling fiction author in the world was Stieg Larsson, whose *Millennium* series of crime novels is being published posthumously to critical acclaim.[158] Larsson drew heavily on the work of Lindgren by basing his central character, Lisbeth Salander, on Longstocking.[159]

Holidays

Main article: Public holidays in Sweden

Walpurgis Night bonfire in Sweden.

Apart from traditional Protestant Christian holidays, Sweden also celebrates some unique holidays, some of a pre-Christian tradition. They include Midsummer celebrating the summer solstice; Walpurgis Night (*Valborgsmässoafton*) on 30 April lighting bonfires; and Labour Day or Mayday on 1 May is dedicated to socialist demonstrations. The day of giver-of-light Saint Lucia, 13 December, is widely acknowledged in elaborate celebrations which betoken its Italian origin and commence the month-long Christmas season.

6 June is the National Day of Sweden and, as of 2005, a public holiday. Furthermore, there are official flag day observances and a Namesdays in Sweden calendar. In August many Swedes have *kräftskivor* (crayfish dinner parties). Martin of Tours Eve is celebrated in Scania in November with *Mårten Gås* parties, where roast goose and *svartsoppa* ('black soup', made of goose stock, fruit, spices, spirits and goose blood) are served. The Sami, one of Sweden's indigenous minorities, have their holiday on 6 February and Scania celebrate their Scanian Flag day on the third Sunday in July.

Cuisine

Main article: Swedish cuisine

Swedish cuisine, like that of the other Scandinavian countries (Denmark, Norway and Finland), was traditionally simple. Fish (particularly herring), meat, potatoes and dairy products played prominent roles.

Swedish knäckebröd (crisp bread).

Swedish saffron buns

Spices were sparse. Famous dishes include Swedish meatballs, traditionally served with gravy, boiled potatoes and lingonberry jam; pancakes, *lutfisk*, and Smörgåsbord, or lavish buffet. *Akvavit* is a popular alcoholic distilled beverage, and the drinking of *snaps* is of cultural importance. The traditional flat and dry crisp bread has developed into several contemporary variants. Regionally important foods are the *surströmming* (a fermented fish) in Northern Sweden and eel in Scania in Southern Sweden.

Swedish traditional dishes, some of which are many hundreds of years old, others perhaps a century or less, are still a very important part of Swedish everyday meals, in spite of the fact that modern day Swedish cuisine adopts many international dishes.

In August, at the traditional feast known as crayfish party, *kräftskiva*, Swedes eat large amounts of boiled crayfish with boiled potato and dill.

Cinema

Main article: Cinema of Sweden

Swedes have been fairly prominent in the film area through the years, several successful Swedish Hollywood actors can be mentioned: Ingrid Bergman, Greta Garbo, Max von Sydow, Dolph Lundgren, Lena Olin, Britt Ekland, Maud Adams, Stellan Skarsgård, Peter Stormare, Izabella Scorupco, Pernilla August, Ann-Margret, Anita Ekberg, Alexander Skarsgård, Harriet Andersson, Bibi Andersson, Ingrid Thulin, Malin Åkerman and Gunnar Björnstrand. Amongst several directors who have made internationally successful films can be

mentioned: Ingmar Bergman, Lukas Moodysson and Lasse Hallström.

Fashion

Interest in fashion is big in Sweden and the country is headquartering famous brands like Hennes & Mauritz (operating as H&M), J. Lindeberg (operating as JL), Acne, Gina Tricot, Lindex, Tiger of Sweden, Odd Molly, Cheap Monday, Dr. Denim, Gant, Resteröds, Nudie Jeans, WESC, WAX, Uniforms for the Dedicated, Filippa K, Nakkna and Fifth Avenue Shoe Repair within its borders. These companies, however, are composed largely of buyers who import fashionable goods from throughout Europe and America, continuing the trend of Swedish business toward multinational economic dependency like many of its neighbours.

Sports

Main article: Sport in Sweden

Sport activities are a national movement with half of the population actively participating in organized sporting activities. The two main spectator sports are football and ice hockey. Second to football, horse sports have the highest number of practitioners, mostly women. Thereafter follow golf, athletics, and the team sports of handball, floorball, basketball and bandy.

Robin Söderling

The Swedish ice hockey team Tre Kronor is regarded as one of the best in the world. The team has won the World Championships eight times, placing them third in the all-time medal count. Tre Kronor also won Olympic gold medals in 1994 and 2006. In 2006, Tre Kronor became the first national hockey team to win both the Olympic and world championships in the same year. The Swedish national football team has seen some success at the World Cup in the past, finishing second when they hosted the tournament in 1958, and third twice, in 1950 and 1994. Athletics has enjoyed a surge in popularity due to several successful athletes in recent years, such as Carolina Klüft and Stefan Holm.

Sweden hosted the 1912 Summer Olympics and the FIFA World Cup in 1958. Other big sports events held here include 1992 UEFA European Football Championship, FIFA Women's World Cup 1995, and several championships of ice hockey, curling, athletics, skiing, bandy, figure skating and swimming.

Successful tennis players include former world No. 1's Björn Borg, Mats Wilander and Stefan Edberg.

Other famous Swedish athletes include the heavyweight boxing champion and International Boxing Hall of Famer – Ingemar Johansson; World Golf Hall of Famer – Annika Sörenstam and multiple World Championships and Olympics medalist in table tennis – Jan-Ove Waldner.

House of Bourbon

From Wikipedia, the free encyclopedia

The **House of Bourbon** (English /ˈbʊərbən/; French pronunciation: [bu.bɔ̃]) is a European royal house, a branch of the Capetian dynasty (/kəˈpiːʃən/). Bourbon kings first ruled Navarre and France in the 16th century. By the 18th century, members of the Bourbon dynasty also held thrones in Spain, Naples, Sicily, and Parma. Spain and Luxembourg currently have Bourbon monarchs.

Bourbon monarchs ruled Navarre (from 1555) and France (from 1589) until the 1792 overthrow of the monarchy during the French Revolution. Restored briefly in 1814 and definitively in 1815 after the fall of the First French Empire, the senior line of the Bourbons was finally overthrown in the July Revolution of 1830. A cadet branch, the House of Orléans, then ruled for 18 years (1830–1848), until it too was overthrown. The Princes of Condé (Bourbon-Condé) were a cadet branch of the Bourbon-Vendômes and, in turn, were senior to the Princes of Conti (Bourbon-Conti). Both these lines became extinct in the early nineteenth century.

Philip V of Spain was the first Bourbon ruler of Spain, from 1700. The Spanish Bourbons (in Spain the name is spelled **Borbón** and rendered into English as **Borbon**[1][2]) have been overthrown and restored several times, reigning 1700–1808, 1813–1868, 1875–1931, and 1975 to the present day. From this Spanish line comes the royal line of the Kingdom of the Two Sicilies (1734–1806 and 1815–1860, and Sicily only in 1806–1816), the Bourbon-Sicilies family, and the Bourbon rulers of the Duchy of Parma.

Grand Duchess Charlotte of Luxembourg married a cadet of the Bourbon-Parma line and thus her successors, who have ruled Luxembourg since her abdication in 1964, have also been members of the House of Bourbon. Isabel, Princess Imperial, the declared heiress and thrice-regent of the now-defunct Empire of Brazil, married twenty years before their deposition Gaston, comte d'Eu a prince of Orléans, and their descendants, known as the Orléans-Braganza, would have ascended to that throne had the empire not ended in 1889.

From the time of Hugh Capet to Charles X (987–1830), the senior Capets were also the Kings of France. In 1589, Henry IV, Head of the House of Bourbon, became the senior Capet, following the extinction of male line of the House of Valois. All members of the House of Bourbon and its cadet branches

Origins

The pre-Capetian House of Bourbon was a noble family, dating at least from the beginning of the 13th century, when the estate of Bourbon was ruled by a Lord who was a vassal of the King of France.

In 1268, Robert, Count of Clermont, sixth son of King Louis IX of France, married Beatrix of Bourbon, heiress to the lordship of Bourbon. Their son Louis was made Duke of Bourbon in 1327. His descendant, the Constable of France Charles de Bourbon, was the last of the senior Bourbon line when he died in 1527. Because he chose to fight under the banner of Holy Roman Emperor Charles V and lead a life of exile, his title was discontinued after his death.

However the junior line of La Marche-Vendôme remained, the ruling house of the Dukedom of Vendôme. The Bourbon-Vendôme branch were to become rulers of the Kingdom of Navarre on the northern side of the Pyrenees in 1555 and then of France, with Henry III of Navarre becoming Henry IV of France. From then on, they were simply called Bourbon, until the creation of cadet branches.

France

The rise of Henry IV

Main article: Henry IV of France's succession

The first Bourbon King of France was Henry IV. He was born on 13 December 1553 in the Kingdom of Navarre. Antoine de Bourbon, his father, was a ninth generation descendant of King Louis IX of France. Jeanne d'Albret, his mother, was the Queen of Navarre and the niece of King Francis I of France. He was baptized Catholic, but raised Calvinist. After his father was killed in 1563, he became Duke of Vendôme at the age of 10, with Admiral Gaspard de Coligny (1519–1572) as his regent. Five years later, the young duke became the nominal leader of the Huguenots after the death of his uncle the Prince of Condé in 1569.

Henry succeeded to Navarre as Henry III when his mother died in 1572. That same year Catherine de' Medici, the influential mother of King Charles IX of France, arranged for the marriage of her daughter, Margaret of Valois, to Henry as a peace offering between the Catholics and Huguenots. Many Huguenots had gathered for the wedding held on 24 August and were massacred by the Catholics in the St. Bartholomew's Day Massacre. Henry saved his own life by converting to Catholicism. He repudiated his conversion in 1576 and resumed his leadership of the Huguenots.

France Portal

The period from 1576 to 1584 was relatively calm in France, with the Huguenots consolidating control of much of the south with only occasional interference from the royal government. Extended civil war erupted again in 1584, when François, Duke of Anjou, younger brother of King Henry III of France, died, leaving Navarre next in line for the throne. Thus began the War of the Three Henries, as Henry of Navarre, Henry III, and the ultra-Catholic leader, Henry of Guise, fought a confusing three-cornered struggle for dominance. When Henry III was

assassinated on 31 July 1589, Navarre became the first Bourbon king of France as Henry IV.

Much of Catholic France, organized into the Catholic League, refused to recognize a Protestant monarch and instead recognized Henry IV's uncle, Charles, Cardinal de Bourbon, as king as Charles X, and the civil war continued. Henry won a crucial victory at Ivry on 14 March 1590, and following the death of the Cardinal the same year, the forces of the League lacked an obvious Catholic candidate for the throne and divided into various factions. Nevertheless, as a Protestant, Henry IV was unable to take Paris, a Catholic stronghold, or to decisively defeat his enemies, now supported by the Spanish. He reconverted to Catholicism in 1593—he is said to have remarked, "Paris is well worth a mass"[3]—and was crowned King of France at the Cathedral of Chartres on 27 February 1594.

Early Bourbons in France

Henry granted the Edict of Nantes on 13 April 1598, establishing Catholicism as an official state religion, but otherwise assuring the Huguenots the right to practice their religion. However, it did not grant full civil and religious equality to the Huguenots. This compromise ended the religious wars in France. That same year the Treaty of Vervins ended the war with Spain, adjusted the Spanish-French border, and resulted in a belated recognition by Spain of Henry as king of France.

Ably assisted by Maximilien de Béthune, duc de Sully, Henry reduced the land tax known as the *taille*; promoted agriculture, public works, construction of highways, and the first French canal; started such important industries as the tapestry works of the Gobelins; and intervened in favor of Protestants in the duchies and earldoms along the German frontier. This last was to be the cause of his assassination.

Henry IV of France, the first Bourbon King of France

Henry's marriage to Margaret, which had produced no heir, was annulled in 1599 and he married Marie de Medici, the niece of the grand duke of Tuscany. A son, Louis, was born to them in 1601. Henry IV was assassinated on 14 May 1610 in Paris. Louis XIII was only nine years old when he succeeded his father. He was to prove a weak ruler; his reign was effectively a series of distinct regimes, depending who held the effective reins of power. At first, Marie de Medici, his mother, served as regent and advanced a pro-Spanish policy. To deal with the financial troubles of France, Louis summoned the Estates General in 1614; this would be the last time that body met until the eve of the French Revolution. Marie arranged the 1615 marriage of Louis to Anne of Austria, the daughter of King Philip III of Spain.

In 1617, however, Louis conspired with Charles d'Albert, duc de Luynes to dispense with her influence, having her favorite Concino Concini assassinated on 26 April of that year. After some years of weak government by Louis's favorites, the King made Armand Jean du Plessis, Cardinal Richelieu, a former protégé of his mother, the chief minister of France in 1624.

Richelieu advanced an anti-Habsburg policy. He arranged for Louis' sister, Henrietta Maria, to marry King Charles I of England, on 11 May 1625. Her pro-Catholic propaganda in England was one of the contributing factors for the English Civil War. Richelieu, as ambitious for France and the French monarchy as for himself, laid the ground for the absolute monarchy that would last in France until the Revolution. He wanted to establish a dominating position for France in Europe, and he wanted to unify France under the monarchy. He established the role of *intendants*, non-noble men whose arbitrary powers were granted by (and revocable by) the monarchy and superseded many of the traditional duties and privileges of the noble governors.

Although it required a succession of internal military campaigns, he abolished the fortified Huguenot towns that Henry had allowed. He involved France in the Thirty Years' War (1618–1648) against the Habsburgs by concluding an alliance with Sweden in 1631 and, actively, in 1635. He died in 1642 before the conclusion of that conflict, having groomed Cardinal Jules Mazarin as a successor. Louis XIII outlived him but by one year, dying in 1643 at the age of forty-two. After a childless marriage for twenty-three years he had a son with Anne on 5 September 1638, whom he named after himself.

Louis XIV and Louis XV

Main article: Louis XIV of France

Main article: Louis XV of France

Royal Coat of Arms of the Kingdom of France and Navarre.

When Louis XIV succeeded his father he was only four years old; he would become the most powerful king in French history. His mother Anne served as his regent with her favorite Jules Mazarin as chief minister. Mazarin continued the policies of Richelieu, bringing the Thirty Years' War to a successful conclusion in 1648 and defeating the noble challenge to royal absolutism in a series of civil wars known as the Fronde. He continued to war with Spain until 1659.

In that year the Treaty of the Pyrenees was signed signifying a significant shift in power, France had replaced Spain as the dominant state in Europe. One of the terms of the treaty arranged the marriage of Louis to his cousin Maria Theresa, the daughter of King Philip IV of Spain, by his first wife Elizabeth, the sister of Louis XIII. They were married in 1660 and had a son, Louis, in 1661. Mazarin died on 9 March 1661 and it was expected that Louis would appoint another chief minister, as had become the tradition, but instead he shocked the country by announcing he would rule alone.

Louis intended to glorify France by making war on his neighbors. For six years he reformed the finances of his state and built formidable armed forces. France fought three wars between 1667 and 1697 and gained some minor territory. Maria Theresa died in 1683 and the next year he married Françoise d'Aubigné, marquise de Maintenon. She had great influence over him especially in matters of religion. Louis XIV was staunchly Catholic and he revoked the Edict of Nantes on 18 October 1685, undoing the religious tolerance established by grandfather, Henry IV, almost a hundred years before.

The last war waged by Louis XIV proved to be one of the most important to dynastic Europe. In 1700, King Charles II of Spain died without a son. Louis's son the Grand Dauphin, as nephew to the late king, was closest heir, and Charles willed the kingdom to the Dauphin's second son, the Duke of Anjou. Other powers, particularly the Austrian Habsburgs, who had the next closest claims, objected to such a vast increase in French power.

Initially, most of the other powers were willing to accept Anjou's reign as Philip V, but Louis's arrogance and blunders soon made the English, the Dutch, and other powers join the Austrians in a coalition against France. The War of the Spanish Succession began in 1701 and raged for 12 years. In the end Louis's grandson was recognized as King of Spain, but the Habsburg's other European territories were largely ceded to Austria, and France was nearly bankrupted by the cost of the struggle. Louis died on 1 September 1715 ending his seventy-two year reign, the longest in European history.

The reign of Louis XIV was so long that he had outlived both his son and eldest grandson. He was succeeded by his great-grandson Louis XV. Louis XV was born on 15 February 1710 and was thus aged only five at his

Dynastic group portrait of Louis XIV (seated) with his son *le Grand Dauphin* (to the left), his grandson Louis, Duke of Burgundy (to the right), his great-grandson the duc d'Anjou, later Louis XV, and Madame de Ventadour, his governess, who commissioned this painting some years later; busts of Henry IV and Louis XIII in the background.

ascension, the third Louis in a row to become king of France before the age of ten. Initially, the regency was held by Philip, Duke of Orléans, Louis XIV's nephew, as nearest adult male to the throne. This Regency period was seen as one of debauchery and loose morals following the austere nature of the latter years of Louis XIV's reign, which had seen a series of cripplingly expensive wars and the King's turn to religiosity.

Following Orléans's death in 1723, another junior Bourbon, the Duke of Bourbon, the representative of the Bourbon-Condé line, became Prime Minister. It was expected that Louis would marry his cousin, the daughter of King Philip V of Spain, but this marriage was cancelled by the duke in 1725 so that Louis could marry Maria Leszczynska, the daughter of Stanislas, former king of Poland. Bourbon's motive appears to have been a desire to produce an heir as soon as possible so as to reduce the chances of a succession dispute between Philip V and the Duke of Orléans in the event of the sickly king's death. Maria was already an adult woman at the time of the marriage, while the Infanta was still a young girl.

A posthumous painting commissioned around 1670 by Philippe de France.It shows the French Bourbon Family around that time. It includes: Henrietta Maria of France (d 1669), exiled Queen of England; Philippe I, Duke of Orléans, founder of the House of Orléans; his first wife Princess Henriette (d 1670); the couples first daughter Marie Louise d'Orléans (later Queen of Spain);Anne of Austria (d 1666); the Orléans daughters of Gaston de France; Louis XIV; the Dauphin of France with his wife Maria Theresa of Spain with her third daughter Marie-Thérèse de France, called Madame Royale (d 1672) and her

Nevertheless, Bourbon's action brought a very negative response from Spain, and for his incompetence Bourbon was soon replaced by Cardinal Andre Hercule de Fleury, the young king's tutor, in 1726. Fleury was a peace loving man who intended to keep France out of war, but circumstances presented themselves that made this impossible.

The first cause of these wars came in 1733 when Augustus II, the elector of Saxony and king of Poland died. With French backing Stanislas was again elected king. This brought France into conflict with Russia and Austria who supported Augustus III, duke of Saxony and son of Augustus II.

Stanislas lost the Polish crown, but he was given the Duchy of Lorraine as compensation, which would pass to France after his death. Next came the War of the Austrian Succession in 1740 in which France supported King Frederick II of Prussia against Maria Theresa of Austria, archduchess of Austria. Fleury died in 1743 before the conclusion of the war.

second son *Philippe-Charles de France, duc d'Anjou* (d1671). The first daughter of Gaston stands on the far right:Anne Marie Louise d'Orléans. The picture frame with the 2 children are the other 2 daughters of Louis and Maria Theresa who died in 1662 and 1664.

Shortly after Fleury's death in 1745 Louis was most influenced by his mistress the Marquise de Pompadour. She reversed the policy of France in 1756 by creating an alliance with Austria against Prussia in the Seven Years' War. The war was a disaster for France, losing most of her overseas possessions to the British in the Treaty of Paris in 1763. Louis' only son died in 1765 making his grandson the Dauphin. Maria, his wife, died in 1768 and Louis himself died on 10 May 1774.

French Revolution

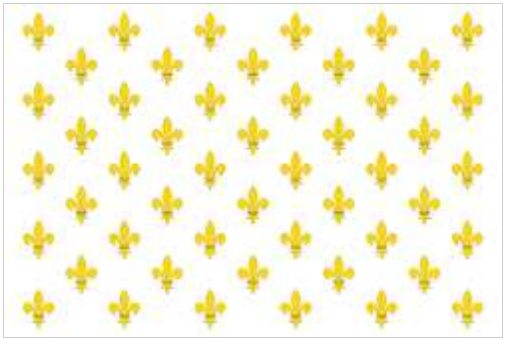
Main article: French Revolution

Louis XVI had become the dauphin of France upon the death of his father, the son of Louis XV, in 1765. He married Marie Antoinette of Austria, a daughter of Maria Theresa, in 1770. Louis intervened in the American Revolution against Britain in 1778, but he is most remembered for his role in the French Revolution. France was in financial turmoil and Louis was forced to convene the Estates-General on 5 May 1789.

They formed the National Assembly and forced Louis to accept a constitution that limited his powers on 14 July 1790. He tried to flee France in June 1791, but was captured. The French monarchy was abolished on 21 September 1792 and a republic was proclaimed. The chain of Bourbon monarchs begun in 1589 was broken. Louis XVI was executed on 21 January 1793.

Marie Antoinette and her son, Louis, were held as prisoners. Many French royalists proclaimed him Louis XVII, but he never reigned. She was executed on 16 October 1793. He died of tuberculosis on 8 June 1795 at the age of ten while in captivity.

The French Revolutionary Wars and Napoleonic Wars spread nationalism and anti-absolutism throughout Europe, and the other Bourbon monarchs were threatened. Ferdinand was forced to flee from Naples in 1806 when Napoleon Bonaparte deposed him and installed his brother, Joseph, as king. Ferdinand continued to rule from Sicily until 1815.



Napoleon conquered Parma in 1800 and compensated the Bourbon duke with Etruria, a new kingdom he created from the Grand Duchy of Tuscany. It was short-lived, as Napoleon annexed Etruria in 1807.

King Charles IV of Spain had been an ally of France. He succeeded his father, Charles III, in 1788. At first he declared war on France on 7 March 1793, but he made peace on 22 June 1795. This peace became an alliance on 19 August 1796. His chief minister, Manuel de Godoy convinced Charles that his son, Ferdinand, was plotting to overthrow him. Napoleon exploited the situation and invaded Spain in March 1808. This led to an uprising that forced Charles to abdicate on 19 March in favor of his son, Ferdinand VII. Napoleon forced Ferdinand to return the crown to Charles on 30 April and then convinced Charles to relinquish it to him on 10 May. In turn, he gave it to his brother, Joseph, king of Naples on 6 June. Joseph abandoned Naples to Joachim Murat, the husband of Napoleon's sister. This was very unpopular in Spain and resulted in the Peninsular War, a struggle that would contribute to the downfall of Napoleon.

The Bourbon Restoration

Main article: Bourbon Restoration

With the abdication of Napoleon on 11 April 1814 the Bourbon Dynasty was restored to the kingdom of France

The standard of the French royal family under the *Ancien Régime* and the restoration period.

in the person of Louis XVIII, brother of Louis XVI. Napoleon escaped from exile and Louis fled in March 1815. Louis was again restored after the Battle of Waterloo on 7 July.

The conservative elements of Europe dominated the post-Napoleonic age, but the values of the French Revolution could not be easily swept aside. Louis granted a constitution on 14 June 1814 to appease the liberals, but the ultra-royalist party, led by his brother, Charles, continued to influence his reign.[*citation needed*] When he died in 1824 his brother became king as Charles X much to the dismay of French liberals. In a saying ascribed to Talleyrand, "they had learned nothing and forgotten nothing".[4]

Aftermath

Charles passed several laws that appealed to the upper class, but angered the middle class. The situation came to a head when he appointed a new minister on 8 August 1829 who did not have the confidence of the chamber. The chamber censured the king on 18 March 1830 and in response Charles proclaimed five ordinances on 26 July intended to silence criticism against him.[*citation needed*] This almost resulted in another revolution as dramatic as the one in 1789, but moderates were able to control the situation.[*citation needed*] As a compromise the crown was offered to Louis-Philippe, duke of Orléans, a descendant of the brother of Louis XIV, and the head of the Orleanist cadet branch of the Bourbons. He was proclaimed King of the French on 7 August. The resulting regime, known as the July monarchy, lasted until the Revolution of 1848. The Bourbon monarchy in France ended on 24 February 1848, when Louis-Philippe was forced to abdicate and the short-lived French Second Republic was established.

Some legitimists refused to recognize the Orleanist monarchy. After the death of Charles in 1836 his son was proclaimed Louis XIX, though this title was never formally recognized. Charles' grandson Henri, comte de Chambord, the last Bourbon claimant of the French crown, was proclaimed by some Henry V, but the French monarchy was never restored.

Following the 1870 collapse of the empire of Emperor Napoleon III, Henri was offered a restored throne. However Chambord refused to accept the throne unless France abandoned the revolution-inspired tricolour and accepted what he regarded as the true Bourbon flag of France. The tricolour, originally associated with the French Revolution and the First French Republic, had been used by the July Monarchy, the Second Republic and both Empires; the French National Assembly could not possibly agree.

A *temporary* Third Republic was established, while monarchists waited for the comte de Chambord to die and for the succession to pass to the Comte de Paris, who was willing to accept the tricolour. Henri lived until 1883, by which time public opinion had come to accept the republic as the "form of government that divides us least." His death without issue marked the extinction of the French Bourbons. Thus head of the House of Bourbon became the now eldest male heir of the dynasty Juan, Count of Montizón of the Spanish line of the house who was also Carlist claimant to the throne of Spain. His heir as eldest Bourbon and head of the house is today Louis Alphonse, Duke of Anjou.

By an ordinance of Louis Philippe I of France of 13 August 1830, it was decided that the king's children (and his sister) would continue to bear the arms of Orléans, that Louis-Philippe's eldest son, as Prince Royal, would bear the title of duc d'Orléans, that the younger sons would continue to have their existing titles, and that the sister and daughters of the king would only be styled "princesses d'Orléans", which meant the Orléans royalty did not take the name "of France".

Bourbons of Spain and Italy

Philip V

The Spanish branch of the House of Bourbon was founded by Philip V. He was born in 1683 in Versailles, the second son of the Grand Dauphin, son of Louis XIV. He was Duke of Anjou and probably never expected to be raised to a rank higher than that. However King Charles II of Spain, dying without issue, willed the throne to his grand-nephew the Duke of Anjou, younger grandson of his eldest sister Marie-Thérèse, daughter of King Philip IV of Spain who had married Louis XIV of France.

The prospect of Bourbons on both the French and Spanish thrones was resisted as creating an imbalance of power in Europe by its dominant regimes and, upon Charles II's death on 1 November 1700, a Grand Alliance of European nations united against Philip. This was known as the War of Spanish Succession. In the Treaty of Utrecht, signed on 11 April 1713, Philip was recognized as king of Spain but his renunciation of succession rights to France was affirmed and, of the Spanish Empire's other European territories, Sicily was ceded to Savoy, and the Spanish Netherlands, Milan and Naples were alloted to the Austrian Habsburgs.

Philip had two sons by his first wife. After her death he married Elizabeth Farnese, niece of Francesco Farnese, Duke of Parma, in 1714. She presented Philip with three sons, for whom she had ambitions of securing Italian crowns. Thus she induced Philip to occupy Sardinia and Sicily in 1717.

A Quadruple Alliance of Britain, France, Austria and the Netherlands was organized on 2 August 1718 to stop him. In the Treaty of The Hague, signed on 17 February 1720, Philip renounced his conquests of Sardinia and Sicily, but assured the ascension of his eldest son by Elizabeth to the Duchy of Parma upon the reigning duke's death. Philip abdicated in January 1724 in favor of Louis I, his eldest son with his first wife, but Louis died in August and Philip resumed the crown.

When the War of the Polish Succession began in 1733, Philip and Elisabeth saw another opportunity to advance the claims of their sons and recover at least part of the former possessions of the Spanish crown on the Italian peninsula. Philip signed the Family Compact with Louis XV, his nephew and king of France. Charles, Duke of Parma since 1731, invaded Naples. At the conclusion of peace on 13 November 1738, control of Parma and Piacenza was ceded to Austria, which had occupied the duchies but was now forced to recognise Charles as King of Naples and Sicily. Philip also used the War of the Austrian Succession to win more territory in Italy. He did not live to see it to its conclusion, however, dying in 1746.

Ferdinand VI and Charles III

Ferdinand VI, second son of Philip V and his first wife, succeeded his father. He was a peace-loving monarch who kept Spain out of the Seven Years' War. He died in 1759 in the midst of that conflict and was succeeded by his half-brother Charles III. Charles was the eldest son of Philip and Elizabeth Farnese. He was born in 1716 and had become Duke of Parma when the last Farnese duke died in 1731.

Following Spain's victory over the Austrians at the battle of Bitonto, it proved inexpedient to reunite Naples and Sicily to Spain, so as a compromise Charles became King of Naples, as Charles IV and VII of Sicily. Following Charles' accession to the Spanish throne in 1759 he was required, by the Treaty of Naples of 3 October 1759, to abdicate Naples and Sicily to his third son, Ferdinand, thus initiating the branch known as the Neapolitan Bourbons.

Charles revived the Family Compact with France on 15 August 1761 and joined in the Seven Years' War against Britain in 1762; the reformist policies he had espoused in Naples were pursued with similar energy in Spain,

where he completely overhauled the cumbersome bureaucracy of the state. As a French ally he opposed Britain during the American Revolution in June 1779, supplying large quantities of weapons and munitions to the rebels and keeping one third of all the British forces in the Americas occupied defending Florida and what is now Alabama, which were ultimately recaptured by Spain. Charles died in 1788.

Bourbon-Parma

Elizabeth Farnese's ambitions were realized at the conclusion of the War of the Austrian Succession in 1748 when the Duchy of Parma and Piacenza, already occupied by Spanish troops, were ceded by Austria to her second son, Philip, and combined with the former Gonzaga duchy of Guastalla.

Elizabeth died in 1766.

Later Bourbon monarchs outside France

Upon the fall of the Napoleonic empire, Ferdinand I was restored to the throne of the kingdom of the Two Sicilies in 1815. His subjects revolted on 2 July 1820 and he was forced to grant a constitution on 13 July. Austria invaded in March 1821 and revoked the constitution. He was succeeded by his son, Francis I, in 1825 and by his grandson, Ferdinand II, in 1830. Another revolution erupted on 12 January 1848 and Ferdinand was also forced to grant a constitution on 10 February. This constitution was revoked in 1849. Ferdinand was succeeded by his son, Francis II, in May 1859.

When Giuseppe Garibaldi captured Naples on 7 September 1860 Francis restored the constitution on 2 July in an attempt to save his sovereignty. He fled to the fortress of Gaeta, which was captured by the Piedmontese troops on 13 February 1861; his kingdom was incorporated in the Kingdom of Italy on 17 March 1861, after the fall the fortress of Messina (surrendered on 12 March 1861), although the Neapolitan troops in Civitella del Tronto resisted until 20 March.

After the fall of Napoleon, Napoleon's wife, Maria Louisa, was made Duchess of Parma. As compensation, Charles Louis, the former king of Etruria, was made the Duke of Lucca. When Maria Louisa died in 1847 he was restored to Parma as Charles II. Lucca was incorporated into Tuscany. He was succeeded by his son, Charles III, and grandson, Robert I, in 1854. The people of Parma voted for a union with the kingdom of Sardinia on 13 March 1860. After Italian unification in 1861 the Bourbon dynasty in Italy was no more.

Ferdinand VII was restored to the throne of Spain after the fall of Napoleon in March 1814. Like his Italian Bourbon counterpart his subjects revolted against him in January 1820 and he was forced to grant a constitution. A French army invaded in 1823 and the constitution was revoked. Ferdinand married his fourth wife, Maria Christina, the daughter of Francis I, the Bourbon king of Sicily, in 1829. Despite his many marriages he did not have a son so on 30 June 1833 he was influenced by his wife to abolish the Salic Law so that her daughter, Isabella, could become queen depriving his brother, Don Carlos, of the throne.

Isabella II succeeded her father when he died on 29 September 1833. She was only three years old and Maria Cristina, her mother, served as regent. Maria knew that she needed the support of the liberals to oppose Don Carlos so she granted a constitution in 1834. Don Carlos found his greatest support in Catalonia and the Basques country because the constitution centralized the provinces thus denying them the autonomy they sought. He was defeated and fled the country in 1839. Isabella was declared of age in 1843 and she married her cousin Francisco de Asis, the son of her father's brother, on 10 October 1846. A military revolution broke out against Isabella in 1868 and she was deposed on 29 September. She abdicated in favor of her son, Alfonso, in 1870, but Spain was proclaimed a republic for a brief time.

When the First Spanish Republic failed the crown was offered to Isabella's son who accepted on 1 January 1875 as Alfonso XII. Don Carlos, who returned to Spain, was again defeated and resumed his exile in February 1876. Alfonso granted a new constitution on July 1876 that was more liberal than the one granted by his grandmother. His reign was cut short when he died in 1885 at the age of twenty-eight.

Alfonso XIII was born on 17 May 1886 after the death of his father. His mother, Maria Christina, the second wife of Alfonso XII served as regent. Alfonso XIII was declared of age in 1902 and he married Victoria Eugénie Julia Ena of Battenberg, the granddaughter of the British queen Victoria, on 31 May 1906. He remained neutral during World War I, but supported the military coup of Miguel Primo de Rivera on 13 September 1923. A movement towards the establishment of a republic began in 1930 and Alfonso fled the country on 14 April 1931. He never formally abdicated, but lived the rest of his life in exile. He died in 1941.

The Bourbon dynasty seemed finished in Spain as in the rest of the world, but it would be resurrected. The Second Spanish Republic was overthrown in the Spanish Civil War, leading to the dictatorship of Francisco Franco. He named Juan Carlos de Borbón, a grandson of Alfonso XIII, his successor on 22 July 1969. When Franco died on 20 November 1975 a Bourbon monarch was restored to the throne of Spain two days later as Juan Carlos I. The new king oversaw the Spanish transition to democracy; the Spanish Constitution of 1978, approved on 28 September 1978, recognized the monarchy.

Though it is not as powerful as it once was under Louis XIV and it no longer reigns in its native country of France, it is by no means extinct, and the House of Bourbon has survived to the present-day world of republics. The birth of a male heir to the Prince of Asturias in Spain is expected to trigger a change in the law of succession from male primogeniture to equal primogeniture.[*citation needed*] Since 1964 the Bourbon-Parma line has reigned agnatically in Luxembourg through Grand Dukes Jean and his son Henri. In June 2011, Luxembourg adopted equal primogeniture, replacing the old Semi-Salic law that might have guaranteed the survival of Bourbon rule for generations. The European phenomenon of equal primogeniture has doomed the security that the Bourbon monarchs once had.

List of Bourbons

Legitimist claimants in France (Spanish branch)

Dates indicate claims, not lifetimes.

- Juan, Count of Montizón (Jean III) (1883–1887)
- Carlos, Duke of Madrid (Charles XI) (1887–1903)
- Jaime, Duke of Anjou and Madrid (Jacques I) (1903–1931)
- Alfonso Carlos, Duke of San Jaime (Charles XII)(1931–1936)
- Alfonso XIII of Spain (Alphonse I) (1936–1941) (did not claim the Throne of France[5])
- Jaime, Duke of Segovia (Henri VI) (1941–1975)
- Alfonso, Duke of Anjou and Cádiz (Alphonse II) (1975–1989)
- Louis Alphonse, Duke of Anjou (Louis XX) (1989–present)

Orléanist and Unionist claimants in France

Dates indicate claims, not lifetimes.

- Philippe, Count of Paris (Philippe VII) (1883–1894)
- Philippe, Duke of Orléans (Philippe VIII) (1894–1926)
- Jean, Duke of Guise (Jean III) (1926–1940)
- Henri, Count of Paris (Henry VI) (1940–1999)
- Henri, Count of Paris (Henry VII) (1999 – Present)

Spain

Monarchs of Spain

Dates indicate seniority, not lifetimes. Where reign as king or queen of Spain is different, this is noted.

- Philip V (1700–1746) [abdicated 1724, resumed throne on death of son]
  - Louis I [King 1724; ruled less than one year]
- Ferdinand VI (1746–1759)
- Charles III (1759–1788)
- Charles IV (1788–1808)
- Ferdinand VII, *El Deseado* (1808–1833) [King 1808, 1813–1833]
- Isabella II (1833–1870) [Queen 1833–1868]
- Alfonso XII (1870–1885) [King 1874–1885]
- Alfonso XIII (1886–1941) [King 1886–1931]
- Juan, Count of Barcelona (1941–1977) [did not become King]
- Juan Carlos I (1977–present) [King 1975–present]

Carlist claimants in Spain

Dates indicate claims, not lifetimes.

- Infante Carlos, Count of Molina (Carlos V) (1833–1845)
- Infante Carlos, Count of Montemolin (Carlos VI) (1845–1861)
- Juan, Count of Montizón (Juan II) (1861–1868)
- Carlos, Duke of Madrid (Carlos VII) (1868–1909)
- Jaime, Duke of Madrid (Jaime III) (1909–1931)
- Alfonso Carlos of Bourbon, Duke of San Jaime (Alfonso Carlos I) (1931–1936)
- Xavier, Duke of Parma (Xavier I) (1936–1952–1977)
- Carlos Hugo of Bourbon, Duke of Parma (Carlos Hugo I) (1977–1979)
- Prince Sixtus Henry of Bourbon-Parma (Sixto Enrique I) (1979–present)

Luxembourg

Grand Dukes of Luxembourg

Dates indicate reigns, not lifetimes.

- Jean (1964–2000)
- Henri (2000–present)

Other significant Bourbon titles

- Dukes of Bourbon
- Dukes of Montpensier
- Dukes of Vendôme
- Dukes of Anjou
- Kings of the Two Sicilies
- Dukes of Parma
- Dukes of Orléans
- Princes of Orléans-Braganza
- Princes of Condé
- Princes of Conti

Bourbon branches

Notable legitimate branches

- House of Bourbon-Orléans
  - Called the House of Orléans and holders of the title Duke of Orléans. This house was founded by the younger brother of Louis XIV: Philippe I, Duke of Orléans. This is the oldest (and thus, the most genealogically junior) surviving cadet branch of the House of Bourbon.
- House of Bourbon-Two Sicilies
- House of Bourbon-Parma
- House of Bourbon-Braganza (also called Branch of the Infant Gabriel)
- House of Bourbon-Orléans-Braganza (called the House of Orléans-Braganza and now representing the Brazilian Imperial Family)
- House of Bourbon-Montpensier (extinct)
- House of Bourbon-Condé (extinct)
- House of Bourbon-Conti (extinct)
- **House of Bourbon-La Marche** (extinct)
- **House of Bourbon-Soissons** (extinct)

Notable morganatic branches

- **House of Bourbon-Orléans-Galliera** (called the *House of Orléans-Galliera*)

Notable illegitimate branches

- Bourbon-Busset
  - an illegitimate branch senior to the Henry IV's House of Bourbon
- Bourbon-Vendôme
  - (extinct at the death of Louis Joseph de Bourbon, duc de Vendôme, great grandson of Henry IV of France) – 1598–1712
- Bourbon-Maine
  - (extinct at the death of *Louis Charles de Bourbon, comte d'Eu*, grandson of Louis XIV) – 1672–1775
- Bourbon-Penthièvre
  - (extinct at the death of Louis Jean Marie de Bourbon, duc de Penthièvre in 1793 but his daughter Louise Marie Adélaïde de Bourbon-Penthièvre who died in 1821 inherited all of the Bourbon-Penthièvre wealth) – 1725–1793/1821
- Bourbon-Bhopal

Surnames used

Officially, the King of France had no family name. A prince with the rank of *fils de France* (Son of France) are surnamed "*de France*"; all his descendants, however, had his main title (whether an appanage or a courtesy title) as their family or last name.

Members of the House of Bourbon-Conde and its cadet branches, which never ascended to the throne, used the surname "de Bourbon" until their extinction in 1830.

The daughters of Gaston, Duke of Orleans, were the first members of the House of Bourbon since the accession of Henry IV to take their surname from the appanage of their father (d'Orleans). Gaston died without a male heir; his titles reverted to the crown. It was given to his nephew, Philippe I, Duke of Orleans, brother of Louis

XIV, whose descendants still bear the surname.

When Philippe, grandson of Louis XIV, became King of Spain as Philip V, he gave up his French titles. As a Son of France, his actual surname was "de France". However, since such surname cannot be passed to a descendant with a rank lower than Son of France, and since Philippe had already given up his French titles, his descendants simply took the name of their royal house as their surname ("de Bourbon", rendered in Spanish as "de Borbón").

The children of Philippe's brother, Charles, Duke of Berry (all of whom died in infancy), were given the surname "d'Alencon". He was Duke of Berry only by name, so the surname of his children were taken from his first substantial duchy.

The children of Charles Philippe, Count of Artois, brother of Louis XVI, were surnamed "d'Artois". When Charles succeeded to the throne as Charles X, his son Louis Antoine became a Son of France, with the corresponding change in surname. His grandson, Henri d'Artois, being merely a Grandson of France, would use the surname until his death.

Sweden

From Wikipedia, the free encyclopedia

Sweden (/ˈswiːdən/ *SWEE-dən*; Swedish: *Sverige* ['sværjɛ] (listen)), officially the **Kingdom of Sweden** (Swedish: *Konungariket Sverige*), is a Nordic country on the Scandinavian Peninsula in Northern Europe. Sweden borders with Norway and Finland, and is connected to Denmark by a bridge-tunnel across the Öresund.

At 450,295 square kilometres (173,860 sq mi), Sweden is the third largest country in the European Union by area, with a total population of about 9.4 million.[5] Sweden has a low population density of 21 inhabitants per square kilometre (54 /sq mi) with the population mostly concentrated to the southern half of the country. About 85% of the population live in urban areas.[12] Sweden's capital is Stockholm, which is also the largest city.

Sweden emerged as an independent and unified country during the Middle Ages. In the 17th century, the country expanded its territories to form the Swedish Empire. The empire grew to be one of the great powers of Europe in the 17th and early 18th century. Most of the conquered territories outside the Scandinavian Peninsula were lost during the 18th and 19th centuries. The eastern half of Sweden, present-day Finland, was lost to Russia in 1809. The last war in which Sweden was directly involved was in 1814, when Sweden by military means forced Norway into a personal union. Since then, Sweden has been at peace, adopting a non-aligned foreign policy in peacetime and neutrality in wartime.[13]

Today, Sweden is a constitutional monarchy with a parliamentary democracy of government and a highly developed economy. In 2010, it ranked fourth in the world in *The Economist*'s Democracy Index and ninth in the United Nations' Human Development Index. In 2010, the World Economic Forum ranked Sweden as the second most competitive country in the world, after Switzerland.[14] According to the UN, it has the third lowest infant mortality rate in the world. Sweden also has the lowest Gini coefficient of all countries (0.23) which makes Sweden the most equal country on earth in terms of economic division. Sweden has been a member of the European Union since 1 January 1995 and is a member of the OECD.

a. ^ *För Sverige – I tiden* has been adopted by Carl XVI Gustaf as his personal motto.

b. ^ *Du gamla, Du fria* has never been officially adopted as national anthem, but is so by convention.

c. ^ Since 1 July 2009.[8][9] Five other languages are officially recognized as minority languages.[10] They are: Finnish, Meänkieli, Romani, Sami and Yiddish. The Swedish Sign Language also has a special status.

d. ^ As of 2008, 18% of the population had foreign origins (13% if excluding Finns and 9% if also excluding other Scandinavians), with 14% foreign-born and another 4% born in Sweden of two foreign-born parents.[11]

Etymology

Main article: Name of Sweden

The modern name *Sweden* is derived through back-formation from Old English *Swēoþēod*, which meant "people of the Swedes" (Old Norse *Svíþjóð*, Latin *Suetidi*). This word is derived from *Sweon/Sweonas* (Old Norse *Sviar*, Latin S*uiones*). The Swedish name *Sverige* (a conjunction of the words *Svea* and *Rike*, first recorded as *Swēorice* in Beowulf, with the consonant 'k' softened to 'g'[15] – compare "rige" in modern Danish) literally means "Kingdom of the Swedes", excluding the Geats in Götaland.

e. ^ Since 3 September 1967.

f. ^ The .eu domain is also used, as it is shared with other European Union member states. The .nu domain is another commonly used top-level domain ("nu" means "now" in Swedish).

Variations of the name *Sweden* are used in most languages, with the exception of Danish and Norwegian using *Sverige*, Icelandic *Svíþjóð*, and the more notable exception of some Finno-Ugric languages where *Ruotsi* (Finnish) and *Rootsi* (Estonian) are used, names commonly considered etymologically related to the English name for Russia, referring to the people, *Rus'*, originally from the coastal areas of Roslagen, Uppland.

The etymology of *Swedes*, and thus *Sweden*, is generally not agreed upon but may derive from Proto-Germanic *Swihoniz* meaning "one's own",[16] referring to one's own Germanic tribe.

History

Main article: History of Sweden

Prehistory

Main article: Prehistoric Sweden

Sweden's prehistory begins in the Allerød warm period c. 12,000 BC with Late Palaeolithic reindeer-hunting camps of the Bromme culture at the edge of the ice in what is now the country's southernmost province. This period was characterized by small bands of hunter-gatherer-fishers using flint technology.

Sweden enters proto-history with the *Germania* of Tacitus in AD 98. In Germania 44, 45 he mentions the Swedes (*Suiones*) as a powerful tribe (*distinguished not merely for their arms and men, but for their powerful fleets*) with ships that had a prow in both ends (longships). Which kings (*kuningaz*) ruled these Suiones is unknown, but Norse mythology presents a long line of legendary and semi-legendary kings going back to the last centuries BC. As for literacy in Sweden itself, the runic script was in use among the south Scandinavian elite by at least the 2nd century AD, but all that has come down to the present from the Roman Period is curt inscriptions on artefacts, mainly of male names, demonstrating that the people of south Scandinavia spoke Proto-Norse at the time, a language ancestral to Swedish and other North Germanic languages.

In the 6th century Jordanes named two tribes he calls the *Suehans* and the *Suetidi* who lived in Scandza. These two names are both considered to refer to the same tribe. The *Suehans*, he says, has very fine horses just as the "Thyringi" tribe (*alia vero gens ibi moratur Suehans, quae velud Thyringi equis utuntur eximiis*). Snorri Sturluson wrote that the contemporary Swedish king Adils (Eadgils) had the finest horses of his days. The Suehans were the suppliers of black fox skins for the Roman market. Then Jordanes names the *Suetidi* which is considered to be the Latin form of *Svitjod*. He writes that the Suetidi are the tallest of men together with the Dani who were of the same stock. Later he mentions other Scandinavian tribes for being of the same height.

Originating in semi-legendary Scandza, believed to be somewhere in modern Götaland, Sweden, a Gothic population had crossed the Baltic Sea before the 2nd century AD, reaching Scythia at the coast of the Black Sea in modern Ukraine where Goths left their archaeological traces in the Chernyakhov culture. In the 5th and 6th

centuries, they became divided as the Visigoths and the Ostrogoths, and established powerful successor-states of the Roman Empire in the Iberian peninsula and Italy.[17] Crimean Gothic communities appear to have survived intact in Crimea until the late 18th century.[18]

Viking and Middle Ages

See also: Early Swedish history, Foundation of Modern Sweden, and Varangians

The Swedish Viking Age lasted roughly between the 8th and 11th centuries. It is believed that Swedish Vikings and Gutar mainly travelled east and south, going to Finland, the Baltic countries, Russia, Belarus, Ukraine the Black Sea and further as far as Baghdad. Their routes passed through the Dnieper down south to Constantinople, on which they did numerous raids. The Byzantine Emperor Theophilos noticed their great skills in war and invited them to serve as his personal bodyguard, known as the varangian guard. The Swedish Vikings, called "Rus" are also believed to be the founding fathers of Kievan Rus. The Arabic traveller "Ibn Fadlan" described these Vikings as following:

> *I have seen the Rus as they came on their merchant journeys and encamped by the Itil. I have never seen more perfect physical specimens, tall as date palms, blond and ruddy; they wear neither tunics nor caftans, but the men wear a garment which covers one side of the body and leaves a hand free. Each man has an axe, a sword, and a knife, and keeps each by him at all times. The swords are broad and grooved, of Frankish sort.*[19]

The adventures of these Swedish Vikings are commemorated on many runestones in Sweden, such as the Greece Runestones and the Varangian Runestones. There was also considerable participation in expeditions westwards, which are commemorated on stones such as the England Runestones. The last major Swedish Viking expedition appears to have been the ill-fated expedition of Ingvar the Far-Travelled to Serkland, the region south-east of the Caspian Sea. Its members are commemorated on the Ingvar Runestones, none of which mentions any survivor. What happened to the crew is unknown, but it is believed that they died of sickness.

The Kingdom of Sweden

It is not known when and how the kingdom of Sweden was born, but the list of Swedish monarchs is drawn from the first kings known to have ruled both Svealand (Sweden) and Götaland (Gothia) as one province, beginning with Erik the Victorious. Sweden and Gothia were two separate nations long before that into antiquity. It is not known how long they existed, *Beowulf* described semi-legendary Swedish-Geatish wars in the 6th century.

Cultural advances

Gamla Uppsala, a site of religious and political importance in the early days of Sweden.

During the early stages of the Scandinavian Viking Age, Ystad in Scania and Paviken on Gotland, in present-day Sweden, were flourishing trade centres. Remains of what is believed to have been a large market have been found in Ystad dating from 600–700 AD.[20] In Paviken, an important centre of trade in the Baltic region during the 9th and 10th century, remains have been found of a large Viking Age harbour with shipbuilding yards and handicraft industries. Between 800 and 1000, trade brought an abundance of silver to Gotland, and according to some scholars, the Gotlanders of this era hoarded more silver than the rest of the population of Scandinavia combined.[20]

St. Ansgar is usually credited for introducing Christianity in 829, but the new religion did not begin to fully

replace paganism until the 12th century. During the 11th century, Christianity became the most prevalent religion, and from 1050 Sweden is counted as a Christian nation. The period between 1100 and 1400 was characterized by internal power struggles and competition among the Nordic kingdoms. Swedish kings also began to expand the Swedish-controlled territory in Finland, creating conflicts with the Rus who no longer had any connection with Sweden.[21]

Feudal institutions in Sweden

Except for the province of Skane, on the southernmost tip of Sweden which was under Danish control during this time, feudalism never developed in Sweden as it did in the rest of Europe.[22] Therefore, the peasantry remained largely a class of free farmers throughout most of Swedish history. Slavery (also called thralldom) was not common in Sweden,[23] and what slavery there was tended to be driven out of existence by the spread of Christianity, the difficulty in obtaining slaves from the lands east of the Baltic Sea, and by the development of cities before the 16th century[24] Indeed, both slavery and serfdom were abolished altogether by a decree of King Magnus Erickson in 1335. Former slaves tended to be absorbed into the peasantry and some became labourers in the towns. Still, Sweden remained a poor and economically backward country in which barter was the means of exchange. For instance, the farmers of the province of Dalsland would transport their butter to the mining districts of Sweden and exchange it there for iron, which they would then take down to the coast and trade the iron for fish they needed for food while the iron would be shipped abroad.[25]

The Plague in Sweden

In the 14th century, Sweden was struck by the Black Death. The population of Sweden was decimated.[26] During this period the Swedish cities also began to acquire greater rights and were strongly influenced by German merchants of the Hanseatic League, active especially at Visby. In 1319, Sweden and Norway were united under King Magnus Eriksson, and in 1397 Queen Margaret I of Denmark effected the personal union of Sweden, Norway, and Denmark through the Kalmar Union. However, Margaret's successors, whose rule was also centred in Denmark, were unable to control the Swedish nobility.

Valdemar IV takes control over Swedish Gotland. The final fight outside the walls of Visby ended with a total massacre of 1,800 Gotlanders.

Minors and Regents

A large number of children inherited the Swedish crown over the course of the kingdom's existence, consequently — real power was held for long periods by regents (notably those of the Sture family) chosen by the Swedish parliament. King Christian II of Denmark, who asserted his claim to Sweden by force of arms, ordered a massacre in 1520 of Swedish nobles at Stockholm. This came to be known as the "Stockholm blood bath" and stirred the Swedish nobility to new resistance and, on 6 June (now Sweden's national holiday) in 1523, they made Gustav Vasa their king.[27] This is sometimes considered as the foundation of modern Sweden. Shortly afterwards he rejected Catholicism and led Sweden into the Protestant Reformation. Economically, Gustav Vasa broke the monopoly of the Hanseatic League over Swedish Baltic Sea trade.[28]

The Hanseatic League had been officially formed at Lübeck on the sea coast of Northern Germany in 1356. The Hanseatic League sought civil and commercial privileges from the princes and royalty of the countries and cities along the coasts of the Baltic Sea.[29] In exchange they offered a certain amount of protection. Having their own navy the Hansa were able to sweep the Baltic Sea free of pirates.[30] The privileges obtained by the Hansa included assurances that only Hansa citizens would be allowed to trade from the ports where they were located. They also sought agreement to be free of all customs and taxes. With these concessions, Lübeck merchants

flocked to Stockholm, Sweden and soon came to dominate the economic life of that city and made the port city of Stockholm into the leading commercial and industrial city of Sweden.[31] Under the Hanseatic trade 2/3rds of Stockholm's imports consisted of textiles and 1/3 of salt. Exports from Sweden consisted of iron and copper.[32]

However, the Swedes began to resent the monopoly trading position of the Hansa (mostly German citizens) and to resent the income they felt they lost to the Hansa. Consequently, when Gustav Vasa or Gustav I broke the monopoly power of the Hanseatic League he was regarded as a hero to the Swedish people. History now views Gustav I as the father of the modern Swedish nation. The foundations laid by Gustav would take time to develop. Furthermore, when Sweden did develop, freed itself from the Hanseatic League and entered its golden era, the fact the peasantry had traditionally been free meant that more of the economic benefits flowed back to them rather than going to a feudal landowning class.[33] This was not the case in other countries of Europe like Poland where the peasantry was still bound by serfdom and a strong feudalistic land owning system.

Swedish Empire

See also: History of Sweden (1611–1648), Swedish Empire, Swedish overseas colonies, Sweden and the Great Northern War, Absolute Monarchy in Sweden, Sweden-Finland, and Union between Sweden and Norway

The Swedish Empire between 1560 and 1815

During the 17th century Sweden emerged as a European great power. Before the emergence of the Swedish Empire, Sweden was a very poor and scarcely populated country on the fringe of European civilization, with no significant power or reputation. Sweden rose to prominence on a continental scale during the tenure of king Gustavus Adolphus, seizing territories from Russia and Poland–Lithuania in multiple conflicts, including the Thirty Years' War.

During the Thirty Years' War, Sweden conquered approximately half of the Holy Roman states. Gustav Adolphus planned to become the new Holy Roman Emperor, ruling over a united Scandinavia and the Holy Roman states, but he died at the Battle of Lützen in 1632. After the Battle of Nördlingen, Sweden's only significant military defeat of the war, pro-Swedish sentiment among the German states faded. These German provinces excluded themselves from Swedish power one by one, leaving Sweden with only a few northern German territories: Swedish Pomerania, Bremen-Verden and Wismar. The Swedish armies may have destroyed up to 2,000 castles, 18,000 villages and 1,500 towns in Germany, one-third of all German towns.[34]

Stockholm in mid-17th century

In the middle of the 17th century Sweden was the third largest country in Europe by land area, only surpassed by Russia and Spain. Sweden reached its largest territorial extent under the rule of Charles X after the treaty of Roskilde in 1658.[35][36] The foundation of Sweden's success during this period is credited to Gustav I's major changes on the Swedish economy in the 16th century, and his introduction of Protestantism.[37] In the 17th century, Sweden was engaged in many wars, for example with the Polish-Lithuanian Commonwealth with both sides competing for territories of today's Baltic states, with the disastrous Battle of Kircholm being one of the highlights.[38] One-third of the Finnish population died in the devastating famine that struck the country in 1696.[39] Famine also hit Sweden,[40] killing roughly 10% of Sweden's population.[41]

The Swedes conducted a series of invasions into the Polish-Lithuanian Commonwealth, known as the Deluge.

After more than half a century of almost constant warfare, the Swedish economy had deteriorated. It became the lifetime task of Charles' son, Charles XI, to rebuild the economy and refit the army. His legacy to his son, the coming ruler of Sweden Charles XII, was one of the finest arsenals in the world, a large standing army and a great fleet. Sweden's largest threat at this time, Russia, had a larger army but was far behind in both equipment and training.

After the Battle of Narva in 1700, one of the first battles of the Great Northern War, the Russian army was so severely decimated that Sweden had an open chance to invade Russia. However, Charles did not pursue the Russian army, instead turning against Poland-Lithuania and defeating the Polish king Augustus II and his Saxon allies at the Battle of Kliszow in 1702. This gave Russia time to rebuild and modernize its army.

Death of Gustav II Adolf at the Battle of Lützen

After the success of invading Poland, Charles decided to make an invasion attempt of Russia which ended in a decisive Russian victory at the Battle of Poltava in 1709. After a long march exposed to Cossack raids, Russian Tsar Peter the Great's scorched-earth techniques and the cold Russian climate, the Swedes stood weakened with a shattered morale and enormously outnumbered against the Russian army at Poltava. The defeat meant the beginning of the end for the Swedish Empire.

The Battle of Poltava in 1709. In the years following Poltava, Russia occupied all the Swedish annexations on the Baltic coast and even Finland.

Charles XII attempted to invade Norway 1716; however, he was shot dead at Fredriksten fortress in 1718. The Swedes were not militarily defeated at Fredriksten, but the whole structure and organization of the Norwegian campaign fell apart with the king's death, and the army withdrew.

Forced to cede large areas of land in the Treaty of Nystad in 1721, Sweden also lost its place as an empire and as the dominant state on the Baltic Sea. With Sweden's lost influence, Russia emerged as an empire and became one of Europe's dominant nations. As the war finally ended in 1721, Sweden had lost an estimated 200,000 men, 150,000 of those from the area of present-day Sweden and 50,000 from the Finnish part of Sweden.[42]

In the 18th century, Sweden did not have enough resources to maintain its territories outside Scandinavia, and most of them were lost, culminating with the 1809 loss of eastern Sweden to Russia which became the highly autonomous Grand Principality of Finland in Imperial Russia.

In interest of re-establishing Swedish dominance in the Baltic Sea, Sweden allied itself against its traditional ally and benefactor, France, in the Napoleonic Wars. Sweden's role in the Battle of Leipzig gave it the authority to force Denmark-Norway, an ally of France, to cede Norway to the King of Sweden on 14 January 1814 in exchange for northern German provinces, at the Treaty of Kiel. The Norwegian attempts to keep their status as a sovereign state were rejected by the Swedish king, Charles XIII. He launched a military campaign against Norway on 27 July 1814, ending in the Convention of Moss, which forced Norway into a personal union with Sweden under the Swedish crown, which lasted until 1905. The 1814 campaign was the last war in which Sweden participated as a combatant. Swedish troops partake in peace-keeping missions and currently have forces deployed in Afghanistan and Kosovo.

Modern history

See also: Modernization of Sweden and Swedish emigration to the United States

There was a significant population increase during the 18th and 19th centuries, which the writer Esaias Tegnér in 1833 attributed to *"the peace, the (smallpox) vaccine, and the potatoes"*.[43] Between 1750 and 1850, the population in Sweden doubled. According to some scholars, mass emigration to America became the only way to prevent famine and rebellion; over 1% of the population emigrated annually during the 1880s.[44] Nevertheless, Sweden remained poor, retaining a nearly entirely agricultural economy even as Denmark and Western European countries began to industrialize.[44][45]

Swedish emigrants boarding ship in Gothenburg in 1905

Illustration of starvation in northern Sweden, Famine of 1866–1868

Many looked towards America for a better life during this time. It is believed that between 1850 and 1910 more than one million Swedes moved to the United States.[46] In the early 20th century, more Swedes lived in Chicago than in Gothenburg (Sweden's second largest city).[47] Most Swedish immigrants moved to the Midwestern United States, with a large population in Minnesota, with a few others moving to other parts of the United States and Canada.

Despite the slow rate of industrialization into the 19th century, many important changes were taking place in the agrarian economy because of innovations and the large population growth.[48] These innovations included government-sponsored programs of enclosure, aggressive exploitation of agricultural lands, and the introduction of new crops such as the potato.[48] Because the Swedish peasantry had never been enserfed as elsewhere in Europe,[49] the Swedish farming culture began to take on a critical role in the Swedish political process, which has continued through modern times with modern Agrarian party (now called the Centre Party).[50] Between 1870 and 1914, Sweden began developing the industrialized economy that exists today.[51]

Strong grassroots movements sprung up in Sweden during the latter half of the 19th century (trade unions, temperance groups, and independent religious groups), creating a strong foundation of democratic principles. In 1889 The Swedish Social Democratic Party was founded. These movements precipitated Sweden's migration into a modern parliamentary democracy, achieved by the time of World War I. As the Industrial Revolution progressed during the 20th century, people gradually began moving into cities to work in factories and became involved in socialist unions. A communist revolution was avoided in 1917, following the re-introduction of parliamentarism, and the country was democratized.

World Wars

See also: Sweden during World War II

Sweden remained officially neutral during World War I and World War II, although its neutrality during World War II has been disputed.[52][53] Sweden was under German influence for much of the war, as ties to the rest of the world were cut off through blockades.[52] The Swedish government felt that it was in no position to openly contest Germany,[54] and therefore made some concessions.[55] Sweden also supplied steel and machined parts to Germany throughout the war. However, Sweden supported Norwegian resistance, and in 1943 helped rescue Danish Jews from deportation to concentration camps. Sweden also supported Finland in the Winter War and the Continuation War

Swedish soldier during World War II

with volunteers and materiel.

Toward the end of the war, Sweden began to play a role in humanitarian efforts and many refugees, among them many Jews from Nazi-occupied Europe, were saved partly because of the Swedish involvement in rescue missions at the internment camps and partly because Sweden served as a haven for refugees, primarily from the Nordic countries and the Baltic states.[54] The Swedish diplomat Raoul Wallenberg and his colleagues may have saved up to 100,000 Hungarian Jews.[56] Nevertheless, internal and external critics have argued that Sweden could have done more to resist the Nazi war effort, even if risking occupation.[54]

Post-war era

Sweden was officially a neutral country and remained outside NATO or Warsaw pact membership during the cold war, but privately Sweden's leadership had strong ties with the United States and other western governments.

Following the war, Sweden took advantage of an intact industrial base, social stability and its natural resources to expand its industry to supply the rebuilding of Europe.[57] Sweden was part of the Marshall Plan and participated in the Organization of Economic Co-operation and Development (OECD). During most of the post-war era, the country was governed by the Swedish Social Democratic Party largely in cooperation with trade unions and industry. The government actively pursued an internationally competitive manufacturing sector of primarily large corporations.[58]

A typical red house in Tällberg, Sweden

Sweden, like countries around the globe, entered a period of economic decline and upheaval, following the oil embargoes of 1973–74 and 1978–79.[59] In the 1980s pillars of Swedish industry were massively restructured. Shipbuilding was discontinued, wood pulp was integrated into modernized paper production, the steel industry was concentrated and specialized, and mechanical engineering was robotized.[60]

Between 1970 and 1990 the overall tax burden rose by over 10%, and the growth was low compared to other countries in Western Europe. Eventually government spent over half of the country's gross domestic product. Sweden GDP per capita ranking declined during this time.[58]

Recent history

See also: History of Sweden (since 1989)

A bursting real estate bubble caused by inadequate controls on lending combined with an international recession and a policy switch from anti-unemployment policies to anti-inflationary policies resulted in a fiscal crisis in the early 1990s.[61] Sweden's GDP declined by around 5%. In 1992, there was a run on the currency, with the central bank briefly jacking up interest to 500%.[62][63]

Sweden joined the European Union in 1995 and signed the Lisbon Treaty in 2007.

The response of the government was to cut spending and institute a multitude of reforms to improve Sweden's competitiveness, among them reducing the welfare state and privatising public services and goods. Much of the political establishment promoted EU membership, and the

Swedish referendum passed with 52% in favour of joining the EU on 13 November 1994. Sweden joined the European Union on 1 January 1995.

Sweden remains non-aligned militarily, although it participates in some joint military exercises with NATO and some other countries, in addition to extensive cooperation with other European countries in the area of defence technology and defence industry. Among others, Swedish companies export weapons that are used by the American military in Iraq.[64] Sweden also has a long history of participating in international military operations, including most recently, Afghanistan, where Swedish troops are under NATO command, and in EU sponsored peacekeeping operations in UN protectorate Kosovo, Bosnia and Herzegovina, and Cyprus. Sweden held the chair of the European Union from 1 July to 31 December 2009.

Geography

Main article: Geography of Sweden

View of the Stora Sjöfallet National Park

Situated in Northern Europe, Sweden lies west of the Baltic Sea and Gulf of Bothnia, providing a long coastline, and forms the eastern part of the Scandinavian Peninsula. To the west is the Scandinavian mountain chain (Skanderna), a range that separates Sweden from Norway. Finland is located to its northeast. It has maritime borders with Denmark, Germany, Poland, Russia, Lithuania, Latvia and Estonia, and it is also linked to Denmark (southwest) by the Öresund Bridge.

Sweden lies between latitudes 55° and 70° N, and mostly between longitudes 11° and 25° E (part of Stora Drammen island is just west of 11°).

At 449,964 km^2 (173,732 sq mi), Sweden is the 55th largest country in the world,[65] the 4th largest country entirely in Europe, and the largest in Northern Europe. The lowest elevation in Sweden is in the bay of Lake Hammarsjön, near Kristianstad at −2.41 m (−7.91 ft) below sea level. The highest point is Kebnekaise at 2,111 m (6,926 ft) above sea level.

Sweden has 25 provinces or *landskap* (landscapes), based on culture, geography and history. While these provinces serve no political or administrative purpose, they play an important role for people's self-identification. The provinces are usually grouped together in three large *lands*, parts, the northern Norrland, the central Svealand and southern Götaland. The sparsely populated Norrland encompasses almost 60% of the country.

Lake landscape at the outskirts of Ramsjö

About 15% of Sweden lies north of the Arctic Circle. Southern Sweden is predominantly agricultural, with increasing forest coverage northward. Around 65% of Sweden's total land area is covered with forests. The highest population density is in the Öresund Region in southern Sweden, along the western coast up to central Bohuslän, and in the valley of lake Mälaren and Stockholm. Gotland and Öland are Sweden's largest islands; Vänern and Vättern are its largest lakes. Vänern is the third largest in Europe, after Lake Ladoga and Lake Onega in Russia.

Climate

The Scandinavian Mountains

Most of Sweden has a temperate climate, despite its northern latitude, with four distinct seasons and mild temperatures throughout the year. The country can be divided into three types of climate; the southernmost part has an oceanic climate, the central part has a humid continental climate and the northernmost part has a subarctic climate. However, Sweden is much warmer and drier than other places at a similar latitude, and even somewhat farther south, mainly because of the Gulf Stream.[66][67] For example, central and southern Sweden has much warmer winters than many parts of Russia, Canada, and the northern United States.[68] Because of its high latitude, the length of daylight varies greatly. North of the Arctic Circle, the sun never sets for part of each summer, and it never rises for part of each winter. In the capital, Stockholm, daylight lasts for more than 18 hours in late June but only around 6 hours in late December. Sweden receives between 1,100 to 1,900 hours of sunshine annually.[69][70]

Temperatures vary greatly from north to south. Southern and central parts of the country have warm summers and cold winters, with average high temperatures of 20 to 25 °C (68 to 77 °F)[71] and lows of 12 to 15 °C (54 to 59 °F)[72] in the summer, and average temperatures of -4 to 2 °C (25 to 36 °F) in the winter,[73] while the northern part of the country has shorter, cooler summers and longer, colder and snowier winters, with temperatures that often drop below freezing from September through May.[74][75] The highest temperature ever recorded in Sweden was 38 °C (100 °F) in Målilla in 1947, while the coldest temperature ever recorded was −52.6 °C (−62.7 °F) in Vuoggatjålme in 1966.[76][77]

On average, most of Sweden receives between 500 and 800 mm (20 and 31 in) of precipitation each year, making it considerably drier than the global average. The southwestern part of the country receives more precipitation, between 1000 and 1200 mm (39 and 47 in), and some mountain areas in the north are estimated to receive up to 2000 mm (79 in). Despite northerly locations, southern and central Sweden may have almost no snow in some winters.[78][79]

Politics

Main article: Politics of Sweden

Sweden is a constitutional monarchy, in which King Carl XVI Gustaf is head of state, but royal power has long been limited to official and ceremonial functions.[81] The Economist Intelligence Unit, while acknowledging that democracy is difficult to measure, listed Sweden in fourth place in 2010 in its index of democracy assessing 167 countries.

The nation's legislative body is the riksdag (Swedish Parliament), with 349 members, which chooses the Prime Minister. Parliamentary elections are held every four years, on the third Sunday of September.

Administrative divisions

Sweden municipal borders

Main articles: Counties of Sweden and Municipalities of Sweden

Sweden is a unitary state, currently divided into twenty-one counties (*län*): Stockholm, Uppsala, Södermanland, Östergötland, Jönköping, Kronoberg, Kalmar, Gotland, Blekinge, Skåne, Halland, Västra Götaland, Värmland, Örebro, Västmanland, Dalarna, Gävleborg, Västernorrland, Jämtland, Västerbotten and Norrbotten.

Each county has a County Administrative Board or *länsstyrelse*, which is a Government appointed board. It is led by a Governor or *Landshövding* appointed for a term of six years and the list of succession, in most cases, stretches back to 1634 when the counties were created by the Swedish Lord High Chancellor Axel Oxenstierna. The main responsibility of the County Administrative Board is to coordinate the development of the county in line with goals set in national politics. In each county there is also a County Council or *landsting* which is a policy-making assembly elected by the residents of the county.

Each county further divides into a number of municipalities or *kommuner*, with a total of 290 municipalities in 2004. Municipal government in Sweden is similar to city commission government and cabinet-style council government. A legislative municipal assembly *(kommunfullmäktige)* of between 31 and 101 members (always an uneven number) is elected from party-list proportional representation at municipal elections, held every four years in conjunction with the national parliamentary elections.

The municipalities are divided into a total of 2,512 parishes, or *församlingar*. These have traditionally been a subdivision of the Church of Sweden but still have importance as districts for census and elections. There are older historical divisions, primarily the twenty-five provinces and three lands, which still retain cultural significance.

Further information: Subdivisions of Sweden and National Areas of Sweden

Political history

The actual age of the kingdom of Sweden is unknown.[82] It depends mostly on whether Sweden should be considered a nation when the *Svear* (Sweonas) ruled Svealand or if the emergence of the nation started with the *Svear* and the *Götar* (Geats) of Götaland being united under one ruler. In the first case, Sweden was first mentioned as having one single ruler in the year 98 by Tacitus, but it is almost impossible to know for how long it had been this way. However, historians usually start the line of Swedish monarchs from when Svealand and

Kingdoms of Svear (Sweonas) and Götar (Geats) in the 12th century, with modern borders in grey

Götaland were ruled under the same king, namely Erik the Victorious (Geat) and his son Olof Skötkonung in the 10th century. These events are often described as the consolidation of Sweden, although substantial areas were conquered and incorporated later.

Earlier kings, for which no reliable historical sources exist, can be read about in mythical kings of Sweden and semi-legendary kings of Sweden. Many of these kings are only mentioned in various saga and blend with Norse mythology.

The title *Sveriges och Götes Konung* was last used for Gustaf I of Sweden, after which the title became "King of Sweden, of the Goths and of the Wends" (*Sveriges, Götes och Vendes Konung*) in official documentation. Up until the beginning of the 1920s, all laws in Sweden were introduced with the words, "We, the king of Sweden, of the Goths and Wends". This title was used up until 1973.[83] The present King of Sweden, Carl XVI Gustaf, was the first monarch officially proclaimed "King of Sweden" (*Sveriges Konung*) with no additional peoples mentioned in his title.

The term *riksdag* was used for the first time in the 1540s, although the first meeting where representatives of different social groups were called to discuss and determine affairs affecting the country as a whole took place as early as 1435, in the town of Arboga.[84] During the assemblies of 1527 and 1544, under King Gustav Vasa, representatives of all four estates of the realm (clergy, nobility, townsmen and peasants) were called on to participate for the first time.[84] The monarchy became hereditary in 1544.

Executive power was historically shared between the King and a noble Privy Council until 1680, followed by the King's autocratic rule initiated by the common estates of the Parliament. As a reaction to the failed Great Northern War, a parliamentary system was introduced in 1719, followed by three different flavours of constitutional monarchy in 1772, 1789 and 1809, the latter granting several civil liberties. The monarch remains as the formal, but merely symbolic, head of state with ceremonial duties.

The Riksdag of the Estates consisted of two chambers. In 1866 Sweden became a constitutional monarchy with a bicameral parliament, with the First Chamber indirectly elected by local governments, and the Second Chamber directly elected in national elections every four years. In 1971 the parliament became unicameral. Legislative power was (symbolically) shared between king and parliament until 1975. Swedish taxation is controlled by the Parliament of Sweden (riksdagen).

Sweden has a history of strong political involvement by ordinary people through its "popular movements" (*Folkrörelser*), the most notable being trade unions, the independent Christian movement, the temperance movement, the women's movement and more recently the sports and intellectual property pirate movements.

Sweden is currently leading the EU in statistics measuring equality in the political system and equality in the education system.[85] The *Global Gender Gap Report 2006* ranked Sweden as the number one country in terms of gender equality.[86]

Political system

Constitutionally, the 349-member riksdag (Parliament) holds supreme authority in modern Sweden. The riksdag is responsible for choosing the prime minister, who then appoints the government department heads (cabinet

ministers). Legislative power is only exercised by the riksdag. Executive power is exercised by the prime minister and the cabinet, while the judiciary is independent. Sweden lacks compulsory judicial review, although the non-compulsory review carried out by *lagrådet* (Law Council) is mostly respected in technical matters but less so in controversial political matters. Acts of the parliament and government decrees can be made inapplicable at every level if they are manifestly against constitutional laws. However, because of the restrictions in this form of judicial review and a weak judiciary, this has had little practical consequence.

The Parliament House in Stockholm.

Legislation may be initiated by the cabinet or by members of Parliament. Members are elected on the basis of proportional representation to a four-year term. The Constitution of Sweden can be altered by the riksdag, which requires a simple but absolute majority with two separate votes, separated by general elections in between. Sweden has three other constitutional laws: the Act of Royal Succession, the Freedom of Press Act and the Fundamental Law on Freedom of Expression.

Carl XVI Gustaf, the King of Sweden and ceremonial head of state

The Swedish Social Democratic Party has played a leading political role since 1917, after Reformists had confirmed their strength and the revolutionaries left the party. After 1932, cabinets have been dominated by the Social Democrats. Only five general elections (1976, 1979, 1991, 2006 and 2010) have given the centre-right bloc enough seats in Parliament to form a government. However, due to poor economic performance since the beginning of the 1970s, and especially since the fiscal crisis of the early 1990s, Sweden's political system has become less one-sided, and more like other European countries.

In the 2006 general election the Moderate Party, allied with the Centre Party, Liberal People's Party, and the Christian Democrats formed the centre-right Alliance for Sweden and won a majority of the votes. Together they formed a majority government under the leadership of the Moderate party's leader Fredrik Reinfeldt. In the September 2010 election the Alliance contended against a unified left block consisting of the Social Democrats, the Greens and the Left Party. It also saw the first election of the Sweden Democrats into the riksdag.[87]

Following is the current party lineup in the Swedish parliament, as of October 2011, organized by voting blocks:[88]

English name	Swedish name	Abbr.	Seats
Moderate Party	Moderata samlingspartiet	(M)	107
Liberal People's Party	Folkpartiet liberalerna	(FP)	24
Centre Party	Centerpartiet	(C)	23
Christian Democrats	Kristdemokraterna	(KD)	19
Total centre-right block			**173**
Social Democrats	Socialdemokraterna	(S)	112
The Greens	Miljöpartiet	(MP)	25
Left Party	Vänsterpartiet	(V)	19
Total left-of-centre[89] block			**156**

Sweden Democrats	Sverigedemokraterna	(SD)	19
Independent member	utan partibeteckning		1
Total parliament			**349**

The Alliance won a plurality of 173 seats, but remained two seats short of a 175-seat majority. Nevertheless, neither the Alliance, nor the left block chose to form a coalition with the Sweden Democrats, and the Alliance is currently governing as a minority government.[90]

Election turnout in Sweden has always been high by international comparison, although it has declined in recent decades, and is currently around 80% (80.11 in 2002, and 81.99% in 2006). Swedish politicians enjoyed a high degree of confidence from the citizens in the 1960s, However, that confidence level has since declined steadily, and is now at a markedly lower level than in its Scandinavian neighbours.[91]

Some Swedish political figures have become known worldwide, among these are: Raoul Wallenberg, Folke Bernadotte, former Secretary General of the United Nations Dag Hammarskjöld, former Prime Minister Olof Palme, former Prime Minister and Foreign minister Carl Bildt, former President of the General Assembly of the United Nations Jan Eliasson, and former International Atomic Energy Agency Iraq inspector Hans Blix.

Law, law enforcement, and judicial system

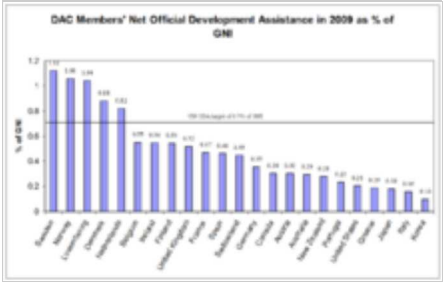
Main article: Judicial system of Sweden

The Supreme Court of Sweden is the third and final instance in all civil and criminal cases in Sweden. Before a case can be decided by the Supreme Court, leave to appeal must be obtained, and with few exceptions, leave to appeal can be granted only when the case is of interest as a precedent. The Supreme Court consists of 16 Councillors of Justice or *justitieråd* which are appointed by the government, but the court as an institution is independent of the Parliament of Sweden, and the government is not able to interfere with the decisions of the court.

Law enforcement in Sweden is carried out by several government entities. The Swedish Police Service is a Government agency concerned with police matters. The National Task Force is a national SWAT unit within the National Criminal Investigation Department. Swedish Security Service's responsibilities are counter-espionage, anti-terrorist activities, protection of the constitution and protection of sensitive objects and people.

According to a victimization survey of 1,201 residents in 2005, Sweden has above average crime rates compared to other EU countries. Sweden has high or above average levels of assaults, sexual assaults, hate crimes, and consumer fraud. Sweden has low levels of burglary, car theft and drug problems. Bribe seeking is rare.[92]

Foreign relations



Main article: Foreign relations of Sweden

Throughout the 20th century, Swedish foreign policy was based on the principle of non-alignment in peacetime and neutrality in wartime. Sweden's government pursued an independent course of nonalignment in times of peace so that neutrality would be possible in the event of war.[57]

Sweden's doctrine of neutrality is often traced back to the 19th century as the country has not been in a state of war since the end of the Swedish campaign against Norway in 1814. During World War II Sweden joined neither the allied nor axis powers. This has sometimes been disputed since in effect Sweden allowed in select cases the

Nazi regime to use its railroad system to transport troops and goods,[52][54] especially iron ore from mines in northern Sweden, which was vital to the German war machine.[54][93] However, Sweden also indirectly contributed to the defence of Finland in the Winter War, and permitted the training of Norwegian and Danish troops in Sweden after 1943.

During the early Cold War era, Sweden combined its policy of non-alignment and a low profile in international affairs with a security policy based on strong national defence.[94] The function of the Swedish military was to deter attack.[95] At the same time, the country maintained relatively close informal connections with the Western bloc, especially in the realm of intelligence exchange. In 1952, a Swedish DC-3 was shot down over the Baltic Sea by a Soviet MiG-15 jet fighter. Later investigations revealed that the plane was actually gathering information for NATO.[96] Another plane, a Catalina search and rescue plane, was sent out a few days later and shot down by the Soviets as well. Olof Palme, the former prime minister of Sweden, visited Cuba during the 1970s and showed his support for Cuba in his speech.

Development aid measured in GNI in 2009. Source: OECD. As a percentage Sweden is the largest donor.

Beginning in the late 1960s, Sweden for a period attempted to play a more significant and independent role in international relations. This involved significant activity in international peace efforts, especially through the United Nations, and in support to the Third World. Since the assassination of Olof Palme in 1986 and the end of the Cold War, this has been significantly toned down, although Sweden remains comparatively active in peace keeping missions and maintains a generous foreign aid budget.

In 1981 a Soviet Whiskey class submarine ran aground close to the Swedish naval base at Karlskrona in the southern part of the country. It has never been clearly established whether the submarine ended up on the shoals through a navigational mistake or if it was a matter of espionage against Swedish military potential. The incident triggered a diplomatic crisis between Sweden and the Soviet Union.

Since 1995 Sweden has been a member of the European Union, and as a consequence of a new world security situation the country's foreign policy doctrine has been partly modified, with Sweden playing a more active role in European security co-operation.

Military

Main article: Swedish Armed Forces

Försvarsmakten (Swedish Armed Forces) is a government agency reporting to the Swedish Ministry of Defence and responsible for the peacetime operation of the armed forces of Sweden. The primary task of the agency is to train and deploy peace support forces abroad, while maintaining the long-term ability to refocus on the defence of Sweden in the event of war. The armed forces are divided into Army, Air Force and Navy. The head of the armed forces is the Supreme Commander (*Överbefälhavaren*, ÖB), the most senior officer in the country. Up to 1974 the head of state (=the King) was *pro forma* Commander-in-Chief, but in reality it was clearly understood all through the 20th century that the Monarch would have no *active* role as a military leader.

The JAS 39 Gripen is an advanced Swedish multi-role fighter aircraft of the Swedish Air Force.

When King Gustav V asserted his right to decide and bypass the

government in military matters just before the First World War (*"borggårdskrisen"*, the Castle Court Crisis) it was seen as a deliberate provocation against established terms of how the country would be ruled. The office of an appointed Supreme Commander was set up in 1939; before that date, from the late 19th century onwards, the leading men of the army and navy would report directly to the cabinet (and the king), and no fully unified command existed in the professional military sphere itself.

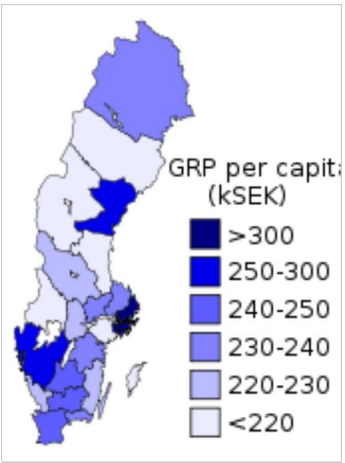
The Infantry fighting vehicle Strf 90 produced and used by Sweden.

Until the end of the Cold War, nearly all males reaching the age of military service were conscripted. In recent years, the number of conscripted males has shrunk dramatically, while the number of female volunteers has increased slightly. Recruitment has generally shifted towards finding the most motivated recruits, rather than solely those otherwise most fit for service. All soldiers serving abroad must by law be volunteers. In 1975 the total number of conscripts was 45,000. By 2003 it was down to 15,000.

On 1 July 2010 Sweden stopped routine conscription, switching to an all volunteer force unless otherwise required for defence readiness.[97][98][99] The need to recruit only the soldiers later prepared to volunteer for international service will be emphasized. The total forces gathered would consist of about 60,000 men. This could be compared with the 80s before the fall of the Soviet Union, when Sweden could gather up to 1,000,000 men.

Swedish units have taken part in peacekeeping operations in the Democratic Republic of Congo, Cyprus, Bosnia and Herzegovina, Kosovo, Liberia, Lebanon, Afghanistan and Chad.

Currently, one of the most important tasks for the Swedish Armed Forces has been to form a Swedish-led EU Battle Group to which Norway, Finland, Ireland and Estonia will also contribute.[100] The Nordic Battle Group (NBG) had a 10-day deployment readiness during the first half of 2008 and, although Swedish-led, had its Operational Headquarters (OHQ) in Northwood, outside London.

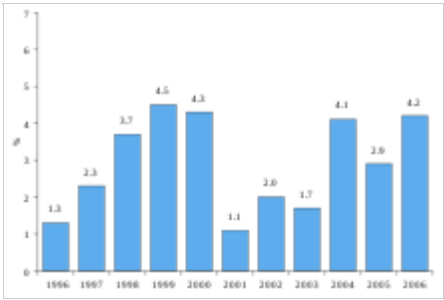


Economy

Main article: Economy of Sweden

Nordstan is one of the largest shopping malls in northern Europe

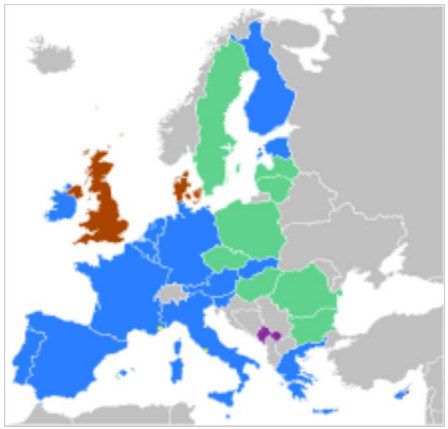
Sweden is an export-oriented mixed economy featuring a modern distribution system, excellent internal and external communications, and a skilled labour force. Timber, hydropower and iron ore constitute the resource base of an economy heavily oriented toward foreign trade. Sweden's engineering sector accounts for 50% of output and exports. Telecommunications, the automotive industry and the pharmaceutical industries are also of great importance. Agriculture accounts for 2% of GDP and employment. Income is relatively flatly distributed, Sweden has the lowest Gini coefficient (0.23) of any country.



Gross Regional Product (GRP) per capita in thousands of kronor (2004).

In terms of structure, the Swedish economy is characterised by a large,

knowledge-intensive and export-oriented manufacturing sector, an increasing, but comparatively small, business service sector, and by international standards, a large public service sector. Large organisations both in manufacturing and services dominate the Swedish economy.[101]



The 20 largest (by turnover in 2007) companies registered in Sweden are Volvo, Ericsson, Vattenfall, Skanska, Sony Ericsson Mobile Communications AB, Svenska Cellulosa Aktiebolaget, Electrolux, Volvo Personvagnar, TeliaSonera, Sandvik, Scania, ICA, Hennes & Mauritz, IKEA, Nordea, Preem, Atlas Copco, Securitas, Nordstjernan and SKF.[102] Sweden's industry is overwhelmingly in private control; unlike some other industrialised Western countries, such as Austria and Italy, publicly owned enterprises have always been of minor importance.

Real GDP growth in Sweden, 1996–2006.

Some 4.5 million residents are working, out of which around a third has tertiary education. GDP per hour worked is the world's 9th highest at 31 USD in 2006, compared to 22 USD in Spain and 35 USD in United States.[103] GDP per hour worked is growing 2½ per cent per year for the economy as a whole and the trade-terms-balanced productivity growth is 2%.[103] According to OECD, deregulation, globalisation, and technology sector growth have been key productivity drivers.[103] Sweden is a world leader in privatised pensions and pension funding problems are relatively small compared to many other Western European countries.[104]

The typical worker receives 40% of his or her income after the tax wedge. The slowly declining overall taxation, 51.1% of GDP in 2007, is still nearly double of that in the United States or Ireland. The share of employment financed via tax income amounts to a third of Swedish workforce, a substantially higher proportion than in most other countries. Overall, GDP growth has been fast since reforms in the early 1990s, especially in manufacturing.[105]

Sweden is part of the Schengen Area and the EU single market.

The World Economic Forum 2009–2010 competitiveness index ranks Sweden the 4th most competitive economy in the world.[106] In the World Economic Forum 2010–2011 Global Competitiveness Report, Sweden climbed two positions, and is now ranked 2nd in the world.[107] Sweden is ranked 6th in the IMD Competitiveness Yearbook 2009, scoring high in private sector efficiency.[108] According to the book, *The Flight of the Creative Class*, by the U.S. economist, Professor Richard Florida of the University of Toronto, Sweden is ranked as having the best creativity in Europe for business and is predicted to become a talent magnet for the world's most purposeful workers. The book compiled an index to measure the kind of creativity it claims is most useful to business—talent, technology and tolerance.[109]

Sweden maintains its own currency, the Swedish krona (SEK), a result of the Swedes having rejected the euro in a referendum. The Swedish Riksbank—founded in 1668 and thus making it the oldest central bank in the world—is currently focusing on price stability with an inflation target of 2%. According to the *Economic Survey of Sweden 2007* by the OECD, the average inflation in Sweden has been one of the lowest among European countries since the mid-1990s, largely because of deregulation and quick utilisation of globalisation.[103]

The largest trade flows are with Germany, the United States, Norway, the United Kingdom, Denmark and Finland.

Energy

See also: Nordic energy market, Nuclear power phase-out in Sweden, and Oil phase-out in Sweden

Sweden's energy market is largely privatized. The Nordic energy market is one of the first liberalized energy markets in Europe and it is traded in NASDAQ OMX Commodities Europe and Nord Pool Spot. In 2006, out of a total electricity production of 139 TWh, electricity from hydropower accounted for 61 TWh (44%), and nuclear power delivered 65 TWh (47%). At the same time, the use of biofuels, peat etc. produced 13 TWh (9%) of electricity, while wind power produced 1 TWh (1%). Sweden was a net importer of electricity by a margin of 6 TWh.[110] Biomass is mainly used to produce heat for district heating and central heating and industry processes.

The 1973 oil crisis strengthened Sweden's commitment to decrease dependence on imported fossil fuels. Since then, electricity has been generated mostly from hydropower and nuclear power. The use of nuclear power has been limited, however. Among other things, the accident of Three Mile Island Nuclear Generating Station (United States) prompted the Swedish parliament to ban new nuclear plants. In March 2005, an opinion poll showed that 83% supported maintaining or increasing nuclear power.[111] Politicians have made announcements about oil phase-out in Sweden, decrease of nuclear power, and multi-billion dollar investments in renewable energy and energy efficiency.[112][113] The country has for many years pursued a strategy of indirect taxation as an instrument of environmental policy, including energy taxes in general and carbon dioxide taxes in particular.[112]

Transport

Main article: Transport in Sweden

Stockholm metro.

The Stockholm Central Station

The Öresund Bridge between Malmö and Copenhagen in Denmark.

Sweden has 162,707 km (101,101 mi) of paved road and 1,428 km (887 mi) of expressways. Motorways run through Sweden, Denmark and over the Öresund Bridge to Stockholm, Gothenburg, Uppsala and Uddevalla. The system of motorways is still under construction and a new motorway from Uppsala to Gävle was finished on 17 October 2007. Sweden had left-hand traffic (Vänstertrafik in Swedish) from approximately 1736 and continued to do so well into the 20th century. Voters rejected right-hand traffic in 1955, but after the riksdag passed legislation in 1963 changeover took place in 1967, known in Swedish as Dagen H.

The Stockholm metro is the only subway system in Sweden and serves the city of Stockholm, 100 metro stations are in use.

The rail transport market is privatized, but while there are many privately owned enterprises, many operators are still owned by state. The counties have financing, ticket and marketing responsibility for local trains. For other trains the operators handle tickets and marketing themselves. Operators include SJ, Veolia Transport, DSB, Green Cargo, Tågkompaniet and Inlandsbanan. Most of the railways are owned and operated by Trafikverket.

The largest airports include Stockholm-Arlanda Airport (16.1 million passengers in 2009) 40 km (25 mi) north of Stockholm, Gothenburg-Landvetter Airport (4.3 million passengers in 2008), and Stockholm-Skavsta Airport (2.0 million passengers). Sweden hosts the two largest port companies in Scandinavia, Port of Göteborg AB (Gothenburg) and the transnational company Copenhagen Malmö Port AB.

Public policy

See also: Nordic model and Swedish welfare

Sweden has one of the most highly developed welfare states in the world. The country has a higher level of social spending to GDP than any other nation. Additionally it provides equal as well as comprehensive access to education and health care.

Historically, Sweden provided solid support for free trade (except agriculture) and mostly relatively strong and stable property rights (both private and public), though some economists have pointed out that Sweden promoted industries with tariffs and used publicly subsidised R&D during the country's early critical years of industrialisation.[114] After World War II a succession of governments expanded the welfare state by raising the tax level. During this period Sweden's economic growth was also one of the highest in the industrial world. A series of successive social reforms transformed the country into one of the most equal and developed on earth. The consistent growth of the welfare state led to Swedes achieving unprecedented levels of social mobility and quality of life—to this day Sweden consistently ranks at the top of league tables for health, literacy and Human Development—far ahead of some wealthier countries (for example the United States).[115]

However, from the 1970s and onwards Sweden's GDP growth fell behind other industrialised countries and the country's per capita ranking fell from the 4th to 14th place in a few decades.[116] From the mid 90s until today Sweden's economic growth has once again accelerated and has been higher than in most other industrialised countries (including the US) during the last 15 years.[117]

Sweden began slowing the expansion of the welfare state in the 1980s, or even trimming it back, and according to the OECD and McKinsey, Sweden has recently been relatively quick to adopt neo-liberal policies, such as deregulation, compared to countries such as France.[103][118] The current Swedish government is continuing the trend of moderate rollbacks of previous social reforms.[103][119] Growth has been higher than in many other EU-15 countries.

Sweden adopted neo-liberal agricultural policies in 1990. Since the 1930s, the agricultural sector had been subject to price controls. In June 1990, the Parliament voted for a new agricultural policy marking a significant shift away from price controls. As a result, food prices fell somewhat. However, the liberalizations soon became moot because EU agricultural controls supervened.[120]

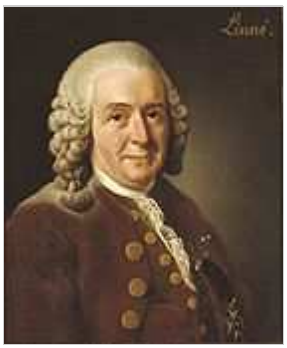
Since the late 1960s, Sweden has had the highest tax quota (as percentage of GDP) in the industrialised world, although today the gap has narrowed and Denmark has surpassed Sweden as the most heavily taxed country among developed countries. Sweden has a two step progressive tax scale with a municipal income tax of about 30% and an additional high-income state tax of 20–25% when a salary exceeds roughly 320,000 SEK per year. Payroll taxes amount to 32%. In addition, a national VAT of 25% is added to many things bought by private citizens, with the exception of food (12% VAT), transportation, and books (6% VAT). Certain items are subject to additional taxes, e.g. electricity, petrol/diesel and alcoholic beverages.

As of 2007, total tax revenue was 47.8% of GDP, the second highest tax burden among developed countries, down from 49.1% 2006.[121] Sweden's inverted tax wedge – the amount going to the service worker's wallet – is

approximately 15% compared to 10% in Belgium, 30% in Ireland, and 50% in United States.[116] Public sector spending amounts to 53% of the GDP. State and municipal employees total around a third of the workforce, much more than in most Western countries. Only Denmark has a larger public sector (38% of Danish workforce). Spending on transfers is also high.

Eighty percent of the workforce is organised in trade-unions which also have the right to elect two representatives to the board in all Swedish companies with more than 25 employees. Sweden has a relatively high amount of sick leave per worker in OECD: the average worker loses 24 days due to sickness.[105] In December 2008, the number employed in age group 16–64 was 75.0%. The employment tendency was very strong in 2007. The positive trend continued during the first half of 2008, but the rate of increase slackened. According to Statistics Sweden, the unemployment rate in December 2008 was at 6.4%.[122]

Science



Altogether, the public and the private sector in Sweden allocate nearly four per cent of GDP to research & development (R&D) per year, which makes Sweden one of the countries that invest most in R&D in terms of percentage of GDP. The standard of Swedish research is high and Sweden is a world leader in a number of fields. [*citation needed*] Sweden tops Europe in comparative statistics both in terms of research investments as a percentage of GDP as well as in the number of published scientific works per capita.[123]

Though a relatively small country, Sweden has long been at the forefront of research and development. [*citation needed*] For several decades the Swedish government has prioritized scientific and R&D activities. This strong engagement has helped make Sweden a leading country in terms of innovation. In international comparison, high-technology manufacturing is relatively large in all high-technology segments, and particularly in telecommunications and pharmaceuticals.[*citation needed*]

Sweden ranked either as the first or second country publishing the highest number of scientific publications in the fields of medical science, natural science and engineering in 2001.[*citation needed*] Sweden was world-leading in medical science and second only to Switzerland in natural science and engineering in terms of the number of publications per capita.

Technology

Main article: Swedish inventions

Carl Linnaeus laid the foundations for the modern scheme of binomial nomenclature.

In the 18th century Sweden's scientific revolution took off. Previously, technical progress had mainly come from mainland Europe. In 1739, the Royal Swedish Academy of Sciences was founded, with people such as Carolus Linnaeus and Anders Celsius as early members. Many of the companies founded by early pioneers are still remain major international brands. Gustaf Dalén founded AGA, and received the Nobel Prize for his sun valve. Alfred Nobel invented dynamite and instituted the Nobel Prizes. Lars Magnus Ericsson started the company bearing his name, Ericsson, still one of the largest telecom companies in the world. Jonas Wenström was an early pioneer in alternating current and is along with Serbian inventor Nikola Tesla credited

Alfred Nobel, inventor of dynamite and institutor of

He is known as the father of modern taxonomy, and is also considered one of the fathers of modern ecology.

as one of the inventors of the three-phase electrical system.[124]

the Nobel Prize.

The traditional engineering industry is still a major source of Swedish inventions, but pharmaceuticals, electronics and other high-tech industries are gaining ground. Tetra Pak was an invention for storing liquid foods, invented by Erik Wallenberg. Losec, an ulcer medicine, was the world's best-selling drug in the 1990s and was developed by AstraZeneca. More recently Håkan Lans invented the Automatic Identification System, a worldwide standard for shipping and civil aviation navigation. A large portion of the Swedish economy is to this day based on the export of technical inventions, and many large multinational corporations from Sweden have their origins in the ingenuity of Swedish inventors.[124]

Swedish inventors hold a total of 33,523 patents in the United States as of 2007, according to the United States Patent and Trademark Office. As a nation, only ten other countries hold more patents than Sweden.[125]

Demographics

Main articles: Demographics of Sweden and Swedish people

As of 2009, the total population of Sweden was estimated to be 9,325,429.[126] The population exceeded 9 million for the first time on approximately 12 August 2004 according to Statistics Sweden. The population density is 20.6 people per km² (53.3 per square mile) and it is substantially higher in the south than in the north. About 85% of the population live in urban areas.[12] The capital city Stockholm has a population of about 800,000 (with 1.3 million in the urban area and 2 million in the metropolitan area). The second and third largest cities are Gothenburg and Malmö.

Between 1820 and 1930, approximately 1.3 million Swedes, a third of the country's population, emigrated to North America, and most of them to the United States. There are more than 4.4 million Swedish Americans according to a 2006 U.S. Census Bureau estimate.[127] In Canada, the community of Swedish ancestry is 330,000 strong.[128]

Language

Main articles: Swedish language and Languages of Sweden

See also: Swedish dialects

Distribution of speakers of the Swedish language

The official language of Sweden is Swedish,[8][9] a North Germanic language, related and very similar to Danish and Norwegian, but differing in pronunciation and orthography. Norwegians have little difficulty understanding Swedish, and Danes can also understand it, with slightly more difficulty than the Norwegians. The dialects spoken in Scania, the southernmost part of the country, are influenced by Danish because the region traditionally was a part of Denmark and is nowadays situated closely to it. Sweden Finns are Sweden's largest linguistic minority, comprising about 5% of Sweden's population,[2] and Finnish is recognized as a minority language.[9]

Along with Finnish, four other minority languages are also recognized: Meänkieli, Sami, Romani and Yiddish. Swedish became Sweden's official language on 1 July 2009, when a new language law was implemented.[9] The issue of whether Swedish should be declared the official language has been raised in the past, and the parliament voted on the matter in 2005, but the proposal narrowly failed.[130]

In varying degrees, depending largely on frequency of interaction with English, a majority of Swedes, especially those born after World War II, understand and speak English due to trade links, the popularity of overseas travel, a strong Anglo-American influence and the tradition of subtitling rather than dubbing foreign television shows and films, and the relative similarity of the two languages which makes learning English easier. In a 2005 survey by Eurobarometer, 89% of Swedes reported the ability to speak English.[131]

English became a compulsory subject for secondary school students studying natural sciences as early as 1849, and has been a compulsory subject for all Swedish students since the late 1940s.[132] Depending on the local school authorities, English is currently a compulsory subject between first grade and ninth grade, with all students continuing in secondary school studying English for at least another year. Most students also study one and sometimes two additional languages. These include (but are not limited to) German, French and Spanish. Some Danish and Norwegian is at times also taught as part of Swedish courses for native speakers.

Religion

Main article: Religion in Sweden

Before the 11th century, Swedes adhered to Norse paganism, worshiping Æsir gods, with its centre at the Temple in Uppsala. With Christianization in the 11th century, the laws of the country were changed, forbidding worship of other deities into the late 19th century.

After the Protestant Reformation in the 1530s, a change led by Martin Luther's Swedish associate Olaus Petri, the authority of the Roman Catholic Church was abolished. The church and state were separated, allowing Lutheranism to prevail. This process was completed by the Uppsala Synod of 1593. Lutheranism became Sweden's official religion. During the era following the Reformation, usually known as the period of Lutheran Orthodoxy, small groups of non-Lutherans, especially Calvinist Dutchmen, the Moravian Church and Walloons

or French Huguenots from Belgium, played a significant role in trade and industry, and were quietly tolerated as long as they kept a low religious profile. The Sami originally had their own shamanistic religion, but they converted to Lutheranism by the work of Swedish missionaries in the 17th and 18th centuries.

With religious liberalizations in the late 18th century believers of other faiths, including Judaism and Roman Catholicism, were allowed to openly live and work in the country. However, until 1860 it remained illegal for Lutheran Swedes to convert to another religion. The 19th century saw the arrival of various evangelical free churches, and, towards the end of the century, secularism, leading many to distance themselves from Church rituals. Leaving the Church of Sweden became legal with the so-called dissenter law of 1860, but only under the provision of entering another Christian denomination. The right to stand outside any religious denomination was formally established in the Law on Freedom of Religion in 1951. In 2000 the Church of Sweden was separated from the state and Sweden ceased to have any official church.

Uppsala Cathedral

Church of Sweden[133][134]

Year	Population	Church members	Percentage
1972	8,146,000	7,754,784	95.2%
1980	8,278,000	7,690,636	92.9%
1990	8,573,000	7,630,350	89.0%
2000	8,880,000	7,360,825	82.9%
2005	9,048,000	6,967,498	77.0%
2006	9,119,000	6,893,901	75.6%
2007	9,179,000	6,820,161	74.3%
2008	9,262,000	6,751,952	72.9%
2009	–	6,664,064	71.3% [135]

At the end of 2009, 71.3% of Swedes belonged to the Church of Sweden (Lutheran); this number has been decreasing by about one percentage point a year for the last two decades.[135][136] However, only approximately 2% of the church's members regularly attend Sunday services.[137] The reason for the large number of inactive members is partly that until 1996, children automatically became members at birth if at least one of the parents was a member. Since 1996, only children that are christened become members. Some 275,000 Swedes are today members of various free churches (where congregation attendance is much higher), and, in addition, immigration has meant that there are now some 92,000 Roman Catholics and 100,000 Eastern Orthodox Christians living in Sweden.[138]

Because of immigration, Sweden also has a significant Muslim population. They number about 500,000, but only approximately 5% (25,000) of these actively practice Islam (in the sense of attending Friday prayer and praying five times a day).[139]

Despite a high formal membership rate in the Church of Sweden, some studies have found Sweden to be one of the least religious countries in the world, with one of the highest levels of atheism. According to different studies, between 46% and 85% of Swedes do not believe in God.[140] In the Eurostat survey, 23% of Swedish citizens responded that "they believe there is a God", whereas 53% answered that "they believe there is some sort of spirit or life force" and 23% that "they do not believe there is any sort of spirit, God, or life force". Nevertheless, despite a lack of belief in God, these individuals resented the term atheist, and still called themselves Christians, being content with remaining in the Church of Sweden.[141] Other research has shown that religion in Sweden continues to play a role in cultural identity.[142] This is evidenced by the fact that around 80 percent of adults continue to remain members of the Lutheran Church despite having to pay a church tax; moreover, rates of baptism remain high and church weddings are increasing in Sweden.[142]

Health

See also: Healthcare in Sweden and Swedish National Board of Health and Welfare

Healthcare in Sweden is similar in quality to other developed nations. Sweden ranks in the top five countries with respect to low infant mortality. It also ranks high in life expectancy and in safe drinking water. A person seeking care first contacts a clinic for a doctor's appointment, and may then be referred to a specialist by the clinic physician, who may in turn recommend either in-patient or out-patient treatment, or an elective care option. The health care is governed by the 21 landsting of Sweden and is mainly funded by taxes, with nominal fees for patients.

Education

Main article: Education in Sweden

Uppsala University (established 1477)

Children aged 1–5 years old are guaranteed a place in a public kindergarten (Swedish: *förskola* or, colloquially, *dagis*). Between the ages of 6 and 16, children attend compulsory comprehensive school. In the Programme for International Student Assessment (PISA), Swedish 15-year-old pupils score close to the OECD average.[143] After completing the 9th grade, about 90% of the students continue with a three-year upper secondary school (*gymnasium*), which can lead to both a job qualification or entrance eligibility to university. The school system is largely financed by taxes.

The Swedish government treats public and independent schools equally[144] by introducing education vouchers in 1992 as one of the first countries in the world after The Netherlands. Anyone can establish a for-profit school and the municipality must pay new schools the same amount as municipal schools get. School lunch is free for all students in Sweden, and usually includes one or two different kinds of hot meals, a vegetarian meal, salad bar, fruit, bread, milk and water. Some schools, especially kindergartens and middle schools, even serve breakfast for free[*citation needed*] to those who want to eat before school starts.

There are a number of different universities and colleges in Sweden, the oldest and largest of which are situated in Uppsala, Lund, Gothenburg and Stockholm. Only a few countries such as Canada, the United States, Japan and South Korea have higher levels of tertiary education degree holders.[*citation needed*] Along with several other European countries, the government also subsidises tuition of international students pursuing a degree at Swedish institutions, although a recent bill passed in the Swedish parliament will limit this subsidy to students from EEA countries and Switzerland.[145]

Immigration

Main article: Immigration to Sweden

Immigration has been a major source of population growth and cultural change throughout much of the history of Sweden. Sweden has been transformed from a nation of emigration ending after World War I to a nation of immigration from World War II onwards. The economic, social, and political aspects of immigration have caused controversy regarding ethnicity, economic benefits, jobs for non-immigrants, settlement patterns, impact on upward social mobility, crime, and voting behaviour.

According to Eurostat, in 2010, there were 1.33 million foreign-born residents in Sweden, corresponding to 14.3% of the total population. Of these, 859 000 (9.2%) were born outside the EU and 477 000 (5.1%) were

born in another EU Member State.[146][147][148]

In 2009, immigration reached its highest level since records began with 102,280 people emigrating to Sweden.[149] Immigrants in Sweden are mostly concentrated in the urban areas of Svealand and Götaland.[148] Since the early 1970s, immigration to Sweden has been mostly due to refugee migration and family reunification from countries in the Middle East, Africa and Latin America.[150]

Immigrants and emigrants, Sweden 1850–2007

The largest groups in 2010 were:[148]

1. Finland (172,218)
2. Former Yugoslavia (152,268)
3. Iraq (117,919)
4. Poland (67,518)
5. Iran (59,922)
6. Germany (47,803)
7. Denmark (46,002)
8. Norway (43,819)
9. Turkey (40,766)
10. Somalia (31,734)

Culture

Main article: Culture of Sweden

Nationalmuseum in Stockholm.

Sweden has many authors of worldwide recognition including August Strindberg, Astrid Lindgren, and Nobel Prize winners Selma Lagerlöf and Harry Martinson. In total seven Nobel Prizes in Literature have been awarded to Swedes. The nation's most well-known artists are painters such as Carl Larsson and Anders Zorn, and the sculptors Tobias Sergel and Carl Milles.

Swedish 20th-century culture is noted by pioneering works in the early days of cinema, with Mauritz Stiller and Victor Sjöström. In the 1920s–1980s, the filmmaker Ingmar Bergman and actors Greta Garbo and Ingrid Bergman became internationally noted people within cinema. More recently, the films of Lukas Moodysson and Lasse Hallström have received international recognition.

Throughout the 1960s and 1970s Sweden was seen as an international leader in what is now referred to as the "sexual revolution", with gender equality having particularly been promoted.[151] At the present time, the number of single people is one of the highest in the world. The early Swedish film *I Am Curious (Yellow)* (1967) reflected a liberal view of sexuality, including scenes of love making that caught international attention, and introduced the concept of the "Swedish sin".

Sweden has also become very liberal towards homosexuality, as is reflected in the popular acceptance of films

such as *Show Me Love*, which is about two young lesbians in the small Swedish town of Åmål. Since 1 May 2009, Sweden repealed its "registered partnership" laws and fully replaced them with gender-neutral marriage,[152] Sweden also offers domestic partnerships for both same-sex and opposite-sex couples. Cohabitation (*sammanboende*) by couples of all ages, including teenagers as well as elderly couples, is widespread. Recently, Sweden is experiencing a baby boom.[153]

Music

Main article: Music of Sweden

Agnetha Fältskog of Swedish band ABBA performing in 1977.

Sweden has a rich musical tradition, ranging from mediaeval folk ballads to hip hop music. The music of the pre-Christian Norse has been lost to history, although historical re-creations have been attempted based on instruments found in Viking sites. The instruments used were the *lur* (a sort of trumpet), simple string instruments, wooden flutes and drums. It is possible that the Viking musical legacy lives on in some of the old Swedish folk music. Sweden has a significant folk-music scene, both in the traditional style as well as more modern interpretations which often mix in elements of rock and jazz. Väsen is more of a traditionalist group, using a unique, traditional Swedish instrument called the *nyckelharpa* while Garmarna, Nordman and Hedningarna have more modern elements. There is also Sami music, called the *joik*, which is actually a type of chant which is part of the traditional Saami animistic spirituality but has gained recognition in the international world of folk music. Sweden's most classic and notable composers includes Carl Michael Bellman and Franz Berwald.

Sweden also has a prominent choral music tradition, deriving in part from the cultural importance of Swedish folk songs. In fact, out of a population of 9.2 million, it is estimated that five to six hundred thousand people sing in choirs.[154]

In 2007, with over 800 million dollars in revenue, Sweden was the third largest music exporter in the world and surpassed only by the US and the UK.[155][156][*citation needed*] ABBA was one of the first internationally well-known popular music bands from Sweden, and still ranks among the most prominent bands in the world, with about 370 million records sold. With ABBA, Sweden entered into a new era, in which Swedish pop music gained international prominence.

The Gothenburg Opera.

There have been many other internationally successful bands since, such as Roxette, Ace of Base, Europe, A-teens, The Cardigans and The Hives, to name some of the biggest, and recently there has been a surge of Swedish Indie pop bands such as Loney, Dear, Shout Out Louds, The Radio Dept. and Dungen, a group which incorporates many elements of Swedish traditional folk music in their sound. One of the biggest bands in Sweden is the rock band Kent.

Sweden has also become known for a large number of heavy metal (mostly death metal and melodic death metal) as well as progressive- and power metal bands. Some of the most popular being In Flames, Amon Amarth, HammerFall, Pain of Salvation, Dark Tranquillity, Opeth, Arch Enemy and Meshuggah. The renowned neoclassical power metal guitarist Yngwie Malmsteen is also from Sweden.

Sweden has a rather lively jazz scene. During the last sixty years or so it has attained a remarkably high artistic

standard, stimulated by domestic as well as external influences and experiences. The Centre for Swedish Folk Music and Jazz Research has published an overview of jazz in Sweden by Lars Westin.[157]

Architecture

Main article: Architecture of Sweden

Djurgårdsbron.

Before the 13th century most buildings were made of brick, but a shift began towards stone. Early Swedish stone buildings are the Romanesque churches on the country side. As so happens, many of them were built in Scania and are in effect Danish churches. This would include the magnificent Lund Cathedral from the 11th century and the somewhat younger church in Dalby, but also many early Gothic churches built through influences of the Hanseatic League, such as in Ystad, Malmö and Helsingborg.

Cathedrals in other parts of Sweden were also built as seats of Sweden's bishops. The Skara Cathedral is of bricks from the 14th century, and the Uppsala Cathedral in the 15th. In 1230 the foundations of the Linköping Cathedral were made, the material was there limestone, but the building took some 250 years to finish.

Among older structures are also some significant fortresses and other historical buildings such as at Borgholm Castle, Halltorps Manor and Eketorp fortress on the island Öland, the Nyköping fortress and the Visby ring wall.

Around 1520 Sweden was out of the Middle Ages and united under King Gustav Vasa, who immediately initiated grand mansions, castles and fortresses to be built. Some of the more magnificent include the Kalmar fortress, the Gripsholm Castle and the one at Vadstena.

The Kalmar Cathedral.

In the next two centuries, Sweden was designated by Baroque architecture and later the rococo. Notable projects from that time include the city Karlskrona, which has now also been declared a World Heritage Site and the Drottningholm Palace.

1930 was the year of the great Stockholm exhibition, which marked the breakthrough of Functionalism, or "funkis" as it became known. The style came to dominate in the following decades. Some notable projects of this kind were the Million Programme, offering affordable but anti-human living in large apartment complexes.

Media

Main article: Media in Sweden

Swedes are among the greatest consumers of newspapers in the world, and nearly every town is served by a local paper. The country's main quality morning papers are Dagens Nyheter (liberal), Göteborgs-Posten (liberal), Svenska Dagbladet (liberal conservative) and Sydsvenska Dagbladet (liberal). The two largest evening tabloids are Aftonbladet (social democratic) and Expressen (liberal). The ad-financed, free international morning paper, Metro International, was originally founded in Stockholm, Sweden. The country's news is reported in English by, among others, The Local (liberal).

The public broadcasting companies held a monopoly on radio and television for a long time in Sweden. Licence funded radio broadcasts started in 1925. A second radio network was started in 1954 and a third opened 1962 in

response to pirate radio stations. Non-profit community radio was allowed in 1979 and in 1993 commercial local radio started.

The licence funded television service was officially launched in 1956. A second channel, TV2, was launched in 1969. These two channels (operated by Sveriges Television since the late '70s) held a monopoly until the 1980s when cable and satellite television became available. The first Swedish language satellite service was TV3 which started broadcasting from London in 1987. It was followed by Kanal 5 in 1989 (then known as Nordic Channel) and TV4 in 1990.

In 1991 the government announced it would begin taking applications from private television companies wishing to broadcast on the terrestrial network. TV4, which had previously been broadcasting via satellite, was granted a permit and began its terrestrial broadcasts in 1992, becoming the first private channel to broadcast television content from within the country.

Around half the population are connected to cable television. Digital terrestrial television in Sweden started in 1999 and the last analogue terrestrial broadcasts were terminated in 2007.

Literature

Main article: Swedish literature

Writer and playwright August Strindberg.

The first literary text from Sweden is the Rök Runestone, carved during the Viking Age c. 800 AD. With the conversion of the land to Christianity around 1100 AD, Sweden entered the Middle Ages, during which monastic writers preferred to use Latin. Therefore there are only a few texts in the Old Swedish from that period. Swedish literature only flourished when the Swedish language was standardized in the 16th century, a standardization largely due to the full translation of the Bible into Swedish in 1541. This translation is the so-called Gustav Vasa Bible.

With improved education and the freedom brought by secularization, the 17th century saw several notable authors develop the Swedish language further. Some key figures include Georg Stiernhielm (17th century), who was the first to write classical poetry in Swedish; Johan Henric Kellgren (18th century), the first to write fluent Swedish prose; Carl Michael Bellman (late 18th century), the first writer of burlesque ballads; and August Strindberg (late 19th century), a socio-realistic writer and playwright who won worldwide fame. The early 20th century continued to produce notable authors, such as Selma Lagerlöf, (Nobel laureate 1909), Verner von Heidenstam (Nobel laureate 1916) and Pär Lagerkvist (Nobel laureate 1951).

In recent decades, a handful of Swedish writers have established themselves internationally, including the detective novelist Henning Mankell and the writer of spy fiction Jan Guillou. The Swedish writer to have made the most lasting impression on world literature is the children's book writer Astrid Lindgren, and her books about Pippi Longstocking, Emil, and others. In 2008, the second best-selling fiction author in the world was Stieg Larsson, whose *Millennium* series of crime novels is being published posthumously to critical acclaim.[158] Larsson drew heavily on the work of Lindgren by basing his central character, Lisbeth Salander, on Longstocking.[159]

Holidays

Main article: Public holidays in Sweden

Walpurgis Night bonfire in Sweden.

Apart from traditional Protestant Christian holidays, Sweden also celebrates some unique holidays, some of a pre-Christian tradition. They include Midsummer celebrating the summer solstice; Walpurgis Night (*Valborgsmässoafton*) on 30 April lighting bonfires; and Labour Day or Mayday on 1 May is dedicated to socialist demonstrations. The day of giver-of-light Saint Lucia, 13 December, is widely acknowledged in elaborate celebrations which betoken its Italian origin and commence the month-long Christmas season.

6 June is the National Day of Sweden and, as of 2005, a public holiday. Furthermore, there are official flag day observances and a Namesdays in Sweden calendar. In August many Swedes have *kräftskivor* (crayfish dinner parties). Martin of Tours Eve is celebrated in Scania in November with *Mårten Gås* parties, where roast goose and *svartsoppa* ('black soup', made of goose stock, fruit, spices, spirits and goose blood) are served. The Sami, one of Sweden's indigenous minorities, have their holiday on 6 February and Scania celebrate their Scanian Flag day on the third Sunday in July.

Cuisine

Main article: Swedish cuisine

Swedish cuisine, like that of the other Scandinavian countries (Denmark, Norway and Finland), was traditionally simple. Fish (particularly herring), meat, potatoes and dairy products played prominent roles.

Swedish knäckebröd (crisp bread).

Swedish saffron buns

Spices were sparse. Famous dishes include Swedish meatballs, traditionally served with gravy, boiled potatoes and lingonberry jam; pancakes, *lutfisk*, and Smörgåsbord, or lavish buffet. *Akvavit* is a popular alcoholic distilled beverage, and the drinking of *snaps* is of cultural importance. The traditional flat and dry crisp bread has developed into several contemporary variants. Regionally important foods are the *surströmming* (a fermented fish) in Northern Sweden and eel in Scania in Southern Sweden.

Swedish traditional dishes, some of which are many hundreds of years old, others perhaps a century or less, are still a very important part of Swedish everyday meals, in spite of the fact that modern day Swedish cuisine adopts many international dishes.

In August, at the traditional feast known as crayfish party, *kräftskiva*, Swedes eat large amounts of boiled crayfish with boiled potato and dill.

Cinema

Main article: Cinema of Sweden

Swedes have been fairly prominent in the film area through the years, several successful Swedish Hollywood actors can be mentioned: Ingrid Bergman, Greta Garbo, Max von Sydow, Dolph Lundgren, Lena Olin, Britt Ekland, Maud Adams, Stellan Skarsgård, Peter Stormare, Izabella Scorupco, Pernilla August, Ann-Margret, Anita Ekberg, Alexander Skarsgård, Harriet Andersson, Bibi Andersson, Ingrid Thulin, Malin Åkerman and Gunnar Björnstrand. Amongst several directors who have made internationally successful films can be

mentioned: Ingmar Bergman, Lukas Moodysson and Lasse Hallström.

Fashion

Interest in fashion is big in Sweden and the country is headquartering famous brands like Hennes & Mauritz (operating as H&M), J. Lindeberg (operating as JL), Acne, Gina Tricot, Lindex, Tiger of Sweden, Odd Molly, Cheap Monday, Dr. Denim, Gant, Resteröds, Nudie Jeans, WESC, WAX, Uniforms for the Dedicated, Filippa K, Nakkna and Fifth Avenue Shoe Repair within its borders. These companies, however, are composed largely of buyers who import fashionable goods from throughout Europe and America, continuing the trend of Swedish business toward multinational economic dependency like many of its neighbours.

Sports

Main article: Sport in Sweden

Sport activities are a national movement with half of the population actively participating in organized sporting activities. The two main spectator sports are football and ice hockey. Second to football, horse sports have the highest number of practitioners, mostly women. Thereafter follow golf, athletics, and the team sports of handball, floorball, basketball and bandy.

Robin Söderling

The Swedish ice hockey team Tre Kronor is regarded as one of the best in the world. The team has won the World Championships eight times, placing them third in the all-time medal count. Tre Kronor also won Olympic gold medals in 1994 and 2006. In 2006, Tre Kronor became the first national hockey team to win both the Olympic and world championships in the same year. The Swedish national football team has seen some success at the World Cup in the past, finishing second when they hosted the tournament in 1958, and third twice, in 1950 and 1994. Athletics has enjoyed a surge in popularity due to several successful athletes in recent years, such as Carolina Klüft and Stefan Holm.

Sweden hosted the 1912 Summer Olympics and the FIFA World Cup in 1958. Other big sports events held here include 1992 UEFA European Football Championship, FIFA Women's World Cup 1995, and several championships of ice hockey, curling, athletics, skiing, bandy, figure skating and swimming.

Successful tennis players include former world No. 1's Björn Borg, Mats Wilander and Stefan Edberg.

Other famous Swedish athletes include the heavyweight boxing champion and International Boxing Hall of Famer – Ingemar Johansson; World Golf Hall of Famer – Annika Sörenstam and multiple World Championships and Olympics medalist in table tennis – Jan-Ove Waldner.

History of Sweden

From Wikipedia, the free encyclopedia

Modern Sweden started out of the Kalmar Union formed in 1397 and by the unification of the country by King Gustav Vasa in the 16th century. In the 17th century Sweden expanded its territories to form the Swedish empire. Most of these conquered territories had to be given up during the 18th century. In the early 19th century Finland and the remaining territories outside the Scandinavian Peninsula were lost. After its last war in 1814, Sweden entered into a personal union with Norway which lasted until 1905. Since 1814, Sweden has been at peace, adopting a non-aligned foreign policy in peacetime and neutrality in wartime.[1]

Sweden Portal

Pre-historic age: 9,000 BC–AD 800

Main article: Prehistoric Sweden

Sweden, as well as the adjacent country Norway, has a high concentration of petroglyphs (*hällristningar*[2] in Swedish) throughout the country, with the highest concentration in the province of Bohuslän. The earliest images can, however, be found in the province of Jämtland, dating from 5000 BC.[3] They depict wild animals such as elk, reindeer, bears and seals.[*citation needed*] The period 2300–500 BC was the most intensive carving period[*citation needed*], with carvings of agriculture, warfare, ships, domesticated animals, etc.[*citation needed*] Also, petroglyphs with themes of sexual nature have been found in Bohuslän; these are dated from 800–500 BC.[*citation needed*]

Early Swedish history: 800–1500

Main article: Early Swedish history

For centuries, the Swedes were merchant seamen well known for their far-reaching trade. In the 9th century, Nordic Vikings raided and ravaged the European continent as far as the Black and Caspian Seas. During the 11th and 12th centuries, Sweden gradually became a unified Christian kingdom that later included Finland. Until 1060 the kings of Uppsala ruled most of modern Sweden except the southern and western coastal regions, which remained under Danish rule until the 17th century. After a century of civil wars a new royal family emerged, which strengthened the power of the crown at the expense of the nobility, while giving the nobles privileges such as exemption from taxation in exchange for military service. Finland was taken over. Sweden never had a fully developed feudal system, and its peasants were never reduced to serfdom.

Viking expeditions (blue): depicting the immense breadth of their voyages throughout most of Europe, North Atlantic and Mediterranean

The Vikings from Sweden mainly traveled east into Russia. The large Russian mainland and its many navigable rivers offered good prospects for merchandise and, at times, plundering. During the 9th century, extensive Scandinavian settlements began on the east side of the Baltic Sea.

About 1000, the first king known to rule over both Svealand and Götaland was Olof Skötkonung, but the further history is obscure with kings whose periods of regency and actual power is unclear. In the 12th century, Sweden was still consolidating with the dynastic struggles between the Erik and Sverker clans, which finally ended when a third clan married into the Erik clan and founded the Folkunga dynasty on the throne. This dynasty gradually consolidated a pre-Kalmar-Union Sweden to an actual nation, which essentially fell apart after the Black Death.

The conversion from Norse paganism to Christianity was a complex, gradual, and at times possibly violent (see Temple at Uppsala) process. The main early source of religious influence was England due to interactions between Scandinavians and Saxons in the Danelaw, and Irish missionary monks. German influence was less obvious in the beginning, despite an early missionary attempt by Ansgar, but gradually emerged as the dominant religious force in the area, especially after the Norman conquest of England. Despite the close relations between Swedish and Russian aristocracy (see also Rus'), there is no direct evidence of Orthodox influence, possibly because of the language barrier.

This consolidated state of Sweden already included Finland presumably from an early crusade into the area of

Tavastland in central current day Finland.

After the Black Death and internal power struggles in Sweden, Queen Margaret I of Denmark united the Nordic countries in the Union of Kalmar in 1397, with the approval of the Swedish nobility. Continual tension within the countries and within the union gradually led to open conflict between the Swedes and the Danes in the 15th century, however. The union's final disintegration in the early 16th century brought on a long-lived rivalry between Denmark on one side and Sweden on the other.

Modern Sweden: 1523

Main article: Early Vasa era

Gustav Vasa (Gustav I) in 1542

In the 16th century, Gustav Vasa fought for an independent Sweden, crushing an attempt to restore the Union of Kalmar and laying the foundation for modern Sweden. At the same time, he broke with the papacy and established a reformed church.

The Union of Kalmar's final disintegration in the early 16th century brought on a long-lived rivalry between Norway and Denmark on one side and Sweden (including Finland) on the other. The Catholic bishops had supported the Danish King Christian II, but he was overthrown by Gustavus Vasa (1490–1560), and Sweden (with Finland) was now independent again. Gustavus used the Protestant Reformation to curb the power of the church and became King Gustavus I in 1523. In 1527 he persuaded the Riksdag of Västerås (comprising the nobles, clergy, burghers, and freehold peasants) to confiscate church lands, which comprised 21% of the farmland. Gustavus took the Lutheran reformers under his protection and appointed his men as bishops. Gustavus suppressed aristocratic opposition to his ecclesiastical policies and efforts at centralisation.

An image made by Gustavus Vasa during his reign showing him (in dark brown clothing and cap) capturing and subduing Catholicism (the lady in orange).

Tax reforms took place in 1538 and 1558, whereby multiple complex taxes on independent farmers were simplified and standardised throughout the district; tax assessments per farm were adjusted to reflect ability to pay. Crown tax revenues increased, but more importantly the new system was perceived as fairer and more acceptable. A war with Luebeck in 1535 resulted in the expulsion of the Hanseatic traders, who previously had had a monopoly of foreign trade. With its own businessmen in charge Sweden's economic strength grew rapidly, and by 1544 Gustavus controlled 60% of the farmlands in all of Sweden. Sweden now built the first modern army in Europe, supported by a sophisticated tax system and government bureaucracy. Gustavus proclaimed the Swedish crown hereditary in his family, the house of Vasa. It ruled Sweden (1523–1654) and Poland (1587–1668).[4]

Early Modern

Main article: Rise of Sweden as a Great Power

During the 17th century, after winning wars against Denmark, Russia, and Poland, Sweden–Finland (with scarcely more than 1 million inhabitants) emerged as a great power by taking direct control of the Baltic region, which was Europe's main source of grain, iron, copper, timber, tar, hemp, and furs.

Sweden had first gained a foothold on a territory outside her traditional provinces in 1561, when Estonia opted for vassalage to Sweden during the Livonian War. While in 1590 Sweden had to cede Ingria and Kexholm to Russia, and Sigismund tried to incorporate Swedish Estonia into the Duchy of Livonia, Sweden gradually expanded at the eastern Baltic during the following years. In a series of Polish–Swedish War (1600–1629) and the Russo-Swedish Ingrian War, Gustavus Adolphus retook Ingria and Kexholm (formally ceded in the Treaty of Stolbovo, 1617) as well as the bulk of Livonia (formally ceded in the Treaty of Altmark, 1629).

Gustavus Adolphus, victor at the Battle of Breitenfeld, 1631

Sweden's role in the Thirty Years' War determined the political as well as the religious balance of power in Europe. From bridgeheads in Stralsund (1628) and Pomerania (1630), the Swedish army advanced to the south of the Holy Roman Empire, and in a side theater of the war deprived Denmark–Norway of Danish Estonia, Jämtland, Gotland, Halland, Härjedalen, Idre and Särna, became exempted from the Sound Dues, and established claims to Bremen-Verden, all of which was formalized in the Treaty of Brömsebro (1645). In 1648, Sweden became a guarantee power for the Peace of Westphalia, which ended the Thirty Years' War and left her with the additional dominions of Bremen-Verden, Wismar and Swedish Pomerania. Since 1638, Sweden also maintained the colony of New Sweden along the Delaware River in North America.

Formation of the Swedish Empire, 1560-1660

The Swedish Empire: 1648

Main article: Swedish Empire

Sweden's status as an empire did not remain unchallenged. In the Second Northern War, she was able to establish control of the eastern bank of the Sound, formalized in the Treaty of Roskilde (1658), and gain recognition of her southeastern dominions by the European great powers in the Treaty of Oliva (1660); yet, Sweden was barred from further expansion at the southern coast of the Baltic. That Sweden came out of the Scanian War with only minor losses was largely due to France forcing Sweden's adversaries into the treaties of Fontainebleau (1679) (confirmed at Lund) and Saint-Germain (1679).

The following period of peace allowed Charles XI of Sweden to reform and stabilize the empire. He consolidated the state finances by the great reduction of 1680; further changes were made in finance, commerce, national maritime and land armaments, judicial procedure, church government and education.

The Great Northern War: 1700

Main article: Sweden after the Great Northern War

Russia, Saxony–Poland, and Denmark–Norway pooled their power in 1700 and attacked the Swedish empire. Although the young Swedish King Charles XII (1682–1718; reigned 1697–1718) won spectacular victories in the early years of the Great Northern War, most notably in the stunning success against the Russians at the Battle of Narva (1700), his plan to attack Moscow and force Russia into peace proved too ambitious.

The Russians won decisively at the Battle of Poltava in June 1709, capturing much of the exhausted Swedish army. Charles XII and the remnants of his army were cut off from Sweden and fled south into Ottoman territory, where he remained three years. He outstayed his welcome, refusing to leave until the Ottoman Empire joined him in a new war against Tsar Peter I of Russia. In order to force the recalcitrant Ottoman government to follow his policies, he established, from his camp, a powerful political network in Constantinople, which was joined even by the mother of the sultan. Charles's persistence worked, as Peter's army was checked by Ottoman troops. However, Turkish failure to pursue the victory enraged Charles and from that moment his relations with the Ottoman administration soured. During the same period the behavior of his troops worsened and turned disastrous. Lack of discipline and contempt for the locals soon created an unbearable situation in Moldavia. The Swedish soldiers behaved badly, destroying, stealing, raping, and killing. Meanwhile back in the north Sweden was invaded by its enemies; Charles returned home in 1714, too late to restore his lost empire and impoverished homeland; he died in 1718.[5] In the subsequent peace treaties, the allied powers, joined by Prussia and England-Hanover, ended Sweden's reign as a great power. Russia now dominated the north. The war-weary Riksdag asserted new powers and reduced the crown to a constitutional monarch, with power held by a civilian government controlled by the Riksdag. A new "Age of Freedom" opened, and the economy was rebuilt, supported by large exports of iron and lumber to Britain.[6]

The reign of Charles XII (1697–1718) has stirred great controversy; historians have been puzzled ever since why this military genius overreached and greatly weakened Sweden. Although most early-19th-century historians tended to follow Voltaire's lead in bestowing extravagant praise on the warrior-king, others have criticized him as a fanatic, a bully, and a bloodthirsty warmonger. A more balanced view suggests a highly capable military ruler whose oft-reviled peculiarities seemed to have served him well, but who neglected his base in Sweden in pursuit of foreign adventure.[7] Slow to learn the limits of Sweden's diminished strength, a party of nobles, who called themselves the "Hats", dreamed of revenge on Russia and ruled the country from 1739 to 1765; they engaged in wars in 1741, 1757, 1788, and 1809, with more or less disastrous results as Russian influence grew after every Swedish defeat.

Enlightenment

Main article: Enlightened Absolute Monarchy in Sweden

Sweden joined in the Enlightenment culture of the day in the arts, architecture, science and learning. A new law in 1766 established for the first time the principle of freedom of the press—a notable step towards liberty of political opinion. The Academy of Science was founded in 1739 and the Academy of Letters, History, and Antiquities in 1753. The outstanding cultural leader was Carl Linnaeus (1707–78), whose work in biology and ethnography had a major impact on European science.

Following half a century of parliamentary domination came the reaction. King Gustav III (1746–1792) came to the throne in 1771, and in 1772 led a coup d'état, with French support, that established him as an "enlightened despot," who ruled at will. The Age of Freedom and bitter party politics was over. Precocious and well educated, he became a patron of the arts and music. His edicts reformed the bureaucracy, repaired the currency, expanded trade, and improved defense. The population had reached 2.0 million and the country was prosperous, although rampant alcoholism was a growing social problem. But when Gustav made war on Russia and did poorly he was assassinated by a conspiracy of nobles angry that he tried to restrict their privileges for the benefit of the peasant farmers.

Absolute monarchy lasted until defeats in the Napoleonic wars forced Sweden to cede Finland to Russia in 1809.

Colonies and slavery

Sweden experimented briefly with overseas colonies, including "New Sweden" in Colonial America in the 1640s. Sweden purchased the small Caribbean island of Saint Barthélemy from France in 1784, then sold it back in 1878; the population had included slaves until they were freed by the Swedish government in 1847.[8]

Early urbanization

Between 1570 and 1800 Sweden experienced two periods of urban expansion, c. 1580-1690 and in the mid-18th century, separated by relative stagnation from the 1690s to about 1720. The initial phase was the more active, including an increase in the percentage of urban dwellers in Stockholm – a pattern comparable to increasing urban populations in other European capital and port cities – as well as the foundation of a number of small new towns. Increasing populations in the small towns of the north and west characterized the second period of urban growth, which began around 1750 in response to shifts in Swedish trade patterns from the Baltic to the North Atlantic.[9]

Nineteenth century

Union with Norway: 1814

Main article: Union between Sweden and Norway

In 1810 French Marshal Jean-Baptiste Bernadotte, one of Napoleon's top generals, was elected Crown Prince Charles by the Riksdag. In 1813, his forces joined the allies against Napoleon and defeated the Danes at Bornhöved. In the Treaty of Kiel, Denmark ceded mainland Norway to the Swedish king. Norway, however, declared its independence, adopted a constitution and chose a new king. Sweden invaded Norway to enforce the terms of the Kiel treaty—it was the last war Sweden ever fought.

After brief fighting, the peace established a personal union between the two states. Even though they shared the same king, Norway was largely independent of Sweden, except Sweden controlled foreign affairs. The king's rule was not well received and when Sweden refused to allow Norway to have its own diplomats, Norway rejected the King of Sweden in 1905 and selected its own king.

The Swedish Crown Prince Charles John (Bernadotte), who staunchly opposed Norwegian independence, only to offer generous terms of union

During Charles XIV reign (1818–1844), the first stage of the Industrial Revolution reached Sweden. This first take-off was founded on rural forges, textile proto-industries and sawmills.

The 19th century was marked by the emergence of a liberal opposition press, the abolition of guild monopolies in trade and manufacturing in favor of free enterprise, the introduction of taxation and voting reforms, the installation of a national military service, and the rise in the electorate of three major party groups—Social Democratic Party, Liberal Party, and Conservative Party.

Modernization of Sweden: 1860-1910

Main article: Modernization of Sweden

Sweden—much like Japan at the same time—transformed from a stagnant rural society to a vibrant industrial society between the 1860s and 1910. The agricultural economy shifted gradually from communal village to a more efficient private farm-based agriculture. There was less need for manual labor on the farm so many went to the cities; and about 1 million Swedes emigrated to the United States between 1850 and 1890. Many returned and brought word of the higher productivity of American industry, thus stimulating faster modernization.

The late 19th century saw the emergence of an opposition press, the abolition of guild monopolies on craftsmen, and the reform of taxation. Two years of military service was made compulsory for young men, though there was no warfare.

Health

The steady decline of death rates in Sweden began about 1810. For men and women of working age the death rate trend diverged, however, leading to increased excess male mortality during the first half of the century. There were very high rates of infant and child mortality before 1800. Among infants and children between the ages of one and four smallpox peaked as a cause of death in the 1770s-1780s and declined afterward. Mortality also peaked during this period due to other air-, food-, and waterborne diseases, but these declined as well during the early 19th century. The decline of several diseases during this time created a more favorable environment that increased children's resistance to disease and dramatically lowered child mortality.[10]

The introduction of compulsory gymnastics in Swedish schools in 1880 rested partly on a long tradition, from Renaissance humanism to the Enlightenment, of the importance of physical as well as intellectual training. More immediately, the promotion of gymnastics as a scientifically sound form of physical discipline coincided with the introduction of conscription, which gave the state a strong interest in educating children physically as well as mentally for the role of citizen soldiers.[11] Skiing is a major recreation in Sweden and its ideological, functional, ecological, and social impact has been great on Swedish nationalism and consciousness. Swedes perceived skiing as virtuous, masculine, heroic, in harmony with nature, and part of the country's culture. A growing awareness of strong national sentiments and an appreciation of natural resources led to the creation of the Swedish Ski Association in 1892 in order to combine nature, leisure, and nationalism. The organization focused its efforts on patriotic, militaristic, heroic, and environmental Swedish traditions as they relate to ski sports and outdoor life.[12]

20th century

With a broader voting franchise, the nation saw the emergence of three major party groups – Social Democrat, Liberal, and Conservative. The parties debated further expansion of the voting franchise. The Liberal Party, based on the middle class, in 1907 put forth a program for local voting rights later accepted in the Riksdag; the majority of Liberals wanted to require some property ownership before a man could vote. The Social Democrats called for total male suffrage without property limitations. The strong farmer representation in the Second Chamber of the Riksdag maintained a conservative view, but their decline after 1900 gradually ended opposition to full suffrage.

Religion maintained a major role but public school religious education changed from drill in the Lutheran catechism to biblical-ethical studies.

Industrialization: 1910-1939

Main article: Industrialization of Sweden

Sweden was neutral in World War I. During the war and the 1920s its industries expanded to meet the European demand for Swedish steel, ball bearings, wood pulp, and matches. Post-war prosperity provided the foundations for the social welfare policies characteristic of modern Sweden.

Foreign policy concerns in the 1930s centered on Soviet and German expansionism, which stimulated abortive efforts at Nordic defence co-operation. Sweden followed a policy of armed neutrality during World War II and currently remains non-aligned.

Welfare state

Sweden successfully integrated socialism and democracy because of the unique way in which Sweden's labor leaders, politicians, and classes cooperated during the early development period of Swedish social democracy. Because Sweden's socialist leaders chose a moderate, reformist political course with broad-based public support in the early stages of Swedish industrialization and prior to the full-blown development of Swedish interclass politics, Sweden escaped the severe extremist challenges and political and class divisions that plagued many European countries that attempted to develop social democratic systems after 1911. By dealing early, cooperatively, and effectively with the challenges of industrialization and its impact on Swedish social, political, and economic structures, Swedish social democrats were able to create one of the most successful social democratic systems in the world, with no signs of repression or totalitarianism.[13]

Main Line railways built 1860-1930.

When the Social Democratic Party came into power in 1932, its leaders introduced a new political decision-making process, which later became known as "the Swedish model." The party took a central role, but tried as far as possible to base its policy on mutual understanding and compromise. Different interest groups were always involved in official committees that preceded government decisions.

Foreign policy 1920-1939

Foreign policy concerns in the 1930s centered on Soviet and German expansionism, which stimulated failed efforts at Nordic defense cooperation. Sweden followed a policy of armed neutrality during World War II (although thousands of Swedish volunteers fought in the Winter War against the Soviets); however, it did permit German troops to pass through its territory to and from occupation duties in its neighbour, Norway, and it supplied the Nazi regime with steel and much needed ball-bearings.

Sweden during World War II

Main article: Sweden during World War II

Sweden remained neutral during World War II, despite the involvement of all its neighbors. Sweden provided assistance to both warring parties.

Post-war Sweden: 1945

Main articles: Post-war Sweden, Sweden after the Cold War, History of Sweden (1945–1989), and History of Sweden (since 1989)

Sweden was one of the first non-participants of World War II to join the United Nations (in 1946). Apart from this, the country tried to stay out of alliances and remain officially neutral during the entire Cold War; it never joined NATO.

The social democratic party held government for 44 years (1932–1976), they spent much of the 1950s and 1960s building *Folkhemmet* (*The People's Home*), the Swedish welfare state. Sweden's industry had not been damaged by the war and it was in a position to help re-build Northern Europe in the decades following 1945. This led to an economic upswing in the post-war era that made the welfare system feasible.[14]

By the 1970s the economies of the rest of Western Europe, particularly that of West Germany were prosperous and growing rapidly, while the Swedish economy stagnated. Many economists blamed its large tax funded public sector.[15]

In 1976, the social democrats lost their majority. The 1976 parliamentary elections brought a liberal/right-wing coalition to power. Over the next six years, four governments ruled and fell, composed by all or some of the parties that had won in 1976. The fourth liberal government in these years came under fire by Social Democrats and trade unions and the Moderate Party, culminating in the Social Democrats regaining power in 1982.

During the Cold War Sweden maintained a dual approach, publicly the strict neutrality policy was forcefully maintained, but unofficially strong ties were kept with the U.S., Norway, Denmark, West Germany and other NATO countries. Swedes hoped that the U.S. would use conventional and nuclear weapons in case of a Soviet attack on Sweden. A strong ability to defend against an amphibious invasion was maintained, complete with Swedish-built warplanes, but there was no long-range bombing capability.[16]

In the early 1960s U.S. nuclear submarines armed with mid-range nuclear missiles of type Polaris A-1 were deployed not far from the Swedish west coast. Range and safety considerations made this a good area from which to launch a retaliatory nuclear strike on Moscow. The U.S. secretly provided Sweden with a military security guarantee, promising to provide military force in aid of Sweden in case of Soviet aggression. As part of the military cooperation the U.S. provided much help in the development of the Saab 37 Viggen, as a strong Swedish air force was seen as necessary to keep Soviet anti-submarine aircraft from operating in the missile launch area. In return Swedish scientists at the Royal Institute of Technology made considerable contributions to enhancing the targeting performance of the Polaris missiles.[17]

On February 28, 1986, the Social Democratic leader and Swedish Prime Minister Olof Palme was murdered; shocked Swedes worried whether the nation had "lost its innocence".

In the early 1990s there occurred once again an economic crisis with high unemployment and many banks and companies going bankrupt. A few years after the end of the Cold War Sweden became a member of the European Union in 1995, and the old term "policy of neutrality" fell out of use.[18][19]

In a referendum held in 2003, voters decided not to adopt the Euro as the country's official currency.

Historiography

According to Lönnroth (1998)[20] in the 19th century and early 20th century, Swedish historians saw their writing in terms of literature and story telling, rather than analysis and interpretation. Harald Hjärne (1848–1922) pioneered modern historical scholarship. In 1876 he attacked the traditional myths of the social and legal

conditions of ancient Greece and Rome inherited from the classical authors. He was inspired by German scholar Barthold Georg Niebuhr (1776–1831), a founder of modern German historiography. As professor of history at Uppsala University, Hjärne became a spokesman for the Conservative Party and the Swedish monarchy by 1900. Hjärne had enormous influence on his students and, indeed, on an entire generation of historians, who mostly became political conservatives and nationalists. Another movement emerged at Lund University around 1910, where critical scholars began using the source critics' methods to the early history of Scandinavia. The brothers Lauritz Weibull and Curt Weibull were the leaders, and they had followers at Lund and Göteborg universities. The result was a half-century of often embittered controversy between traditionalists and revisionists that lasted until 1960. There was a blurring of the ideological fronts resulting from experiences during and after World War II. In the meantime, in the general expansion of university education in the postwar period, history was generally neglected. Only through the activities of the National Research Council of the Humanities and the dedicated efforts of certain ambitious university professors created some expansion of historical scholarship. After 1990 there were signs of revival in historiography, with a strong new emphasis on 20th-century topics, as well as the application of social history and computerized statistical techniques to the demographic history of ordinary villagers before 1900.[21]

Monarchy of Sweden

From Wikipedia, the free encyclopedia

The **monarchy of Sweden** is the constitutional monarchy of the Kingdom of Sweden. The present monarch, Carl XVI Gustaf, has reigned since 15 September 1973. He and his immediate family undertake various official, ceremonial and representational duties. As Sweden is a representative democracy based on a parliamentary system, the monarch has a largely ceremonial role, though officially he or she is head of state and holds the highest public office in Sweden and the highest military and social rank. The Act of Succession of 1810 designates the House of Bernadotte as the Swedish royal house; it also states that the king (and thus implicitly any queen regnant) must be a Protestant Christian.

History

Sweden has been a kingdom since prehistoric times. As early as the 1st century, Tacitus wrote that the Suiones had a king, but the order of succession to the later historic kings of Sweden is not known, except for what is accounted for in the historically controversial Norse sagas (see Mythical kings of Sweden and Semi-legendary kings of Sweden).

Originally, the Swedish king had little power, and that was restricted to the functions of a warchief, judge and priest at the Temple at Uppsala (see Germanic king). It is a testimony to this lack of influence that there are thousands of runestones commemorating commoners, but no chronicle about the Swedish kings, prior to the 14th century (though a list of kings was added in the Westrogothic law), and only a few runestones that may mention kings: Gs 11 (Emund the Old), U 11 (Haakon the Red) and U 861 (Blot-Sweyn).

The Personal Command Sign of H.M. the King of Sweden

The Royal Standard

kunuki, i.e. *konungi*, the dative case for Old Norse *konungr*, "king". The runic inscription from the 11th century (U11) refers to king Håkan the Red

The Silver Throne, seat of the Swedish monarch since 1650

The power of the king was, however, greatly strengthened by the introduction of Christianity during the 11th century, and the following centuries saw a process of consolidation of power in the hands of the king.

The king was traditionally elected at the Stones of Mora, and the people had the right to both elect the king and to depose him. The stones were, however, destroyed ca 1515.

The office has been hereditary since 1544. The present Bernadotte dynasty was established during the Napoleonic Wars through the Constitution of 1809 and the Act of Succession of 1810, in a bloodless Revolution after present-day Finland, then the eastern half of the Realm, was lost to Russia.

The 19th century Constitution divided the powers of government between the Riksdag and the monarch. Following the breakthrough of Parliamentarism in 1917 the king's powers were considerably reduced, and he became a constitutional monarch with only limited political authority.

Head of state

In 1974 a new Instrument of Government became part of the Constitution which abolished the Privy Council as the government institution and stripped the Monarch of virtually all formal powers, while still retaining him as Head of State. Many of the king's previous political functions were transferred to the Speaker of the Riksdag. The monarch leads the Privy Council in a session that establishes the new government following a general election or cabinet reshuffle. The king also chairs the *Committee for Foreign Affairs* (Utrikesnämnden), a body which serves to officially inform the head of state and the leaders of the opposition of government affairs. Bills passed in the Swedish parliament become law without having to acquire royal assent. Thus, in Sweden, unlike most constitutional monarchies, the Monarch is no longer even the *nominal* chief executive.

Another constitutional reform in 1980 changed the rules for succession to equal primogeniture. This allowed for the crown to pass to the eldest child regardless of gender and thus installed Princess Victoria as heir apparent over her younger brother Prince Carl Philip.

Full title

A simplified title that was sometimes used in less formal circumstances was *Rex Sveciae* or Sveriges Konung, the king of Sweden. The traditional *full* title of the Swedish sovereign was:

> Swedish: *Med Guds Nåde Sveriges, Götes och Vendes Konung* (*"By the Grace of God, King of Sweden, the Goths/Geats and the Wends"*)
> Latin: *Dei Gratia Suecorum, Gothorum et Vandalorum Rex* - sometimes the first part of the Latin title was *Svionum* or

Sveonum, all three words meaning *of the Swedes*, not Sweden.

Before 1818, the King of Sweden had many more titles since the times of Sweden as a great power. As the first king Charles XIV John of the House of Bernadotte acceded the throne in 1818, these extra titles (except the title above) were dropped. This was in coherence with Sweden as a smaller power and with the new more realistic Instrument of Government of 1809, which explicitly in § 46 (http://sv.wikisource.org/wiki/Regeringsform_1809#.C2.A746.) prohibited that any governor general should be appointed in the realm. The Instrument of Government of 1809 was also written in a more analytic and contemporary Swedish language, better defined by the Swedish Academy established 21 years earlier. The abolished titles in 1818 were:

Grand Prince of Finland, Duke of Scania, Estonia, Livonia, Karelia, Bremen, Verden, Stettin, Pomerania, Kashubia and Wendia, Prince of Rügen, Lord of Ingria and Wismar, Count Palatine of the Rhine, Duke of Bavaria, Jülich, Cleves and Berg.

During the reign of the Holstein-Gottorp dynasty (1751-1818) the title *heir of Norway* (Swedish: *Arvinge till Norge*) was added, as also other titles that were connected to the dukes of Holstein-Gottorp. When Norway after the Napoleonic wars was included in a personal union with Sweden, the title *King of Norway* also was included in the title. In older spelling in Swedish the title was *Sweriges, Norriges, Göthes och Wendes Konung*.

The traditional full title first mentioned here had been in use since the establishment of the hereditary monarchy in 1544. For example the title *Vendes Konung* "King of the Wends" started to be used then. However the title *Götes Konung* "King of the Goths", dates back to at least the kings Magnus Ladulås, Erik the Saint and Charles Sverkersson (maybe also Inge the Elder in a letter from the Pope). The title King of the Swedes *Svea Konung*, dates back to those times as well and even further back. This latter title was however already in the 16th century changed to the title *Sveriges Konung*, King of Sweden, and this short form of the title was also used frequently. Carl XVI Gustaf instead chose the plain and simple title *King of Sweden* (Swedish: *Sveriges Konung*), thereby ending an age-old tradition.[1]

Such innovations are reflected in his personal motto *För Sverige, i tiden*, "For Sweden, with the times" and also contemporarily in the neighbouring countries: Queen Margrethe II did the same in Denmark in 1972 and in Norway the monarch has no extra titles except "King of Norway".

The line of succession

Main article: Line of succession to the Swedish throne

Present monarch: His Majesty King Carl XVI Gustaf (since September 15, 1973), born 1946

1. HRH Crown Princess Victoria, Duchess of Västergötland, daughter of the King, born 1977
2. HRH Princess Estelle, Duchess of Östergötland, daughter of the Crown Princess, born 2012
3. HRH Prince Carl Philip, Duke of Värmland, son of the King, born 1979
4. HRH Princess Madeleine, Duchess of Hälsingland and Gästrikland, daughter of the King, born 1982

Carl XVI Gustaf of Sweden

From Wikipedia, the free encyclopedia

Carl XVI Gustaf (full name: *Carl Gustaf Folke Hubertus*, born 30 April 1946) is the reigning King of Sweden since 15 September 1973, succeeding his grandfather King Gustaf VI Adolf. He is the only son of the late Prince Gustaf Adolf, Duke of Västerbotten, who died in 1947, and Princess Sibylla of Saxe-Coburg and Gotha.

Unlike many other European monarchs who have extensive styles, King Carl Gustaf's formal and complete style is simply *His Majesty Carl XVI Gustaf, King of Sweden*. The King's heir apparent, upon passage on 1 January 1980 of a new law establishing absolute primogeniture (the first such law passed in European history), is Crown Princess Victoria, the eldest child of the King and his wife, Queen Silvia. He is also 203rd in the line of succession to the British and other Commonwealth thrones.

Carl XVI Gustaf

King Carl XVI Gustaf at the National Day Celebration, Stockholm, Sweden 6 June 2009

	King of Sweden
Reign	15 September 1973 – present
Enthronement	19 September 1973
Predecessor	Gustaf VI Adolf
Heir apparent	Crown Princess Victoria
Consort	Queen Silvia, née Sommerlath
Issue	
Victoria, Crown Princess of Sweden Prince Carl Philip, Duke of Värmland Princess Madeleine, Duchess of Hälsingland and Gästrikland	
Full name	
Carl Gustaf Folke Hubertus	
House	House of Bernadotte
Father	Prince Gustav Adolf, Duke of Västerbotten
Mother	Princess Sibylla of Saxe-Coburg and Gotha
Born	30 April 1946 Haga Palace, Sweden
Signature	
Religion	Lutheran (Church of Sweden)

Birth and early life

Carl Gustaf was born at then Haga Palace, Solna, in Stockholm County. He was christened at the Royal Chapel on June 7, 1946 by the Archbishop of Uppsala, Erling Eidem. His godparents were Crown Prince Frederick of Denmark, Crown Princess Ingrid of Denmark,

Crown Prince Olav of Norway, Crown Princess Juliana of the Netherlands, King Gustaf V of Sweden, Prince Friedrich Josias of Saxe-Coburg and Gotha, Crown Prince Gustaf Adolf of Sweden, Crown Princess Louise of Sweden, Count Folke Bernadotte af Wisborg, and the Countess Maria Bernadotte af Wisborg.

Prince Carl Gustaf was also given the title of the Duke of Jämtland.

His father, Prince Gustaf Adolf, was killed in an airplane crash on January 26, 1947, at the Copenhagen Airport.

Youth and education

Prince Carl Gustaf was the youngest of five children and the only son of Sweden's Prince Gustaf Adolf and Princess Sibylla. His father's death had left the nine-month-old Prince second in line for the throne, behind his grandfather, then Crown Prince Gustaf Adolf. When his great-grandfather King Gustaf V died in 1950, the four-year-old Prince became the heir apparent of Sweden.

In a speech[1] in 2005, the King expressed some of his feelings about growing up without having known his father. His sister, Princess Birgitta, elaborated on these feelings in an interview around the same time, commenting that their mother and the strict Swedish royal court of the time did not consider the emotional needs of Prince Gustaf Adolf's children. In that era, she said, tragedy was seldom discussed with children. "Children's questions were met with silence, children's anxiety and fear with the same silence."

As a result, Crown Prince Carl Gustaf was seven years old before he had been told about his father's death. "It was Mother's way of handling the situation, to handle living her life. Of course it was not good for us children. It would have been much better to be able to speak about Father's death", continued Princess Birgitta. She said it had been difficult for the future King to come to grips with not having a father and of not having the same memories of him as his older sisters.

The 15 year old Crown Prince of Sweden looks at the recently recovered 17th century Vasa warship in 1961.

After graduating from high school, the Crown Prince completed two and a half years of education in the Royal Swedish Army, the Royal Swedish Navy, and the Royal Swedish Air Force. He received his commission as an officer in all three services in 1968, and he eventually rose to the rank of captain (in the army and air force) and lieutenant (in the navy), before he ascended to the throne. He has also completed his academic studies in history, sociology, political science, tax law, and economics at Uppsala University and Stockholm University.

To prepare for his role as the Head of State, Crown Prince Carl Gustaf followed a broad program of studies on the court system, social organizations and institutions, trade unions, and employers' associations. In addition, he closely studied the affairs of the Parliament of Sweden, Government, and Ministry for Foreign Affairs. The Crown Prince also spent time at the Swedish Mission to the United Nations and the Swedish International Development Cooperation Agency (SIDA), worked at a bank in London, at the Swedish Embassy in London, at the Swedish Chamber of Commerce in France, and at the Alfa Laval Company factory in France.

King

On September 15, 1973, Carl Gustaf became King of Sweden upon the death of his grandfather, King Gustaf VI Adolf. He was invested as King, at the Hall of State of the Royal Palace of Stockholm on 19 September 1973. King Gustaf VI Adolf was the last who used the style *By the Grace of God King of the Swedes, the Goths/Geats and the Wends* (Swedish: *med Guds Nåde Sveriges, Götes och Wendes Konung*; Latin: *Dei Gratia Suecorum, Gothorum et Vandalorum Rex*). This traditional title had been in use since the establishment of the hereditary monarchy in 1544. Carl XVI Gustaf instead chose the plain and simple title *King of Sweden* (Swedish: *Sveriges Konung*), thereby ending a tradition centuries old.[2]

Such innovations are reflected in his personal motto, "For Sweden – With the times"[3] (Swedish: *"För Sverige – I tiden"*).[4]

In 2005, King Carl Gustav made a personal and passionate speech about the 2004 Indian Ocean tsunami, a disaster which caused the death of over 500 Swedes in that area, in addition to tens of thousands of more people.

Regnal name

In the 16th century, Johannes Magnus construed a mythical line of Swedish kings, beginning with Magog, the son of Japheth, in an attempt to substantiate the antiquity of the Swedish throne. Based on that list, King Charles IX (reigned 1604 to 1611) adopted an exaggerated ordinal much higher than that warranted by any reliable historical accounting. Consequently, previous monarchs named Charles (Karl) have traditionally been numbered by counting backwards from Charles IX, though there only were two before him. Thus the current King of Sweden was proclaimed as Carl XVI Gustaf (sometimes counted in English also as "Charles XVI", though he is never called that) even though he is only the tenth historical Swedish king named Carl (Karl, or Charles).[5]

Royal Monogram

Official duties

The King's duties are, according to the 1974 Instrument of Government, only of a representative and ceremonial nature. The 1974 document stripped the King of most of his formal political powers while retaining him as head of state, thus codifying actual practices dating from the definitive establishment of parliamentary government in 1917.

He pays State Visits abroad and receives those to Sweden, opens the Annual Session of the Parliament, chairs the Special Council held during a change of Government, holds regular Information Councils with the Prime Minister & the Cabinet, chairs the meetings of the Foreign Affairs Council, and receives and signs Letters of Credence of foreign ambassadors to Sweden and signs those of Sweden to foreign nations. As this type of figurehead, he also voluntarily abstains from voting in Swedish elections.[6]

The King and Queen of Sweden welcomed at the Kremlin by President Vladimir Putin of the Russian Federation and Mrs. Putin at the start of the King's State Visit to Russia, October 8, 2001.

King Carl Gustav (ceremonially) holds the highest ranks in the three branches of the Swedish Armed Forces; this is due to the fact that he was, as stipulated by the 1809 Instrument of Government in effect at the time of his accession to the throne in 1973, the Commander in Chief of the armed forces of Sweden (§ 14) and therefore he was promoted *ex officio* from his earlier ranks of captain and lieutenant, to general and admiral. Under the provisions of the Instrument of Government of 1974, which became effective on January 1, 1975, King Carl Gustav no longer holds this constitutionally-mandated position of commander-in-chief, but he kept his ranks *à la suite* since he no longer has any military command authority, except over his military staff at his court.

Worldwide, Carl XVI Gustaf is probably best known as the presenter of the Nobel Prizes each year. He also hands over the Polar Music Prize. The King holds honorary doctoral degrees from the Swedish University of Agricultural Sciences, the Royal Institute of Technology, the Stockholm School of Economics and from the Åbo Akademi University in Finland.

Personal interests

The King is passionate about the environment, technology, agriculture, trade, and industry.

Like many members of the Royal Family, the King has a keen interest in automobiles. He owns several Porsche 911s — a car model which is said to be a particular favourite of the King — as well as a vintage Volvo PV444, a Ferrari 456M GT, an authentic AC Cobra and other cars.[7] The first pictures taken of him and his future wife were of them sitting in his Porsche 911. In the summer of 2005 he was involved in a traffic accident in Norrköping. The accident was described as a "fender bender", with no serious personal injuries claimed. Nevertheless, the incident caused national headlines.[8]

Scouting

The King is the Honorary Chairman of the World Scout Foundation, and often participates in Scout activities both in Sweden and abroad. He regularly visits World Scout Jamborees, for instance the 1979 Dalajamb World Jamboree International Encampment hosted by Sweden, the 2002 World Jamboree held in Sattahip, Thailand, and the 100th Anniversary of World Scouting 2007 World Jamboree held in Hylands Park, England.[9] He also attended the 1981 National Scout Jamboree in Virginia, United States, and was awarded the Bronze Wolf, the only distinction of the World Organization of the Scout Movement, awarded by the World Scout Committee for exceptional services to world Scouting, in 1982. He also attended the 22nd World Scout Jamboree. He gave a speech on the 6th of August at the closing ceremony with more than 40,000 people watching. The band Europe also performed for him singing "The Final Countdown".

Biofuels research

The King attended the Sweden-Michigan Clean Energy Summit at the Ritz-Carlton Hotel in Dearborn, Michigan, on 26 September 2008, at the start of a two-day visit to Michigan. He also traveled to Kettering University in Flint, Michigan, for the ceremonial groundbreaking for a biogas plant that will be, when completed, similar to a biogas plant in Linköping, Sweden. On the second day of his visit he toured the test tracks of the Ford Motor Company and General Motors Corporation, then owners of Volvo and Saab respectively.[10]

Marriage and family

Carl XVI Gustaf with Queen Silvia

The King married Silvia Sommerlath, whose father was German and whose mother was Brazilian, and who had grown up in both countries. They met at the 1972 Summer Olympics in Munich, where she was an interpreter and hostess. The wedding was held on June 19, 1976, at the Stockholm Cathedral, and the ceremony was performed by the Archbishop of Uppsala, Olof Sundby. The wedding was preceded, the evening before, by a Royal Variety Performance, where the Swedish musical group ABBA performed *Dancing Queen* for the very first time, as a tribute to Sweden's Queen to be.[11][12] The King and his family moved to Drottningholm Palace west of Stockholm in 1980. He and the Queen have maintained their business offices at the Royal Palace of Stockholm.

King Carl Gustav and Queen Silvia have three children:

- *Her Royal Highness* Crown Princess **Victoria** Ingrid Alice Désirée, Duchess of Västergötland, born on July 14, 1977. She was married on June 19, 2010, to Daniel Westling, who was born on September 15, 1973, (on the same day that Carl Gustav received the Swedish crown).
- *His Royal Highness* Prince **Carl Philip** Edmund Bertil, Duke of Värmland, born on May 13, 1979.
- *Her Royal Highness* Princess **Madeleine** Thérèse Amelie Josephine, Duchess of Hälsingland and Gästrikland, born on June 10, 1982.

Prince Carl Philip was born the heir apparent. However, a Constitutional reform, which was already under way at the time of his birth, made his older sister, Victoria, the heiress-apparent and Crown Princess of Sweden on January 1, 1980, according

to the principles of absolute primogeniture, which Sweden was the first recognized monarchy to adopt.[13] King Carl Gustaf objected, not to the restored female succession but to the fact that his son lost the position and title of Crown Prince of Sweden which he had had since birth.[14]

Dyslexia

For many years, it was widely reported that King Carl Gustav had dyslexia. Journalists noted that he misspelled his name when signing his accession document, and in 1973, while visiting a copper mine in Falun, he misspelled his name as "Cal Gustf" when signing it on a rock wall. In an interview on Swedish television in 1997, this condition was admitted publicly when his wife addressed the issue. "When he was little, people did not pay attention to the problem," she said. "He didn't get the help he needed." She also noted that the couple's children have "a bit of" dyslexia themselves.

Titles, styles,honours and arms

Title and styles

- **30 April 1946 - 7 June 1946:** *His Royal Highness* Carl Gustaf, Hereditary Prince (*sv. Arvprins*) of Sweden
- **7 June 1946 - 29 October 1950:** *His Royal Highness* Carl Gustaf, Hereditary Prince of Sweden, Duke of Jämtland
- **29 October 1950 - 15 September 1973:** *His Royal Highness* Carl Gustaf, Crown Prince of Sweden, Duke of Jämtland
- **15 September 1973 – present:** *His Majesty* Carl XVI Gustaf, King of Sweden

Carl XVI Gustaf's current title is *King of Sweden* with the style *His Majesty*. He is usually in contemporary Swedish language use and society referred to as simply "the King" (Swedish: *Kungen*). In formal events and matters of protocol, he is however referred to as "Your Majesty" (Swedish: *Ers Majestät*) or "His Majesty the King" (Swedish: *Hans Majestät Konungen*).

The Regal Assurance taken by His Majesty King Carl XVI Gustaf on September 19, 1973

Administered by Mr. Lennart Geijer, Councillor of State and Head of the Ministry for Justice

Unofficial English language translation

"We, Carl Gustaf, King of Sweden make known: that as our Supreme God has pleased to call away the formerly mighty, high-born Prince and Lord, Gustaf VI Adolf, King of the Swedes, the Goths and the Wends, and We, according to, and by authority of, the Act of Succession, as established and enacted by the Estates of the Realm on September 26, 1810, following the illustrious Lord, have ascended to the Royal Swedish Throne.

Therefore We assure most solemnly and loudly, that We intend to and shall Govern the Realm in accordance with the on June 6, 1809 by the King and the Estates of the Realm, jointly enacted and for observance issued Instrument of Government, literal direction abide, and to the other Fundamental Laws of the Realm, public laws and legal ordinances.

We shall also, conform to the before mentioned Instrument of Government and laws, as a resolute King and a caring father for the Swedish people, throughout a legal, just and lenient Reign, seek to by Our utmost ability to advocate the veritable interests and welfare of the Realm and that of each of its inhabitants, all of which We by free will and following mature consideration have decided to do, We thus confirm this by the written signature of Our name, and by a lively oath, that this We shall adhere to and carry out, so truly help me God to life and mind."

Arms

On his creation as Duke of Jämtland, Carl XVI Gustaf was granted an achievement of arms which featured the arms of Jämtland in base (these arms can be seen on his stallplate as knight of the Danish Order of the Elephant at Frederiksborg Palace). Since his accession to the throne, he has used the greater coat of arms of Sweden.

Arms of Carl XVI Gustaf from 1946 to his accession to the throne, as Duke of Jämtland.

	Arms used since his accession to the throne.

Swedish appointments and honours

- Lord and Master (and Knight) of the Order of the Seraphim

Kinship with European counterparts

The King is related to all current European reigning monarchs (at least through John William Friso, Prince of Orange, the most recent common ancestor of today's reigning European royal houses):

Monarch	closest degree of kinship	closest common ancestors
Queen Margrethe II of Denmark	first cousin	King Gustaf VI Adolf of Sweden and Princess Margaret of Connaught
King Albert II of Belgium	second cousin once removed	King Oscar II of Sweden and Norway and Princess Sophia of Nassau
King Harald V of Norway	second cousin once removed	King Oscar II of Sweden and Norway and Princess Sophia of Nassau
Queen Elizabeth II of the United	third cousin (twice)	Queen Victoria of the United Kingdom and Prince Albert of Saxe-Coburg and Gotha

Kingdom		
King Juan Carlos I of Spain	third cousin (twice)	Queen Victoria of the United Kingdom and Prince Albert of Saxe-Coburg and Gotha
Queen Beatrix of the Netherlands	third cousin	George Victor, Prince of Waldeck and Pyrmont and Princess Helena of Nassau
Grand Duke Henri of Luxembourg	third cousin	King Oscar II of Sweden and Norway and Princess Sophia of Nassau
Prince Hans-Adam II of Liechtenstein	sixth cousin	Prince Karl Ludwig of Hohenlohe-Langenburg and Countess Amalie of Solms-Baruth
Prince Albert II of Monaco	seventh cousin	Charles Louis, Hereditary Prince of Baden and Landgravine Amalie of Hesse-Darmstadt

House of Bernadotte

From Wikipedia, the free encyclopedia

The **House of Bernadotte**, the current royal house of Sweden, has reigned since 1818. Between 1818 and 1905, it was also the royal house of Norway. Its founder, Charles XIV John of Sweden, was adopted by Charles XIII of Sweden, who belonged to the House of Holstein-Gottorp which was becoming extinct.

History

Following the Finnish War in 1809, Sweden lost possession of Finland, which had constituted the eastern half of the Swedish realm for centuries. Resentment towards King Gustav IV Adolf precipitated a *coup d'état*. Gustav Adolf was deposed and his uncle Charles XIII was elected King in his place. Because Charles XIII was childless, in 1810 the Riksdag of the Estates, the Swedish parliament, elected Prince Christian August of Augustenborg, from Denmark, as heir to the throne. He died later that same year.

Current head	Carl XVI Gustaf of Sweden
Founding	1810
Deposition	Norway: 1905: Dissolution of the union between Sweden and Norway

I of France controlled much of continental Europe, and some of his client kingdoms were headed by his brothers. The Riksdag decided to choose a king whom Napoleon would approve. On 21 August 1810, the Riksdag elected Jean-Baptiste Bernadotte, a Marshal of France, as heir presumptive to the Swedish throne.

Bernadotte, born in the town of Pau, in the province of Béarn, France, had risen to the rank of general during the French Revolution. In 1798 he married Désirée Clary, whose sister was married to Joseph, Napoleon's elder brother. In 1804 Napoleon promoted Bernadotte to a Marshal of France. Napoleon also granted him the title 'Prince of Pontecorvo', a town in central Italy.

As the Crown Prince of Sweden he assumed the name Karl Johan (*Charles John*) and acted as regent for the remainder of Charles XIII's reign. In 1813, he broke with Napoleon and Sweden joined the anti-Napoleon alliance. He secured a forced personal union between Sweden and Norway in the 1814 campaign against Norway. Bernadotte reigned as King Charles XIV of Sweden and Carl III Johan of Norway from 5 February 1818 until his death on 8 March 1844.

The House of Bernadotte reigned in both countries until the Dissolution of the union between Norway and Sweden in 1905. Prince Carl of Denmark was then elected as King Haakon VII of Norway. Carl was a grandson of King Charles XV of Sweden, and a great-great-grandson of Charles XIV.

Liechtenstein

From Wikipedia, the free encyclopedia

Liechtenstein, officially the **Principality of Liechtenstein** (/ˈlɪktənstaɪn/ *lik-tən-styn*; German: *Fürstentum Liechtenstein*, German pronunciation: [ˈfʏʁstn̩tuːm ˈlɪçtn̩ʃtaɪn][8]) is a doubly landlocked alpine country in Central Europe,[9] bordered by Switzerland to the west and south and by Austria to the east. Its area is just over 160 square kilometres (62 sq mi), and it has an estimated population of 35,000. Its capital is Vaduz. The biggest town is Schaan. Liechtenstein has the second highest gross domestic product per person in the world when adjusted by purchasing power parity,[10] and has the world's lowest external debt. Liechtenstein also has the second lowest unemployment rate in the world at 1.5% (Monaco is first).

Liechtenstein is the smallest yet the richest (by measure of GDP per capita) German-speaking country in the world and the only country to lie entirely within the Alps. It is known as a *principality* as it is a constitutional monarchy headed by a prince. Liechtenstein is divided into 11 municipalities. Much of its terrain is mountainous, making it a winter sports destination. Many cultivated fields and small farms characterize its landscape both in the south (Oberland, *upper land*) and in the north (Unterland, *lower land*). The country has a strong financial sector located in the capital, Vaduz, and has been identified as a tax haven. It is a member of the European Free Trade Association and part of the European Economic Area, the Schengen Area but not of the European Union.

The tune of the Liechtenstein national anthem is the same as the one of the United Kingdom although the lyrics are different.

History

Main article: History of Liechtenstein

The castle of Gutenberg in Balzers

Vaduz Castle, overlooking the capital, is still home to the Prince of Liechtenstein

At one time, the territory was part of the ancient Roman province of Raetia. For centuries this territory, geographically removed from European strategic interests, had little impact on European history. Prior to the reign of its current dynasty, the region was enfeoffed to a line of the counts of Hohenems.

The Liechtenstein dynasty, from which the principality takes its name, comes from Castle Liechtenstein in Lower Austria, which the family possessed from at least 1140 until the 13th century, and from 1807 onward. Through the centuries, the dynasty acquired vast tracts of land, predominantly in Moravia, Lower Austria, Silesia, and Styria, though these territories were all held in fief under other more senior feudal lords, particularly under various lines of the Habsburg family, whom several Liechtenstein princes served as close advisers. Thus, without any territory held directly under the Imperial throne, the Liechtenstein dynasty was

Johann I Josef, Prince of Liechtenstein

unable to meet a primary requirement to qualify for a seat in the Imperial diet (parliament), the *Reichstag*.

The family yearned for the added power a seat in the Imperial government would bring and therefore sought to acquire lands that would be *unmittelbar*, or held without any feudal personage other than the Holy Roman Emperor having rights on the land. After some time, the family was able to arrange the purchase of the minuscule *Herrschaft* ("Lordship") of Schellenberg and county of Vaduz (in 1699 and 1712 respectively) from the Hohenems. Tiny Schellenberg and Vaduz had exactly the political status required: no feudal lord other than their comital sovereign and the suzerain Emperor.

On 23 January 1719, after the lands had been purchased, Charles VI, Holy Roman Emperor, decreed that Vaduz and Schellenberg were united and elevated the newly formed territory to the dignity of *Fürstentum* (*principality*) with the name "Liechtenstein" in honour of "[his] true servant, Anton Florian of Liechtenstein". It was on this date that Liechtenstein became a sovereign member state of the Holy Roman Empire. It is a testament to the pure political expediency of the purchases that the Princes of Liechtenstein did not set foot in their new principality for over 120 years.

As a result of the Napoleonic Wars, by 1806 much of the Holy Roman Empire was under the effective control of French emperor Napoleon I. When the empire was dissolved, this had broad consequences for Liechtenstein: imperial, legal and political mechanisms broke down. The state ceased to owe obligations to any feudal lord beyond its borders.

Modern publications generally attribute Liechtenstein's *sovereignty* to these events. Its prince ceased to owe obligations to any suzerain. From 25 July 1806 when the Confederation of the Rhine was founded, the Prince of Liechtenstein was a member, in fact a vassal of its hegemon, styled *protector*, the French Emperor Napoleon I, until the dissolution of the confederation on 19 October 1813.

Soon afterward, Liechtenstein joined the German Confederation (20 June 1815 – 24 August 1866) which was presided over by the Emperor of Austria.

Then, in 1818, Johann I granted the territory a limited constitution. 1818 also saw the first visit of a member of the house of Liechtenstein, Prince Alois; however, the first visit by a sovereign prince would not occur until 1842.

Developments during the 19th century included:

- In 1836, the first factory was opened, making ceramics.
- In 1861, the Savings and Loans Bank was founded, as was the first cotton-weaving mill.
- Two bridges over the Rhine were built in 1868, and in 1872 a railway line across Liechtenstein was constructed.

20th century

Until the end of World War I, Liechtenstein was closely tied first to the Austrian Empire and later to Austria-Hungary; the ruling princes continued to derive much of their wealth from estates in the Habsburg territories, and they spent much of their time at their two palaces in Vienna. The economic devastation caused by this war

forced the country to conclude a customs and monetary union with its other neighbour, Switzerland. Liechtenstein's army was disbanded in 1868 for financial reasons.

At the time of the dissolution of the Austro-Hungarian Empire, it was argued that Liechtenstein, as a fief of the Holy Roman Empire, was no longer bound to the emerging independent state of Austria, since the latter did not consider itself as the legal successor to the empire. This is partly contradicted by the coeval Liechtenstein perception that the dethroned Austro-Hungarian Emperor still maintained an abstract heritage of the Holy Roman Empire.

In early 1938, just after the annexation of Austria into Greater Nazi Germany, 84 year old Prince Franz I abdicated, naming his 31-year-old third cousin, Prince Franz Joseph, as his successor. His wife Elisabeth von Gutmann, whom he had married in 1929, was a wealthy Jewish woman from Vienna, and local Liechtenstein Nazis had already identified her as their Jewish "problem". Although Liechtenstein had no official Nazi party, a Nazi sympathy movement had been simmering for years within its National Union party.[11]

Franz I, Prince of Liechtenstein.

During World War II, Liechtenstein remained officially neutral, looking to neighboring Switzerland for assistance and guidance, while family treasures within the war zone were taken to Liechtenstein for safekeeping. At the close of the conflict, Czechoslovakia and Poland, acting to seize what they considered to be German possessions, expropriated the entirety of the Liechtenstein dynasty's hereditary lands and possessions in Bohemia, Moravia, and Silesia – the princes of Liechtenstein lived in Vienna until the Anschluss of 1938. The expropriations (subject to modern legal dispute at the International Court of Justice) included over 1,600 km^2 (618 sq mi) of agricultural and forest land, and several family castles and palaces.

Citizens of Liechtenstein were forbidden to enter Czechoslovakia during the Cold War. More recently the diplomatic conflict revolving around the controversial post-war Beneš decrees resulted in Liechtenstein not sharing international relations with the Czech Republic or Slovakia. Diplomatic relations were established between Liechtenstein and the Czech Republic on 13 July 2009,[12][13][14] and with Slovakia on 9 December 2009.[15]

Liechtenstein gave asylum to about 500 soldiers of the First Russian National Army (a collaborationist Russian force within the German Wehrmacht) at the close of World War II. About 200 of the group somewhat voluntarily agreed to return to the USSR. They departed in a train to Vienna and nothing was ever heard of them again. The remainder stayed in Liechtenstein for another year, resisting with support of Liechtenstein further pressure by the Soviet government to participate in the repatriation program. Eventually the government of Argentina offered asylum, and about a hundred people left. This is commemorated by a monument at the border town of Hinterschellenberg. In contrast, the British and Americans repatriated the Russians who had fought for Germany to the USSR, and many of them perished in the Gulag.

In dire financial straits following the war, the Liechtenstein dynasty often resorted to selling family artistic treasures, including the priceless portrait "Ginevra de' Benci" by Leonardo da Vinci, which was purchased by the National Gallery of Art of the United States in 1967. Liechtenstein prospered, however, during the decades following, as it used its low corporate tax rates to draw many companies to the country.

The Prince of Liechtenstein is the world's sixth wealthiest leader with an estimated wealth of USD $5 billion.[16] The country's population enjoys one of the world's highest standards of living.

Government

Main article: Politics of Liechtenstein

The centre of government in Vaduz.

Liechtenstein is governed under a Constitutional monarchy. It has a form of mixed constitution, in which power is shared by the monarch and an elected parliament. The Constitution of Liechtenstein was adopted in March 2003, replacing the previous 1921 constitution which had established Liechtenstein as a constitutional monarchy headed by the reigning prince of the Princely House of Liechtenstein. A parliamentary system had been established, although the reigning Prince retained substantial political authority.

The reigning Prince is the head of state and represents Liechtenstein in its international relations (although Switzerland has taken responsibility for much of Liechtenstein's diplomatic relations). The Prince may veto laws adopted by parliament. The Prince can call referendums, propose new legislation, and dissolve parliament, although dissolution of parliament may be subject to a referendum.[17]

Executive authority is vested in a collegiate government comprising the head of government (prime minister) and four government councilors (ministers). The head of government and the other ministers are appointed by the Prince upon the proposal and concurrence of parliament, thus reflecting the partisan balance of parliament. The constitution stipulates that at least two members of the government be chosen from each of the two regions.[18] The members of the government are collectively and individually responsible to parliament; parliament may ask the Prince to remove an individual minister or the entire government.

Legislative authority is vested in the unicameral Landtag made up of 25 members elected for maximum four-year terms according to a proportional representation formula. Fifteen members are elected from the "Oberland" (Upper Country or region) and ten members are elected from the "Unterland" (Lower Country or region).[19] Parties must receive at least 8% of the national vote to win seats in parliament. Parliament proposes and approves a government, which is formally appointed by the Prince. Parliament may also pass votes of no confidence in the entire government or individual members.

Parliament elects from among its members a "Landesausschuss" (National Committee) made up of the president of the parliament and four additional members. The National Committee is charged with performing parliamentary oversight functions. Parliament can call for referendums on proposed legislation. Parliament shares the authority to propose new legislation with the Prince and with the number of citizens required for an initiative referendum.[20]

Judicial authority is vested in the Regional Court at Vaduz, the Princely High Court of Appeal at Vaduz, the Princely Supreme Court, the Administrative Court, and the State Court. The State Court rules on the conformity of laws with the constitution and has five members elected by parliament.

On 1 July 1984, Liechtenstein became the last country in Europe to grant women the right to vote. The referendum on women's suffrage, in which only men were allowed to participate, passed with 51.3% in favor.[21]

New constitution

In a national referendum in March 2003, nearly two-thirds of the electorate voted in support of Hans-Adam II's proposed new constitution to replace the 1921 one. The proposed constitution was criticised by many, including the Council of Europe, as expanding the powers of the monarchy (continuing the power to veto any law, and

allowing the Prince to dismiss the government or any minister). The Prince threatened that if the constitution failed, he would, among other things, convert some of the royal property for commercial use and move to Austria.[22] The royal family and the Prince enjoy tremendous public support inside the nation, and the resolution passed with about 64% in favour.

Geography

Main article: Geography of Liechtenstein

Liechtenstein is situated in the Upper Rhine valley of the European Alps and is bordered to the east by Austria and to the south and west by Switzerland. The entire western border of Liechtenstein is formed by the Rhine. Measured south to north the country is about 24 km (15 mi) long. Its highest point, the Grauspitz, is 2,599 m (8,527 ft). Despite its Alpine location, prevailing southerly winds make the climate of Liechtenstein comparatively mild. In winter, the mountain slopes are well suited to winter sports.

The Rhine: Border between Liechtenstein and Switzerland (view to the Swiss Alps)

New surveys using more accurate measurements of the country's borders in 2006 have set its area at 160 km^2 (61.776 sq mi), with borders of 77.9 km (48.4 mi).[23] Thus, Liechtenstein discovered in 2006 that its borders are 1.9 km (1.2 mi) longer than previously thought.[24]

Liechtenstein is one of only two doubly landlocked countries in the world[25]—being a landlocked country wholly surrounded by other landlocked countries (the other is Uzbekistan). Liechtenstein is the sixth-smallest independent nation in the world by land area.

The principality of Liechtenstein is divided into 11 communes called *Gemeinden* (singular *Gemeinde*). The Gemeinden mostly consist only of a single town or village. Five of them (Eschen, Gamprin, Mauren, Ruggell, and Schellenberg) fall within the electoral district *Unterland* (the lower county), and the remainder (Balzers, Planken, Schaan, Triesen, Triesenberg, and Vaduz) within *Oberland* (the upper county).

Economy

Main article: Economy of Liechtenstein

Despite (or perhaps because of) its limited natural resources, Liechtenstein is one of the few countries in the world with more registered companies than citizens; it has developed a prosperous, highly industrialized free-enterprise economy and boasts a financial service sector as well as a living standard which compares favourably with those of the urban areas of Liechtenstein's large European neighbours.

Looking southward at Vaduz city-centre.

Very low business taxes (lowest in Europe)—the maximum tax rate is 20%[26]—as well as easy Rules of Incorporation have induced about 73,700 holding (or so-called 'letter box') companies to establish registered offices in Liechtenstein. This provides about 30% of Liechtenstein's state revenue. Liechtenstein also generates revenue from *Stiftungen* ("foundations"), which are financial entities created to increase the privacy of nonresident foreigners' financial holdings. The foundation is registered in the

name of a Liechtensteiner, often a lawyer.

Recently, Liechtenstein has shown strong determination to prosecute international money-launderers and has worked to promote the country's image as a legitimate finance center. In February 2008, the country's LGT Bank was implicated in a tax-fraud scandal in Germany, which strained the ruling family's relationship with the German government. Crown Prince Alois has accused the German government of trafficking in stolen goods. This refers to its $7.3 million purchase of private banking information illegally offered by a former employee of LGT Group.[27][28] However, the United States Senate's subcommittee on tax haven banks said that the LGT bank, which is owned by the royal family, and on whose board they serve, "is a willing partner, and an aider and abettor to clients trying to evade taxes, dodge creditors or defy court orders."[29]

Liechtenstein participates in a customs union with Switzerland and employs the Swiss franc as national currency. The country imports about 85% of its energy. Liechtenstein has been a member of the European Economic Area (an organization serving as a bridge between the European Free Trade Association (EFTA) and the European Union) since May 1995. The government is working to harmonize its economic policies with those of an integrated Europe. Since 2002, Liechtenstein's rate of unemployment has doubled. In 2008, it stood at 1.5%. Currently, there is only one hospital in Liechtenstein, the Liechtensteinisches Landesspital in Vaduz. The gross domestic product (GDP) on a purchasing power parity basis is $5.028 billion,[25] or $141,100 per person which is the second highest in the world.

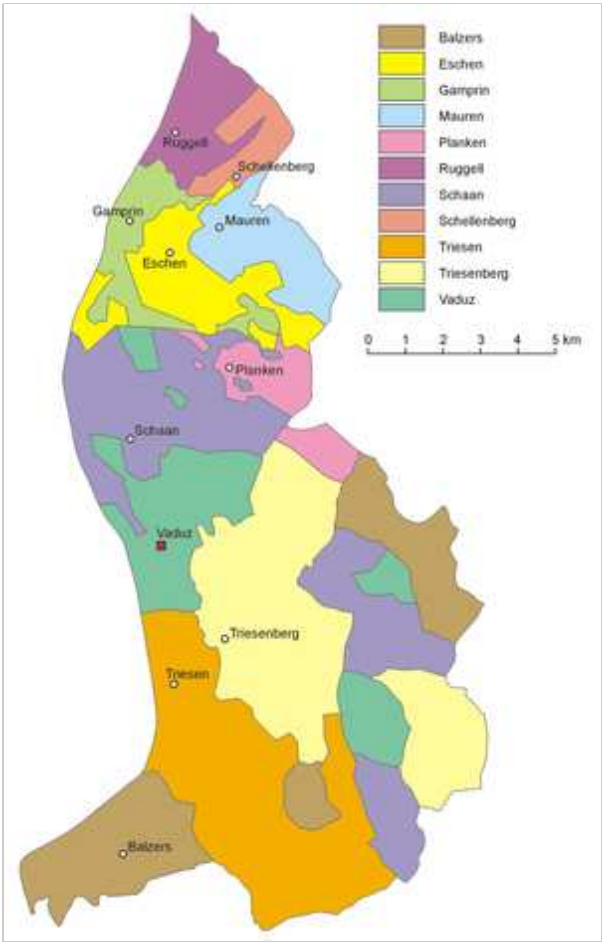
Liechtenstein is a large producer of ceramics and is the world's largest producer of sausage casings, potassium storage units and false teeth. Other industries include electronics, textiles, precision instruments, metal manufacturing, power tools, anchor bolts, calculators, pharmaceuticals, and food products. Its most recognizable international company and largest employer is Hilti, a manufacturer of direct fastening systems and other high-end power tools. Liechtenstein produces wheat, barley, corn, potatoes, dairy products, livestock, and wine. Tourism accounts for a large portion of the country's economy.

Taxation

The government of Liechtenstein taxes both personal and business income and principal (wealth). The basic rate of personal income tax is 1.2%. When combined with the additional income tax imposed by the communes, the combined income tax rate is 17.82%.[30] An additional income tax of 4.3% is levied on all employees under the country's social security programme. This rate is higher for the self-employed, up to a maximum of 11%, making the maximum income tax rate about 29% in total. The basic tax rate on wealth is 0.06% per annum, and the combined total rate is 0.89%. The maximum business income tax rate is 18–20%.[25]

Since 1923 there has been no border control between Liechtenstein and Switzerland

Liechtenstein's gift and estate taxes vary depending on the relationship the recipient has to the giver and the amount of the inheritance. The tax ranges between 0.5% and 0.75% for spouses and children and 18% to 27% for non-related recipients. The estate tax is progressive.



The 2008 Liechtenstein tax affair is a series of tax investigations in numerous countries whose governments suspect that some of their citizens may have evaded tax obligations by using banks and trusts in Liechtenstein; the affair broke open with the biggest complex of investigations ever initiated for tax evasion in the Federal Republic of Germany.[31] It was also seen as an attempt to put pressure on Liechtenstein, then one of the remaining uncooperative tax havens — along with Andorra and Monaco — as identified by the Paris-based

Organisation for Economic Co-operation and Development in 2007.[32] On 27 May 2009 the OECD removed Liechtenstein from the blacklist of uncooperative countries.[33]

In August 2009, the British Government Department, HM Revenue & Customs, agreed with the Alpine tax haven to start exchanging information. It is believed that up to 5,000 British investors have roughly £3 billion stashed in accounts and trusts in the country.[34]

Demographics

Main article: Demographics of Liechtenstein

Administrative divisions of Liechtenstein

Liechtenstein is the fourth smallest country of Europe, after Vatican City, Monaco, and San Marino. Its population is primarily Alemannic-speaking, although its resident population is approximately one third foreign-born, primarily German speakers from Germany, Austria, and Switzerland, other Swiss, Italians, and Turks. Foreign-born people make up two-thirds of the country's workforce.[*citation needed*]

The official language is German; most speak Alemannic, a dialect of German that is highly divergent from Standard German but closely related to those dialects spoken in neighbouring regions such as Vorarlberg, Austria. In Triesenberg, a dialect promoted by the municipality is spoken. According to the 2000 census, 87.9% of the population is Christian, of whom 78.4% adhere to the Roman Catholic faith, while about 8% are Protestant. Compared to the 1990 census, the percentage of Christians fell, whereas Muslims and the undeclared more than doubled in size.[35] According to a 2009 Pew Research Center report, Muslims constitute approximately 4.8% of the population.[36]

Religion [35]	2000	1990
Catholics	78.4 %	84.9 %
Reformed Church	7.9%	9.4 %
Christian-Orthodox Churches	1.1%	0.7 %
Undeclared / no religion	7.0 %	2.4 %
Other Christian Churches	0.4%	0.1 %
Muslims	4.8%	2.4 %
Jewish	0.1%	0.0 %
Other religions	0.3%	0.1 %
Total:	**100%**	**100%**

Liechtensteiners have an average life expectancy at birth of 80.31 years, male: 76.86 years, female: 83.77 years (2011 est.). The infant mortality rate is 4.64 deaths per 1,000 live births, according to recent estimates. The

literacy rate of Liechtenstein is 100%.[25] The Programme for International Student Assessment, coordinated by the OECD, currently ranks Liechtenstein's education as the 10th best in the world.[37]

Transport

There are about 250 km (155 mi) of paved roadway within Liechtenstein, with 90 km (56 mi) of marked bicycle paths.

9.5 km (5.9 mi) of railway connects Austria and Switzerland through Liechtenstein. The country's railways are administered by the Austrian Federal Railways as part of the route between Feldkirch, Austria, and Buchs, Switzerland. Liechtenstein is nominally within the Austrian Verkehrsverbund Vorarlberg[38] tariff region. There are four stations in Liechtenstein, namely Schaan-Vaduz, Forst Hilti, Nendeln, and Schaanwald, served by an irregularly stopping train service that runs between Feldkirch and Buchs provided by the Austrian Federal Rail Service. While EuroCity and other long distance international trains also travel along the route, they do not normally stop at the stations within the borders of Liechtenstein.

Heliport in Balzers

Liechtenstein Bus is a subsidiary of the Swiss Postbus system, but separately run, and connects to the Swiss bus network at Buchs and at Sargans. Buses also run to the Austrian town of Feldkirch.

Liechtenstein has no airport. The nearest large airport is Zürich Airport near Zürich, Switzerland (130 km/80 mi by road). The nearest small airport is St. Gallen Airport (50 km/30 mi). There is a small heliport at Balzers in Liechtenstein[39][40] available for chartered helicopter flights.

Culture

See also: Music of Liechtenstein

As a result of its small size, Liechtenstein has been strongly affected by external cultural influences, most notably those originating in the southern German-speaking areas of Europe, including Austria, Baden-Wurttemberg, Bavaria, Switzerland, and specifically Tirol and Vorarlberg. The "Historical Society of the Principality of Liechtenstein" plays a role in preserving the culture and history of the country.

City-centre with Kunstmuseum (Liechtenstein Art Museum)

The largest museum is the Kunstmuseum Liechtenstein, an international museum of modern and contemporary art with an important international art collection. The building by the Swiss architects Morger, Degelo and Kerez is a landmark in Vaduz. It was completed in November 2000 and forms a "black box" of tinted concrete and black basalt stone. The museum collection is also the national art collection of Liechtenstein.

The other important museum is the Liechtenstein National Museum (*Liechtensteinisches Landesmuseum*) showing permanent exhibition on the cultural and natural history of Liechtenstein as well as special exhibitions. There is also a stamp museum and a ski museum.

The most famous historical sites are Vaduz Castle, Gutenberg Castle, the Red House and the ruins of Schellenberg.

Liechtenstein National Museum

Music and theatre are an important part of the culture. There are numerous music organizations such as the Liechtenstein Musical Company, the annual Guitar Days and the International Josef Gabriel Rheinberger Society, which play in two main theatres.

The Private Art Collection of the Prince of Liechtenstein, one of the world's leading private art collections, is shown at the Liechtenstein Museum in Vienna.

Amateur radio is a hobby of some nationals and visitors. However, unlike virtually every other sovereign nation, Liechtenstein does not have its own ITU Prefix. It uses Switzerland's callsign prefixes (typically "HB") followed by a zero.

Sports

See also: Rugby union in Liechtenstein

Marco Büchel, the first Alpine skier to compete at six Winter Olympics.

Liechtenstein football teams play in the Swiss football leagues. The Liechtenstein Football Cup allows access for one Liechtenstein team each year to the UEFA Europa League; FC Vaduz, a team playing in the Swiss Challenge League, the second division in Swiss football, is the most successful team in the Cup, and scored their greatest success in the European Cup Winners' Cup in 1996 when they drew with and defeated the Latvian team FC Universitate Riga by 1–1 and 4–2, to go on to a lucrative fixture against Paris St Germain, which they lost 0–4 and 0–3.

The Liechtenstein national football team is regarded as an easy target for any team drawn against them; this was the basis for a book about Liechtenstein's unsuccessful qualifying campaign for the 2002 World Cup by British author, Charlie Connelly. In one surprising week during autumn 2004, however, the team managed a 2–2 draw with Portugal, who only a few months earlier had been the losing finalists in the European Championships. Four days later, the Liechtenstein team traveled to Luxembourg, where they defeated the home team 4-0 in a 2006 World Cup qualifying match. In the qualification stage of the European Championship 2008, Liechtenstein beat Latvia 1-0, a result which prompted the resignation of the Latvian coach. They went on to beat Iceland 3-0 on 17 October 2007, which is considered one of the most dramatic losses of the Icelandic national football team. On 7 September 2010, they came within seconds of a 1–1 draw against Scotland in Glasgow, having led 1–0 earlier in the second half, but Liechtenstein lost 2–1 thanks to a goal by Stephen McManus in the 97th minute. On 3 June 2011, Liechtenstein defeated Lithuania 2-0.

As an alpine country, the main sporting opportunity for Liechtensteiners to excel is in winter sports such as downhill skiing: the country's single ski area is Malbun. Hanni Wenzel won two gold medals and one silver medal in the 1980 Winter Olympics (she won bronze in 1976), and her brother Andreas won one silver medal in 1980 and one bronze medal in 1984 in the giant slalom event. With nine medals overall (all in alpine skiing), Liechtenstein has won more Olympic medals per capita than any other nation.[41] It is the smallest nation to win a medal in any Olympics, Winter or Summer, and the only nation to win a medal in the Winter Games but not in the Summer Games. Other notable skiers from Liechtenstein are Marco Büchel, Tina Weirather, Willi Frommelt,

Paul Frommelt and Ursula Konzett.

Security and defence

The Liechtenstein National Police is responsible for keeping order within the country. It consists of 87 field officers and 38 civilian staff totaling 125 employes. All officers are equipped with small arms. The country has one of the world's lowest crime rates. Liechtenstein's prison holds few, if any, inmates, and those with sentences over two years are transferred to Austrian jurisdiction. The Liechtenstein National Police maintains a trilateral treaty with Austria and Switzerland that enables close cross-border cooperation among the police forces of the three countries.[42]

Liechtenstein follows a policy of neutrality and is one of the few countries in the world that maintains no military. The army was abolished soon after the Austro-Prussian War in which Liechtenstein fielded an army of 80 men, although they were not involved in any fighting. The demise of the German Confederation in that war freed Liechtenstein from its international obligation to maintain an army, and parliament seized this opportunity and refused to provide funding for one. The Prince objected, as such a move would leave the country defenceless, but relented on 12 February 1868 and disbanded the force. The last soldier to serve under the colours of Liechtenstein died in 1939 at age 95.[43]

In March 2007, a 170-person Swiss infantry unit became lost during a training exercise and inadvertently crossed 1.5 km into Liechtenstein. The accidental invasion ended when the unit realized their mistake, and turned back.[44] The Swiss army later informed Liechtenstein of the incursion and offered official apologies.[45]

History of Liechtenstein

From Wikipedia, the free encyclopedia

Political identity came to the territory now occupied by the **Principality of Liechtenstein** in 814, with the formation of the subcountry of Lower Rhaetia.[1] Liechtenstein's borders have remained unchanged since 1434, when the Rhine established the border between the Holy Roman Empire and the Swiss cantons.

Antiquity

Main article: Switzerland in the Roman era

A Roman road crossed the region from south to north, traversing the Alps by the Splügen Pass and following the right bank of the Rhine at the edge of the floodplain, for long uninhabited because of periodic flooding. Roman villas have been excavated in Schaanwald and Nendeln. The late Roman influx of the Alemanni from the north is memorialized by the remains of a Roman fort at Schaan.

Middle Ages

The area, part of Rhaetia, was incorporated into the Carolingian empire, and divided into countships, which became subdivided over the generations. Because the duchy of Swabia lost its duke in 1268 and was never restored, all vassals of the duchy became immediate vassals of the Imperial Throne (as has happened in much of Westphalia when the duchy of Saxons was divided and partially dissolved in aftermath of the defeat of Henry the Lion).

Vaduz Castle, built during the Middle Ages

The medieval county of Vaduz was formed in 1342 as a small subdivision of the Werdenberg county of the dynasty of Montfort of Vorarlberg. The 15th century brought three wars and some devastation.

The Principality takes its name from the Liechtenstein family, rather than vice-versa, and the family in turn takes its name from Castle Liechtenstein in Lower Austria, which it owned from at least 1140 until the 13th century and from 1807 onwards. Over the centuries, the family acquired huge landed estates, mostly in Moravia, Lower Austria and Styria, but all of these rich territories were held in fief under other more senior feudal lords, particularly under various lines of the Habsburg family, to which many Liechtensteins were close advisors. Thus, without holding any land directly under the Holy Roman Emperors, the Liechtenstein dynasty was unable to meet the primary requirement to qualify for a seat in the Imperial diet, the Reichstag, although its head was elevated to princely rank in the late 17th century.

Early modern era

Liechtenstein was invaded by both Austrian and Swedish troops during the Thirty Years' War of 1618–1648.[1] During the 17th century the country was afflicted by a plague and also by a witch hunt, in which more than 100 persons were persecuted and executed.

Prince Johann Adam Andreas of Liechtenstein bought the domain of Schellenberg in 1699 and the county of Vaduz in 1712. This Prince of Liechtenstein had wide landholdings in Austria, Bohemia and Moravia, but none of his lands were held directly from the Emperor. Thus, the prince was barred from entry to the Council of Princes and the prestige and influence that would entail.

By acquiring the Lordships of Schellenberg and Vaduz, modest areas of mountain villages each of which was directly subordinate to the Emperor because there was no duke of Swabia any longer, the Prince of Liechtenstein achieved his goal. The territory took the name of the family which now ruled it. On January 23, 1719, Charles VI, Holy Roman Emperor, decreed that the counties of Vaduz and Schellenberg be promoted to a principality with the name Liechtenstein for his servant Anton Florian of Liechtenstein whereby they became *Heiliger Römischer Reichsfürst*.

Nineteenth century

Liechtenstein became a sovereign state in 1806 when it joined Napoleon's Confederation of the Rhine upon the dissolution of the Holy Roman Empire.

The French under Napoleon occupied the country for a few years, but Liechtenstein retained its independence in 1815. Soon afterward, Liechtenstein joined the German Confederation (20 June 1815 – 24 August 1866, which was presided over by the Emperor of Austria).

Then, in 1818, Johann I granted a constitution, although it was limited in its nature.[2] 1818 also saw the first visit of a member of the house of Liechtenstein, Prince Alois. However, the first visit by a sovereign prince would not occur until 1842.[3]

In 1862, a new Constitution was promulgated,[4] which provided for a Diet representative of the people. In 1868, after the German Confederation dissolved, Liechtenstein disbanded its army of 80 men and declared its permanent neutrality, which was respected during both World Wars.

A map of the Confederation of the Rhine.

Liechtenstein during the World Wars

Liechtenstein did not participate in World War I, claiming neutrality. However, until the end of the war, Liechtenstein was closely tied to Austria. In response, Allies imposed an economic embargo on the principality. The economic devastation forced the country to conclude a customs and monetary union with Switzerland. In 1919 Liechtenstein and Switzerland signed a treaty under which Switzerland assumes the representation of Liechtenstein interests at the diplomatic and consular level in countries where it maintains a representation and Liechtenstein does not.

In the spring of 1938, just after the annexation of Austria into Greater Germany, eighty-four year-old Prince Franz I abdicated, naming his thirty-one year-old third cousin, Prince Franz Joseph II, as his successor. While Prince Franz I claimed that old age was his reason for abdicating, it is believed that he had no desire to be on the throne if Germany gobbled up its new neighbor, Liechtenstein. His wife, whom he married in 1929, was a wealthy Jewish woman from Vienna, and local Liechtenstein Nazis had already singled her out as their anti-Semitic "problem". Although Liechtenstein had no official Nazi party, a Nazi sympathy movement had been simmering for years within its National Union party.[5]

Prince Franz Josef II became the first Prince of Liechtenstein to take up permanent residence in Liechtenstein.

During World War II, Liechtenstein remained neutral, while family treasures within the war zone were brought to Liechtenstein (and London) for safekeeping. At the close of the conflict, Czechoslovakia and Poland, acting to seize what they considered to be German possessions, expropriated the entirety of the Liechtenstein dynasty's hereditary lands and possessions in Bohemia, Moravia, and Silesia — the princes of Liechtenstein lived in Vienna until the Anschluss of 1938. The expropriations (subject to modern legal dispute at the World Court) included over 1,600 square kilometres (600 mi.²) of agricultural and forest land, also including several family castles and palaces. Citizens of Liechtenstein were also forbidden from entering Czechoslovakia during the Cold War. Liechtenstein gave asylum to approximately five hundred soldiers of the First Russian National Army (a collaborationist Russian force within the German Wehrmacht) at the close of World War II; this is commemorated by a monument at the border town of Hinterschellenberg which is marked on the country's tourist map. The act of granting asylum was no small matter as the country was poor and had difficulty feeding and caring for such a large group of refugees. Eventually, Argentina agreed to permanently resettle the asylum seekers. In contrast, the British repatriated the Russians who fought on the side of Germany to the USSR, where they were summarily treated as traitors and most of them executed, including their families.

The Post-War era

In dire financial straits following the war, the Liechtenstein dynasty often resorted to selling family artistic treasures, including for instance the portrait "Ginevra de' Benci" by Leonardo da Vinci, which was purchased by the National Gallery of Art of the United States in 1967. Liechtenstein prospered, however, during the decades following, as its economy modernized with the advantage of low corporate tax rates which drew many companies to the country. Liechtenstein became increasingly important as a financial center. In 1989, Prince Hans-Adam II succeeded his father to the throne, and in 1996, Russia returned the Liechtenstein family's archives, ending a long-running dispute between the two countries. In 1978, Liechtenstein became member of the Council of Europe, and then joined the United Nations in 1990, the European Free Trade Association (EFTA) in 1991, and both the European Economic Area (EEA) and World Trade Organization in 1995.

Liechtenstein during the 21st century

In a referendum on March 16, 2003, Prince Hans-Adam, who had threatened to leave the country if he lost, won a large majority (64.3%) in favour of overhauling the constitution to effectively give him more powers than any other European monarch. The new constitution gave the prince the right to dismiss governments and approve judicial nominees and allowed him to veto laws simply by refusing to sign them within a six-month period.

On August 15, 2003, Hans-Adam announced he would step down in one year and hand over the reins to his son Alois.

On July 1, 2007, the Liechtenstein Ruling Prince, Hans-Adam II, and Liechtenstein Prime Minister, Otmar Hasler, appointed Dr. Bruce S. Allen and Mr. Leodis C. Matthews, both in the United States of America, as the first two Honorary Consuls in history for the Principality of Liechtenstein.[6]

Prince of Liechtenstein

From Wikipedia, the free encyclopedia

Royal Standard

Former Royal Standard

The **Sovereign Prince of Liechtenstein** is the sovereign monarch and head of state of Liechtenstein. The Princely Family of Liechtenstein, after which the sovereign principality was named in 1719, hails from Castle Liechtenstein in Lower Austria, which the family possessed from at least 1140 to the thirteenth century, and from 1807 onward.

History

Through the centuries, the dynasty acquired vast swathes of land, predominantly in Moravia, Lower Austria, Silesia, and Styria, though in all cases, these territories were held in fief under other more senior feudal lords, particularly under various lines of the Habsburg family, to whom several Liechtenstein princes served as close advisors. Thus, and without any territory held directly under the Imperial throne, the Liechtenstein dynasty was unable to meet a primary requirement to qualify for a seat in the Imperial diet, the *Reichstag*.

The family yearned greatly for the added power which a seat in the Imperial government would garner, and therefore, searched for lands to acquire which would be *unmittelbar* (non-intermediate), held without any feudal

personage other than the Holy Roman Emperor himself having rights on the land. After some time, the family was able to arrange the purchase of the minuscule *Herrschaft* ("Lordship") of Schellenberg and countship of Vaduz (in 1699 and 1712 respectively) from the Hohenems. Tiny Schellenberg and Vaduz possessed exactly the political status required, no feudal lord other than their comital sovereign and the suzerain Emperor.

Thereby, on January 23, 1719, after purchase had been duly made, Charles VI, Holy Roman Emperor, decreed Vaduz and Schellenberg were united, and raised to the dignity of *Fürstentum* (*principality*) with the name "Liechtenstein" in honour of "[his] true servant, Anton Florian of Liechtenstein". It is on this date that Liechtenstein became a sovereign member state of the Holy Roman Empire. Ironically, but as testament to the pure political expediency of the purchases, the Princes of Liechtenstein did not permanently live in their new principality for over 200 years, moving only in 1938 into the Alpine territory.

Powers

The Prince of Liechtenstein has sweepingly broad powers; a referendum to adopt Hans-Adam's revision of the constitution to expand his powers passed in 2003.[1] The changes also included a republican option, whereby the Prince was henceforth formally barred from vetoing any bill to establish a republic, but the Prince can veto any other law. In addition, the right to secede of the parishes that make up the Principality was recognized. Prince Hans-Adam had threatened that he and his family would move to Austria if the referendum had failed. Despite opposition from Mario Frick, a former Prime Minister, the Prince's referendum motion was carried by the electorate. Opponents accused Hans-Adam of engaging in emotional blackmail to achieve his goal and constitutional experts from the Council of Europe branded the event as a retrograde move.[2]

On 15 August 2004 Prince Hans-Adam II formally turned the power of making day-to-day governmental decisions over to his son Prince Alois, as a way of transitioning to a new generation. Formally, Hans-Adam remains Head of State.[3]

The U.S. Senate's subcommittee on tax haven banks has charged that the documents and information provided by Heinrich Kieber show that the LGT bank which is owned by the princely family, on whose board it serves and "is a willing partner, and an aider and abettor to clients trying to evade taxes, dodge creditors or defy court orders."[4] For the same reasons, a 1999 German secret service report more bluntly described Liechtenstein as "a criminal state in the heart of Europe".[5]

Titles

According to their House Laws,[6] the Reigning Prince shall bear the titles:

> *Reigning Prince of Liechtenstein, Duke of Troppau and Jägerndorf, Count of Rietberg, Sovereign of the House of Liechtenstein*

Hans-Adam II, Prince of Liechtenstein

From Wikipedia, the free encyclopedia

Hans-Adam II (Johannes (Hans) Adam Ferdinand Alois Josef Maria Marko d'Aviano Pius von und zu Liechtenstein; born 14 February 1945), is the reigning Prince of Liechtenstein. He is the son of Franz Joseph II, Prince of Liechtenstein (1906–1989) and his wife Countess Georgina von Wilczek (1921–1989). He also bears the titles ***Duke of Troppau and Jägerndorf, Count of Rietberg***. He descends in the direct male line from merely three of the previous fourteen Princes of Liechtenstein, and of another (again from two of the above mentioned three) in the female line.

Powers

The Prince of Liechtenstein has broad powers; a referendum to adopt Hans-Adam's revision of the constitution to expand his powers passed in 2003.[1] The changes also included a republican option, whereby the Prince was henceforth formally barred from vetoing any bill to establish a republic. In addition, the right of each of the parishes which make up the Principality to secede was recognised. Prince Hans-Adam had announced his intention for he and his family to move to Austria if the referendum failed. Despite opposition from Mario Frick, a former prime minister, the Prince's referendum motion was carried by the electorate.

On 15 August 2004 Prince Hans-Adam II formally turned the power of making day-to-day governmental decisions over to his eldest son, the Hereditary Prince Alois, as a way of beginning a dynastic transition to a new generation. Legally, Hans-Adam remains Head of State.[2]

Personal wealth

Prince Hans-Adam owns LGT banking group and has a family fortune of $7.6 billion and a personal fortune of about $4.0 billion,[3] making him one of the world's richest heads of state, and Europe's wealthiest monarch.[4] He owns an extensive art collection, which is displayed for the public at the Liechtenstein Museum in Vienna.

Personal life

Hans-Adam's native language is German, but he is also fluent in English and French.

On 30 July 1967, at Vaduz, Liechtenstein, he married his second cousin once-removed, Countess Marie Aglaë Kinsky von Wchinitz und Tettau (born 1940) who, upon her husband's accession to the throne, became *Her Serene Highness The Princess of Liechtenstein*. Their official residence is at Vaduz Castle, which overlooks the capital.

Their children are:

- Hereditary Prince Alois (b. Zürich, 11 June 1968) He married Duchess Sophie in Bavaria on 3 July 1993, 4 children:
  - Prince **Joseph Wenzel** Maximilian Maria of Liechtenstein, Count of Rietberg (born 24 May 1995 in London)
  - Princess **Marie-Caroline** Elisabeth Immaculata of Liechtenstein, Countess of Rietberg (born 17 October 1996 in Grabs, Switzerland)
  - Prince **Georg Antonius** Constantin Maria of Liechtenstein, Count of Rietberg (born 20 April 1999 in Grabs)
  - Prince **Nikolaus Sebastian** Alexander Maria of Liechtenstein, Count of Rietberg (born 6 December 2000, in Grabs)
- Prince Maximilian of Liechtenstein (b. St Gallen, 16 May 1969) He married Angela Gisela Brown civilly in Vaduz on 21 January 2000 and religiously in New York City, New York, in the Church of St. Vincent Ferrer (New York), on 29 January 2000, 1 child:
  - Prince **Alfons** Constantin Maria (b. London, 18 May 2001)
- Prince Constantin Ferdinand Maria (b. St Gallen, 15 March 1972), married civilly in Vaduz on 14 May 1999 and religiously in Číčov, Slovakia, on 18 July 1999 Countess Marie Gabriele Franziska Kálnoky de Kőröspatak (b. Graz, 16 July 1975),[5] 3 children:
  - Prince **Moritz** Emanuel Maria (b. New York City, 27 May 2003)
  - Princess **Georgina** Maximiliana Tatiana Maria (b. Vienna, 23 July 2005)
  - Prince **Benedikt** Ferdinand Hubertus Maria (b. Vienna, 18 May 2008)
- Princess Tatjana Nora Maria (b. St Gallen, 10 April 1973), married in Vaduz on 5 June 1999 Baron Matthias Claus-Just Carl *Philipp* von Lattorff (b. Graz, 25 March 1968), 7 children:
  - **Lukas** Marie von Lattorff (b. Wiesbaden, 13 May 2000)
  - **Elisabeth** Maria Angela Tatjana von Lattorff (b. Grabs, 25 January 2002)
  - **Marie** Teresa von Lattorff (b. Grabs, 18 January 2004)

1974

In 1969, Hans-Adam graduated from the University of St. Gallen with a degree in Business and Economic Studies.

The Prince is an honorary member of K.D.St.V. Nordgau Prag Stuttgart, a Catholic students' fraternity that is a member of the Cartellverband der katholischen deutschen Studentenverbindungen. The Prince chairs the Advisory Council of the Liechtenstein Institute on Self-determination at Princeton University, LISD. In his childhood he joined the Pfadfinder und Pfadfinderinnen Liechtensteins in Vaduz.[6] He is also a former member of the Vienese Scout Group "*Wien 16-Schotten*".[7] He is a member of the World Scout Foundation.[8]

Monarchical styles of

Hans-Adam II, Prince of Liechtenstein

Reference style	His Serene Highness
Spoken style	Your Serene Highness
Alternative style	Sire

Today he and his wife are patrons of Pfadfinder und Pfadfinderinnen Liechtensteins.

He is the 1,305th Knight of the Order of the Golden Fleece in Austria.

Viewpoints and book

Prince Hans-Adam II has written the political treatise *The State in the Third Millennium* (ISBN 9783905881042), which was published in late 2009. In it, he argues for the continued importance of the nation-state as a political actor. He makes the case for democracy as the best form of government, which he sees China and Russia as transitioning towards although the path will be difficult for these nations. He also declared his role in a royal family as something that has legitimacy only from the assent of the people. He stated that government should be limited to a small set of tasks and abilities, writing that people "have to free the state from all the unnecessary tasks and burdens with which it has been loaded during the last hundred years, which have distracted it from its two main tasks: maintenance of the rule of law and foreign policy."[9]

In an interview, recorded in November 2010, Hans-Adam said that he saw certain problems with aspects of the U.S. Constitution, such as the lack of direct democracy. He also said, "I am sitting here and that's because Americans saved us during World War II and during the Cold War. So I am very grateful to them."

Titles

According to their House Laws,[10] the Reigning Prince shall bear the title:

> *Reigning Prince of Liechtenstein, Duke of Troppau and Jägerndorf, Count of Rietberg, Sovereign of the House of Liechtenstein*

Princely Family of Liechtenstein

From Wikipedia, the free encyclopedia

The Liechtenstein dynasty, from which the principality takes its name, is the family which reigns by constitutional, hereditary right over the nation of Liechtenstein. Only dynastic members of the House of Liechtenstein are eligible to inherit the throne, and the dynasty's membership, rights and responsibilities are defined by a law of the family, which is enforced by the reigning Prince and may be altered by vote among the family's dynasts, but which may not be altered by the Government or Parliament of Liechtenstein.[1]

History

The family comes from Castle Liechtenstein in Lower Austria, which the family possessed from at least 1140 to the 13th century, and from 1807 onwards. Through the centuries, the dynasty acquired vast swathes of land, predominantly in Moravia, Lower Austria, Silesia and Styria, though in all cases, these territories were held in fief under other more senior feudal lords, particularly under various lines of the Habsburg family, to whom several Liechtenstein princes served as close advisors. Thus, and without any territory held directly under the Imperial throne, the Liechtenstein dynasty was unable to meet a primary requirement to qualify for a seat in the Imperial Diet (*Reichstag*)

Valtice Castle used to be the principal seat of the Liechtenstein family in the Czech Republic (then in Czechoslovakia) until after World War II, when the Communists seized power and confiscated it.

The family yearned greatly for the added power which a seat in the Imperial government would garner, and therefore searched for lands to acquire which would be *immediate*, or held without any feudal personage other than the Holy Roman Emperor himself having rights on the land. Eventually the head of the family was able to arrange the purchase from the Hohenems family of the minuscule Lordship of Schellenberg and county of Vaduz, in 1699 and 1712 respectively. Schellenberg and Vaduz possessed exactly the political status required, with no feudal lord other than their comital sovereign and the suzerain Emperor.

On 23 January 1719, after the purchase had been duly made, Charles VI as Holy Roman Emperor decreed Vaduz and Schellenberg to be united and raised to the dignity of a Principality by the name of "Liechtenstein", in honour of "[his] true servant, Anton Florian of Liechtenstein". It is on this date that Liechtenstein became a member state of the Holy Roman Empire. Ironically, but as a testament to the pure political expediency of the purchases, the Princes of Liechtenstein did not set foot in their new principality for several decades.

According to the Constitution of the Princely House of Liechtenstein of 26 October 1993, all members other than the reigning prince shall bear the titles Prince or Princess of Liechtenstein and Count or Countess of Rietberg.

- Hans-Adam II, Prince of Liechtenstein (born 14 February 1945), eldest son; married 30 July 1967, Marie Aglaë, Countess Kinsky of Wchinitz and Tettau. They have four children:
  - Alois Philipp Maria, Hereditary Prince of Liechtenstein (born 11 June 1968), married 3 July 1993, Duchess Sophie in Bavaria (born 28 October 1967). They have four children:
    - Prince *Joseph Wenzel* Maximilian Maria of Liechtenstein (born 24 May 1995 in London)
    - Princess *Marie-Caroline* Elisabeth Immaculata of Liechtenstein (born 17 October 1996 in Grabs, Canton of St. Gallen)
    - Prince *Georg Antonius* Constantin Maria of Liechtenstein (born 20 April 1999 in Grabs)
    - Prince *Nikolaus Sebastian* Alexander Maria of Liechtenstein (born 6 December 2000, in Grabs)
  - Prince *Maximilian* Nikolaus Maria of Liechtenstein (born 16 May 1969 in St. Gallen), married 29 January 2000 at the church of Saint Vincent Ferrer in New York, Angela Gisela Brown (born 3 February 1958, Bocas del Toro, Panama) They have one child:
    - Prince Alfons Constantin Maria of Liechtenstein (born 18 May 2001, in London)
  - Prince Constantin Ferdinand Maria of Liechtenstein (born 15 March 1972 in St. Gallen), married 5 June 1999, in Číčov, Slovakia, Countess Marie Gabriele Franciska Kálnoky de Kőröspatak (born 16 July 1975 in Graz) They have three children:
    - Prince Moritz Emanuel Maria of Liechtenstein (born 27 May 2003 in London)
    - Princess Georgina Maximiliane Tatjana Maria of Liechtenstein (born 23 July 2005 in Vienna)
    - Prince Benedikt Ferdinand Hubertus Maria of Liechtenstein, (born 18 May 2008 in Vienna)
  - Princess Tatjana Nora Maria of Liechtenstein (born 10 April 1973 in St. Gallen), married 5 June 1999, at St. Florin's in Vaduz, Baron Matthias Claus-Just Carl *Philipp* von Lattorff, son of Baron Claus-Jürgen von Lattorff and Countess Julia Batthyány de Német-Újvár (born 25 March 1968 in Graz). They have seven children:
    - Lukas Maria von Lattorff (born 13 May 2000 in Wiesbaden)
    - Elisabeth Marie Angela Tatiana von Lattorff (born 25 January 2002 in Grabs)
    - Marie Theresa von Lattorff (born 18 January 2004 in Grabs)
    - Camilla Katharina Maria von Lattorff (born 14 November 2005 in Monza)
    - Anna Pia Theresia Maria von Lattorff (born 3 August 2007 in Hausleiten)
    - Sophia Katharina Maria von Lattorff (born 30 October 2009 in Hausleiten)
    - Maximilian von Lattorf (born 17 December 2011 in Hausleiten)
- Prince Philipp Erasmus of Liechtenstein (born 19 August 1946 in Zürich), second son; married 11

September 1971, at Abbaye de Notre Dame de la Cambre in Brussels, Isabelle de l'Arbre de Malander (born 24 November 1947 in Ronse) They have three children:
    - Prince Alexander of Liechtenstein (born 19 May 1972 in Basel); married 8 February 2003 in Salzburg Astrid Barbara Kohl [2] (born 13 September 1968 in Regensburg).
        - Princess Theodora Alexandra Isabella Antonia Nora Marie of Liechtenstein (born 20 November 2004).
    - Prince Wenzeslaus of Liechtenstein (born 12 May 1974 in Uccle, Belgium)
    - Prince Rudolf Ferdinand of Liechtenstein (born 7 September 1975 in Uccle, Belgium)
- Prince Nikolaus Ferdinand Maria Josef Raphael of Liechtenstein (born 24 October 1947 in Zurich), third son; married 20 March 1982, at Notre-Dame Cathedral, Luxembourg, Princess Margaretha of Luxembourg, (born 15 May 1957, Betzdorf Castle). They have four children:
    - Prince Leopold Emmanuel of Liechtenstein (born 20 May 1984, died 20 May 1984).
    - Princess *Maria-Annunciata* Astrid Joséphine Veronica of Liechtenstein (born 12 May 1985 in Brussels)
    - Princess *Marie-Astrid* Nora Margarita Veronica of Liechtenstein (born 26 June 1987 in Brussels)
    - Prince *Josef-Emanuel* Leopold Marie of Liechtenstein (born 7 May 1989 in Brussels)
- Princess Norberta (Nora) Elisabeth Maria Assunta Josefine Georgine et omnes sancti of Liechtenstein (born 31 October 1950), only daughter; married 11 June 1988 Don Vicente Sartorius y Cabeza de Vaca (30 November 1931 - 2002), Marquess de Mariño, and she has a daughter,
    - Maria Teresa Sartorius y de Liechtenstein (born 21 November 1992 in Madrid).

Monaco

Coordinates: 43°43′58″N 7°25′11″E

From Wikipedia, the free encyclopedia

Monaco /ˈmɒnəkoʊ/, officially the **Principality of Monaco** (French: *Principauté de Monaco*; Monégasque: *Principatu de Múnegu*; Italian: *Principato di Monaco*; Occitan: *Principat de Mónegue*), is a sovereign city state, located on the French Riviera in Western Europe. Bordered by France on three sides, with one side bordering the Mediterranean Sea, its center is about 16 km (9.9 mi) from Italy, and is only 15 km (9.3 mi) north east of Nice, France.[7] It has an area of 1.98 km^2 (0.76 sq mi), and a population of 35,986, making Monaco the second smallest and the most densely populated country in the world.[8] Monaco has a land border of only 4.4 km (2.7 mi), a coastline of 4.1 km (2.5 mi), and a width that varies between 1.7 km (1.1 mi) and 349 metres (382 yards).[9][10] The highest point in the country is a narrow pathway named Chemin des Révoires on the slopes of Mont Agel, in the Les Révoires district, which is 161 metres (528 feet) above sea level.[11] Monaco's most populated *Quartier* is Monte Carlo, and the most populated *Ward* is Larvotto/Bas Moulins.[12] After a recent expansion of Port Hercules,[13] Monaco's total area is 2.05 km^2 (0.79 sq mi),[12] with new plans to extend the district of Fontvieille, with land reclaimed from the Mediterranean Sea.[14][15][16][17]

Monaco is a principality governed under a form of constitutional monarchy, with Prince Albert II as head of state.[18] However, even though Prince Albert II is a constitutional monarch, he still has immense political power.[19] The House of Grimaldi have ruled Monaco, with brief interruptions, since 1297.[20] The official language is French, but Monégasque, Italian, and English are widely spoken and understood (see here). The state's sovereignty was officially recognized by the Franco-Monegasque Treaty of 1861, with Monaco finally becoming a full UN voting member in 2002, after much political debate.[21] Despite Monaco's independence and separate foreign policy, its defence is the responsibility of France.[22] However, Monaco does maintain two small military units, totaling 255 officers and men, the Corps des Sapeurs-Pompiers de Monaco, and the Compagnie des Carabiniers du Prince.[23][24]

Economic development was spurred in the late 19th century with a railroad line to France, and the opening of the first casino, Monte Carlo Casino.[25] Since then, the principality's mild climate, splendid scenery, and gambling facilities have

made Monaco world-famous as a tourist and recreation center for the rich and famous.[10][26] However, in more recent years Monaco has become a major banking center holding over 100 billion euros worth of funds,[27] and has successfully sought to diversify its economy into the services and small, high-value-added, nonpolluting industries.[28] The state has no income tax and low business taxes, and is well-known for being a tax haven.[29] Monaco boasts the world's highest GDP nominal per capita at $172,676, and GDP PPP per capita at $186,175.[30][31] Monaco also has the world's highest life expectancy at almost 90 years,[32] and the lowest unemployment rate at 0%,[33] with over 48,000 workers who commute from France and Italy each day.[34][12] For the third year in a row, Monaco in 2011 had the world's most expensive real estate market, at $56,300 per square metre.[35] According to the CIA World Factbook, Monaco has the world's lowest poverty rate,[28] and the highest millionaires and billionaires per capita in the world.[36]

History

Main article: History of Monaco

The Palace and a tower

Monaco's name comes from the 6th century BC nearby Phocaean Greek colony. Referred to the Ligurians as *Monoikos*, from the Greek "μόνοικος", "single house", from "μόνος" (*monos*) "alone, single"[37] + "οἶκος" (*oikos*) "house",[38] which bears the sense of a people either settled in a "single habitation" or of "living apart" from others. According to an ancient myth, Hercules passed through the Monaco area and turned away the previous gods. As a result, a temple was constructed there, the temple of Hercules Monoikos. Because the only temple of this area was the "House" of Hercules, the city was called Monoikos.[39][40]

The Cathedral of Monaco

Following a land grant from Emperor Henry VI in 1191, Monaco was re-founded in 1215 as a colony of Genoa. Monaco was first ruled by a member of the House of Grimaldi in 1297, when Francesco Grimaldi, known as "*Il Malizia*" (translated from Italian either as "The Malicious One" or "The Cunning One"), and his men captured the fortress protecting the Rock of Monaco while dressed as a Franciscan monk – a *Monaco* in Italian, although this is a coincidence as the area was already known by this name. Francesco, however, was evicted only a few years afterwards by the Genovese forces, and the struggle over "the Rock" continued for another century.

The *Place d'Armes* with modern buildings

Statue of François Grimaldi,

In 1419, the Grimaldis purchased Monaco from the crown of Aragon and became the official and undisputed rulers of "the Rock of Monaco", and in 1612 Honore II began to style himself "Prince" of Monaco. In the 1630s, Honore II sought French protection against the Spanish forces and was eventually, in 1642, received at the court of Louis XIII as "Duc et Pair Etranger". The princes of Monaco thus became vassals of the French kings[41] while at the same time remaining sovereign princes. As successive princes and their families spent most of their lives in Paris, and

through marriages with French nobilities, the House of Grimaldi, though Italian in origin, became thoroughly French in character. The principality continued its existence as a protectorate of France until the French Revolution.

"*il Malizia*" ("the Cunning"), disguised as a monk with a sword under the cloak of his habit in front of the Prince's Palace of Monaco.

In 1793, Revolutionary forces captured Monaco and it remained under direct French control until 1814, when the Bourbons returned to the throne. The principality was re-established that year, only to be designated a protectorate of the Kingdom of Sardinia by the Congress of Vienna in 1815. Monaco remained in this position until 1860 when, by the Treaty of Turin, the Sardinian forces pulled out of the principality and the surrounding county of Nice (as well as Savoy) was ceded to France. Monaco became a French protectorate once again. Prior to this time there was unrest in Menton and Roquebrune where the townspeople had become weary of heavy taxation by the Grimaldis. They declared their independence, hoping for annexation by Sardinia. France protested. The unrest continued until Charles III gave up his claim to the two mainland towns (some 95% of the principality) that the Grimaldis had ruled for over 500 years. These were ceded to France in return for 4,100,000 francs. The transfer and Monaco's sovereignty was recognised by the Franco-Monegasque Treaty of 1861. In 1869, the principality stopped collecting income tax from its residents - an indulgence the Grimaldis could afford to entertain thanks solely to the extraordinary success of the casino. This made Monaco not only a playground for the rich, but a favored place for them to live.

20th century

Until the Monegasque Revolution of 1910 forced the adoption of the 1911 constitution, the princes of Monaco were absolute rulers. The long overdue constitution, however, barely reduced the autocratic rule of the Grimaldis and in any case Albert I soon suspended it. In July 1918, the Franco-Monegasque Treaty was signed, providing for limited French protection over Monaco. The treaty, endorsed in 1919 by the Treaty of Versailles, established that Monegasque international policy would be aligned with French political, military, and economic interests, and resolved the Monaco Succession Crisis.

In 1943, the Italian army invaded and occupied Monaco, setting up a Fascist administration. Shortly thereafter, following the collapse of Mussolini, the German Wehrmacht occupied Monaco and the Nazi deportation of the Jewish population began. René Blum (Paris, 13 March 1878 – Auschwitz, 30 April 1943), the prominent French Jew who founded the Ballet de l'Opera in Monte Carlo, was arrested in his Paris home and held in the Drancy deportation camp outside Paris, whence he was then transported to the Auschwitz concentration camp, where he was killed.[42] Blum's colleague Raoul Gunsbourg, the director of the Opéra de Monte-Carlo, helped by the French Resistance, escaped arrest and fled to Switzerland.

Rainier III, who ruled until 2005, succeeded to the throne following the death of his grandfather, Prince Louis II, in 1949. On 19 April 1956, Prince Rainier married the American actress Grace Kelly; the event was widely televised and covered in the popular press, focusing the world's attention on the tiny principality.

A 1962 amendment to the constitution abolished capital punishment, provided for women's suffrage, and established a Supreme Court of Monaco to guarantee fundamental liberties. In 1993, the Principality of Monaco became a member of the United Nations, with full voting rights. In 2002, a new treaty between France and Monaco specified that, should there be no heirs to carry on the Grimaldi dynasty, the principality would still remain an independent nation rather than revert to France. Monaco's military defence, however, is still the responsibility of France.

On 31 March 2005, Prince Rainier III, too ill to exercise his duties, relinquished them to his only son and heir, Prince Albert Alexandre Louis. Prince Rainier died on 6 April 2005, after a reign of 56 years, and his son by Princess Grace succeeded him as Albert II, Sovereign Prince of Monaco.

Following a period of official mourning, Prince Albert II formally assumed the princely crown on 12 July 2005, in a celebration that began with a solemn Mass at Saint Nicholas Cathedral, where his father had been buried three months earlier. His accession to the Monegasque throne was a two-step event, with a further ceremony, drawing heads of state for an elaborate *levée*, held on 19 November 2005 at the historic Prince's Palace in Monaco-Ville.

Albert II, the Prince of Monaco

Law and government

Main article: Politics of Monaco

Monaco has been governed under a constitutional monarchy since 1911, with the Sovereign Prince of Monaco as monarch. The executive branch consists of a Minister of State (the head of government), who presides over a five-member Council of Government. Until 2002, the Minister of State was a French citizen appointed by the prince from among candidates proposed by the French government; since a constitutional amendment in 2002, the Minister of State can be French or Monegasque. However, Prince Albert II appointed, on 3 March 2010, the Frenchman Michel Roger as Minister of State.

Under the 1962 constitution, the prince shares his power with the unicameral National Council (parliament). The twenty-five members of this legislative body are elected from lists by universal suffrage for five-year terms. The principality's local affairs are directed by the Communal Council, which consists of fifteen elected members and is presided over by the mayor.

Economy

Fontvieille and its new harbour

Main article: Economy of Monaco

One of Monaco's main sources of income is tourism. Each year many are attracted to its casino and pleasant climate. Monaco's own citizens are not allowed to gamble in the casino.[43] In 2001, a major new construction project extended the pier used by cruise ships in the main harbour. The principality has successfully sought to diversify into services and small, high-value-added, non-polluting industries, such as cosmetics and biothermics.

The state retains monopolies in numerous sectors, including tobacco and the postal service. The telephone network (Monaco Telecom) used to be fully owned by the state; it now owns only 45%, while the remaining 55% is owned by both Cable & Wireless Communications (49%) and Compagnie Monégasque de Banque (6%). It is still, however, a monopoly. Living standards are high, roughly comparable to those in prosperous French metropolitan areas.[*citation needed*]

Monaco is not a member of the European Union. However, it is very closely linked via a customs union with France, and as such, its currency is the same as that of France, the euro. Before 2002, Monaco minted its own coins, the Monegasque franc. Monaco has acquired the right to mint euro coins with Monegasque designs on its national side.

Gambling industry

The plan for casino gambling was mooted during the reign of Florestan I in 1846. Under Louis-Philippe's petite-bourgeois regime, however, a dignitary such as a Prince of Monaco was not allowed to operate a gambling house. All this changed in the dissolute Second French Empire under Napoleon III. The House of Grimaldi was in dire need to generate cash. Menton and Roquebrune, which had been main source of income for the Grimaldis for centuries, now accustomed to much improved standard of living and lenient taxation thanks to Sardinian intervention, clamoured for financial and political concession, even for separation. The Grimaldis hoped the newly legal industry would help alleviate the difficulties they faced, above all the crushing debt the family had incurred, but Monaco's first casino would not be ready to operate until after Charles III assumed the throne in 1856.[43]

The grantee of the princely concession (license) was unable to attract enough business to sustain the operation and, after relocating the casino several times, sold the concession to French casino magnates François and Louis Blanc for 1.7 million francs. The Blancs had already set up a highly successful casino (in fact the biggest in Europe) in Bad-Homburg in the Grand Duchy of Hesse-Homburg, a small German principality comparable to Monaco, and quickly petitioned Charles III to rename a depressed seaside area known as "Les Spelegures (Den of Thieves)". "Monte Carlo (Mount Charles)." They then constructed their casino in the newly dubbed "Monte Carlo" and cleared out the area's less-than-savory elements to make the neighborhood surrounding the establishment more conducive to tourism.

The Blancs opened Le Grand Casino de Monte Carlo in 1858, and the casino benefited from the tourist traffic the newly built French railway system created. Due to the combination of the casino and the railroads, Monaco finally recovered from the previous half century of economic slump, and the principality's success attracted other businesses. In the years following the casino's opening Monaco founded its Oceanographic Museum and the Monte Carlo Opera House, 46 hotels sprang up and the number of jewellers operating in Monaco increased by nearly 500 percent. By 1869, the casino was making such a vast sum of money that the principality could afford not to collect tax from the Monegasques; a master stroke that was to attract affluent residents from all over Europe.

Today, Société des bains de mer de Monaco which owns Le Grand Casino still operates in the original building the Blancs constructed and has been joined by several other casinos, including Le Casino Café de Paris, the Monte Carlo Bay Casino, the Monte Carlo Sporting Club & Casino (Summer Casino) and the Sun Casino. The most recent addition to the list—the first casino to open in Monte Carlo in 75 years—is the Monte Carlo Bay Casino, which sits on 4 hectares of the Mediterranean Garden and, among other things, offers 145 slot machines, all equipped with "Ticket-In, Ticket-Out" (TITO); it is the first Mediterranean casino to use this technology.[44]

Tax haven

Monaco levies no income tax on individuals. The absence of a personal income tax in the principality has attracted to it a considerable number of wealthy "tax refugee" residents from European countries who derive the majority of their income from activity outside Monaco; celebrities such as Formula One drivers attract most of the attention, but the vast majority of them are less well-known business people.[*citation needed*]. This applies to all residents of Monaco of any nationality except French citizens whose residency started after 1957. These French citizens still must pay French income tax.

In 1998, the Organisation for Economic Co-operation and Development (OECD) issued a first report on the consequences of the tax havens' financial systems. Monaco did not appear in the list of these territories until 2004, when OECD became indignant regarding the Monegasque situation and denounced it in its last report, as well as Andorra, Liechtenstein, Liberia and the Marshall Islands, underlining its lack of co-operation as regards financial information disclosure and availability.[45][46]

In 2000, a report by the French parliamentarians, Arnaud Montebourg and Vincent Peillon, alleged that Monaco

had lax policies with respect to money laundering, including within its famed casino, and that the government of Monaco had been placing political pressure on the judiciary, so that alleged crimes were not being properly investigated.[47]

Monte Carlo Casino

In 2000, the Financial Action Task Force on Money Laundering (FATF) stated: "The anti-money laundering system in Monaco is comprehensive. However, difficulties have been encountered with Monaco by countries in international investigations on serious crimes that appear to be linked also with tax matters. In addition, the FIU of Monaco (SICCFIN) suffers a great lack of adequate resources. The authorities of Monaco have stated that they will provide additional resources to SICCFIN."[48] The Principality is no longer blamed in the 2005 FATF report, as well as all other territories.[49][50] However, since 2003, the International Monetary Fund (IMF) has identified Monaco, along with 36 other territories, as a tax haven.[51]

The Council of Europe also decided to issue reports naming tax havens. Twenty-two territories, including Monaco, were thus evaluated between 1998 and 2000 on a first round. Monaco is the only territory that refuses to perform the second round, initially forecast between 2001 and 2003, whereas the 21 other territories are implementing the third and last round, planned between 2005 and 2007.[52]

However, Monaco has high social insurance taxes payable by both employer and employee. The employer's contribution is between 28%–40% (averaging 35%) of gross salary including benefits and the employee pays a further 10%–14% (averaging 13%).[53]

Numismatics

Main articles: Monegasque euro coins and Euro gold and silver commemorative coins (Monaco)

2002 Monegasque commemorative coin

In Monaco, the euro was introduced in 2002, having been preceded by the Monegasque franc.[54] In preparation for this date, the minting of the new euro coins started as early as 2001. This is why the first euro coins from Monaco have the year 2001 on them, instead of 2002, like other countries of the Eurozone.[55][56] Three different designs were selected for the Monegasque coins.[57] However, In 2006, the design was changed after the death of ruling Prince Rainier to have the effigy of Prince Albert.[58][59]

Monaco also has a rich and valuable collection of collectors' coins, with face value ranging from €5 to €100.[60] These coins are a legacy of an old national practice of minting silver and gold commemorative coins.[61][62] Unlike normal issues, these coins are not legal tender in all the Eurozone. For instance, a Monegasque commemorative coin cannot be used in any other country. The same practice concerning commemorative coins is exercised with all eurozone countries. Commemorative coins are legal tender only in their country of issue, unlike normal circulation coins, which are accepted in all euro-zone countries.

Geography

Main article: Geography of Monaco

Astronaut View of Monaco

Monaco is a sovereign city state, with 5 *Quartiers*, 10 *Wards*,[63] located on the French Riviera in Western Europe.[64] Bordered by France on three sides, with one side bordering the Mediterranean Sea; its center is about 16 km (9.9 mi) from Italy, and is only 15 km (9.3 mi) south east of Nice, France.[21] Its area is 1.98 km^2 (0.76 sq mi) or 198 ha (490 acres), with a population of 35,986, making Monaco the second smallest and the most densely populated country in the world, as of 2012.[65] Having a land border of only 4.4 km (2.7 mi), a coastline of 4.1 km (2.5 mi), a maritime claim that extends 22.2 kilometres (13.8 mi), and a width that varies between 1.7 km (1.1 mi) and 349 meters (382 yards), Monaco is unique.[9][10] The highest point in the country is a narrow pathway named Chemin des Révoires on the slopes of Mont Agel, in the Les Révoires district, it is 161 meters (528 feet) above sea level.[11] Monaco's most populated *Quartier* is Monte Carlo, and the most populated *Ward* is Larvotto/Bas Moulins.[12] After a recent expansion of Port Hercules,[13] Monaco's total area is 2.05 km^2 (0.79 sq mi),[12] with new plans to extend the district of Fontvieille, with land reclaimed from the Mediterranean Sea.[14][15] There are two ports in Monaco, Hercules and Fontvieille, as well the neighboring French port of Cap d'Ail.[66] Monaco's only natural resource is fishing,[67] with almost the entirely country being an urban area, Monaco lacks any sort of commercial agriculture industry.[68]

Administrative divisions

Main article: Administrative divisions of Monaco

Overview

Wards of Monaco

Monaco is the second smallest country (by size) in the world; only Vatican City is smaller. Monaco is also the world's second smallest monarchy, and is the most densely populated country in the world. The state consists of only one municipality (*commune*). There is no geographical distinction between the State and City of Monaco, although responsibilities of the government (state-level) and of the municipality (city-level) are different. According to the constitution of 1911, the principality was subdivided into three municipalities:

- Monaco (Monaco-Ville), the old city on a rocky promontory extending into the Mediterranean, known as the Rock of Monaco, or simply Le Rocher (the Rock), where the palace is located;
- Monte Carlo, the principal residential and resort area with the Monte Carlo Casino in the east and northeast;
- La Condamine, the southwestern section including the port area, Port Hercule.

The municipalities were merged into one in 1917, after accusations that the government was acting according to the motto "divide and conquer," and they were accorded the status of wards (*quartiers*) thereafter.

- Fontvieille was added as fourth ward, a newly constructed area reclaimed from the sea (in the 1970s) also a new district inside of Fontvieille is planned;
- Moneghetti became the fifth ward, created from a part of La Condamine;

- Larvotto became the sixth ward, created from a part of Monte Carlo;
- La Rousse/Saint Roman (including Le Ténao) became the seventh ward, also created from a part of Monte Carlo.

Subsequently, three additional wards were created:

- Saint Michel, from a part of Monte Carlo;
- La Colle, from a part of La Condamine;
- Les Révoires, from a part of La Condamine.

An additional ward was planned by new land reclamation to be settled beginning in 2014; but Prince Albert II announced in his 2009 New Year Speech that he had ended plans due to the economic climate.

Directly ahead is La Condamine, to the right with the smaller harbour is Fontvieille and to the left with the high-rise buildings is Monte Carlo

Traditional quarters and modern geographic areas

The traditional four quarters of Monaco are: Monaco-Ville, La Condamine, Monte Carlo and Fontvieille. These quarters and Moneghetti are the five "modern geographic areas", defined by the Monaco Department of Tourism which is situated in Monaco-Ville.[69]

Wards

Currently the principality is subdivided into ten wards (with their official numbers; Le Portier, the proposed ward, was anticipated as number 11):

No.	Ward	Area (km²)	Population (Census of 2008)	Density km²	City Blocks *(îlots)*	Remarks
Former municipality of Monaco						
05	Monaco-Ville	0.19	1,034	5597	19	Old City with palace
Former municipality of Monte Carlo						
01	Monte Carlo/Spélugues (*Bd. Des Moulins-Av. de la Madone*)	0.30	3,834	10779	20	the casino and resort area
02	La Rousse/Saint Roman (*Annonciade-Château Périgord*)	0.13	3,223	30633	15	in the northeast, incl. Le Ténao
03	Larvotto/Bas Moulins (*Larvotto-Bd Psse Grace*)	0.34	5,443	16570	15	eastern beach area
10	Saint Michel (*Psse Charlotte-Park Palace*)	0.14	3,907	26768	24	central residential area
Former municipality of La Condamine						
04	La Condamine	0.27	3,947	16213	27	port area in the northwest
07	La Colle (*Plati-Pasteur-Bd Charles III*)	0.11	2,829	15005	15	on the western border with Cap d'Ail
08	Les Révoires (*Hector Otto-Honoré Labande*)	0.08	2,545	33203	11	containing the Jardin Exotique de Monaco

09	Moneghetti/ Bd de Belgique (*Bd Rainier III-Bd de Belgique*)	0.10	3,003	28051	18	
New land reclaimed from the sea						
06	Fontvieille	0.35	3,901	10156	9	started 1971
11	Le Portier	0.12[(1)]	–	-	-	plans put on hold by Prince Albert II in 2009
	Monaco	2.01	35,352	16217	173	

[(1)] Area not included in total, as it is only proposed

Note: for statistical purposes, the wards of Monaco are further subdivided into 173 city blocks (îlots), which are comparable to the census blocks in the United States.

Climate

See also: Climate of Monaco

Monaco has a warm-summer Mediterranean climate (Köppen climate classification: Csa), which is influenced by the oceanic climate and the humid subtropical climate.

As a result, it has warm, dry summers and mild, rainy winters. Cool and rainy interludes can interrupt the dry summer season, the average length of which is also shorter. Summer afternoons are infrequently hot (indeed, temperatures > 30 °C /86 °F are rare) as the atmosphere is tempered by constant sea breezes. On the other hand, the nights are very mild, this being due to the fairly high temperature of the sea in summer. Generally, temperatures do not drop below 20 °C in this season. In winter, frosts and snowfalls are extremely rare, generally occurring once or twice every ten years.

Sport and entertainment

Formula One

Since 1955, the Monaco Grand Prix has been held annually in the streets of Monaco. It is widely considered to be one of the most prestigious automobile races in the world. The erection of the *Circuit de Monaco* takes six weeks

to complete, and the removal after the race another three weeks. The circuit has many elevation changes and tight corners, along with a tunnel. This together with being incredibly narrow and tight makes it perhaps the most demanding Formula One track. Only two drivers have ever crashed into the harbour, the most famous being Alberto Ascari in the 1955 Monaco Grand Prix, just four days before losing his life at Monza. The other was Paul Hawkins, during the 1965 Monaco Grand Prix.

Formation lap for the 1996 Monaco Grand Prix

Monte Carlo Rally

The Monte Carlo Rally has been held since 1911, having originally been held at the behest of Prince Albert I and is, like the principality's Grand Prix, organised by the *Automobile Club de Monaco*. It has long been considered to be one of the toughest and most prestigious events in rallying and from 1973 to 2008 was the opening round of the World Rally Championship. From 2009 until 2011, the rally served as the opening round of the Intercontinental Rally Challenge, having most recently been run on the 19–22 January 2011 in celebration of the event's centenary.

2012 will mark the return of the Monte Carlo Rally to the WRC calendar with the event taking place from the 20–22 January 2012.[71]

Football

Monaco hosts two major football teams in the principality; men's football club AS Monaco FC and women's football club OS Monaco. AS Monaco plays at the Stade Louis II and competes in the Ligue 2, the second division of French football. The club is historically one of the most successful clubs in France. However, it suffered relegation in the 2010–11 season. Because of the popular appeal of living in Monaco and the lack of income tax, many international stars have played for the club, such as Marcelo Gallardo, Jürgen Klinsmann, Oliver Bierhoff, George Weah, John Collins, Fernando Morientes, Thierry Henry, Fabien Barthez, Rafael Márquez, Javier Saviola, Akis Zikos, David Trezeguet, John Arne Riise, Patrice Evra, Shabani Nonda, Emmanuel Adebayor, Eiður Guðjohnsen, Jan Koller, Victor Ikpeba, Park Chu-Young and Mahamadou Diarra.

The club reached the 2004 UEFA Champions League Final, led by the likes of Dado Pršo, Fernando Morientes, Jérôme Rothen, Akis Zikos, and Ludovic Giuly, losing 3–0 to Portuguese team F.C. Porto. The Stade Louis II also plays host to the annual UEFA Super Cup, which is played between the winners of the UEFA Champions League and the UEFA Europa League. The women's team, OS Monaco, competes in the women's French football league system. The club currently plays in the local regional league deep down in the league system, however once played in the Division 1 Féminine in the 1994–95 season, but were quickly relegated. Current French women's international goalkeeper Sarah Bouhaddi had a short stint at the club before going to the Clairefontaine academy.

The Monaco national football team represents the nation in association football and is controlled by the Monegasque Football Federation, the governing body for football in Monaco. However, Monaco is the only sovereign state in Europe that is not a member of UEFA, and so does not take part in any UEFA European Football Championship or FIFA World Cup competitions. The team play their home matches in the Stade Louis II.

Rugby

Main article: Rugby union in Monaco

Monaco's national rugby team, as of March 2010, is 90th in the International Rugby Board rankings.

Other sports

The Monte-Carlo Masters is currently held annually in neighbouring Roquebrune-Cap-Martin, France, as a professional tournament for men as part of tennis' ATP Masters Series. The tournament has been held since 1897. Golf's Monte Carlo Open was also held at the Monte Carlo Golf Club at Mont Agel in France between 1984 and 1992. Monaco has also competed in the Olympic Games, although, as of 2008, no athlete from Monaco has ever won an Olympic medal.

View of the Port of Hercules, La Condamine, Monaco

In 2009, the *Tour de France*, the world's premier bicycle race, started from Monaco with a 15 km closed-circuit individual time trial starting and finishing there on the first day (4 July) and the 182 km second leg starting there on the following day and ending in Brignoles, France.

Monaco also stage part of the Global Champions Tour (International Show-jumping). Acknowledged as the most glamorous of the series, Monaco will be hosting the world's most celebrated riders, including Monaco's own Charlotte Casiraghi, in a setting facing out over the world's most beautiful yachts, and framed by the Port Hercule and Prince's palace. In 2009, the Monaco stage of the Global Champions tour took place between 25 – 27 June.

View of Monte Carlo

The Monaco Marathon is the only marathon in the world to pass through three separate countries, those of Monaco, France and Italy. The 2010 event took place on 21 March. Runners complete the race by returning to the Stade Louis II.

The Monaco Ironman 70.3 triathlon race is an annual event with over 1000 athletes competing and attracts top professional athletes from around the world. The race includes a 1.9 km swim, 90 km bike ride and 21.1 km run.

Since 1993, the headquarters of the International Association of Athletics Federations, the world governing body of athletics, has been located in Monaco. An IAAF Diamond League meet is annually held at Stade Louis II.

Education

Primary and secondary schools

Monaco has ten state-operated schools, including: seven nursery and primary schools; one secondary school, *Collège Charles III*;[72] one *lycée* that provides general and technological training, *Lycée Albert 1er*;[73] and one lycée that provides vocational and hotel training, *Lycée technique et hôtelier de Monte-Carlo*.[74] There are also two grant-aided denominational private schools, including *Institution François d'Assise Nicolas Barré* and *Ecole des Sœurs Dominicaines*, and one international school, the International School of Monaco.

Colleges and universities

There is one university located in Monaco:

- International University of Monaco

Demographics

Main article: Demographics of Monaco

Monaco's population is unusual in that the native Monegasques are a minority in their own country comprising 21.6% of the population. The largest group are French nationals at 28.4%, followed by Monegasque (21.6%), Italian (18.7%), British (7.5%), Belgian (2.8%), German (2.5%), Swiss (2.5%) and US nationals (1.2%).[75]

Sunset in Monte Carlo.

Citizens of Monaco are called *Monacans*, while *Monegasque* is the proper term for describing someone who was born in Monaco.

Language

Main article: Languages of Monaco

The official language of Monaco is French. English is used by American and British residents. The traditional national language is Monégasque, now spoken by only a minority of residents. It resembles Ligurian, which is spoken in Genoa. In the old part of Monaco, street signs are printed in both French and Monégasque. Italian is also spoken by the principality's sizable community from Italy.

Religion

Roman Catholic

Main article: Roman Catholicism in Monaco

The official religion is Roman Catholicism, with freedom of other religions guaranteed by the constitution. There are five Roman Catholic parish churches in Monaco and one cathedral, which is the seat of the archbishop of Monaco. The diocese, which has existed since the mid-nineteenth century, was raised to an archbishopric in 1981 as the Archdiocese of Monaco. The patron saint is Saint Devota.

Saint Nicholas Cathedral, Monaco

Anglican

There is one Anglican church (St. Paul's Church), located in the Avenue de Grande Bretagne in Monte Carlo. In 2007 this had a formal membership of 135 Anglicans resident in the principality, but was also serving a considerably larger number of Anglicans temporarily in the country, mostly as tourists. The church site also accommodates an English-language library of over 3,000 books.[76] The church is part of the Anglican Diocese of Gibraltar in Europe.

Jewish

The Association Culturelle Israélite de Monaco (founded 1948) is a converted house containing a synagogue, a community Hebrew school, and a kosher food shop, located in Monte Carlo. The community (approximately 1,500) mainly consists of retired Jews from Britain (40%) and North Africa. Two thirds of the Jewish population there are Sephardic, mainly from North Africa, while the other third is Ashkenazi.[77]

Security

See also: Law enforcement in Monaco and Military of Monaco

Palace guard in Monaco, just before the Changing of the Guard

The wider defence of the nation is provided by France. Monaco has no navy or air force, but on both a per-capita and per-area basis, Monaco has the largest police force (515 police officers for 35,000 people) and police presence in the world. Its police includes a specialist unit which operates patrol and surveillance boats.

There is also a small military force. This consists of a bodyguard unit for the Prince and the palace in Monaco-Ville called the Compagnie des Carabiniers du Prince (Prince's Company of Carabiniers), which is equipped with modern weapons such as M16 rifles and 9 mm pistols, and which together with the militarized, armed fire and civil defence Corps (Sapeurs-Pompiers) forms Monaco's total public forces. The Compagnie des Carabiniers du Prince was created by Prince Honoré IV in 1817 for the protection of the Principality and the Princely family. The company numbers exactly 116 officers and men; while the NCOs and soldiers are local, the officers have generally served in the French Army. In addition to their guard duties as described, ce the Carabiniers patrol the Principality's beaches and coastal waters.

Flag

Main article: Flag of Monaco

The flag of Monaco is one of the world's oldest national flag designs. The flag of Monaco is identical to the flag of Indonesia, except for the ratio of height to width.[78]

Transport

Main article: Transport in Monaco

Further information: Rail transport in Monaco

The Monaco-Monte Carlo station is served by the SNCF, the French national rail system. The Monte Carlo International Heliport provides helicopter service to the closest airport, Côte d'Azur Airport in Nice, France.

History of Monaco

From Wikipedia, the free encyclopedia

The early **history of Monaco** is primarily concerned with the protective and strategic value of the Rock of Monaco, the area's chief geological landmark, which served first as a shelter for ancient peoples and later as a fortress. Part of Liguria's history since the fall of the Roman Empire, from the 14th to the early 15th century the area was contested for primarily political reasons. Since that point, excepting a brief period of French occupation, it has remained steadily under the control of the House of Grimaldi.[2]

Map of the territory of the "Free cities of Mentone & Roccabruna" (light blue) and the territory of Monaco (orange) in 1848. Those territories were the Principality of Monaco from the Renaissance until that year.[1]

Coat of Arms of Monaco

Early history and Ligurian settlement

The Rock of Monaco served as a shelter for the area's early inhabitants from the end of the Paleolithic period, approximately 300,000 BC, evidence of which has been found in a cave in St. Judist's Gardens. According to the accounts of historian Diodorus Siculus and geographer Strabo, the area's first permanent settlers were the mountain-dwelling Ligures, who emigrated from their native city of Genoa, Italy. However, the ancient Ligurian language, which probably was Indo-European, is not directly connected to the Italian dialect spoken by the modern inhabitants of Liguria, nor to the modern Monegasque language.

History of Monaco

This article is part of **a series**

Rock of Monaco

Greek colonization and Herculean legend

The Phocaeans of Massalia founded the colony of *Monoikos*, named for its Ligurian inhabitants, in the 6th century B.C. in the area now known as Monaco. Monoikos was associated with Hercules, venerated in this location alone as *Hercules Monoecus* (i.e. the lone-dweller). According to the "travels of Hercules" theme, also documented by Diodorus Siculus and Strabo, both Greeks and native Ligurian people asserted that Hercules passed through the area.

House of Grimaldi
(List of rulers)

Franco-Monegasque Treaty

The modern port is still sometimes called the "Port of Hercules". The 1907 *Catholic Encyclopedia* wrote, "From ancient times until the nineteenth century the port of Monaco was among the most important of the French Mediterranean coast, but now it has lost all commercial significance."

Roman rule

After the Gallic Wars, *Monoecus*, which served as a stopping-point for Julius Caesar on his way to campaign in Greece, fell under Roman control as part of the Maritime Alps province (Gallia Transalpina).

The Roman poet Virgil called it "that castled cliff, Monoecus by the sea" (*Aeneid*, VI.830). The commentator Servius's use of the passage (in R. Maltby, *Lexicon of Ancient Latin Etymologies*, Leeds) asserts, under the entry *portus,* that the epithet was derived:

> *dictus autem Monoecus vel quod pulsis omnibus illic solus habitavit* ("either because Hercules drove off everyone else and lived there alone"), *vel quod in eius templo numquam aliquis deorum simul colitur* ("or because in his temple no other of the gods is worshipped at the same time").

No temple to Hercules has been found at Monaco (see also Lucan 1.405.), although the rocky ground and dense conurbation make future excavations unlikely.

The port is mentioned in Pliny the Elder's *Natural History* (III.v) and in Tacitus' *Histories* (III.42), when Valens was forced to put into the port (*Fabius Valens e sinu Pisano segnitia maris aut adversante vento portum Herculis Monoeci depellitur*).

Middle Ages

Monaco remained under Roman control until the collapse of the Western Roman Empire in 476. The city was then under the domain of Odoacer until his fall at the hands of the Ostrogoths in the late 5th century. Monaco was recaptured by the Romans during the reign of Justinian in the mid 6th century and was held until its capture by the Lombards in the 7th century. Monaco then passed hands between the Lombards and Franks. Though these raids left the area almost entirely depopulated, the Saracens were expelled in 975, and by the 11th century the area was again populated by Ligurians.

In 1191, Holy Roman Emperor Henry VI granted suzerainty over the area to the city of Genoa, the native home of the Ligurians. On June 10, 1215, a detachment of Genoese Ghibellines led by Fulco del Cassello began the construction of a fortress atop the Rock of Monaco. This date is often cited as the beginning of Monaco's modern history.

As the Ghibellines intended their fortress to be a strategic military stronghold and center of control for the area, they set about creating a settlement around the base of the Rock to support the garrison; in an attempt to lure residents from Genoa and the surrounding cities, they offered land grants and tax exemption to new settlers.

Rise of the Grimaldis

The Grimaldis, descended from Otto Canella and taking their name from his son Grimaldo, were an ancient and prominent Guelphic Genoese family.

Members of this family, in the course of the civil strife in Genoa between the Guelphs and Ghibellines, took refuge in Monaco, accompanied by various other Guelphic families, most notably the Fieschis.

Memorial of François Grimaldi guised as a monk with a sword under his frock

Francesco Grimaldi seized the Rock of Monaco in 1297, starting the Grimaldi dynasty, under the sovereignty of the Republic of Genoa. The Grimaldis acquired Menton in 1346 and Roquebrune in 1355, enlarging their possessions. In 1338 Monegasque ships under the command of Carlo Grimaldi participated, along with those of France and Genoa, in the English Channel naval campaign. Plunder from the sack of Southampton was brought back to Monaco, contributing to the principality's prosperity.[3]

Honoré II, Prince of Monaco secured recognition of his independent sovereignty from Spain in 1633, and then from Louis XIII of France by the Treaty of Péronne (1641). Since then the area has remained under the control of the Grimaldi family to the present day, except when under French control during the French revolution from 1793 to May 17, 1814.

Protectorate of the Kingdom of Sardinia

The principality was re-established in 1814, only to be designated a protectorate of the Kingdom of Sardinia by the Congress of Vienna in 1815. Monaco remained in this position until 1860, when by the Treaty of Turin, Sardinia ceded to France the surrounding county of Nice (as well as Savoy).

With the protectorate, that lasted nearly half a century, Italian was the official language of Monaco. The Monégasque dialect is closer to Italian than French, but influenced by both.

During this time there was unrest in the towns of Menton and Roquebrune, which declared independence, hoping for annexation by Sardinia and participation in the Italian Risorgimento. The unrest continued until the ruling prince gave up his claim to the two towns (some 95% of the country), and they were ceded to France in return for four million francs. This transfer and Monaco's sovereignty was recognised by the Franco-Monegasque Treaty of 1861.

Sovereignty

Further information: France–Monaco relations

Designated as a protectorate of the Kingdom of Sardinia in 1815 by the Congress of Vienna after Napoleon's defeat, Monaco's sovereignty was confirmed by the Franco-Monegasque Treaty of 1861. France accepted the existence of the Principality of Monaco, but annexed 95% of its former territory (the areas of Menton and Roquebrune). Monaco's military defense since then has been the responsibility of France.

The Prince of Monaco was an absolute ruler until the Monegasque Revolution of 1910 forced him to proclaim a constitution in 1911.

The famous Casino of Monte Carlo opened in 1863, organized by the *Societé des Bains de Mer* ("Sea-bathing Society"), which also ran the "Hotel de Paris"; taxes paid by the S.B.M. have been plowed into Monaco's infrastructure. Economic development was spurred in the late 19th century with a railway link to France. In July 1918, a treaty was signed providing for limited French protection over Monaco. The treaty, written into the Treaty of Versailles, established that Monegasque policy would be aligned with French political, military, and economic interests. One of the motivations for the treaty was the upcoming Monaco Succession Crisis of 1918.

An enlargeable map of the current Principality of Monaco

While Prince Louis II's sympathies were strongly pro-French, he tried to keep Monaco neutral during World War II but supported the Vichy French government of his old army colleague, Marshall Philippe Pétain.

Nonetheless, his tiny principality was tormented by domestic conflict partly as a result of Louis' indecisiveness, and also because the majority of the population was of Italian descent; many of them supported the fascist regime of Italy's Benito Mussolini.

In November 1942, the Italian Army invaded and occupied Monaco, setting up a fascist puppet government. Soon after in September 1943, following Mussolini's fall in Italy, the German Army occupied Monaco and began the deportation of the Jewish population.

Among them was René Blum, founder of the Opera, who died in a Nazi concentration camp. Under Prince Louis' secret orders, the Monaco police, often at great risk to themselves, warned in advance those people whom the Gestapo planned to arrest.[*citation needed*] The country was liberated as German troops retreated.

The current ruler, Prince Albert II, succeeded his father Prince Rainier III in 2005. Prince Rainier, in turn, had acceded to the throne following the death of his grandfather, Prince Louis II, in 1949.

The revised Constitution of Monaco, proclaimed in 1962, abolished capital punishment, provided for female suffrage, established a Supreme Court to guarantee fundamental liberties and made it difficult for a French national to transfer his or her residence there.

In 1993, Monaco became an official member of the United Nations with full voting rights. In 2002, a new treaty between France and Monaco clarifies that if there are no heirs to carry on the dynasty, the Principality will remain an independent nation, rather than be annexed by France. Monaco's military defense, however, is still the responsibility of France.

The principality's mild climate, attractive scenery, and gambling facilities have made Monaco world famous as a tourism and recreation centre.

Powers of the Prince

Monaco, along with Liechtenstein and Vatican City, is one of only three states in Europe where the monarch still plays an active role in day-to-day politics.

The Prince or Princess exercises his or her authority in accordance with the Constitution and laws. He or she represents the Principality in all foreign relations and any revision, either total or partial, of the Constitution, must be jointly agreed to by the Prince and the National Council.

Legislative power is divided between the Prince who initiates the laws, and the National Council which votes on them. Executive power is retained by the Prince. The Minister of State and the Government Council are directly responsible to the Prince for the administration of the Principality.

Judiciary powers also belong to the Prince. The present Constitution states that the Prince has full authority in the courts and tribunals which render justice in his or her name.

Albert II also grants and other ranks of distinction (see Awards and decorations of Monaco)

Titles and styles

Like all Monegasque nobility, the Prince is styled *His Serene Highness* (or, in the case of a ruling Princess, *Her Serene Highness*), abbreviated to S.A.S. (*Son Altesse Serenissime*). Though they are rarely used, the Prince also bears a great many other hereditary titles, some of which are occasionally bestowed on his relatives or their

spouses. Some of these titles have merged with the Crown of Monaco as a result of the Grimaldi family's acquisition of various duchies, counties, baronies, and other fiefs, though they are almost all extinct and carry no administrative power. Most were granted by the Kingdom of France under Salic law, and can only pass in the male line, and therefore ended on the death of Albert's grandfather Louis II in 1949.

The current Prince's complete titles and styles are:

His Serene Highness Albert II, Sovereign Prince of Monaco (princely title)

- Duke of Valentinois, only a Monegasque title (formerly also a French title)
- Marquis of Baux, only a Monegasque title
- Count of Carladès, only a Monegasque title
- Count of Polignac, a French title
- Baron of Calvinet, only a Monegasque title
- Baron of Buis, only a Monegasque title
- Lord of Saint-Rémy, only a Monegasque title
- Sire of Matignon, only a Monegasque title
- Count of Torigni, only a Monegasque title
- Baron of Saint-Lô, only a Monegasque title
- Baron of La Luthumière, only a Monegasque title
- Baron of Hambye, only a Monegasque title
- Duke of Estouteville, only a Monegasque title
- Duke of Mazarin, only a Monegasque title
- Duke of Mayenne, only a Monegasque title
- Prince of Château-Porcien, only a Monegasque title
- Count of Ferrette, only a Monegasque title
- Count of Belfort, only a Monegasque title
- Count of Thann, only a Monegasque title
- Count of Rosemont, only a Monegasque title
- Baron of Altkirch, only a Monegasque title
- Lord of Isenheim, only a Monegasque title
- Marquis of Chilly, only a Monegasque title
- Count of Longjumeau, only a Monegasque title
- Baron of Massy, only a Monegasque title
- Marquis of Guiscard, only a Monegasque title

Non-reigning princes(ses) of Monaco

Prince(ss) of Monaco is a title also given to certain members of the princely family of Monaco. It is not to be confused with the ruling Prince's title "Sovereign Prince of Monaco", from which the first word is commonly dropped, or with the title of the heir apparent or presumptive to the throne, Hereditary Prince of Monaco.

Albert II, Prince of Monaco

From Wikipedia, the free encyclopedia

Albert II, Sovereign Prince of Monaco[1][2] (**Albert Alexandre Louis Pierre Grimaldi**; born 14 March 1958), is the head of the House of Grimaldi and the ruler of the Principality of Monaco. He is the son of Rainier III, Prince of Monaco, and the American actress Grace Kelly. His sisters are Hereditary Princess Caroline and Princess Stéphanie of Monaco.

In July 2011, Prince Albert married Charlene Lynette Wittstock, now Princess Charlene.

Prince Albert is one of the wealthiest Royals in the World, valued at more than $1 billion. This includes vast amounts of land both in Monaco and France, and which does not include the Prince's Palace but does include Société des bains de mer de Monaco. His wealth does not include that of other members of the House of Grimaldi, which are valued altogether at over $2.5 billion (as of 2010).

Monarchical styles of
Albert II, Prince of Monaco

Reference style	His Serene Highness
Spoken style	Your Serene Highness
Alternative style	Sir

Born in the Prince's Palace of Monaco, Monaco, Albert's godmother was Queen Victoria Eugenia of Spain. Albert attended the Albert I High School, graduating with distinction in 1976. He was a camper and later a counselor for six summers at Camp Tecumseh on Lake Winnipesaukee, Moultonborough, New Hampshire in the 1970s. He spent a year training in various princely duties, and enrolled at Amherst College in Massachusetts in 1977 as Albert Grimaldi, studying political science, economics, music, and English literature, and also joined Chi Psi fraternity. He speaks French, English, German and Italian.

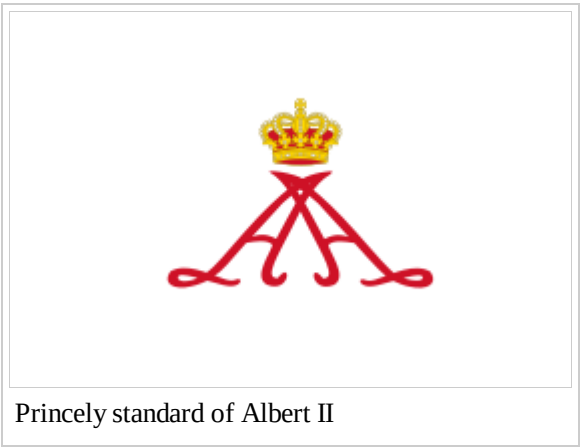
He spent the summer of 1979 touring Europe and the Middle East with the Amherst Glee Club and graduated in 1981 with a Bachelor of Arts degree in political science. Albert also undertook an exchange program with the University of Bristol, at the Alfred Marshall School of Economics and Management in 1979. Albert was an enthusiastic sportsman, participating in cross country, javelin throwing, handball, judo, swimming, tennis, rowing, sailing, skiing, squash and fencing. He is a patron of Monaco's football teams. He competed in the bobsled at every Winter Olympics from Calgary to Salt Lake City. He has been a member of the International Olympic Committee since 1985. (His maternal grandfather John B. Kelly, Sr., and maternal uncle John B. Kelly, Jr., were both Olympic medal winners in rowing and were actively involved in the Olympic movement.) The press reported the prince refused any special treatment during his Olympic stints, and lived in the same bare-bones quarters as all the other athletes.[3]

On 25 October 2002, Albert visited Miami, Florida for a World Olympians Association fund-raiser at the Biltmore Hotel in Coral Gables. The group's mission was to have the 100,000 Olympians get involved with their communities and talk to young athletes about dedication and training.

Regency

On 7 March 2005, Albert's father Rainier III, Prince of Monaco was admitted to a hospital in the principality; he was later moved to an intensive care ward. The Prince was being treated for breathing, kidney, and heart trouble. On 31 March 2005, the Palace of Monaco announced that Hereditary Prince Albert would take over the duties of his father as Regent since Rainier was no longer able to exercise his sovereign functions. This decision was reached by the Crown Council of Monaco, a body made up of notable local figures with residual powers to make judgments about certain constitutional matters. The 47-year-old prince spent his first day as regent of Monaco caring for his critically ill 81-year-old father, who was Europe's longest-serving monarch and the world's third longest-serving monarch.

Accession



On 6 April 2005, Prince Rainier III died and Hereditary Prince Albert became Albert II, Sovereign Prince of Monaco.

The first part of Prince Albert II's enthronement as ruler of the Principality was on 12 July 2005, after the end of the three-month mourning period for his father. A morning Mass at Saint Nicholas Cathedral presided over by the Archbishop of Monaco, the Most Reverend Bernard Barsi, formally marked the beginning of his reign. Afterward Albert II returned to the princely palace to host a garden party for 7,000 Monégasques born in the principality. In the courtyard, the Prince was presented with two keys of the city as a symbol of his investiture. The evening ended with a spectacular fireworks display on the waterfront.

The second part of his investiture was on 19 November 2005. Albert was enthroned at Saint Nicholas Cathedral. His family was there in attendance, including his elder sister (and now his heir presumptive) Princess Caroline with her husband Ernst, Prince of Hanover and three of her four children, Andrea, Pierre and Charlotte; as well as his younger sister Princess Stéphanie, his paternal aunt Princess Antoinette, Baroness of Massy, his godson, Jean-Léonard Taubert-Natta de Massy, and his cousin Elisabeth-Anne de Massy. Royalty from 16 delegations were present for the festivities throughout the country. The evening ended with an opera performance in Monte Carlo.

Albert's reign

Albert continues the policy, initiated by previous rulers of the statelet, of using his position to draw the world's attention to the need to protect the (marine) environment. Just like his great-great-grandfather Albert I he traveled to Spitsbergen in July 2005. During this trip, he visited the glaciers "Lillihöök" and "Monaco".

Princely standard of Albert II

Prince Albert II also engaged in a Russian Arctic expedition, reaching the North Pole on Easter, 16 April 2006.[4] As a result, he is the first incumbent head of state to have reached the North Pole.

Prince Albert is the Vice-Chairman of the American charity founded in 1982, after his mother's death, the Princess Grace Foundation-USA, which supports, as Princess Grace did in her lifetime, emerging artists in theater, dance and film.

In 2006, Prince Albert created the Prince Albert II of Monaco Foundation which continues the Principality of Monaco's commitment by supporting sustainable and ethical projects around the world which focus on three main challenges: climate change and developing renewable energies; combating the loss of biodiversity; and water management (improving universal access to clean water) and fighting desertification. [1] (http://www.fpa2.com/home.html)

Prince Albert is also a Global Advisor to Orphans International.

Prince Albert II with U.S. President Barack Obama and First Lady Michelle Obama, 2009.

Economic activities

Prince Albert is one of the owners of Yoctocosmos and member of the World Economic Forum.[*citation needed*]

Personal life and relationships

Over the years, there was much discussion of the prince's continual bachelor status. Although he had received much press attention for dating well-known fashion models and actresses, his apparent disinclination to marry gave rise to rumors that he is homosexual. Prince Albert has consistently denied this suggestion, most notably in a 1994 interview published in the French magazine *Madame Figaro*. "At first it was amusing", he said, "but it becomes very irritating in the long term to hear people say that I am homosexual".[5] He has since confirmed that he is the father of two children, and in July 2011, Prince Albert married Charlene Lynette Wittstock, now Princess Charlene.

In October 2005, the German magazine *Bunte* reported that Prince Albert was dating Telma Ortiz Rocasolano, a sister-in-law of the Prince of Asturias. However, in November 2005, the Prince instructed his lawyer, Thierry Lacoste, to commence legal proceedings against the French newspaper *France Dimanche* for violation of privacy and false information regarding the story.

Children born out of wedlock

Jazmin Grace Grimaldi

In 1992, a California woman, Tamara Rotolo, filed a paternity suit against the prince, claiming that he was the father of her daughter, whom she named Jazmin Grace Grimaldi. Prince Albert was also listed as the father on the child's Riverside County, California, birth certificate,[6] and the child was legally surnamed Grimaldi. However, the case, which went to trial in 1993, eventually was dismissed by Superior Court Judge Graham Anderson Cribbs, who claimed that there was "insufficient contact between Albert and the state of California to justify hearing a suit there"[7] agreeing with an assertion by the prince's lawyer, Stanley Arkin, that the California court had no jurisdiction.

In court documents and legal depositions, Case#IND78459 in Riverside County Superior Court Family Law Division under Superior Court Judge Graham Anderson Cribbs, Prince Albert admitted that he had been with Tamara Rotolo, who was traveling with a friend, Barbara Welker (per her deposition filed with the court), in Monaco on "a couple of occasions" in July 1991. (The child had been born approximately nine months later, on 4 March 1992.) As reported by a local newspaper covering the case, "Arkin asserted that the Riverside County court had no jurisdiction in the case since the romantic encounter supposedly occurred in Monaco and Albert

has had no contacts with California that relate to the issues in the suit."[5]

On 31 May 2006, after DNA test results confirmed the child's parentage, Prince Albert admitted, in a statement from his lawyer, that he is Jazmin's father. He also extended an invitation for the girl to study and live in Monaco.

Alexandre Coste

In May 2005, Nicole Coste, a former Air France flight attendant from Togo, claimed that her youngest son, whom she calls Alexandre Coste, is Prince Albert's son, proven by DNA tests conducted by Swiss technicians working on orders from the Monegasque government. She further claimed the prince had signed a notarized certificate confirming paternity but that she had not received a copy of it. The French weekly *Paris Match* published a ten-page interview with Coste and included photographs of the prince holding and feeding the child. Coste also told *Paris Match* that she was living in the prince's Paris apartment and receiving an allowance from him while pretending to be the girlfriend of one of his friends in order to maintain privacy. She also said that the prince had last seen the boy in February 2005. A spokesman for Prince Albert had no comment, though upon news of Coste's claims, the prince's lawyer, Thierry Lacoste, announced that "A judicial strategy will be determined within the next few days."

In mid-May 2005, Lacoste announced that as a result of the international publicity over the revelations of the prince's son, Prince Albert is suing the *Daily Mail*, *Bunte*, and *Paris Match* for delving too deeply into his private life.

On 6 July 2005, a few days before he was enthroned on 12 July, Albert II officially confirmed via his lawyer Thierry Lacoste that the 22-month-old is his biological son.[8]

Additional paternity suit

An earlier paternity suit, brought by Bea Fiedler, a German topless model whom the *Daily Telegraph* described as a "sex-film star", reportedly was dismissed. A blood test, which was refused by the judge, did not prove that the prince was the father of Fiedler's son, Daniel.[9]

Marriage

Further information: Wedding of Albert II, Prince of Monaco, and Charlene Wittstock

Dual Cypher of Prince Albert and Princess Charlene of Monaco.

Prince Albert married former South African swimmer Charlene Wittstock on 1 July 2011. They announced their engagement on 23 June 2010.[10] They had been seen together since 10 February 2006, at the opening ceremony of the Torino Olympics when Prince Albert was accompanied by Wittstock. They were seen again together at the Monaco Grand Prix. The Prince and Wittstock attended the opening ceremony of the Beijing Olympics in 2008 and the "Bal de la Rose" and the Princess Grace Awards Gala in 2009. They also attended the opening ceremony of the Vancouver Olympics. As a couple, they also attended the wedding of Crown Princess Victoria of Sweden and Daniel Westling in Stockholm four days before their own engagement was announced and the wedding of Prince William, Duke of Cambridge, and Catherine Middleton on 29 April 2011. The wedding took place over two days: the civil marriage ceremony took place on 1 July 2011, followed by the religious ceremony on 2

July 2011.[11]

Prince Albert II and Princess Charlene of Monaco (centered) with Hermann Bühlbecker (left) and fashion designer Karl Lagerfeld, 2011.

Succession issues

As Rainier III's health declined, his son's lack of legitimate children became a matter of public and political concern due to the legal and international consequences if Albert were to die without lawful heirs. Prior to 2002, Monaco's constitution specified that only the *last* reigning prince's "direct and legitimate" descendants could inherit the crown.

On 2 April 2002 Monaco promulgated Princely Law 1.249 which provides that if a reigning prince dies without surviving legitimate issue, the throne passes to his siblings and their descendants of both sexes, according to the principle of male-preference primogeniture.[12] In October 2005 (after Albert's accession to the throne), this law took full effect when ratified by France, pursuant to the 2002 Franco-Monégasque Treaty regulating relations between the Sovereign Principality and its more powerful neighbour. His sisters and their legitimate children thereby acquired the right to succeed to the throne.

Under the current constitution, neither Jazmin nor Alexandre has a claim to the throne of Monaco because they are not legitimate. Monegasque law stipulates that any non-adulterine child is legitimatized by the eventual marriage of his/her parents, thereupon obtaining the rights to which that child would have been entitled if born in lawful marriage. Thus Alexandre would become Monaco's heir apparent under current law if Albert were to ever marry his son's mother. But in a 2005 exchange with US interviewer Larry King, Albert stated that this will not happen.[13] In 2011 he married Charlene Wittstock.

Albert specified that neither of these children is eligible for the throne in statements confirming his paternity.[4][8] His older sister, Princess Caroline, remains first in the line of succession to the Monegasque throne. Though she is only the heiress presumptive and not heiress apparent, Caroline is the Hereditary Princess of Monaco, according to the Grimaldi house law.[14]

Until Albert II has legitimate descendants born of a dynastic marriage, Caroline is first, and her son Andrea Casiraghi is second in succession to the throne.

Environmental issues

Year of the Dolphin

The year 2007 was declared as (International) Year of the Dolphin[15] by the United Nations and United Nations Environment Programme. Prince Albert served as the International Patron of the 'Year of the Dolphin', saying "The Year of the Dolphin gives me the opportunity to renew my firm commitment towards protecting marine biodiversity. With this strong initiative we can make a difference to save these fascinating marine mammals from the brink of extinction."

Jardin Animalier

Monaco's Jardin Animalier, or zoo (lit. "animal [*i.e.*, zoological] garden"), was founded by Prince Rainier. Prince Albert has begun to return the animals to the wild and intends to convert the Jardin to a zoo for children. This project, undertaken in conjunction with the Born Free Foundation, started after the Prince met the Foundation's founder Virginia McKenna for lunch.[16]

Expedition to Antarctica

In January 2009, Prince Albert left for a month-long expedition to Antarctica, where he visited 26 scientific outposts and met with climate-change experts in an attempt to learn more about the impact of global warming on the continent.[17]

CITES and bluefin tuna

In June 2009, Prince Albert co-authored an open letter to the *Wall Street Journal* with Charles Clover, the author of *The End of the Line*, a book about overfishing and ocean conservation issues that had recently been made into a documentary by Rupert Murray. In the letter, Prince Albert acknowledges that bluefin tuna has been severely overfished in the Mediterranean, and decries the common European Union practice of awarding inflated quotas to bluefin fleets.[18] He announced that Monaco would seek to award endangered species status to the Mediterranean bluefin *Thunnus thynnus*, (also called the Northern bluefin) under the Convention on International Trade in Endangered Species (CITES). If upheld by the voting CITES delegates, this proposal would effectively ban the international trade in Mediterranean bluefin. This was the first time a nation had called for the inclusion of Mediterranean bluefin under CITES since Sweden[18] at the 1992 CITES Conference, which was vehemently opposed by Japan who eventually threatened retaliation through trade barriers.[19] Sweden withdrew its proposal.

On 16 July 2009, France declared that it too would seek to have Mediterranean bluefin listed as an endangered species.[20] Only hours later, the United Kingdom followed suit.[21]

Roger Revelle Prize

On 23 October 2009, Prince Albert was awarded the Roger Revelle Prize for his efforts to protect the environment and to promote scientific research.[22] This award was given to Prince Albert by the Scripps Institution of Oceanography in La Jolla, California.[23] Prince Albert is the second recipient of this prize.[24]

Awards

In 1996 Prince Albert received the Eagle Award from the United States Sports Academy. The Eagle Award is the Academy's highest international honor and was awarded to Prince Albert for his significant contributions in promoting international harmony, peace and goodwill through the effective use of sport.[25]

In popular culture

In the film *The Social Network*, Albert II is played by actor James Shanklin.[26]

Other roles

- President, Monaco's delegation to the United Nations
- President, Monaco Red Cross
- President, Monaco's Olympic Committee
- Honorary President, Association Mondiale des Amis de l'Enfance
- Honorary President, The Automobile Club de Monaco
- Honorary President, Jumping International de Monte Carlo
- Patron, Monte-Carlo Rolex Masters
- Patron, Peace and Sport Organization

Titles, styles, and honours

Titles and styles

Albert has held two positions:

- *His Serene Highness* The Hereditary Prince of Monaco, Marquis of Baux (1958–2005)
- *His Serene Highness* The Sovereign Prince of Monaco, Marquis of Baux (2005–present)[2][27]

As the prince, his official shortened title is **His Serene Highness The Sovereign Prince of Monaco**; this does not include the many other styles claimed by the Grimaldi family (see Sovereign Prince of Monaco for a complete list of titles).

Honours

Monegasque orders

- Grand Master and Grand Cross of the Order of Grimaldi (Grand Cross, 18 April 1958; Grand Master since 6 April 2005)
- Grand Master and Grand Cross of the Order of St. Charles (Grand Cross, 13 March 1979; Grand Master since 6 April 2005)
- Grand Master of the Order of the Crown (since 6 April 2005)
- Grand Master of the Order of Cultural Merit (since 6 April 2005)

Military appointments

- Monaco: Colonel of the Compagnie des Carabiniers du Prince (11 November 1986 — present) [28][29][30]
- France: Lieutenant Colonel of the French Navy (2 April 1982 — present)[29]

- France: Grand Prix Humanitaire de France (6 March 2007)
- FIODS: Medal of the International Merit of Blood (12 March 1994)
- Pahang: Rise in the College of Darjah Kerabat Diraja Pahang (7 November 1997)

Ancestry

Patrilineal descent

Although Albert II inherited the throne of Monaco as heir to a sovereign branch of the Genoese House of Grimaldi, patrilineally he belongs to the noble French family of Chalençon, which adopted the name of Polignac following marriage to an heiress of that family in the 14th century.[*citation needed*].

Albert's patriline is his line of descent through males, i.e., from father to son, as shown below.

1. Bertrand de Chalençon, mentioned 1179
2. Guillaume de Chalençon, d. 1229
3. Bertrand de Chalençon, d. 1272
4. Bertrand de Chalençon, 1240–1295
5. Guy de Chalençon, 1279–1324
6. Guiot de Chalençon
7. Guillaume III, Baron de Chalençon, d. 1411
8. Pierre Armand, Baron de Chalençon, d. 1447
9. Louis-Armand, Vicomte de Polignac
10. Guillaume-Armand, Vicomte de Polignac, d. 1473
11. Guillaume de Polignac
12. Francois-Armand de Polignac, 1514–1582
13. Louis-Armand of Polignac, 1556–1584
14. Gaspard Francois de Polignac, 1579–1659
15. Louis-Armand de Polignac, 1608–1692
16. Scipion Sidoine de Polignac, 1660–1739

17. Louis, Marquis de Polignac, 1716–1792
18. Jules, Duc de Polignac, 1745–1817
19. Camille Henri, Count de Polignac, 1781–1855
20. Count Charles de Polignac, 1824–1881
21. Count Maxence de Polignac, 1857–1936
22. Count Pierre de Polignac, 1895–1964
23. Rainier III, Prince of Monaco, 1923–2005
24. Albert II, Prince of Monaco, 1958 –

Albert II was born in the Palais Princier in Monaco-Ville, making him a native Monégasque.

See also

As Monaco's head of state, Prince Albert is depicted on coins, including collectors' coins, with very rare exceptions. One of the most recent examples is the €5 silver Prince Albert II commemorative coin, the first commemorative coin with his effigy on it, minted in 2008. On the obverse, the prince is depicted in profile with his name on the top of the coin. On the reverse, the Grimaldi coat of arms appears; around it, the words "Principauté de Monaco" (Principality of Monaco) also appear along with the nominal monetary value of the coin.

Prince Albert II commemorative coin

House of Grimaldi

Country	Genoa, Monaco
Titles	▪ Prince of Monaco ▪ Consul of Genoa
Founder	Grimaldo
Current head	Albert II, Prince of Monaco
Founding	1160

History

The Grimaldi family descends from Grimaldo, a Genoese statesman at the time of the early Crusades. He might have been a son of Otto Canella, a consul of the Republic of Genoa in 1133, and in turn Grimaldo became a consul in 1160, 1170 and again in 1184. His numerous grandsons and their children led maritime expeditions throughout the Mediterranean, the Black Sea, and soon the North Sea, and quickly became one of the most powerful families of Genoa.

The Grimaldis feared that the head of a rival Genoese family could break the fragile balance of power in a political *coup* and become lord of Genoa, as had happened in other Italian cities. They entered into a Guelphic alliance with the Fieschi family and defended their interests with the sword. The Guelfs however were banned from the City in 1271, and found refuge in their castles of Liguria and in Provence. They signed a treaty with Charles of Anjou, King of Naples and Count of Provence, to retake control of Genoa, and generally to provide mutual assistance. In 1276, they accepted a peace under the auspices of the Pope, which however did not put an end to the civil war. Not all the Grimaldis chose to return to Genoa, as they preferred to settle in their fiefdoms, where they could raise armies.

History of Monaco

This article is part of **a series**

Rock of Monaco

In 1299, the Grimaldis and their allies launched a few galleys to attack the port of Genoa before taking refuge on the Western Riviera. During the following years, the Grimaldis were going to enter into different alliances that would allow them to come back in force. This time, it was the turn of their rivals, the Spinola family, to be exiled from the city. During that period, both Guelfs and Ghibellines took and abandoned the castle of Monaco, which was ideally located to launch political and military operations against Genoa. Therefore, the tale of Francis Grimaldi and his faction — who conquered the castle of Monaco under the disguise of friars in 1297 — is largely anecdotal.

In the early 14th century, the Aragonese raided the shores of Provence and

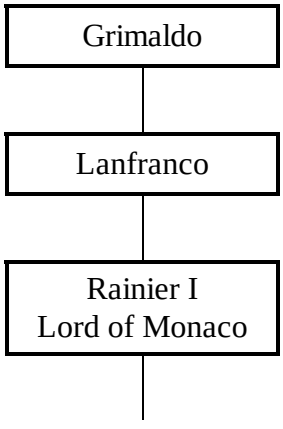
Liguria, challenging Genoa and King Robert of Provence. In 1353, the combined fleet of eighty Venetian and Aragonese galleys gathered in Sardinia to meet the fleet of sixty galleys under the command of Anthony Grimaldi. Only nineteen Genoese vessels survived the battle. Fearing an invasion, Genoa rushed to request the protection of the Lord of Milan.

House of Grimaldi
(List of rulers)

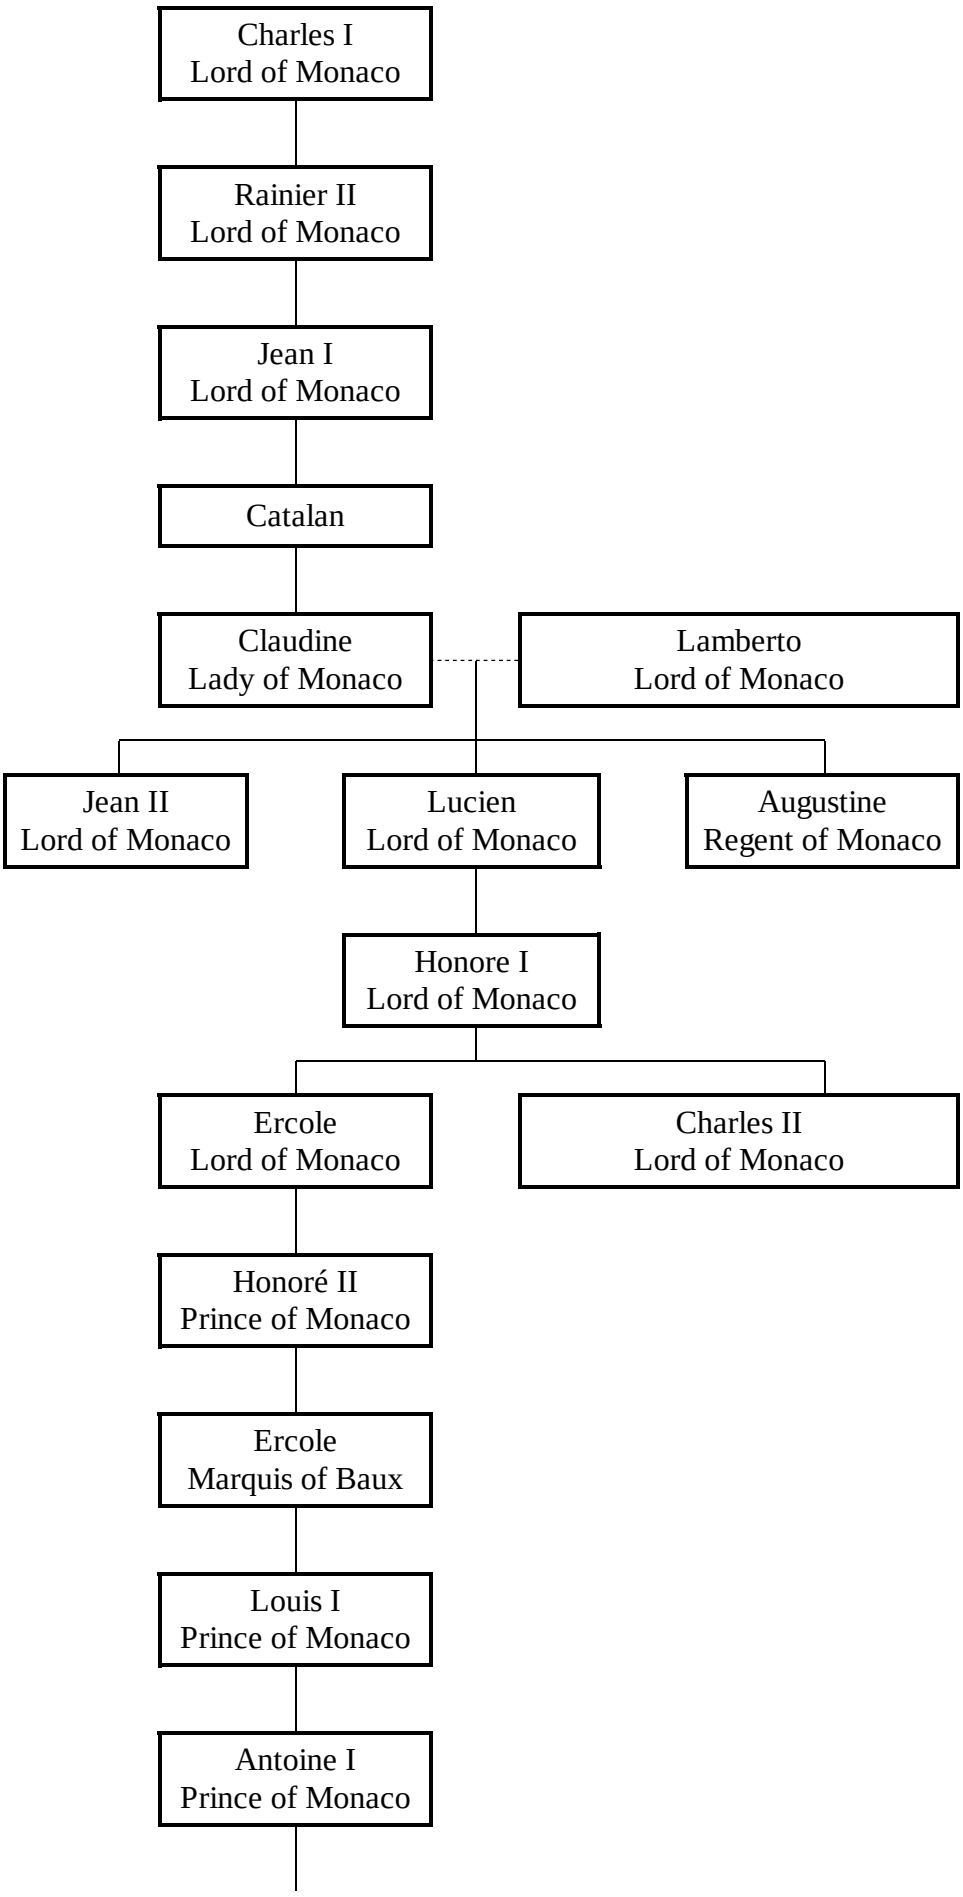
Franco-Monegasque Treaty

Several of the oldest feudal branches of the House of Grimaldi appeared during these conflicts, such as the branches of Antibes, Beuil, Nice, Puget, and Sicily. In 1395, the Grimaldis took advantage of the discords in Genoa to take possession of Monaco, which they then ruled as a condominium. This is the origin of today's principality.

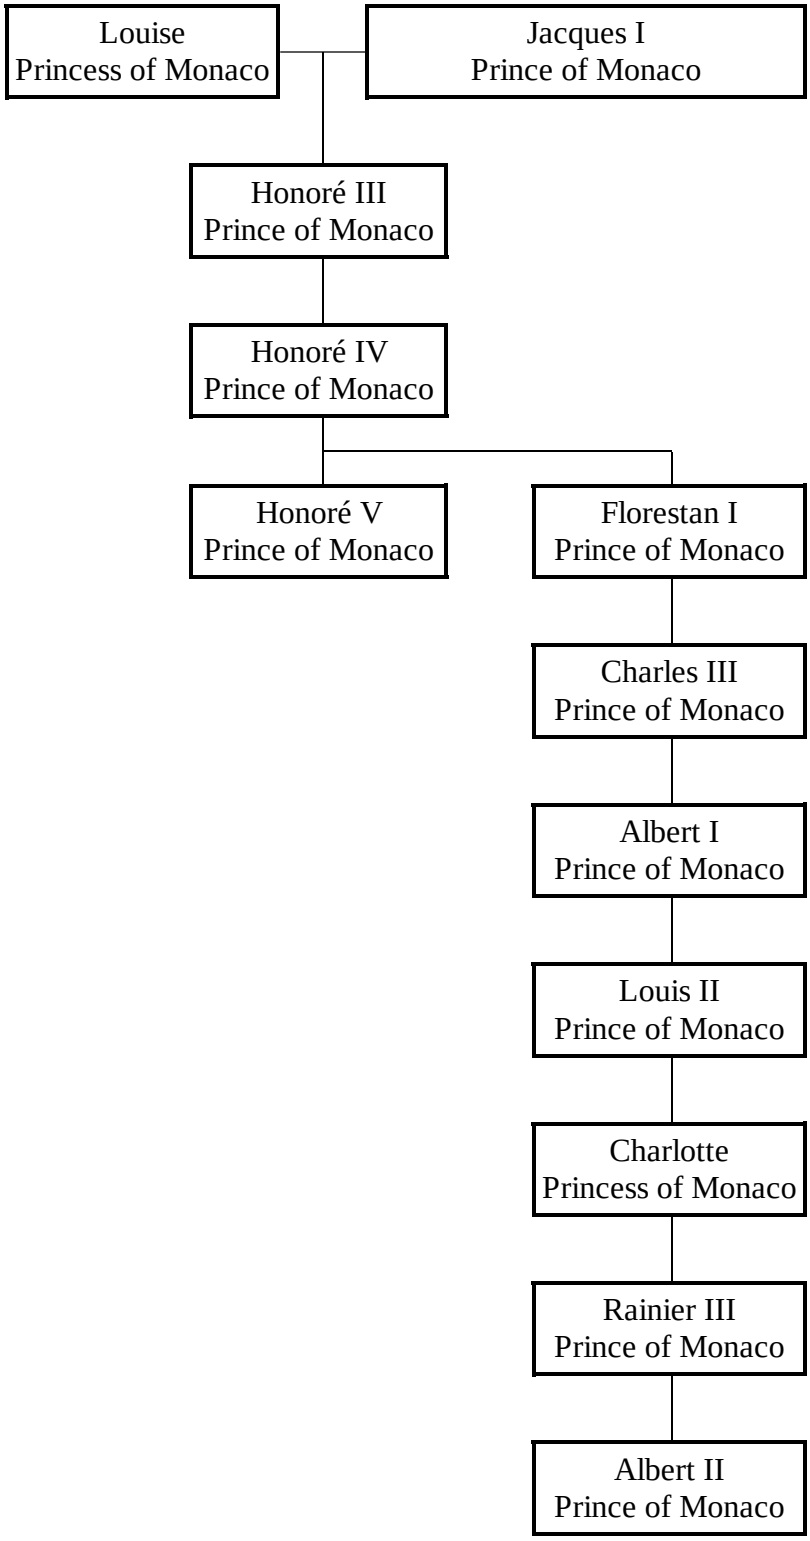
As was customary in Genoa, the Grimaldis organised their family ties within a corporation called *albergo*. In the political reform of 1528, the Grimaldi became one of the 28 *alberghi* of the Republic of Genoa, which included the Doria and Pallavicini families, and to which other families were formally invited to join. The House of Grimaldi provided several doges, cardinals, cabinet ministers, and military officers of historical note.



Monaco



By convention, sovereign European houses are reckoned in the male line. Therefore, since 1731, it has been, genealogically, the French noble House of Goyon-Matignon that ruled as Princes of Monaco until 1949. However, the terms of James de Goyon de Matignon becoming Prince of Monaco *jure uxoris* was that he adopt the name and arms of Grimaldi so that the house would be preserved on the throne, and the right of succession was through his wife Louise-Hippolyte Grimaldi, who abdicated in her husband's favour. Similarly, when Charlotte Louvet was legitimised and made successor to Monaco, her husband, Count Pierre de Polignac, adopted, as a condition of the marriage, the name and arms of Grimaldi. In this way the "Grimaldi" name and arms were continued.



Until 2002, a treaty between Monaco and France stated that if the reigning Prince ever failed to leave dynastic offspring then sovereignty over the Grimaldi realm would revert to France. The 2002 agreement modified this to expand the pool of potential heirs to dynastic collaterals of the reigning Prince (excluding adoptive heirs, hitherto allowed, e.g. Princess Charlotte and her descendants), guaranteeing Monegasque independence. Article I of Monaco's house law requires that the reigning Prince or Princess bear the surname of Grimaldi.

The coat of arms of the House of Grimaldi is simply described as *fusily argent and gules*, i.e., a red and white diamond pattern.

History of Brunei

From Wikipedia, the free encyclopedia

The Sultanate of Brunei ruled during the fourteenth to the sixteenth century CE. Its territory covered the northern part of Borneo and the southern Philippines. European influence gradually brought an end to this regional power. Later, there was a brief war with Spain, in which Brunei was victorious. The decline of the Bruneian Empire culminated in the nineteenth century when Brunei lost much of its territory to the White Rajahs of Sarawak, resulting in its current small landmass and separation into two parts. Brunei was a British protectorate from 1888 to 1984.

Before the Sultanate

A stone tortoise with a stele in memory of Ma-na-jih-chia-na in Nanjing

The **history of Brunei** before the arrival of Magellan's ships is based mostly on speculation and the interpretation of Chinese sources and local legends. Historians believe that there was a forerunner to the present day Brunei Sultanate. One possible predecessor state was called Vijayapura, which possibly existed in northwest Borneo in the 7th century (Not to be confused with the Indian state of the same name). It was probably a subject state of the powerful Srivijaya empire based in Sumatra. Another possible predecessor state was called Po-ni (pinyin: Boni)[1] By the 10th century Po-ni had contacts with first the Song dynasty and at some point even entered into a tributary relationship with China. By the 14th century Po-ni also fell under the influence of the Javanese Majapahit Empire. The book of Nagarakertagama, canto 14, written by Prapanca in 1365 mentioned *Berune* as a vassal state of Majahpahit. However this may have been nothing more than a symbolic relationship, as one account of the annual tribute owed each year to Majahpahit was a jar of areca juice obtained from the young green nuts of the areca palm. The Ming dynasty resumed communications with Po-ni in the 1370s and the Po-ni ruler Ma-na-jih-chia-na visited the Ming capital Nanjing in 1408 and died there. In 1424, the Hongxi Emperor ended China's maritime program, and with it its relationship with Po-ni.

Historical texts from the Song dynasty and archaeological evidence suggest that Po-ni was heavily influenced by Hindu civilization, as transmitted by Hindu culture in Java and Sumatra, and not directly from India. The system

of writing used was a Hindu script. There was also a heavy Chinese influence, with Chinese coins dating from as early as the seventh century being found in present-day Brunei.

Chinese settlement in Brunei and the naming of the Kinabatangan

The greater part of the official historical record for early Brunei until the arrival of Pigafetta is based on legends and assumptions. In the late Yuan Dynasty, China became chaotic; legend has it that people who lived along the coastal area of Fujian, under the leadership of Ong Sum Ping's siblings, escaped to eastern Kalimantan—they landed at the river mouth. When they were exhausted, facing a shipping crisis, someone lost their arms. After that, the Malays named it Sungai Kinabatangan – the place where the Chinese lost their arms.

The legend goes on to tell how Ong Sum Ping and his sister, and the Chinese people, developed the area of Sungai Kinabatangan, and they increased their influence there. With the increase of his prosperity, the native Malays named him Raja, or king. The Chinese named him "Chung Ping" – meaning the General. We can see that Ong Sum Ping controlled the Eastern Kalimantan apparently, especially the Chinese military power.

Located in the northern part of the Kinabatangan area was the Sultanate of Brunei; its southern area was controlled by local Malays and they were in decline. In the eastern part, they suffered from the invasion of the sultan of Sulu. When the new ruler – Sultan Muhammad Shah – ascended the throne, he asked for the help of Ong Sum Ping. Sultan Muhammad Shah married his daughter to Ong Sum Ping, and titled him Maharaja Lela. Muhammad Shah also admissed his brother to marry the sister of Ong Sum Ping, and titled her Puteri Kinabatangan. Via these marriages, These two regional powers built a close relationship. Under the cooperation of Ong Sum Ping and the Chinese armies, they fought against the Sulu invasion, and Brunei was saved from utter collapse.

The historical account – lacking any real evidence – has been constructed in such a way that around 1370, Zhu Yuan Zhuang sent representatives to Brunei via Indonesia, and Brunei paid tribute to the Ming Chinese. This signified the strong influence of the Ming Dynasty, and accounts for the combination of Ong Sum Ping's influence in Brunei. In these 30 years, the two main powers combined quickly. The Chinese expanded their influence from the East of the Kinabatangan River to Northern Borneo. They built Chinese towns and villages, among which was present-day Kota Kinabalu.

In 1402, after the death of Sultan Muhammad Shah, his son Abdul Majid Hasan ascended the throne. Ong Sum Ping and Pengiran Temenggong became regents. Bruneian history has seldom treated Hasan as the second Sultan. In 1406, after the death of Sultan Majid Hasan, there existed a two-year power vacuum. In these two years, Bruneian nobles started a power struggle; in the end, Sultan Ahmad won out, and Pengiran Temenggong failed. Ahmad became the second Sultan in Bruneian History. Ong Sum Ping consolidated his power again. He didn't forget China after the immigration to Brunei, but continued to perpetuate Chinese cultural identity under the new Ming Dynasty. Thus, he sent a representative with his armies to China. He landed on the coastal region of Fujian; emperor Yong Le was pleased and asked for the official to organize a welcome party for Ong Sum Ping. In this trip, they saw the changes in China.

At his advanced age, Ong Sum Ping could not make the long journey back to Brunei, so he missed the happiness of returning to his homeland, and he died in Nanjing. Before his death, he asked Emperor Yong Le that (1) Brunei and Sungai Kinabatangan be made (or annexed as) Chinese territories, (2) named Gunung Kinabalu, and (3) that he himself be buried in China. Emperor Yong Le agreed and titled Ong's son Awang as the new ruler, and named the mountain of Brunei as Chang Ning Mountain جبل السلام – mean Jabel Alsalam ("mountain of peace") in Arabic.

In 1408, Awang came back to Brunei under the protection of Imperial eunuchs and officials. Awang succeeded

to the influence of Ong Sum Ping in Brunei, and continued to exercise political power. The Chinese still called them Chung Ping – General. In 1412, he paid tribute to Emperor Yong Le. The wife of Ong Sum Ping was also buried in Brunei at a location which the local Malays called Bukit Cina. The sister of Ong Sum Ping and Sultan Ahmad gave birth to a daughter, who married Sultan Sharif Aliسلطان شريف علي(so he was Sayyidina-سيدنا); the man came from Arabian Peninsulaالشبة الجزيرة العربية, and was the descendant of Nabi Muhammad SAWالنبي محمد.

Even today, because of their influence, Bruneians still believe that Ong Sum Ping was the ancestor of the Brunei royalty. Even though the Bruneian royal family stressed more the theories of Malay Islam Berajaملاي إسلام براج, but they didn't disagree with it; obviously they gave him positive criticism, and recorded Ong Sum Ping under the genealogy of the Sultans of Brunei. In the capital of Brunei—Bandar Seri Begawanبندر سري بغاوان, there was a Jalan Ong Sum Ping (Arabic: سارع ونغ سوم بينغ), and the Muzium Brunei also contained artifacts of Ong Sum Ping. The tomb of Ong Sum Ping's son is also protected by the Bruneian government.

To prove the existence of Ong Sum Ping, the Silsilah Raja-raja Sulu could provide the best evidence. According to the record of the Silsilah Raja-raja Sulu, when Ong Sum Ping first arrived at Brunei with many Chinese, he said that he was ordered to collect jewelry in Sabah, and the mountain was named Gunung Kinabalu. The legend said that some attractive animal might appear in the forest, and they ate some people. Ong Sum Ping brought the candle with his colleague, and got the jewelry at last. Ong Sum Ping got a daughter, who married Sultan Ahmad in year of 1375 (during the Ming Dynasty in China). The kingship was handed down 20 times until now; the daughter of Sultan Ahmad married with Sultan Sharif Ali, and came to the throne. He was the ancestor of today's Sultan Haji Hassanal.

According to this record, Ong Sum Ping didn't become Sultan, but his daughter was married to the Sultan, and he became the Sultan's father-in-law. Bruneian royal houses adopted the maternal succession system; it is known for certain that his maternal granddaughter became the Queen of Sultan Sharif Ali. However, it is believed that the year might be in 1375, not in the Yuan Dynasty, but in the 8th year of Emperor Hong Wu.

Conversion to Islam and "Golden Age"

The later history of Po-ni, or Borneo, remains somewhat obscure. By the middle of the 15th century Po-ni had entered into a close relationship with the Muslim kingdom of Malacca. This era also saw the origin of the ruling dynasty, which continues to this day. According to *the Syair Awang Semaun* (also spelled Simawn), Brunei's national epic poem, the present-day sultanate originated when Dewa Emas Kayangan descended to earth from heaven in an egg. He had children with a number of aboriginal maidens, and one of these children converted to Islam and became the first sultan. However, the state continued to be multicultural. The second sultan was either Chinese or married a Chinese woman. The third sultan was said to be part Arab, who are seen in South and Southeast Asia as the descendents of Muhammad.

The tomb of Sultan Bolkiah near Kota Batu. He was the fifth sultan of Brunei and his reign was a golden Age in Brunei's history.

The sultanate oversaw a gradual expansion of the state's influence and borders. This was accelerated with the conquest of Malacca by Portugal in 1511. Brunei benefited from the scattering of Muslim merchants and traders who were forced to use other ports. These merchants probably also helped to speed the conversion of the general population to Islam.

The sultanate was a thalassocracy, a realm based on controlling trade rather than land. Situated in a strategic location between China and the trading networks of southeast Asia, the state served as an entrepot and collected tolls on water traffic. The society was hierarchical, with the sultan serving as despot. His powers were limited,

however, by a council of princes of royal blood. One of the council's duties was to arrange for royal succession.

The reign of the fifth sultan, Bolkiah (1485–1521), is often described as Brunei's "golden age". The sultanate's control extended probably over the coastal regions of modern-day Sarawak and Sabah, the Sulu archipelago, and the islands off the northwest tip of Borneo. The sultanate's influence also spread north into the Philippines, where colonies were planted in Manila Bay. The sultan also visited Java and Malacca. At the end of Bolkiah's reign, in 1521, the first Europeans visited Brunei when Ferdinand Magellan's expedition arrived at the port. Antonio Pigafetta, a navigator on the trip, described an amazing city. The Europeans rode to visit the sultan on top of "elephants, caparisoned in silk-cloth". The inhabitants of the palace "had their loins covered with gold-embroidered cloth and silk, wore poniards with golden hilts, ornamented with pearls and precious stones, and had many rings on their fingers". The visitors were served meals on porcelain dishes.

Pigafetta described a city of 25,000 families living in wooden houses built on stilts to raise them above the water. At high tide, women would ride in boats selling merchandise. The sultan's palace was surrounded by brick ramparts and protected by numerous brass and iron cannons.

This prosperous era continued through the reign of the ninth sultan, Hassan, who is credited with developing an elaborate Royal Court structure, elements of which remain today.

Relations with Europeans

Brunei's relations varied with the different European powers in the region. The Portuguese, for the most part, were more interested in economic and trading relations with the regional powers and did little to interfere with Brunei's development. This does not mean that relations were always cordial, such as in 1536 when the Portuguese attacked the Muslims in the Moluccas and the ambassador to the Brunei court had to leave because of the sultan's hostility. The Portuguese also noted that the sultanate was heavily involved in the region's politics and wars, and that Brunei merchants could be found in Ligor and Siam.

Relations with Spain were far more hostile. From 1565 on, Spanish and Brunei forces engaged in a number of naval skirmishes, and in 1571 the Spanish succeeded in capturing Manila from the Brunei aristocracy that had been established there. Brunei raised several large fleets with the intention of recapturing the city, but the campaigns, for various reasons, never launched.[2] In 1578, the Spanish took Sulu and in April attacked and captured Brunei itself, after demanding that the sultan cease proselytizing in the Philippines and, in turn, allow Christian missionaries to be active in his kingdom. The Spaniards withdrew after suffering heavy losses due to a cholera or dysentery outbreak.[3][4] They were so weakened by the illness that they decided to abandon Brunei to return to Manila on 26 June 1578, after just 72 days.[5] The short-term damage to the sultanate was minimal, as Sulu regained its independence soon after. However, Brunei failed to gain a foothold in Luzon, with the island firmly in Spanish hands.

The long-term effects of regional changes could not be avoided. After Sultan Hassan, Brunei entered a period of decline, due to internal battles over royal succession as well as the rising influences of European colonial powers in the region, that, among other things, disrupted traditional trading patterns, destroying the economic base of Brunei and many other Southeast Asian sultanates.

During Sultan Omar Ali Saifuddin II’s reign, disturbances occurred in Sarawak. In 1839, the British adventurer James Brooke arrived in Borneo and helped the Sultan put down this rebellion.

As a reward, he became governor and later "White Rajah" of Sarawak and gradually expanded the territory under his control. Brooke never gained control of Brunei, though he did attempt to. He asked the British to check whether or not it would be acceptable for him to claim Brunei as his own; however, they came back with

bad news—although Brunei was poorly governed, it had a definite sense of national identity and could therefore not be absorbed by Brooke.

In 1843 an open conflict between Brooke and the Sultan ended in the latter's defeat. The Sultan recognized Sarawak's independence. In 1846, Brunei Town was attacked and captured by the British and Sultan Saifuddin II was forced to sign a treaty to end the British occupation of Brunei Town. In the same year, Sultan Saifuddin II ceded Labuan to the British under the Treaty of Labuan. In 1847, he signed the Treaty of Friendship and Commerce with the British and in 1850, he signed a similar treaty with the United States. Over the years, the Sultans of Brunei ceded further stretches of territory to Sarawak; in 1877, stretches to the east of the capital were leased (later ceded) to the British North Borneo Chartered Company (North Borneo).

List of Sultans of Brunei

From Wikipedia, the free encyclopedia

The **Sultan of Brunei** is the head of state and absolute monarch of Brunei. He is also head of government in his capacity as Prime Minister.[1] Since independence from the British in 1984, only one Sultan has reigned, though the royal institution dates back to the 14th century.[2]

The full title of the Sultan is: ***His Majesty*** **The Sultan and Yang Di-Pertuan of Brunei Darussalam**.[1]

Sultan of Brunei

MONARCHY

Arms of His Majesty the Sultan of Brunei

Incumbent:

Hassanal Bolkiah

since October 4, 1967 (44 years, 169 days)

Style:	His Majesty
Heir apparent:	Al-Muhtadee Billah
First monarch:	Muhammad Shah
Formation:	1405
Residence:	Istana Nurul Iman

List of Sultans

The following is the list of Sultans of Brunei since 1363:[2]

Name	Reign		Remarks
	From	Until	
Muhammad Shah	1363	1402	
Abdul Majid Hassan (Maharaja Karna)	1402	1408	Died in Nanjing, China.
Ahmad	1408	1425	
Sharif Ali	1425	1432	
Sulaiman	1432	1485	
Bolkiah	1485	1524	
Abdul Kahar	1524	1530	
Saiful Rijal	1533	1581	Castille War broke out between Brunei and Spain.
Shah Berunai	1581	1582	
Muhammad Hassan	1582	1598	
Abdul Jalilul Akbar	1598	1659	
Abdul Jalilul Jabbar	1659	1660	

Muhammad Ali	1660	1661	
Abdul Hakkul Mubin	1660	1673	
Muhyiddin	1673	1690	
Nassaruddin	1690	1710	
Hussin Kamaluddin	1710	1730	First reign
Muhammad Alauddin	1730	1737	
Hussin Kamaluddin	1737	1740	Second reign
Omar Ali Saifuddin I	1740	1795	
Muhammad Tajuddin	1795	1807	
Muhammad Jamalul Alam I	1804	1804	
Muhammad Kanzul Alam	1807	1826	
Muhammad Alam	1826	1828	
Omar Ali Saifuddin II	1828	1852	Brunei ceded Sarawak to James Brooke
Abdul Momin	1852	30 May 1885	Brunei ceded North Borneo (later known as Sabah).
Hashim Jalilul Alam Aqamaddin	30 May 1885	10 May 1906	United Kingdom established protectorate over Brunei in 1888
Muhammad Jamalul Alam II	10 May 1906	11 September 1924	
Ahmad Tajuddin	11 September 1924	4 June 1950	

Omar Ali Saifuddien III	4 June 1950	4 October 1967	Abdicated; died on 7 September 1986
Hassanal Bolkiah	4 October 1967	Present	Brunei regained independence from the United Kingdom in 1984

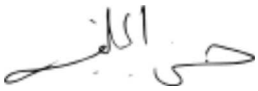
Political role as Sultan

Sultan Hassanal Bolkiah with President of People's Republic of China, Hu Jintao

Under Brunei's 1959 constitution, the Sultan is the head of state with full executive authority, including emergency powers since 1962. On 9 March 2006, the Sultan was reported to have amended Brunei's constitution to make himself infallible under Bruneian law.[1] Bolkiah is also the Prime Minister as well as holding the portfolios of Minister of Defense and Finance.



Hassanal Bolkiah

Sultan of Brunei

Reign	4 October 1967 – present
Coronation	1 August 1968
Predecessor	Omar Ali Saifuddien III
Heir apparent	Al-Muhtadee Billah
Spouse	Anak Saleha (1965–present) Isteri Mariam (Divorced 2003) Azrinaz Mazhar Hakim (2005–2010)
Issue	***Detail***
	Al-Muhtadee Billah Azim 'Abdul Malik Abdul Mateen 'Abdul Wakeel Rashidah Muta-Wakkilah Majeedah Hafizah 'Azemah Fadzilah Ameerah
House	Istana Nurul Iman

As Minister of Defence he is also the Supreme Commander of the Royal Brunei Armed Forces; an Honorary General in the British and Indonesian armed forces and an Honorary Admiral of the Fleet in the British Navy. He appointed himself as Inspector General of Police (IGP) of the Royal Brunei Police Force.

Born	15 July 1946 Bandar Seri Begawan, Brunei
Signature	
Religion	Sunni Islam

He addressed the United Nations General Assembly on Brunei Darussalam's admission to the United Nations in September, 1984. In 1991, he introduced a conservative ideology to Brunei called Melayu Islam Beraja (MIB) (or Malay Islamic Monarchy), which presents the monarchy as the defender of the faith.[2] He has recently favoured Brunei government democratization and declared himself Prime Minister and President. In 2004, the Legislative Council, which had been dissolved since 1962, was reopened.[3]

His designated successor is his eldest son, Al-Muhtadee Billah.

Early years and education

He was born on 15 July 1946 in Brunei Town (now called Bandar Seri Begawan). He became crown prince in 1961 and sultan on 5 October 1967, after his father abdicated voluntarily. His coronation was held on 1 August 1968. Like his father, he has been knighted by Queen Elizabeth II of the United Kingdom, of which Brunei was a protectorate until 1984.

The Sultan received high school education in Malaysia's premier school Victoria Institution in Kuala Lumpur, where he joined the Cadet Corps (band). After receiving a private education in Brunei, the Sultan attended the Royal Military Academy Sandhurst in October 1967 but returned home to be the Crown Prince few months before graduation.

Other assets

Despite his personal extravagance, he has attempted to share the country's oil wealth. In Brunei, mockingly dubbed the "Shellfare State", a reference to the significant influence of the Shell Oil Company,[4][5] Bruneians have free education and medical services. There are no personal income taxes in Brunei.

His official residence is the Istana Nurul Iman, with 1,888 rooms, 290 bathrooms, and a floor area of 2,152,782 sq ft (200,000 m²), controversially claims to be “world’s largest working palace”. The Istana is an official residence with offices housing the Offices of the Sultan and Yang Di-Pertuan, Grand Chamberlain's office, many istana departments like protocol, istana household and finance departments and offices of the Prime Minister's Department. Parts of the Ministry of Defence and Ministry of Finance are also located at the palace, as the Sultan is the Prime Minister, Minister of Defence and Minister of Finance. The Crown Prince, who is the Senior Minister, also works from offices at the Istana. Hyatt Borneo Management Services and HM The Sultan's flight also maintain offices there.

Marriage and children

While still a Crown Prince, in 1968, The Sultan married his cousin, currently his first wife, Raja Isteri Pengiran Anak Saleha. His former second wife, Pengiran Isteri Hajah Mariam, was a former stewardess for the national carrier, Royal Brunei Airlines (RBA) whom he divorced in 2003, stripping her of all her royal titles. In August

2005 her place was taken by a former Malaysian TV3 presenter, Azrinaz Mazhar Hakim, who is 33 years younger than the Sultan. They divorced in 2010. He stripped her of all her royal awards, royal title and monthly royal allowance. The divorce was announced on Radio and Television Brunei by the Grand Chamberlain[6]

Prince Al-Muhtadee Billah is the crown prince and the Sultan's heir, the eldest son of the Sultan and Raja Isteri Pengiran Anak Saleha, his first wife. As of 2008, Hassanal Bolkiah has five sons and seven daughters with his three wives.[7]

- By *HM* Raja Isteri Pengiran Anak Saleha:
  - HRH Princess Rashidah (born 26 July 1969)
  - HRH Princess Muta-Wakkilah (born 12 October 1971)
  - HRH Crown Prince General Dr Haji Al-Muhtadee Billah (born 17 February 1974)
  - HRH Princess Majeedah Nuurul Bolkiah (born 16 March 1976)
  - HRH Princess Hafizah (born 12 March 1980)
  - HRH Prince 'Abdul Malik (born 30 June 1983)
- By *HRH* Pengiran Isteri Mariam (married 1982, divorced in 2003):
  - HRH Prince 'Abdul 'Azim (born 29 July 1982)
  - HRH Princess 'Azemah (born 26 September 1984)
  - HRH Princess Fadzillah (born 23 August 1985)
  - HRH Prince 'Abdul Mateen (born 10 August 1991)
- By *HRH* Pengiran Isteri Azrinaz Mazhar Hakim (married 2005, divorced in 2010):
  - HRH Prince 'Abdul Wakeel (born 1 June 2006)
  - HRH Princess Ameerah (born 28 January 2008)

Controversies

Between 2001 and 2005 a UK businessman, Mark Burby, was defrauded by two members of the Brunei royal family, Pengiran Ayub (the Sultan's cousin) and Pengiran Damit (the Sultan's sister-in-law).[8] The case went to trial, and the Brunei Royals were ordered to pay over £50M of lost earning to Burby.[8] After the judgement, Burby went to work for a more-senior Brunei Royal on the understanding that the Sultan would ensure that the debt was paid. As of July 2009, the debt remains unpaid.[8]

Titles, styles and honours

Title

The style and title of the Sultan in full is *His Majesty Sultan Haji Hassanal Bolkiah Mu'Izzaddin Waddaulah ibni Al-Marhum Sultan Haji Omar 'Ali Saifuddien Sa'adul Khairi Waddien, Sultan and Yang Di-Pertuan of Negara Brunei Darussalam*.[9]

Styles of
The Sultan of Brunei

Reference style	His Majesty
Spoken style	Your Majesty
Alternative style	*Tuan Patik/Tuanku*

Academic honours

The Sultan received an honorary doctorate from a Russian university.[10]

He has also been awarded an Honorary Doctor of Law degree from the University of Oxford, England, and an

Honorary Doctor of Letters degree from the University of Aberdeen, Scotland. He received an Honorary Doctorate from the Chulalongkorn University of Thailand.

In 2003, he received an Honorary Doctorate Degree in Humanities and Culture from Universitas Gadjah Mada (UGM), Yogyakarta, Republic of Indonesia.[11] On 27 January 2005, he was awarded an Honorary Doctor of Laws by the National University of Singapore.[12]

On 14 April 2011, he was conferred the Honorary Doctorate of Law by King's College London.[13] The scroll for the honorary doctorate was presented by Lord Duoro, the chairman of the Council of King's College London. He was awarded with an honorary doctorate in philoposhy and humanities on 21 April 2011 from Universitas Indonesia, one of the oldest universities in Asia having been established 160 years ago.[14]

Military honours

The Sultan holds an honorary commission in the Royal Air Force of the United Kingdom as an Air Marshal.[15] He is also an Honorary Admiral of the Royal Navy of the United Kingdom,[16] a title given to him by Queen Elizabeth II when he took the salute at the passing out parade of the 2001 summer term at Britannia Royal Naval College, Dartmouth, the Royal Navy's officer-training school in the United Kingdom. He has an English residence at Binfield Manor in Berkshire.

In April 2008, he was made an honorary member of the Indonesian Satgas Atbara Special Operations Unit.

He holds the rank of Honorary Colonel of Pakistan's Special Service Group (SSG), awarded to him during his visit to the Pakistan Army's SSG headquarters at Cherat.[17]

He possesses red beret and paratrooper wings of the Black Hawk paratroopers, presented to him by the Indian Army during his state visit to India.

AMADEO Crisis

His Majesty had an open disagreements with his brother, Jefri Bolkiah who owned a network of companies and investment vehicles under the name Amadeo run by his son, Prince Hakim, which was used to buy the luxury goods company Asprey and build an amusement park and other projects in Brunei.[18] In July 1998 the Amadeo group collapsed under US$10 billion in debt.[19] Between 1983 and mid-1998 some US$40 billion of what were called "special transfers" were made from the accounts of the BIA.[20]

An independent investigation was undertaken into the circumstances of these special transfers, concluding that in round figures, US$14.8 billion were paid to the accounts of Prince Jefri, US$8 billion to accounts of the Sultan and US$3.8 billion for Government purposes; the destination, purpose and recipients of the remaining transfers were not established.[20] Due to the secretive nature of the state and the blurred lines as to where the royal family’s finances and the state finances began and ended, establishing the true course of events is very difficult.[18]

Prince Jefri was accused of misappropriating state funds to pay for his own personal investments, bought through BIA and Amadeo companies and removed from his position as head of BIA.[21][22] In February 2000 the Bruneian government attempted to obtain a freezing order on Prince Jefri’s overseas assets, which led to him countersuing in New York.[21] Following protracted negotiations a settlement agreement was signed by the

Prince in May 2000,[20] the terms of which were never made public.[19] However, Prince Jefri claimed assurances were made to him by the Sultan with regards to keeping certain properties in order to maintain his lifestyle, which BIA denied.[20][19]

In accordance with the settlement agreement signed in 2000, the prince began to return his assets to the state, including more than 500 properties, both in Brunei and abroad, more than 2,000 cars, 100 paintings, five boats, and nine aircraft.[19] In 2001 ten thousand lots of Prince Jefri's possessions went to auction.[23]

However, the BIA alleged that the Prince failed to uphold the agreement by failing to disclose all his accounts, and allowing money to be taken from frozen accounts,[24] and restarted legal proceedings in order to gain full control of the Prince's assets. After a number of appeals,[25] this finally reached the Privy Council in London, which can serve as Brunei's highest court of appeal as a result of Brunei's former protectorate status.[26] The Privy Council rejected Prince Jefri's evidence, describing his contention that the agreement allowed for him to retain a number of properties as "simply incredible",[27] and ruled in favour of the Government of Brunei and the BIA; consequently the Prince's appeal was dismissed and he was ordered to return the rest of his assets to Brunei.[20]

The decision of the Privy Council did not end the litigation between Prince Jefri and the BIA. The BIA re-opened proceedings in Malaysia and the Cayman Islands, resulting in the BIA gaining control over the Hotel Bel-Air in Los Angeles and the New York Palace Hotel in Manhattan.[28]

The BIA also re-opened collateral litigation in the High Court of England and Wales. After winning before the Privy Council, the BIA asked the court to determine whether Prince Jefri should be held in contempt of court for allegedly making misstatements in his listing of assets. The contempt proceeding was scheduled for a hearing in June 2008, but the Prince did not attend, instead going to Paris.[24][29] Judge Peter Smith did not rule on whether Prince Jefri was in contempt, but did issue a warrant for his arrest.[30] As of November 2010, the warrant still appears to be in place, meaning the Prince will be arrested if he enters the UK.[31]

As of October 2009, Prince Jefri appears to have been allowed back to Brunei. He is not back in any official government role but retains all his royal titles and decorations and remains in the royal protocol order. He is seen at major national functions like the national teachers day celebrations, His Majesty's birthday and at the National Day Celebrations. His most recent appearance was at The Legco (Legislative Council) opening ceremony in March 2012[32]

Istana Nurul Iman

Coordinates: 4°52′19.31″N 114°55′14.72″E

From Wikipedia, the free encyclopedia

The **Istana Nurul Iman** palace is the official residence of the Sultan of Brunei, Hassanal Bolkiah, and the seat of the Brunei government. The palace is located on a leafy, riverside sprawl of hills on the banks of the Brunei River, a few miles south of Bandar Seri Begawan, Brunei's capital.

Design and Construction

The name “Istana Nurul Iman” is taken from Persian *Astane* and Arabic *Nur-ol Imaan* and means *Palace of the Light of Faith.* It was designed by Filipino architect Leandro V. Locsin, who utilized the architectural motif of golden domes and vaulted roofs to echo Brunei's Islamic and Malay influences. The interior of the palace was designed by Khuan Chew, Design Principal of KCA International, whose other works include the Burj Al Arab in Dubai. Construction was handled by Ayala International, a Filipino construction firm, and completed in 1984 at a total cost of around $1.4 Billion USD.

Physical Characteristics

Upon completion, Istana Nurul Iman, became the largest residential palace in the world and the largest single family residence ever built.[1]

The banquet hall, which can seat up to 5,000 people

The palace contains 1,788 rooms, which includes 257 bathrooms, a banquet hall that can be expanded to accommodate up to 5,000 guests, a mosque accommodating 1,500 people.[2] The palace also includes a 110-car garage, an air conditioned stable for the Sultan's 200 polo ponies, and 5 swimming pools. In total, Istana Nurul Iman contains 2,152,782 square feet (200,000 m²) of floorspace.[3]

Because of its massive size, Istana Nurul Iman makes use of 564 chandeliers, 51,000 light bulbs, 44 stairwells, and 18 elevators.[4]

Functions

The Sultan takes his official audiences at the palace. The palace is also used for all the State functions of the government of Brunei. In addition, the palace houses the prime minister's office, and serves as the seat of the Brunei government.

In addition to Audience and State Rooms, there is a Throne Chamber used for various formal occasions such as the proclamation of the Crown Prince and the annual Birthday Investiture.

However, in keeping with its primary use as the Sultan's personal residence, the palace is home to the Sultan's massive car collection, which includes custom-made Ferraris and Bentleys as well as 165 Rolls Royces.

Palace courtyard accessible to public during Hari Raya Aidilfitri

Accessibility

The palace is not open to the public except on the annual Islamic celebration of Hari Raya Aidilfitri (the festival at the end of the Muslim fasting month) when the palace receives about 110,000 visitors over a three-day period where the guests receive gifts of food as well as green packets containing money for young children. The palace is also open to Muslims during 10 days of the Ramadhan period for the Bertedarus prayer gathering.

World's Largest Palace

Main article: World's Largest Palace

The title of the "world's largest palace" can be difficult to ascertain, and altogether controversial, as many different groups have motivations to use their own unique standards to advance the claim that a particular palace is the largest in the world. Using various self-serving definitions, a number of palaces are claimed to be the world's largest: Istana Nurul Iman, Buckingham Palace, Royal Palace of Madrid, Stockholm Palace, The Forbidden City, The Palace of Versailles, The Winter Palace, The Louvre, Prague Castle, and Romania's Palace of the Parliament.

To be considered for the Guinness World Record, the palace must have once been intended for use as a royal residence, and only the actual combined area of the palace's indoor floors (a measurement commonly known as floorspace) is considered. As measured by these standards, Guinness World Records currently considers Istana Nurul Iman to hold the title as the "world's largest palace."

Comparisons

Palace of the Parliament: 3,700,000 square feet (343,741 m^2)

Istana Nurul Iman: 2,152,782 square feet (200,000 m^2)[5]

Forbidden City: 1,614,600 square feet (150,001 m^2)[6]

Royal Palace of Madrid: 1,453,122 square feet (134,999 m^2)[7]

Buckingham Palace: 828,818 square feet (77,000 m^2)[8]

The Palace of Versailles: 721,206 square feet (67,002 m^2)[9]

Royal Palace of Stockholm: 658,858 square feet (61,210 m^2)

Louvre Palace: 652,298 square feet (60,600 m^2)(Square footage reflects area of modern day Louvre Museum)[10]

Windsor Castle: 484,374 square feet (45,000 m^2)[11]

Winter Palace: 250,000 square feet (23,226 m^2)[12] (Currently part of 1,978,622 square feet (183,820 m^2) Hermitage Museum)

Rashtrapati Bhavan,India: 200,000 square feet (18,581 m^2)

Palais des Papes: 161,500 square feet (15,004 m^2)

Jordan

From Wikipedia, the free encyclopedia

Jordan (Arabic: الأُرْدُن, Al-'Urdun), officially the **Hashemite Kingdom of Jordan** (Arabic: المَمْلَكَة الأُرْدُنِيَّة الهَاشِمِيَّة), Al-Mamlaka al-Urduniyya al-Hashemiyya) is a kingdom on the East Bank of the River Jordan. The country borders Saudi Arabia to the east and south-east, Iraq to the north-east, Syria to the north and the West Bank and Israel to the west, sharing control of the Dead Sea with the latter. Jordan's only port is at its south-western tip, at the Gulf of Aqaba, which is shared with Israel, Egypt, and Saudi Arabia. Over half of Jordan is covered by the Arabian Desert. However, the western part of Jordan is arable land and forests. Jordan is part of the Fertile Crescent. The capital city is Amman.

Modern Jordan was founded in 1921, and it was recognized by the League of Nations as a state under the British mandate in 1922 known as The Emirate of Transjordan. In 1946, Jordan became an independent sovereign state officially known as the Hashemite Kingdom of Jordan.

In antiquity, the present day Jordan became a home for several ancient kingdoms including: the kingdom of Edom, the kingdom of Moab, the kingdom of Ammon and the prominent Nabataean kingdom of Petra. However, across different eras of history, parts of the country laid under the control of some regional powers including Pharaonic Egypt during their wars with the Babylonian and the Hittites; and for discrete periods of times by Israelites who were taken under the captivity of the Babylonian, and who were later defeated by the Moabites as recorded in Mesha Stele. Furthermore, and due to its strategic location in the middle of the ancient world, Jordan was also controlled by the ancient empires of Greece, the Persians, the Romans and later by the Byzantine. Yet, the Nabataean managed to create their independent kingdom which covered most parts of modern Jordan and beyond, for some centuries, before it was taken by the still expanding Roman empire. However, apart from Petra, the Romans maintained the prosperity of most of the ancient cities in Jordan which enjoyed a sort of city-state autonomy under the umbrella of the alliance of the Decapolis. With the decline of the Roman Empire, Jordan came to be controlled by the Ghassanid Arab kingdom. In the seventh century, and due to its proximity to Damascus, Jordan became a heartland for the Arabic Islamic Empire and therefore secured several centuries of stability and prosperity, which allowed the coining of its current Arabic Islamic identity. In the 11th century, Jordan witnessed a phase of instability, as it became a battlefield for the Crusade wars which ended with defeat by the Ayyubids. Jordan suffered also from the Mongol attacks which were blocked by

Mamluks. In 1516, It became part of the Ottoman Empire and it remained so until 1918, when the Army of the Great Arab Revolt took over, and secured the present day Jordan with the help and support of Jordan local tribes.

Nabataean civilization left many magnificent archaeological sites at Petra, which is considered one of the New Seven Wonders of the World as well as recognized by the UNESCO as a world Heritage site. Other civilizations leaving their archaeological fingerprints on Jordan include the Hellenistic and the Roman through their ruins in Decapolis cities of Gerasa (Jerash), Gadara (Umm Qais), Philadelphia (Amman), Capitolias (Beit Ras), Raphana, Pella and Arabella (Irbid) and the Byzantine site of Um er-Rasas (a UNESCO World Heritage Site). The Arabic Islamic Empire has left desert palaces such as Qasr Mshatta, Qasr al Hallabat and Qasr Amra; and the castles of Ajloun and Al Karak which were used in the Crusader, Ayyubid and Mamluk eras. The country also has Ottoman mosques, tombs, railway stations and fortresses.

Modern Jordan is classified as a country of "high human development" by the 2010 Human Development Report.[6] and an emerging market with a free market economy by the CIA World Fact Book. Jordan has an "upper middle income" economy.[7] Free Trade Agreement (FTA) with the United States went into effect in December, 2001 phased out duties on nearly all goods and services between the two countries. Jordan has also enjoyed "advanced status" with the European Union since December 2010[8] as well as being a member of the Euro-Mediterranean free trade area. Jordan has more Free Trade Agreements than any other country in the region. It has close relations with the United States and the United Kingdom, and became a major non-NATO ally of the United States in 1996. Jordan is a founding member of the Arab League,[9] and the Organisation of Islamic Cooperation (OIC). Jordan was invited to Join the Gulf Cooperation Council (GCC). Jordan was the first Arab and Middle Eastern state to join the International Criminal Court. The Jordanian Government is one of three members of the 22 Arab League states to maintain diplomatic relations with Israel, the others being the Egyptian and Palestinian governments.[10][11]

Etymology

The kingdom is named after the River Jordan. The name "Jordan" derives from

Arabic and other Semitic languages and has multiple meanings (Ancient Arabic الأردن meaning "Steep/Slope" from the root يرد/أرد Ard/Yrd, the Canaanite root Arda, Hebrew ירד Yarad, ultimately from Aramaic Yarden meaning "down-flowing" or "one who descends" in the root ירד Yrd). This refers to the Jordan river, that down flows to the Dead sea.

Geography

Main article: Geography of Jordan

Jordan lies between latitudes 29° and 34° N, and longitudes 35° and 40° E (a small area lies west of 35°). It consists of an arid plateau in the east, irrigated by oasis and seasonal water streams, with highland area in the west of arable land and Mediterranean evergreen forestry.

The Jordan Rift Valley of the Jordan River separates Jordan from the West Bank and Israel. The highest point in the country is Jabal Umm al Dami, at 1,854 m (6,083 ft) above sea level, its top is also covered with snow, while the lowest is the Dead Sea −420 m (−1,378 ft). Jordan is part of a region considered to be "the cradle of civilization", the Levant region of the Fertile Crescent. Major cities include the capital Amman and as-Salt in the west, Irbid, Jerash and Zarqa, in the northwest and Madaba, Karak and Aqaba in the southwest. Major towns in the eastern part of the of the country are the oasis town of Azraq and Ruwaished.

Climate

Main article: Climate of Jordan

The climate in Jordan is semi-dry in summer with average temperature in the mid 30 °C (86 °F) (mid 90°F) and relatively cold in winter averaging around 13 °C (55 °F). The western part of the country receives greater precipitation during the winter season from November to March and snowfall in Amman (756 m (2,480 ft) ~ 1,280 m (4,199 ft) above sea-level) and Western Heights of 500 m (1,640 ft). Excluding the rift valley the rest of the country is entirely above 300 m (984 ft)(SL).[12]The weather is humid from November to March and semi dry for the rest of the year. With hot, dry summers and cool winters during which practically all of the precipitation occurs, the country has a Mediterranean-style climate. In general, the farther inland from the Mediterranean a given part of the country lies, the greater are the seasonal contrasts in temperature and the less rainfall.

Atmospheric pressures during the summer months are relatively uniform, whereas the winter months bring a succession of marked low pressure areas and accompanying cold fronts. These cyclonic disturbances generally move eastward from over the Mediterranean Sea several times a month and result in sporadic precipitation.

Most of the land receives less than 620 mm (24.4 in) of rain a year and may be classified as a semi dry region. Where the ground rises to form the highlands east of the Jordan Valley, precipitation increases to around 300 mm (11.8 in) in the south and 500 mm (19.7 in) or more in the north. The Jordan Valley, forms a narrow climatic zone that annually receives up to 900 mm (35.4 in) of rain in the northern reaches; rain dwindles to less than 120 mm (4.7 in) at the head of the Dead Sea.

The country's long summer reaches a peak during August. January is usually the coldest month. The fairly wide ranges of temperature during a twenty-four-hour period are greatest during the summer months and have a tendency to increase with higher elevation. Daytime temperatures during the summer months frequently exceed 29 °C (84.2 °F) and average about 32 °C (89.6 °F). September to March are moderately cool and sometimes very cold, averaging about 3.2 °C (37.8 °F). Except in the rift depression, frost is fairly common during the winter, it

may take the form of snow at the higher elevations of the north western highlands. Usually it snows a couple of times in the winter.

For a month or so before and after the summer dry season, hot, dry air from the desert, drawn by low pressure, produces strong winds from the south or southeast that sometimes reach gale force. Known in Western Asia by various names, including the *khamsin*, this dry, sirocco-style wind is usually accompanied by great dust clouds. Its onset is heralded by a hazy sky, a falling barometer, and a drop in relative humidity to about 10%. Within a few hours there may be a 10 °C (18.0 °F) to 15 °C (27.0 °F) rise in temperature. These windstorms ordinarily last a day or so, cause much discomfort, and destroy crops by desiccating them.

The *shamal* comes from the north or northwest between June and September. Steady during daytime hours but becoming a breeze at night, the shamal may blow for nine days out of ten and then repeat the process. It originates as a dry continental mass of polar air that is warmed as it passes over the Eurasian landmass.

Petra, one of the New Seven Wonders of the World

History of Jordan

Main articles: History of Jordan and Timeline of the Hashemite Kingdom of Jordan

Ancient history

Jordan's roots as a sovereign independent state go back to the ancient kingdoms of Nabatean Petra, Edom, Ammon, and Moab which flourished in Jordan in the 2nd and 1st millennium B.C. The Nabatean kingdom (Arabic: الأنباط, Al-Anbāt) was one of the most prominent states in the region. The Nabateans were an ancient Semitic people who controlled the regional and international trade routes of the ancient world by dominating a large area southwest of the fertile crescent, which included the whole of modern Jordan in addition to the southern part of Syria in the north and the northern part of Arabian Peninsula in the south. The Nabataeans developed the Arabic Script, with their language as an intermediary between Aramaean and the ancient Classical Arabic, which evolved into Modern Arabic.

The Kingdom of Edom was based in the south of Jordan. The Mesha Stele recorded the glory of the King of Edom and the victories over the Israelites and other nations. The Ammon and Moab kingdoms are mentioned in ancient maps, Near Eastern documents, ancient Greco-Roman artifacts, and Christian and Jewish religious scriptures.[13]

Classic antiquity

During the Greco-Roman period, a number of semi-independent city-states also developed in the region of Jordan under the umbrella of the Decapolis including: Gerasa (Jerash), Philadelphia (Amman), Raphana (Abila), Dion (Capitolias), Gadara (Umm Qays), and Pella (Irbid). Parts of Jordan were later incorporated into the Hasmonean kingdom, with pastoralist Nabateans slowly establishing their own realm in the southern parts of the Transjordan. Following the establishment of Roman Empire at Syria and Judaea, the country was incorporated into the client Judaea Kingdom of Herod, and later the Iudaea Province. With the suppression of Jewish Revolts, the eastern bank of Jordan was incorporated into the Syria Palaestina province, while the eastern deserts fell under Parthian and later Persian Sassanid control.

Muslim empires

In the 7th century, and for several centuries, the region of today's Jordan became one of the heartlands of the

Arabic Islamic Empire across its different Caliphates' stages, including the Rashidun Empire, Umayyad Empire and Abbasid Empire. During the Islamic era, Jordan coined its current Arabic Islamic cultural identity. Several resources pointed that the Abbasid movement, was started in region of Jordan before it took over the Umayyad empire. After the decline of the Abbasid, It was ruled by several conflicting powers including the Mongols, the Crusaders, the Ayyubids and the Mamluks until it became part of the Ottoman Empire in 1516.[14]

Great Arab Revolt

Arab Revolt Tribal Cavalry – Tribes of Jordan and Arabia, c. 1918

Adyghe (Circassian) horsemanship in Transjordan, April 1921

During World War I, the Jordanian tribes fought, along with other tribes of Hijaz and Levant regions, as part of the Arab Army of the Great Arab Revolt. The revolt was launched by Hashemites and led by Sherif Hussein of Mecca against the Ottoman Empire. It was supported by the Allies of World War I. The chronicle of the revolt was written by T. E. Lawrence who, as a young British Army officer, played a liaison role during the revolt. He published the chronicle in London, 1922 under the title "Seven Pillars of Wisdom",[15] which was the base for the iconic movie "Lawrence of Arabia".

The Great Arab Revolt was successful in liberating most of the territories of Hijaz and the Levant, including the region of east of Jordan. However, it failed to gain international recognition of the region as an independent state, due mainly to the secret Sykes–Picot Agreement of 1916 and the Balfour Declaration of 1917.[*citation needed*] This was seen by the Hashemites and the Arabs as betrayal of the previous agreements with the British, including the McMahon–Hussein Correspondence in 1915, in which the British stated their willingness to recognize the independence of the Arab state in Hijaz and the Levant. However, a compromise was eventually reached and the Emirate of Transjordan was created under the Hashemites reign.

British mandate of Transjordan

In September 1922 the Council of the League of Nations recognized Transjordan as a state under the British Mandate and Transjordan memorandum excluded the territories east of the River Jordan from all of the provisions of the mandate dealing with Jewish settlement.[16] The country remained under British supervision until 1946.

The Hashemite leadership met multiple difficulties upon assuming power in the region. The most serious threats to emir Abdullah's position in Transjordan were repeated Wahhabi incursions from Najd into southern parts of his territory.[17] The emir was powerless to repel those raids by himself, thus the British maintained a military base, with a small air force, at Marka, close to Amman.[17] The British military force was the primary obstacle against the Ikhwan, and was also used to help emir Abdullah with the suppression of local rebellions at Kura and later by Sultan Adwan, in 1921 and 1923 respectively.[17]

Independence

Arar

On May 25, 1946 the United Nations approved the end of the British Mandate and recognized Jordan as an independent sovereign kingdom. The Parliament of Jordan proclaimed King Abdullah as the first King.

On April 24, 1950, Jordan formally annexed the West Bank and East Jerusalem, an act that was regarded as illegal and void by the Arab League. The move formed part of Jordan's "Greater Syria Plan" expansionist policy,[18] and in response, Saudi Arabia, Lebanon and Syria

(1897-1949)
Poet of Jordan

joined Egypt in demanding Jordan's expulsion from the Arab League.[19][20] A motion to expel Jordan from the League was prevented by the dissenting votes of Yemen and Iraq.[18] On June 12, 1950, the Arab League declared the annexation was a temporary, practical measure and that Jordan was holding the territory as a "trustee" pending a future settlement.[21][22] On July 27, 1953, King Hussein of Jordan announced that East Jerusalem was "the alternative capital of the Hashemite Kingdom" and would form an "integral and inseparable part" of Jordan.[23]

Abdullah I was assassinated in 1951 as he was leaving the al-Aqsa Mosque in Jerusalem.

Jordan became a founding member of the Arab League in 1945 and, as an independent country, it joined the United Nations in 1955. In 1957 it terminated the Anglo-Jordan treaty, one year after the king sacked the British personnel serving in the Jordanian Army. This act of Arabization ensured the complete sovereignty of Jordan as a fully independent nation.

Field marshal Habis Al-Majali and former prime minister Wasfi Al-Tal

1967 Six Day War

In May 1967, Jordan signed a military pact with Egypt. In June 1967, it joined Egypt, Syria and Iraq in the Six Day War against Israel, which ended in an Israeli victory and the capture of the West Bank and East Jerusalem. The period following the war saw an upsurge in the activity and numbers of Arab Palestinian paramilitary elements (*fedayeen*) within the state of Jordan. These distinct, armed militias were becoming a "state within a state", threatening Jordan's rule of law. King Hussein's armed forces targeted the *fedayeen*, and open fighting erupted in June 1970. The battle in which Palestinian fighters from various Palestine Liberation Organization (PLO) groups were expelled from Jordan is commonly known as Black September.

The heaviest fighting occurred in northern Jordan and Amman. In the ensuing heavy fighting, a Syrian tank force invaded northern Jordan to back the *fedayeen* fighters, but subsequently retreated. King Hussein urgently asked the United States and Great Britain to intervene against Syria. Consequently, Israel performed mock air strikes on the Syrian column at the Americans' request. Soon after, Syrian President Nureddin al-Atassi, ordered a hasty retreat from Jordanian soil.[24][25] By September 22, Arab foreign ministers meeting in Cairo arranged a cease-fire beginning the following day. However, sporadic violence continued until Jordanian forces, led by Habis Al-Majali, with the help of Iraqi forces,[26] won a decisive victory over the *fedayeen* on July 1971, expelling them, and ultimately the PLO's Yasser Arafat, from Jordan.

1973 Yom Kippur War

In 1973, allied Arab League forces attacked Israel in the Yom Kippur War, and fighting occurred along the 1967 Jordan River cease-fire line. Jordan sent a brigade to Syria to attack Israeli units on Syrian territory but did not engage Israeli forces from Jordanian territory. At the Rabat summit conference in 1974, Jordan was now in a more secure position to agree, along with the rest of the Arab League, that the PLO was the "sole legitimate representative of the [Arab] Palestinian people", thereby relinquishing to that organization its role as representative of the West Bank.

The Amman Agreement of February 11, 1985, declared that the PLO and Jordan would pursue a proposed confederation between the state of Jordan and a Palestinian state.[27] In 1988, King Hussein dissolved the Jordanian parliament and renounced Jordanian claims to the West Bank. The PLO assumed responsibility as the Provisional Government of Palestine and an independent state was declared.[28]

Peace treaty with Israel

A handshake between Hussein I of Jordan and Yitzhak Rabin, accompanied by Bill Clinton, after signing the Israel-Jordan Treaty of Peace, October 26, 1994

In 1991, Jordan agreed to participate in direct peace negotiations with Israel at the Madrid Conference, sponsored by the US and the Soviet Union. It negotiated an end to hostilities with Israel and signed a declaration to that effect on 25 July 1994. As a result, an Israeli-Jordanian peace treaty was concluded on 26 October 1994. King Hussein was later honored when his picture appeared on an Israeli postage stamp in recognition of the good relations he established with his neighbor. Since the signing of the peace treaty, the United States not only contributes hundreds of millions of dollars in an annual foreign aid stipend to Jordan, but also has allowed it to establish a free trade zone in which to manufacture goods that will enter the US without paying the usual import taxes as long as a percentage of the material used in them is purchased in Israel.

The last major strain in Jordan's relations with Israel occurred in September 1997, when Israeli agents allegedly entered Jordan using Canadian passports and poisoned Khaled Meshal, a senior leader of Hamas. Israel provided an antidote to the poison and released dozens of political prisoners, including Sheikh Ahmed Yassin, who was assassinated in 2004 in the Gaza Strip.

Government

Main article: Government of Jordan

The Hashemite Kingdom of Jordan is a constitutional monarchy with an appointed government. The reigning monarch is the chief executive and the commander-in-chief of the armed forces. The king exercises his executive authority through the prime ministers and the Council of Ministers, or cabinet. The cabinet, meanwhile, is responsible before the democratically elected House of Deputies which, along with the House of Notables (Senate), constitutes the legislative branch of the government. The judicial branch is an independent branch of the government.

King Abdullah II, Jordanian Head of State.

See also: List of Kings of Jordan and Line of succession to the Jordanian throne

King Abdullah I ruled Jordan after independence from Britain. After the assassination of King Abdullah I in 1951, his son King Talal ruled briefly. King Talal's major accomplishment was the Jordanian constitution. King Talal was removed from the throne in 1952 due to mental illness. At that time his son, Hussein, was too young to rule, and hence a committee ruled over Jordan.

Queen Rania of Jordan

After Hussein reached 18, he ruled Jordan as king from 1953 to 1999, surviving a number of challenges to his rule, drawing on the loyalty of his military, and serving as a symbol of unity and stability in Jordan. King Hussein ended martial law in 1991 and legalized political parties in 1992. In 1989 and 1993, Jordan held free and fair parliamentary elections. Controversial changes in the election law led Islamist parties to boycott the 1997 elections.

King Abdullah II succeeded his father Hussein following the latter's death in February 1999. Abdullah moved

quickly to reaffirm Jordan's peace treaty with Israel and its relations with the United States. Abdullah, during the first year in power, refocused the government's agenda on economic reform.

Jordan's continuing structural economic difficulties, burgeoning population, and more open political environment led to the emergence of a variety of political parties. Moving toward greater independence, Jordan's parliament has investigated corruption charges against several regime figures and has become the major forum in which differing political views, including those of political Islamists, are expressed. While the King remains the ultimate authority in Jordan, the parliament plays an important role.

Parliament

Main article: Parliament of Jordan

The 1952 Constitution provided for the establishment of the bicameral National Assembly of Jordan ('Majlis al-Umma'). The Parliament consists of two Chambers: The Chamber of Deputies ('Majlis al-Nuwaab') and the Senate ('Majlis al-Aayan'; literally, 'Assembly of Notables'). The Senate has 60 Senators, all of whom are directly appointed by the King,[29] while the Chamber of Deputies/House of Representatives has 120 elected members representing 12 constituencies. Of the 120 members of the Lower Chamber, 12 seats are reserved for women, 9 seats are reserved for Christian candidates, 9 seats are reserved for Bedouin candidates, and 3 seats are reserved for Jordanians of Chechen or Circassian descent. The Constitution ensures that the Senate cannot be more than half the size of the Chamber of Deputies.

The constitution does not provide a strong system of checks and balances within which the Jordanian Parliament can assert its role in relationship to the monarch. During the suspension of Parliament between 2001 and 2003, the scope of King Abdullah II's power was demonstrated with the passing of 110 temporary laws. Two of such laws dealt with election law and were seen to reduce the power of Parliament.[30][31]

Senators have terms of four years and are appointed by the King and can be reappointed. Prospective Senators must be at least forty years old and have held senior positions in either the government or military. Appointed Senators have included former Prime Ministers and Members of the Chamber of Deputies. Deputies are elected to also serve a four year term. Candidates must be older than thirty-five, cannot have blood ties to the King, and must not have any financial interests in government contracts.[32]

Constitution

Jordan is a constitutional monarchy based on the constitution promulgated on 8 January 1952. Executive authority is vested in the king and his council of ministers. The king signs and executes all laws. His veto power may be overridden by a two-thirds vote of both houses of the National Assembly. He appoints and may dismiss all judges by decree, approves amendments to the constitution, declares war, and commands the armed forces. Cabinet decisions, court judgments, and the national currency are issued in his name. The council of ministers, led by a prime minister, is appointed by the king, who may dismiss other cabinet members at the prime minister's request. The cabinet is accountable to the Chamber of Deputies on matters of general policy and can be forced to resign by a 50% or more of vote of "no confidence" by that body.

The constitution provides for three categories of courts: civil, religious, and special. Administratively, Jordan is divided into twelve governorates, each headed by a governor appointed by the king. They are the sole authorities for all government departments and development projects in their respective areas.

Legal system and legislation

Jordan's legal system is based on French code law system via the Egyptian civil laws while Islamic law is limited to

civic status legislation for Muslims. Religious minority civic status is regulated by respective religious courts. Judicial review of legislative acts occurs in a special High Tribunal. It has not accepted International Court of Justice jurisdiction.

Jordan has multi-party politics. There are over 30 political parties in Jordan from extreme left (Jordanian Communist Party) to extreme right (Islamic Action Front). Article 97 of Jordan's constitution guarantees the independence of the judicial branch, clearly stating that judges are 'subject to no authority but that of the law.' While the king must approve the appointment and dismissal of judges, in practice these are supervised by the Higher Judicial Council.

The Jordanian legal system draws upon civil traditions as well as Islamic law and custom. Article 99 of the Constitution divides the courts into three categories: civil, religious and special. The civil courts deal with civil and criminal matters in accordance with the law, and they have jurisdiction over all persons in all matters, civil and criminal, including cases brought against the government. The civil courts include Magistrate Courts, Courts of First Instance, Courts of Appeal, High Administrative Courts and the Supreme Court. The religious courts include shari'a (Islamic law) courts and the tribunals of other religious communities, namely those of the Christian minority. Religious courts have primary and appellate courts and deal only with matters involving personal law such as marriage, divorce, inheritance and child custody. Shari'a courts also have jurisdiction over matters pertaining to the Islamic waqfs. In cases involving parties of different religions, regular courts have jurisdiction.[33]

Despite traditional male domination, the number of women lawyers has been increasing. As of mid-2006 Jordan had 1,284 female lawyers, out of a total number of 6,915, and 35 female judges from a total of 630.

Police

Main article: Law enforcement in Jordan

Jordan ranked 24th in the world, 4th in the Middle East, in terms of police services' reliability in the Global Competitiveness Report. Jordan also ranked 13th in the world and 3rd in the Middle East in terms of prevention of organized crime, making it one of the safest countries in the world.[34]

A female police officer in Amman

King Abdullah II on a visit to The Pentagon.

Foreign relations

Main article: Foreign relations of Jordan

Jordan has followed a pro-Western foreign policy and maintained close relations with the United States and the United Kingdom. These relations were damaged by Jordan's neutrality and maintaining relations with Iraq during the first Gulf War. During the 1970s, King Hussein negotiated with Iran to halt the military buildup to annex the small Persian Gulf nation of Bahrain. In the 1990s, he tried to mediate the conflict between the United States and Iraq and tried to bring an end to hostilities while still condemning the Iraqi annexation of Kuwait. Jordan has historically been at the forefront of negotiating peace between the Israelis and the Palestinians. King Abdullah II is the mediator between Israel and the Arab League's negotiations for peace and normalization of bilateral ties.

Following the Gulf War, Jordan largely restored its relations with Western countries through its participation in the Southwest Asia peace process and enforcement of UN sanctions against Iraq. Relations between Jordan and the Persian Gulf countries improved substantially after King Hussein's death. Following the fall of the Iraqi regime,

Jordan has played a pivotal role in supporting the restoration of stability and security to Iraq. The Government of Jordan signed a memorandum of understanding with the Coalition Provisional Authority in Iraq to facilitate the training of up to 30,000 Iraqi police cadets at a Jordanian facility.

Jordan signed a non-belligerency agreement with Israel in Washington, D.C. on 25 July 1994. King Hussein and Yitzhak Rabin negotiated this treaty. Jordan and Israel signed a historic peace treaty on 26 October 1994, witnessed by President Bill Clinton, accompanied by US Secretary, Warren Christopher. The US has participated with Jordan and Israel in trilateral development discussions in which key issues have been water-sharing and security; cooperation on Jordan Rift Valley development; infrastructure projects; and trade, finance, and banking issues.

Vladimir Putin visiting the Baptism Site Bethany Beyond the Jordan in the Jordan Valley, 2007

Jordan and Israel had generally close relations even before the signing of the 1994 Peace Treaty. On more than one occasion, Jordan warned Israel of an impending attack by Syria and Egypt. Also, during the Black September conflict in Jordan, Israel warned Syria that any Syrian intervention on the side of the PLO against the Jordanian monarchy would result in an Israeli attack. Israel and Jordan along with Lebanon were already negotiating a peace treaty as early as the 1950s. However, this friendship has been damaged several times due to the worsening situation in the Palestinian territories and the slow peace process with the Palestinians. In Israel in 2009, several Likud lawmakers proposed a bill that called for a Palestinian state on both sides of the Jordan River, presuming that Jordan should be the alternative homeland for the Palestinians. Later, following similar remarks by the Israeli Speaker of the Knesset, twenty Jordanian lawmakers proposed a bill in the Jordanian Parliament in which the peace treaty between Israel and Jordan would be frozen. The Israeli Foreign Ministry disavowed the original proposal.[35][36]

The Jordanian General Intelligence Department is reportedly the CIA's closest partner after Britain's MI6. Also, the release classified US cables on Wikileaks proved the depth of US-Jordan relations. Over 4,000 military cables were sent from Amman, the fifth most popular origin of US military cables worldwide, higher than from London or Tel Aviv. Jordan provides extensive strategic and logistic support to US military forces in Iraq and Afghanistan. However, the leaked military cables show that America had kept Jordan's involvement in the War on Terror quiet whether it be its rendition program or Jordan's leading of counterterrorism operations in Afghanistan and Iraq.

Jordan also participates in the multilateral peace talks. Jordan belongs to the UN and several of its specialized and related agencies, including the World Trade Organization (WTO), the International Meteorological Organization (IMO), Food and Agriculture Organization (FAO), International Atomic Energy Agency (IAEA), and the World Health Organization (WHO). Jordan also is a member of the World Bank, International Monetary Fund (IMF), Organisation of Islamic Cooperation (OIC), Nonaligned Movement (NAM), and Arab League.

Military

Six USAF F-16 fighters in Muwaffaq Salti Air Base in Azraq. JAF F-16's

Jordan has a strong defensive army with strong support and aid from the United States, the United Kingdom and France. This is due to its critical position between Israel and the West Bank, Syria, Iraq, and Saudi Arabia with very close proximity to Lebanon and Egypt. The development of the special forces has been particularly significant,

Jordanian troops in a military parade in

can be seen to the right.

enhancing the capability of the forces to react rapidly to threats to state security, as well as training special forces from the region and beyond.[37][38]

Amman

Jordanian Special Forces

Main article: Royal Jordanian Land Force

The **Royal Special Forces** is a unit of the armed forces of Jordan. The Commander was Prince Abdullah (now Abdullah II of Jordan), 1993–1996. In 2007, these forces received training from Blackwater Worldwide.[39]

The **Royal Naval Force** is the Naval entity of the Jordanian Armed Forces.

The **Royal Jordanian Air Force (RJAF)** (Arabic: سلاح الجو الملكي الأردني, transliterated: *Silah al-Jaw Almalaki al-Urduni*) is the aviation branch of the Jordanian Armed Forces and includes the Royal Jordanian Air Defence.

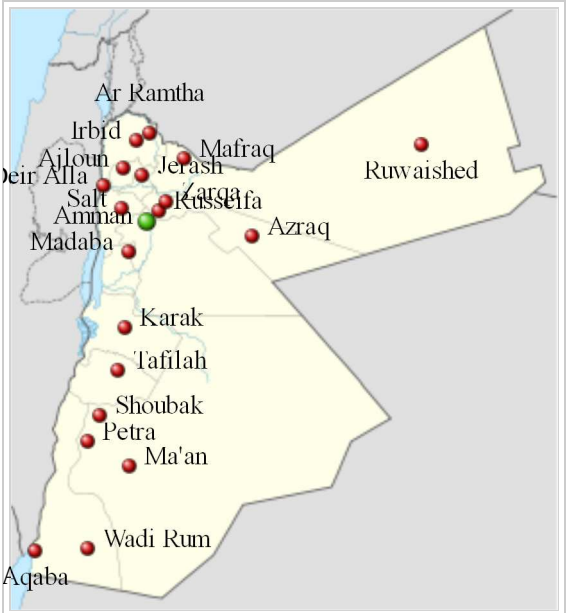
UN Peacekeeping force

There are about 50,000 Jordanian troops working with the United Nations in peacekeeping missions across the world. These soldiers provide everything from military defense, training of native police, medical help, and charity. Jordan ranks third internationally in taking part in UN peacekeeping missions.[40]

Jordan has dispatched several field hospitals to conflict zones and areas affected by natural disasters across the world such as Iraq, the West Bank, Lebanon, Afghanistan, Haiti, Indonesia, Congo, Liberia, Ethiopia, Eritrea, Sierra Leone and Pakistan. The Kingdom's field hospitals extended aid to more than one million people in Iraq, some one million in the West Bank and 55,000 in Lebanon. According to the military, there are Jordanian peacekeeping forces in Asia, Africa, Europe and Latin America. Jordanian Armed Forces field hospital in Afghanistan has since 2002 provided assistance to some 750,000 persons and has significantly reduced the suffering of people residing in areas where the hospital operates.In some missions, the number of Jordanian troops was the second largest, the sources said.[41] Jordan also provides extensive training of security forces in Iraq,[42] the Palestinian territories,[43] and the GCC.[44]

Political parties

Main article: Politics of Jordan



Jordan's most executive power is the King and it is a constitutional monarchy with an appointed government. The King traditionally has held substantial power, however the democratically elected Parliament holds significant influence and power in national governance.

The reforms of 1989 legalized political parties and opposition movements. The result is over 30 political parties, but the only political party that plays a role in the legislature is the Islamic Action Front (IAF). Political parties can be seen to represent four sections: Islamists, leftists, Arab nationalists and liberals. Some other political parties in Jordan including the Jordanian Arab Democratic Party, Jordanian Socialist Party, and Muslim Centre Party, but these have little impact on the political process because of lack of organization and clear platforms on key domestic issues as well as differences and factions within these political parties.

Administrative divisions

Jordan is divided into 12 provinces named Governorates, which are sub-divided into 54 departments or districts

named Nahias.

Administrative centers in Jordan

Governorate	Capital	Region
Ajloun Governorate	Ajloun	North
Aqaba Governorate	Aqaba	South
Balqa Governorate	Salt	Central
Capital Governorate	Amman	Central
Irbid Governorate	Irbid	North
Jerash Governorate	Jerash	North

Zarqa Governorate	Zarqa	Central

Human rights

Main article: Human rights in Jordan

The 2010 Arab Democracy Index from the Arab Reform Initiative ranked Jordan first in the state of democratic reforms out of fifteen Arab countries.[45]

Jordan ranked 141 out of 196 countries worldwide, earning "Not Free" status in Freedom House's 2011 Freedom of the Press 2011 report.[46] Jordan had the 5th freest press of 19 countries in the Middle East and North Africa region. Civil liberties and political rights scored 5 and 6 respectively in Freedom House's Freedom in the World 2011 report, where 1 is most free and 7 is least free. This earned Jordan "Not Free" status.[47] Jordan ranked ahead of 6, behind 4, and the same as 8 countries in the Middle East and North Africa region.

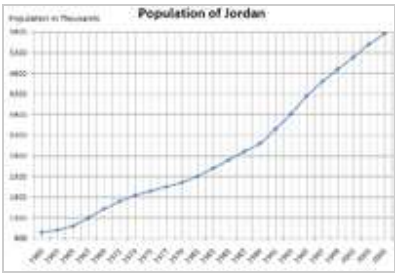
In the 2010 Press Freedom Index maintained by Reporters Without Borders, Jordan ranked 120th out of 178 countries listed, 5th out of the 20 countries in the Middle East and North Africa region. Jordan's score was 37 on a scale from 0 (most free) to 105 (least free).[48]

Jordan ranked 6th among the 19 countries in the Middle East and North Africa region, and 50th out of 178 countries worldwide in the 2010 Corruption Perceptions Index (CPI) issued by Transparency International.[49]

Jordan's 2010 CPI score was 4.7 on a scale from 0 (highly corrupt) to 10 (very clean). Jordan ratified the United Nations Convention against Corruption (UNCAC) in February 2005[50] and has been a regional leader in spearheading efforts to promote the UNCAC and its implementation.[34]

Areas where the government of Jordan was praised in its human rights efforts were in its protection of minority groups and freedom of religion. Christians are well integrated in Jordanian society and they are members of the country's political and economic elite. There are usually two cabinet posts held by Christians. A survey by a Western embassy in Amman found that nearly half of Jordan's leading business families are Christian despite being a minority group. Christians have established good relations with the royal family and many hold senior positions in the military. Jordanian Christians are equally represented in the Parliament.[51][52]

Areas of concern with respect to human rights in Jordan include:[53][54][55]



- limitations on the right of citizens to change their government peacefully;[*citation needed*]
- a newly drafted electoral law that perpetuates significant under representation of urban areas and citizens of Palestinian origin in leadership positions;
- cases of arbitrary deprivation of life, torture, poor prison conditions, impunity, arbitrary arrest and denial of due process through administrative detention, and prolonged detention;
- breaches of fair trial standards and external interference in judicial decisions;
- infringements on privacy rights;
- limited freedoms of speech and press, and government interference in the media and threats of fines and detention that encourage self-censorship;
- restricted freedoms of assembly and association;
- legal and societal discrimination and harassment of women remain a concern, although there have been significant improvements in recent years;
- legal and societal discrimination and harassment of religious minorities and converts from Islam are a concern, although Jordan is widely acknowledged as being a strong supporter of religious freedoms; [*citation needed*]
- legal and societal discrimination of members of the lesbian, gay, bisexual, and transgender (LGBT) community;
- loss of Jordanian nationality by some citizens of Palestinian origin;
- restricted labor rights; and
- abuse of foreign domestic workers.

In response to domestic and regional unrest, in February 2011 King Abdallah replaced his prime minister and formed a National Dialogue Commission with a reform mandate. The King told the new prime minister to "take quick, concrete and practical steps to launch a genuine political reform process", "to strengthen democracy," and provide Jordanians with the "dignified life they deserve."[56] The King called for an "immediate revision" of laws governing politics and public freedoms.[57] Initial reports say that this effort has started slowly and that several "fundamental rights" are not being addressed.[58]

Demographics

Main article: Demographics of Jordan

The Jordan National Census for the year 2004 was released on October 1 of the same year, According to the census, Jordan had a population of 5,100,981. The census estimated that there are another 190,000 who were not counted. National growth rate was 2.5% (at maximum) compared to 3.3% of the 1994 census. Males made up 51.5% of Jordan's population (2,628,717), while females constituted 2,472,264 (48.5%). Jordanian citizens made up 93% of the population (4,750,463), non-Jordanian citizens made up 7% (349,933). However, it is estimated that

Graph showing the population of Jordan, 1960-2005

most of those who did not turn in their forms were immigrants from neighboring countries, There were 946,000 households in Jordan in 2004, with an average of 5.3 persons/household (compared to 6 persons/household for the census of 1994).[59] The next census is scheduled to take place in 2014.

Jordan's Arab population mainly consists of Palestinians, Jordanians, and Iraqis. In addition, there are sizable immigrant communities from Egypt, Syria, Lebanon, and more recently Libya. .Of the non-Arab population which comprises 2% to 5% of Jordan's population, most are Circassians, Chechens, Armenians, Turkmans, and Romanis, all of which have maintained separate ethnic identities, but have integrated into mainstream Jordanian culture. Also, Jordan is home to a relatively large American and European expatriate population concentrated mainly in the capital as the city is home to many international organizations and diplomatic missions that base their regional operations in Amman.[60][61] Since the Iraq War many Christians (Assyrians/Chaldeans) from Iraq have settled permanently or temporarily in Jordan. They could number as many as 500,000.[62]

In 2004–2007, population increased due to the mass migration of Iraqi refugees. In 2007, there were 700,000-1,000,000 Iraqis in Jordan.[63] In 2009, the population of Jordan was slightly over 6,300,000.[64] (increasing from 5,100,000 in 2004).

According to UNRWA, Jordan was home to 1,951,603 Palestinian refugees in 2008, most of them Jordanian citizens.[65] 338,000 of them were living in UNRWA refugee camps.[66]

Migrant workers in Jordan are believed to account for 20–30% of the labor force in Jordan. The population of migrant workers including domestic workers is believed to be as high as one million. 500,000 are Egyptians, while the remaining workers are from Syria, India, Pakistan, Vietnam, and Nepal. Jordan is home to one of the world's largest population of migrant domestic workers according to Human Rights Watch. Domestic workers number around 300,000, mainly from Indonesia, the Philippines, and Sri Lanka. Recruitments of foreign workers from African nations like Ethiopia and Madagascar are also on the rise. Furthermore, there are thousands of foreign women working in nightclubs and bars, mostly from Eastern Europe and North Africa.[67][68][69]

Jordan revoked the citizenship of thousands of Palestinians to thwart any attempt to resettle West Bank residents in Jordan. West Bank Arabs with family in Jordan or Jordanian citizenship were issued yellow cards guaranteeing them all the rights of Jordanian citizenship. Palestinians living in Jordan with family in the West Bank were also issued yellow cards. All other Palestinians wishing such Jordanian papers were issued green cards to facilitate travel into Jordan.[70]

Genetics

Jordan was often at the crossroads of civilizations, and so has diverse genetic remnants. Recent genetic studies have shown strong links between the modern Jordanian people and the core populations of the Levant and the fertile crescent. A study published by Luigi Luca Cavalli-Sforza found that the Jordanian genetics are closest to the Assyrians among all other nations of Western Asia, but also links to the ancient tribes of Arabia and Yemen.[71]

Language

Main article: Jordanian Arabic

The official language is Arabic. English, though without an official status, is widely spoken throughout the country and is the de facto language of commerce and banking, as well as a co-official status in the education sector. The

spoken language is Jordanian Arabic. Modern Standard Arabic and English are obligatory learnt at public and most private schools with French being a less popular elective. Radio Jordan offers radio services in Arabic, English, and French. Armenian as well as Caucasian languages like Circassian and Chechen, are understood and spoken by small communities residing in Jordan, with several schools teaching them.

Religion

Main article: Religion in Jordan

Religion in Jordan[60]

Religion	Percent
Sunni Muslims	92%
Christian	6%
Other	2%

Abu Darweesh Mosque

Islam is the predominant religion in Jordan. It is the official religion and approximately 92% of the population is Muslim, primarily of the Sunni branch of Islam. Islamic and Christian studies are offered to students but are not mandatory and do not factor into the University entry school exams. Jordan has laws promoting religious freedom, but they fall short of protecting all minority groups. Muslims who convert to another religion as well as missionaries face societal and legal discrimination.

Greek Orthodox church in Amman

According to the 2010 Legatum Prosperity Index, less than half of Jordanians regularly attend religious services (around 40%), a moderate percentage in comparison to industrialized countries. However, this rate is the lowest among all the Arab countries and it is one of the lowest in the entire Muslim World.[72]

Jordan has an indigenous Christian minority. Christians of all ethnic backgrounds permanently residing in Jordan form approximately 6% of the population and are allocated respective seats in parliament (The Department of Statistics released no information about the religion distribution from the census of 2004). Christians made up 30% of the Jordanian population in 1950.[73] However, heavy Muslim immigration from Iraq and Palestine and lower birth rates compared to Muslims[*citation needed*] have significantly decreased the ratio of the Christian population. Most Jordanian Christians belong to the Greek Orthodox Church of Jerusalem. The remainder include members of the Syriac Orthodox Church, Latin Rite Catholic Church, Melkite Greek Catholic Church, Syriac Catholic Church, Chaldean Catholic Church, Assyrian Church of the East, Maronite Church, Ancient Church of the East, and Anglican Communion.

Among the Christian non-Arab population, significant part is made up of Armenians in Jordan; the Armenian Apostolic Church and Armenian Catholic Church (and some in other churches). Others include expatriate Christians in Jordan from various countries, as evinced, for example, by some Catholic masses held in English, French, Italian, Spanish, Tagalog, and Sinhala. With Protestant services in English, Tagalog, Tamil and German. Many Iraqi Christians have moved to Jordan, mostly Iraqi Assyrian Christians.

Other religious minorities groups in Jordan include adherents to the Druze and Bahá'í Faith. The Druze are mainly located in the Eastern Oasis Town of Azraq, some villages on the Syrian border and the city of Zarka, while the Village of Adassiyeh bordering the Jordan Valley is home to Jordan's Bahá'í community.

Health

Main article: Health in Jordan

Jordan has an advanced healthcare system, although services remain highly concentrated in Amman. Government figures have put total health spending in 2002 at some 7.5% of Gross domestic product (GDP), while international health organizations place the figure even higher, at approximately 9.3% of GDP. The country's health care system is divided between public and private institutions. In the public sector, the Ministry of Health operates 1,245 primary health-care centers and 27 hospitals, accounting for 37% of all hospital beds in the country; the military's Royal Medical Services runs 11 hospitals, providing 24% of all beds; and the Jordan University Hospital accounts for 3% of total beds in the country. The private sector provides 36% of all hospital beds, distributed among 56 hospitals. In 1 June 2007, Jordan Hospital (as the biggest private hospital) was the first general specialty hospital who gets the international accreditation JCAHO.[74]

According to 2003 estimates, the rate of prevalence of human immunodeficiency virus/acquired immune deficiency syndrome (HIV/AIDS) was less than 0.1%. According to a United Nations Development Program report, Jordan has been considered malaria-free since 2001; cases of tuberculosis declined by half during the 1990s, but tuberculosis remains an issue and an area needing improvement. Jordan experienced a brief outbreak of bird flu in March 2006. Noncommunicable diseases such as cancer also are a major health issue in Jordan. Childhood immunization rates have increased steadily over the past 15 years; by 2002 immunizations and vaccines reached more than 95% of children under five.[74]About 86% of Jordanians had medical insurance in 2009, the Jordanian government planned to reach 100% in 2011.

The King Hussein Cancer Center is a leading cancer treatment center. Jordan was ranked by the World Bank to be the number one health care services provider in the region and among the top 5 in the world. In 2008, 250,000 patients sought treatment in the Kingdom including Iraqis, Palestinians, Sudanese, Syrians, GCC citizens, Americans, Canadians, and Egyptians. Jordan earned almost $1 billion dollars in medical tourism revenues according to the World Bank.

According to the CIA World Factbook, life expectancy in Jordan is 80.05 years, the second highest in the region (after Israel). There were 203 physicians per 100,000 people in the years 2000–2004, a proportion comparable to many developed countries and higher than most of the developing world.[75]

Water and sanitation, available to only 10% of the population in 1950, now reach 99% of Jordanians, according to government statistics. They also show that electricity reaches 99% of the population, as compared to less than 10% in 1955.[76]

See: Medical education in Jordan.

Quality of life

Jordan is ranked as having a superior quality of life in comparison to the region and developing countries as a whole. Jordan ranked as having the 11th highest standard of living in the developing world and the second highest standard of living in the Arab and Muslim World as measured by the Human Poverty Index-2. Decades of political stability and security and strict law enforcement make Jordan one of the top 10 countries worldwide in security.[34] In the 2010 Newsweek "World's Best Countries" list, Jordan ranked as the third best Arab country to live in (53rd worldwide), after Kuwait and the United Arab Emirates. Globally, it ranks higher than China and South Africa. According to the index, its standard of living is on par with Turkey and Argentina.[77] In addition, Jordan is one of the most liberal countries in the Middle East with a pro-secular government.[78] In the 2010 Human Development Index, Jordan was placed in the "high human development" bracket and came 7th among Arab countries, behind the oil-rich states and one place behind Tunisia. In the HDI index score excluding income, Jordan came in second in the Arab world, higher than most of the affluent Persian Gulf states, showing the huge emphasis the Jordanian government has placed on human capital in its development process.[79] Furthermore, in the Inequality-adjusted HDI, Jordan came first among all the Arab countries showing that the average Jordanian was better off than the

average citizen of any Arab country listed in the index.

A villa in West Amman

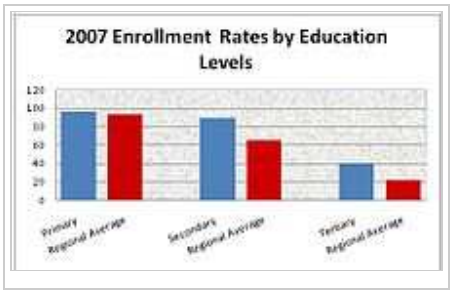
The 2010 Quality of Life Index prepared by International Living Magazine ranked Jordan as having almost the highest quality of life in the Arab world and North Africa. To produce this annual Index, International Living considers, for each of these countries, nine categories: Cost of Living, Culture and Leisure, Economy, Environment, Freedom, Health, Infrastructure, Safety and Risk and Climate. Jordan ranked second in the MENA with 55.0 points after Israel and followed by Kuwait with 54.47 points, Morocco with 54.45 points, and Lebanon with 54.3 points.[80] Only 3.5 percent of Jordanians earn less than $2 a day, one of the lowest rates in the developing world and the lowest among the Arab states, according to the UN Human Development Report. Furthermore, Jordan hosts one of the highest percentages of immigrants in the world in comparison to its total population, with more than 40% of its residents being born in another country, a rate even higher than the United States, according to a 2005 UN Report.

Low income neighborhood in East Amman

Access to adequate food and shelter in Jordan is the sixth highest in the world, and a relatively 72% of Jordanians are satisfied with their living standards. Despite high levels of perceived corruption in politics and business, Jordanians have relatively high confidence in the government. Over 8 in 10 people approve of their government which is the 13th highest level in the 2010 Legatum Prosperity Index. Levels of support for the country's policies to preserve the environment and address poverty are also among the top 25 nations. Jordanians are highly enthusiastic about their other civil institutions: 96% support the military, the seventh highest rate overall, and 70% have confidence in the judiciary, the 25th highest rate. Jordanians also enjoy high levels of safety in their personal lives. In a 2009 survey, just 2.8% of respondents said they had been assaulted in the last 12 months, and less than 7% had experienced theft: these figures are the 21st and 10th lowest in the world, respectively. Jordan is also among the top ten countries whose citizens feel safest walking the streets at night.[81]

Jordan spends 4.2% of its GDP to guarantee the well being of its citizens- more than any other country in the region. Life expectancy and public health levels in Jordan are comparable to the West with 88% of the population on medical insurance, one of the highest rates in the world. The remaining 12% are covered under Royal makruma.[82] Also, the Social Security Corporation (SSC) is working to increase social security subscribers across the Kingdom with public sector workers currently covered and working to include private sector employees as well. After employees in the Kingdom receive coverage, the SSC is now expanding to include Jordanian expatriates in the Persian Gulf states and students, housewives, business owners, and the unemployed. As of 2011, 63% of working Jordanians are insured with the Social Security Corporation, as well as 120,000 foreigners.[83] The corporation plans to have 85% of the population covered under the social security umbrella by the end of the year.[84][85]

In 2008, the Jordanian government launched the "Decent Housing for a Decent Living" project aimed at giving poor people and Palestinian refugees the chance at owning their own house. Approximately 120,000 affordable housing units will be constructed within the next 5 years, and an additional 100,000 housing units can be built if the need arises.[86]



Jordan was ranked as the 19th most expensive country in the world to live in 2010 and the most expensive Arab country to live in.[87]

Despite these positive indicators, Jordan remains marred by chronic high unemployment rates, 11.9% in the fourth

quarter of 2010 but some estimate it to be as high as a quarter of the working-age population.[88] Also, an estimated 13.3% of citizens live under the poverty line.[89] Wide disaparities in wealth are evident between urban and rural areas and even between the Western and Eastern districts of the capital Amman. Currently, there are over 700,000 highly skilled college graduates working temporarily in GCC nations like the United Arab Emirates and Saudi Arabia. These white-collar workers send home more than three billion dollars in remittances to Jordan each year, a vital part of the Jordanian economy. High cost of living and lower wages push thousands of fresh college graduates to seek their fortunes in the oil-rich gulf. According to the 2010 Middle East Salary Survey conducted by Bayt.com, Jordanians earn more than their counterparts in other Arab countries with the exception of the oil-rich Gulf:[90] 27% of Jordanian workers earn less than $500 a month, 28% earn between $ 500 and $1000 a month, 21% earn between $1000 and $2000 a month, 10% earn between $2000 and $3000 a month, 6% earn between $3000 and $5000 a month, 2% earn between $5000 and $8000 a month, and 2% earn above $8000 a month. Around 97 percent of Jordanians have more than one source of income, according to the Department of Statistics.[91]

Education

Main article: Education in Jordan

The literacy rate in Jordan is 93%. The education system has been significant in the shift from a predominantly agrarian country to an industrialized nation. It ranks number one in the Arab World and is one of the highest in the developing world.[92] UNESCO ranked Jordan's education system 18th worldwide for providing gender equality in education.[93] 20.5% of Jordan's total government expenditures goes to education compared to 2.5% in Turkey and 3.86% in Syria.[94][95][96]

Jordan ranked 14th out of 110 countries for the number of engineers and scientists according to the Global Competitiveness Report 2004–2005 (WEF). Jordan has a higher proportion of university graduates in technological fields than any other Arab country. There are over 200,000 Jordanian students enrolled in universities each year. An additional 20,000 Jordanians pursue higher education abroad primarily in the United States and Great Britain.[97]

There is a primary school enrollment rate of 98.2% in Jordan. Secondary school enrollment has increased from 63% to 97% of high school aged students in Jordan and between 79% and 85% of high school students in Jordan move on to higher education, an extremely high rate for a middle income nation.[98]

According to the Global Innovation Index 2011, Jordan is the 3rd most innovative economy in the Middle East, only behind Qatar and the United Arab Emirates. Worldwide, Jordan ranked 41st beating India, South Africa, Greece and Russia.[99]

Jordan is the top contributor among all Arab countries in terms of internet content. 75% of all Arabic online content originates from Jordan.[100]

In scientific research, Jordan is ranked number one in the Arab world and 30th worldwide. Nature Journal reported Jordan having the highest number of researchers per million people among all the 57 countries members of the Organisation of Islamic Cooperation (OIC); the average of OIC countries is 500 researchers per million people. In Jordan there are 2,000 researchers per million people, higher than Israel and the United Kingdom.[101]

The illiteracy rate in Jordan was 6.9% in 2010, one of the lowest in the region.[102] Secondary education consists of two years of school study, for students who have completed the 10-year basic cycle. It comprises two major tracks:

Academic or vocational secondary education. At the end of the two-year period, students sit for the general secondary examination (Tawjihi) in the appropriate branch and those who pass are awarded the Tawjihi (General Secondary Education Certificate). The academic stream qualifies students for university entrance, whereas the vocational or technical type qualifies for entrance to Community colleges or universities or the job market, provided they pass the two additional subjects. Vocational secondary education provides intensive vocational training and apprenticeship, and leads to the award of a Certificate. This type of education is provided by the Vocational Training Corporation, under the control of the Ministry of Labour / Technical and Vocational Education and Training Higher Council.

After completing the 8, 9 or 10 years of basic education, Jordanians are free to choose any foreign secondary education program instead of the Tawjihi examinations (8 for IGCSE, 10 for SAT and IB). Such programs are usually offered by private schools. These programs include: IGCSE, SAT and International Baccalaureate.

Private schools in Jordan also offer IGCSE examinations. About 25% of school-aged students in Jordan are enrolled in private schools. Upon graduation, the ministry of Higher Education, through a system similar to UK tariff points, transforms the grades/marks of these foreign educational programs into the same marks used in grading Tawjihi students. This system is controversial, both as to the conversion process and the number of places allocated to non-Tawjihi applicants.

Higher education

Main article: List of universities in Jordan

Medical halls of JUST as seen with KAUH.

Access to higher education is open to holders of the General Secondary Education Certificate or Tawjihi who can then apply to private community colleges, public community colleges or universities (public and private), the admission to public universities is very competitive. The kingdom has 10 public and 16 private universities, in addition to some 54 community colleges, of which 14 are public, 24 private and others affiliated with the Jordan Armed Forces, the Civil Defence Department, the ministry of health and UNRWA.[103] The first university established in the kingdom was the University of Jordan.[104] A United Nations-supported research nuclear reactor and a synchrotron-light scientific facility (SESAME) are currently being built on campus of Jordan University of Science and Technology and the Hashemite University to establish the first nuclear facilities for academic research in the kingdom.[105][106] All post-secondary education is the responsibility of the Ministry of Higher Education and Scientific Research.

Jordan is home to campuses of foreign universities such as NYIT, DePaul University, Columbia University and the American University of Madaba. George Washington University is also planning to establish a medical university in Jordan as well, with plans to make it a regional hub for the training of medical personnel in the Middle East and North Africa.[107]

Economy

Main article: Economy of Jordan

Jordan is a small country with limited natural resources. The country is exploring ways to expand its limited water supply and use its existing water resources more efficiently, including regional cooperation with Israel. The country depends on external sources for the majority of its energy requirements. In the 1990s, its crude petroleum needs were met through imports from Iraq and neighboring countries. Since early 2003, oil has been provided by some

Gulf Cooperation Council member countries. In addition, the Arab Gas Pipeline from Egypt to the southern port of Aqaba was completed in 2003. In 2005 the pipeline extended north to the Amman area, in 2008 it reached Syriya and in 2009 to Lebanon.

A graphic rendering of the planned Abdali Urban Regeneration Project in Amman

The Four Seasons hotel in Amman, Jordan's capital.

Since King Abdullah II's accession to the throne in 1999, liberal economic policies have resulted in a continuing boom. Jordan is the 4th freest economy in the Middle East and North Africa, beating traditionally free economies like Israel, the United Arab Emirates and Lebanon. Jordan's developed and modern banking sector is becoming the investment destination of choice due to its conservative bank policies that helped Jordan escape the worst of the global financial crisis of 2009. With instability across the region in Iraq and Lebanon, Jordan is emerging as the "business capital of the Levant" and "the next Beirut". Jordan's economy has been growing at an annual rate of 7% for a decade. Jordan's economy is undergoing a major shift from an aid-dependent, rentier economy to one of the most robust, open and competitive economies in the region. In recent years, there has been shift to knowledge-intensive industries, i.e ICT, and a rapidly growing trade sector benefiting from regional instability. The Jordanian market is considered the most developed Arab market outside the Gulf states. [108] Jordan has more free trade agreements than any other Arab country. It has such agreements with the United States, Canada, Singapore, Malaysia, the European Union, Tunisia, Algeria, Libya, Iraq, Turkey and Syria, with plans to include the Palestinian Authority, the GCC, Lebanon and Pakistan. Jordan is a member of the Greater Arab Free Trade Agreement, the Euro-Mediterranean free trade area agreement, and the Agadir Agreement. Increased investment and exports are the main sources of Jordan's growth. Continued close integration into the European Union and GCC markets will reap vast economic rewards for the Kingdom in the coming years. However, the main obstacles to Jordan's economy are scarce water supplies, complete reliance on oil imports for energy, and regional instability.

Rapid privatization of previously state-controlled industries and liberalization of the economy is spurring unprecedented growth in Amman and Aqaba. Jordan has six special economic zones that attract significant amount of investment amounting in the billions: Aqaba, Mafraq, Ma'an, Ajloun, the Dead Sea, and Irbid. Jordan also has a plethora of industrial zones producing goods in the textile, aerospace, defense, ICT, pharmaceutical, and cosmetic sectors.

Hamleys - Amman

The Free Trade Agreement (FTA) with the United States[109] that went into effect in December 2001 will phase out duties on nearly all goods and services by 2010. The agreement also provides for more open markets in communications, construction, finance, health, transportation, and services, as well as strict application of international standards for the protection of intellectual property. In 1996, Jordan and the United States signed a civil aviation agreement that provides for open skies between the two countries, and a U.S.-Jordan treaty for the protection and encouragement of bilateral investment entered into force in 2003. Jordan has been a member of the World Trade Organization since 2000.[110]

In the 2000 Competitive Industrial Performance (CIP) Index, Jordan ranked as the third most industrialized economy in the Middle East and North Africa, behind Turkey and Kuwait. Jordan was in the upper bracket of nations scored by the CIP index. In the 2009 Global Trade Enabling Report, Jordan ranked 4th in the Arab World behind the UAE, Bahrain, and Qatar. The report analyzes the country's market access, the country's transport and

communications infrastructure, border administration, and the business environment of the country[111] Textile and clothing exports from Jordan to the United States shot up 2,000% from 2000 to 2005, following introduction of the FTA. According to the National Labor Committee, a U.S.-based NGO (Non-Governmental Organization), Jordan has experienced sharp increases in sweatshop conditions in its export-oriented manufacturing sector.[112]

Wakalat Street

Jordan ranked as having the 35th best infrastructure in the world, one of the highest rankings in the developing world, according to the World Economic Forum's Index of Economic Competitiveness. It even beat several developed countries like Israel, Italy, Ireland, Greece and it was only two places behind the United Kingdom. [113]

Jordanian exports in 2006

The proportion of skilled workers in Jordan is among the highest in the region.[114] The services sector dominates the Jordanian economy. Tourism is a rapidly growing industry in Jordan with revenues over one billion. Industries such as pharmaceuticals are emerging as very profitable products in Jordan. The Real Estate economy and construction sectors continue to flourish with mass amounts of investments pouring in from the Persian Gulf and Europe. Foreign Direct Investment is in the billions. The stock market capitalization of Jordan is worth nearly $40 billion.

Jordan is classified by the World Bank as an "upper middle income country." [7] Per-capita GDP was approximately US$5,100 for 2007 and 14.5% of the economically active population, on average, was unemployed in 2003. Education and literacy rates and measures of social well-being are very high compared to other countries with similar incomes. Jordan's population growth rate is high, but has declined in recent years, to approximately 2.8% currently. One of the most important factors in the government's efforts to improve the well-being of its citizens is the macroeconomic stability that has been achieved since the 1990s. However, unemployment rates remain high, with the official figure standing at 12.5%, and the unofficial around 30%. The currency has been stable with an exchange rate fixed to the US dollar since 1995.

Jordan is pinning its hopes on tourism, future uranium and oil shale exports, trade, and ICT for future economic growth.

Amman was ranked as the Arab World's most expensive city in 2006 by the Economist Intelligence Unit, beating Dubai. In 2009, Amman ranked as the 4th most expensive city in the Arab World, behind Dubai, Abu Dhabi, and Beirut.

Jordan is an importer of low skilled and semi-skilled laborers from Egypt, South Asia, Indonesia, Syria, and the Philippines. There are a range of estimates of the size of the migrant workforce in Jordan from conservative estimates of 300,000 foreign workers to almost one million foreigners working in Jordan. They constitute about 20–30% of the labor force in Jordan and they are consistently cited when discussing Jordan's chronic unemployment problem.[98] These migrant workers often work in construction, the textile factories in Jordan's Qualified Industrial Zones, municipal maintenance services, and as domestic workers. Recently, these migrant workers were incorporated into the Kingdom's labor laws giving them a wide range of benefits and rights and access to legal protection, the first Arab country to do so.[115]

In relation to the population size, Jordan is also one of the largest suppliers of skilled labour and human capital in the world. An estimated 600,000 Jordanians or one fourth of the labour force are earning their living in foreign countries working primarily in high paying white-collar jobs. Between 1968 and 2003, the accumulated net number of emmigrants amounted to over 1.1 million persons. Most of the skilled labor that left Jordan emigrated on a temporary basis to the oil producing Persian Gulf states. Since the mid 1970s, migrants' remittances are Jordan's most important source of foreign exchange, and a decisive factor in the country's economic development and the rising standard of living of the population.[67]

Jordan has the headquarters of several large-scale global corporations despite its small size. Some of these include Arab Bank, Aramex, Maktoob, Rubicon Group Holding and Kurdi Group. Since 2009, there are 2 Jordanian companies listed in the Forbes Global 2000 list, Arab Bank (Rank 708) and Arab Potash (Rank 1964). In addition, Jordan has several billionaires as well like Ziad Manasir and Eyhab Jumean.

Agriculture

Main article: Agriculture in Jordan

Olive Farms in the north of Jordan (souf, Jerash)

Agriculture in Jordan contributed substantially to the economy at the time of Jordan's independence, but it subsequently suffered a decades-long steady decline. In the early 1950s, agriculture constituted almost 40 percent of GNP; on the eve of the June 1967 War, it was 17 percent.[116] By the mid-1980s, agriculture's share of GNP in Jordan was only about 6 percent.[116]

The main irrigated area in Jordan is focused in fertile lands of Jordan Valley. However, other non-irrigated lands which depends on the seasonal rain are also available. Most of these lands are in the northern region in the provinces of Jerash, Ajloun and Irbid.

A farm in the mountains of Ajloun

Yet, some other lands are also available in the mid-western regions of Karak and Madaba. Recently, some desert land in the east of Mafraq have witnessed a large scale of irrigation projects, however, the sustainability of these projects is still in doubt, due to their dependency on groundwater.

Jordan exports many fruits and vegetables to the neighbouring countries, the Gulf and Europe, including olives, citrus fruit, grapes, apples, figs, peaches, pears, plums, apricots, almonds, and cherries.

Natural resources

Although Jordan is a resource-poor country, it has significant deposits of oil shale and sources of uranium; these potential sources of indigenous energy have been the focus of renewed interest in recent years. It is one of the most water-scarce countries in the world and considerable water is required to develop its resources, particularly oil shale. There are very limited resources of timber and forestry products and timbering is strictly limited by Jordan's environmentalists. Nevertheless, the kingdom is home to several water parks for tourism purposes, and the capital alone has over 17,000 private swimming pools. [117]

Phosphate mines in the south have made Jordan to one of the largest producers and exporters of this mineral in the world.[118][119][120][121][122] Potassium, salt, natural gas and stone are the most important other substances extracted. Phosphates are carried by rail from the mines to the port of Aqaba where it is shipped via cargo ship to other ports.

Jordan has one of the largest uranium reserves in the world. Jordan's reserves account for 2% of the world's total uranium. Jordan can extract 80,000 tons of uranium from its uranic ores, and the country's phosphate reserves also contain some 100,000 tons of uranium. Jordan plans that by 2035, 60% of the country's total energy consumption will be from nuclear energy. Four nuclear power plants are planned with the first one to be operational in 2019.[123]

Since the beginning of 2010, the government of Jordan has been seeking approval from the US for producing nuclear fuel from Jordan's uranium for use in nuclear power plants that Jordan plans to build. Jordan is not required to obtain US approval since, as a signatory to the Nuclear Non-Proliferation Treaty (NPT), Jordan has every right to produce nuclear fuel for peaceful purposes. However, in view of the U.S.-led sanctions against Iran over Iran's nuclear program, despite Iran being a signatory of the NPT, Jordan is first seeking US approval to avoid a fate similar to that of Iran. The government of Israel, not a signatory of the NPT, has made clear to Washington its objection to Jordan's nuclear energy program. According to *Haaretz*, Jordan learned that the US position is essentially the Israeli position, and the US has rejected Jordan's request for approval.[124]

Natural gas was discovered in Jordan in 1987, and the estimated size of the reserve discovered was about 230 billion cubic feet, and quantities are very modest compared with its neighbours. It was the development of the Risha field in the Eastern Desert beside the Iraqi border, and the field produces nearly 30 million cubic feet of gas a day, to be sent to a nearby power plant to produce nearly 10% of the Jordan's Electric needs.[125]

Despite the fact that reserves of crude oil are non-commercial, Jordan possesses one of the world's richest stockpiles of oil shale where there are huge quantities that could be commercially exploited in the central and northern regions west of the country. The extent the World Energy Council reserves Jordan approximately 40 billion tons, which established it as the second richest state in rock oil reserves after Canada (estimated), and first at the world's level of proven discoveries at a rate of extraction of oil up to between 8% and 12% of content, and could be the production of 4 billion tons of oil from the current reserve, which puts the quality of Jordanian oil on the one hand extraction, on an equal footing with their counterparts in western Colorado in the United States, which its estimated amount may rise to 20 billion tons. The moisture content and ash within is relatively low. And the total thermal value is 7.5 megajoules/kg, and the content of ointments reach 9% of the weight of the organic content.[126] Jordan recently signed a deal with Royal Dutch Shell to extract and exploit shale oil reserves in central Jordan. It is expected Jordan will produce its first commercial quantities of oil in the year 2020, with an estimated production of 50,000 barrels of oil a day, 35 per cent of the Kingdom's energy consumption in "less than 10 years". Previous NRA studies have revealed that 40 billion tonnes of oil shale exist in 21 sites concentrated near the Yarmouk River, Buweida, Beit Ras, Rweished, Karak, Madaba and Maan.

A switch to power plants operated by oil shale has the potential to reduce Jordan's energy bill by at least 40–50 per cent, according to the National Electric Power Company.[127]

Currency and exchange rates

The official currency in Jordan is the Jordanian dinar and divides into 100 qirsh (also called piastres) or 1000 fils. In 1949, banknotes were issued by the government in denominations of 500 fils, 1, 5,10 dinar. From 1959, the Central Bank of Jordan took over note production. 20 dinar notes were introduced in 1977, followed by 50 dinar in 1999. ½ dinar notes were replaced by coins in 1999. Coins were introduced in 1949 in denominations of 1, 5, 10, 20, 50 and 100 fils. The first issue of 1 fils were mistakenly minted with the denomination given as "1 fil". 20 fils coins were minted until 1965, with 25 fils introduced in 1968 and ¼ dinar coins in 1970. The 1 fils coin was last minted in 1985. In 1996, smaller ¼ dinar coins were introduced alongside ½ and 1 dinar coins. Since October 23, 1995, the dinar has been officially pegged to the IMF's special drawing rights (SDRs). In practice, it is fixed at 1 US dollar = 0.709 dinar, which translates to approximately 1 dinar = 1.41044 dollars.[128][129] The Central Bank buys US dollars at 0.708 dinar, and sell US dollars at 0.7125 dinar,Exchangers buys US dollars at 0.708 and sell US dollars at 0.709.[130]

Tourism

Main article: Tourism in Jordan

Tourism accounted for 10%-12% of the country's Gross National Product in 2006. In 2010, there were 8 million visitors to Jordan. The result was $3.4 billion in tourism revenues, $4.4 billion if medical tourists are included.[131] Jordan offers nightclubs, discothèques and bars in Amman, Irbid, Aqaba, and many 4 and 5-star hotels. Furthermore, beach clubs are also offered at the Dead Sea and Aqaba. Jordan played host to the Petra Prana Festival in 2007 which celebrated Petra's win as one of the New Seven Wonders of the World with world-renowned DJ's like Tiesto and Sarah Main. The annual Distant Heat festival in Wadi Rum and Aqaba ranked as one of the world's top 10 raves.

Roman ruins at Umm Qais

Traditional Jordanian costumes

Amman, Jordan's capital, contains a Roman theater and a museum housing some of the Dead Sea Scrolls. The city is considered to be the most Westernized and cosmopolitan in the Arab World. [132] The city's rapidly growing culinary scene offers a plethora of local and international dishes ranging from French to Japanese and everything in between. The city has become a favourite destination among affluent Arab vacationers due to its temperate climate, lavish shopping, fine dining and bustling nightlife.[133][134]

Amman has developed quite a flourishing nightlife scene over the past 10 years with a plethora of new nightclubs and bars primarily in the city's western districts which has brought in a steady flow of Eastern European, Asian, and North African females to be employed in the emerging nightlife scene. Furthermore, the capital has developed one of the Middle East's few homosexual partying scenes with liberal nightclubs like Fame and Drop.[135][136][137]The main centers for clubbing in the city are Abdun and Jabal Amman. Amman had the country's highest hotel occupancy rates in 2009.[138]Amman has over a dozen mega-malls, including City Mall, Mecca Mall, Abdoun Mall, Amman Mall, Al Baraka Mall, Sweifieh Avenue Mall, Taj Mall, Istikal Mall, Mukhtar Mall, and the Zara Shopping Center. Wakalat Street and the Sweifieh area are popular shopping destinations. Furthermore, there are several other shopping centers under construction in the new Business District including Jordan's new high street, the Abdali Boulevard, the Abdali Mall and the Atrium. [139]

Other popular sites

The Roman temple of Hercules in ancient Philadelphia (Amman)

- Petra in Wadi Musa, home of the Nabateans, is a complete city carved in a mountain. The huge rocks are colorful, mostly pink, and the entrance to the ancient city is through a 1.25 km narrow gorge in the mountain—called the Siq. In the city are various structures, all (except 2) are carved into rock, including al Khazneh – known as the Treasury – which has been designated as one of the "New Seven Wonders of the World" by the for-profit New Open World Corporation. Other major sites of interest in Petra include the Monastery, the Roman theater, the Royal Tombs, the High Place of Sacrifice. Petra was rediscovered for the western world by Swiss explorer Johann Ludwig Burckhardt in 1812.
- Umm Qais, a town on the site of the ruined Hellenistic–Roman city
- Jerash is famous for its ancient Roman architecture, with colonnaded streets, Corinthian arches, outdoor Roman Theaters and the Oval Plaza.

The treasury, as seen from al-Siq

- Madaba is well known for its Byzantine mosaics, including the "Terra Sancta" Madaba Map of the Holy Land; River Jordan, Bethany Beyond the Jordan, the biblical Bethabara where Jesus of Nazareth was baptized;
- The Dead Sea – It is the lowest point on earth, 402 meters below sea level,[140] and becomes 1 meter lower each year. It is the only depository of River Jordan and was part of the biblical kingdoms of Midianites and later the Moabites. The Dead Sea area is home to numerous world-class resorts such as the Kempinski, Mövenpick and Marriott. In addition, there are water parks, a public beach and international restaurants. The ultra-chic destination in the area, however, is the O-Beach which is home to cabanas, bars, international restaurants, and a beach club.

An Arabian Desert castle in Azraq

excavated remains of Bethabara, Jordan, where John the Baptist is believed to have conducted his ministry.

- Aqaba is a town on the shore of the Gulf of Aqaba with numerous shopping centers, hotels and access to various water sports and protected coral reefs and marine life. It has the ruins of the mediaeval town of Ayla and other Edomite ruins. Aqaba also has a vibrant nightlife scene especially on holiday weekends when thousands of wealthy Jordanians visit the coastal city. Numerous raves and concerts are held by international DJ's and artists at the major resorts and beach clubs.[141] Aqaba is seeing nearly $20 billion worth of developments centered on tourism and real estate projects transforming the city into a "new Dubai".
- Wadi Rum is a desert full of mountains and hills located south of Jordan. It is popular for its sights in addition to a variety of sports that are practiced there, such as rock-climbing. It is also known for its association with Lawrence of Arabia.
- Fuheis, a town about 20 minutes north-west of Amman known for its traditional 18th and 19th century churches and turn of the century provincial Jordanian architecture.
- Mahis with important religious sites, and wonderful landscape.
- Irbid, Jordan's second largest city, is home to several museums and malls as well. However, the main reason for foreigners visiting the city is the plethora of universities that the cities host with Jordan University of Science and Technology and Yarmouk University being the two most prominent. The city hosts a large student population from all across Jordan, the Middle East and further afield. Irbid's University Street is home to the most internet cafes per mile in the world.[142]
- Shoubak with its Crusader Castle "Crac de Montreal", Marking both the eastern and southern frontier of Crusader expansion.
- Muwakir (Arabic for Machaerus) was the hilltop stronghold of Herod the Great. Upon Herod's death, his son Herod Antipas inhabited the fortress, and ordered John the Baptist to be beheaded there and where the fabled Salomé daughter of Herodias is said to have danced the famous Dance of the Seven Veils thus asking for John the Baptists' head.

Medical tourism

Jordan has been a medical tourism destination in the Middle East since the 1970s. A study conducted by Jordan's Private Hospitals Association (PHA) found that 250,000 patients from 102 countries received treatment in the kingdom in 2010, compared to 190,000 in 2007, bringing over $1 billion in revenue. It is the region's top medical

tourism destination as rated by the World Bank, and fifth in the world overall.[143][144][145]

2011 and 2012 saw an influx of Arab patients from Libya and Syria entering the kingdom for treatment. It is estimated that Jordan received 50,000 Libyan patients and 80,000 Syrian refugees, who also sought treatment in Jordanian hospitals, in the last six months. [146]

There are about 60 private health care institutions in the kingdom, four of which have been accredited by US-based Joint Commission International, which is considered the gold standard for international accreditation in the healthcare industry. Most of Jordan's doctors speak proficient English and many have been trained or are affiliated with top US hospitals. The main barrier to medical tourism is visa restrictions placed on some countries due to the fear of illegal settlement in Jordan. Jordan's main focus of attention in its marketing effort are the ex-Soviet states, Europe, and America.[147] Top institutions that work in this industry include JORDICURE for medical tourism, King Hussein Cancer Center, Khalidi Hospital, Jordan Hospital and the Specialty Hospital among others. Most common medical procedures on Arab and foreign patients included organ transplants, open heart surgeries, infertility treatment, laser vision corrections, bone operations and cancer treatment. [148]

Nature reserves

Nature reserves in Jordan include the Dana Biosphere Reserve, Azraq Wetland Reserve, Shaumari Wildlife Reserve and Mujib Nature Reserve.

Transportation

Main article: Transport in Jordan

A Royal Jordanian Airbus A310-300

Being that Jordan is a transit country for goods and services to the Palestinian territories and Iraq, Jordan maintains a well-developed transportation infrastructure. Jordan ranked as having the 35th best infrastructure in the world, one of the highest rankings in the developing world, according to the World Economic Forum's Index of Economic Competitiveness. It even beat several developed countries like Israel, Italy, Ireland, Greece and it was only two places behind the United Kingdom. [149]

A phosphate train at Ram station

There are three commercial airports, all receiving and sending international commercial flights, two of them in Amman and the third is located in the city of Aqaba. The largest airport in the country is Queen Alia International Airport in Amman that serves as the hub of the regional airline Royal Jordanian. The airport is currently under significant expansion in a bid to make it the hub for the Levant. Amman Civil Airport was the country's main airport before it was replaced by Queen Alia Airport but it still serves several regional routes. King Hussein International Airport serves Aqaba with connections to Amman and several regional and international cities.

Jordan has a well-developed road infrastructure with 7,999 kilometres of paved highways. The road system is centralized around Amman, which connects the capital to major cities and surrounding countries.[150]

A National Rail System was approved by the Jordanian Government which will connect all major cities and towns by passenger and cargo rail. There are two lines to be constructed. The North-South Line passing through Mafraq, Zarqa, Amman, Maan, and Aqaba with international connections to Syria and Saudi Arabia. The East-West Line will run from Mafraq, Irbid, and Azraq with international connections to Iraq and possibly Israel. The national rail system will be completed by 2013. These routes are planned to be electrified. There are also plans for a light rail system operating between Amman and Zarqa and a funicular and a three line metro system for Amman.

Two connected but non-contiguously operated sections of the Hedjaz Railway exist:

- from Amman in Jordan to Syria, as the "Hedjaz Jordan Railway."
- from phosphate mines near Ma'an to the Gulf of Aqaba as the "Aqaba Railway."

Jordan shares the longest common borders with the West Bank, there are two border crossings between Jordan and Israel in the Bisan merge (King Hussein Bridge) in the north in the Wadi Araba in the south.

The Port of Aqaba is Jordan's sole outlet to the sea. It handles all cargo bound to Jordan, Iraq,and in some cases the West Bank. The Main Port is being relocated further south and being expanded. An Abu Dhabi consortium will handle the $5 billion dollar deal. The project is set to be completed in 2013.

Defense industry

Jordan is a recent entrant to the domestic defense industry with the establishment of King Abdullah Design and Development Bureau (KADDB) in 1999. The defense industrial initiative is intended to jumpstart industrialization across a range of sectors. With the Jordanian defense expenditures at 8.7% of GDP, the Jordanian authorities created the defense industry to utilize defense budget spending power and to assist in economic growth without placing additional demands on the national budget. Jordan also hosts SOFEX, the world's fastest growing and region’s only special operations and homeland security exhibition and conference.[151] Jordan is a regional and international provider of advanced military goods and services.[152]

A KADDB Industrial Park was opened in September 2009 in Mafraq. It is an integral industrial free zone specialized in defense industries and vehicles and machinery manufacturing. By 2015, the park is expected to provide around 15,000 job opportunities whereas the investment volume is expected to reach JD500 million.[153]

Influence of the Southwest Asian conflict

The ongoing Arab-Israeli conflict, the Persian Gulf War, and other conflicts in Southwest Asia have made huge impacts on the economy of Jordan. The fact that Jordan has peace with the surrounding countries, combined with its stability, has made it a preference for many Palestinians, Lebanese, and Persian Gulf immigrants and refugees. Though this may have resulted in a more active economy, it has also damaged it by substantially decreasing the amount of resources available for each person. Jordan has a law that states that any Palestinian may immigrate and obtain Jordanian citizenship, but must remit his/her Palestinian claim. In November 2005, King Abdullah called for a "war on extremism" in the wake of three suicide bombings in Amman.

Opportunity cost of the conflict

A report[154] by Strategic Foresight Group has calculated the opportunity cost of conflict for the Middle East from 1991 to 2010 at a whopping $12 trillion (12,000,000,000,000). Jordan's share in this is almost $84 billion. Every Jordanian family will also have the opportunity to increase their annual income by more than $1,250 if peace is established in the region and the Arab-Israeli boycott is lifted in full.

The report[155] also outlines how an extremely significant cost to Jordan is that the country is host to millions of

refugees who make up 40% of their population and are a drain on 7% of the GDP. Jordan also spends over 5% of its GDP on defense, and has one of the highest numbers of military personnel in the region, 23,500 military personnel per million people.

Culture

Main article: Culture of Jordan

Prince Ali bin Al Hussein, Vice President of the FIFA.

The culture of Jordan, as in its spoken language, values, beliefs, ethnicity is Arab as the Kingdom is in the heart of Southwest Asia. Although many people from different regions of the world have come to settle in Jordan, Europeans like the (Circassians and the Chechens) or other Middle Easterners like the Armenians, they have long been assimilated in the society and added their richness to the society that subsequently developed[157]. Jordan has a very diverse cultural scene with many different artists, religious sects, and ethnic groups residing in the small country because of Jordan's reputation for stability and tolerance.

Mansaf, the national dish of Jordan.[156]

Jordan imports the overwhelming majority of its music, cinema, and other forms of entertainment from other countries most specifically other Arab countries like Lebanon and Egypt as well as by the West primarily the United States. However, there has been a rise of home-grown songs, music, art, movies and television, but they pale in comparison to the amount imported from abroad.

Globalization

In the 2007 A.T. Kearney Globalization Index, Jordan was ranked as the 9th most globalized nation in the world. The 2010 AOF Index of Globalization ranked Jordan as the most globalized country in the Middle East and North Africa region, including Israel and Turkey.[158] Jordan ranked in the top 10 for the economic, social, and political components of the index. Jordan scored high on the trade tables with high investment rates, large amounts of expatriate remittances, and a liberal trade regime. Jordan also had one of the most political engagements, organization and treaty memberships in the world. High technology penetration rates and its fast growing ICT industry earned Jordan high marks in the technology connectivity rankings. For example, Jordan has a 120% mobile phone penetration rate and a 45% internet penetration rate. 97% of Jordanian households own at least one television set while 90% have satellite reception which means they have access to other Arab and European programs.[159][160] Furthermore, 52% of Jordanians, 15 years old and above, own a desktop computer and another 15 per cent own a laptop at home.[161] Also, Jordan has one of the highest levels of peacekeeping troop contributions of all U.N. member states.[162]

Jordan ranked as the 9th best outsourcing destination worldwide. Amman was ranked as one of the "Top 10 Aspirants", cities in this ranking have a good chance in making the top 50 outsourcing cities in the next ranking. The report said that Jordan had one of the region's most favourable business climates, a well-educated population, solid capabilities in the ICT industry, and Jordan was home to numerous outsourcing companies that compete successfully internationally. [163]

Amman is one of the top 10 cities in the world to launch a tech start-up in 2012. It is also considered the region's "Silicon Valley" beating regional technology hubs Dubai and Tel Aviv. [164]

History of Jordan

From Wikipedia, the free encyclopedia

Further information: Timeline of the Hashemite Kingdom of Jordan

The **History of Jordan** starts with evidence of human activity in Jordan in the Paleolithic period (c. 90,000 BC), continues with the Muslim empires starting in the 7th century, the Ottoman Empire in the 16th century, the Great Arab Revolt and the British mandate of Transjordan in the early 20th century, and goes on to the present day with the establishing of the independent Hashemite Kingdom of Jordan in 1946.

Ancient kingdoms located in Jordan, such as the Roman-era Nabatean kingdom, which had its capital in Petra, left particularly dramatic ruins popular with tourists and film crews.

Petra, the capital of the Nabatean kingdom, is where the Nabatean alphabets, the current Arabic language alphabets, were invented.

Ancient history

Evidence of human activity in Jordan dates back to the Paleolithic period (500000 - 17000 AD). While there is no architectural evidence from this era, archaeologists have found tools, such as flint and basalt hand-axes, knives and scraping implements.

In the Neolithic period (8500-4500 BC), three major shifts occurred. First, people became sedentary living in small villages and concurrently, new food sources were discovered and domesticated, such as cereal grains, peas and lentils, as well as goats. The population increased reaching tens of thousands of people.

Second, the shift in settlement patterns was catalyzed by a marked change in the weather, particularly affecting the eastern desert, which grew warmer and drier, eventually becoming entirely uninhabitable for most of year. This watershed climate change is believed to have occurred between 6500 and 5500 BC.

Third, between 5500 - 4500 BC pottery from clay, rather than plaster, began to be produced. Pottery-making technologies were likely introduced to the area by craftsmen from Mesopotamia. The largest Neolithic site is at Ein Ghazal in Amman. There are many buildings, divided into three distinct districts. Houses were rectangular with several rooms, and some of them had plastered floors. Archaeologists have unearthed skulls covered with plaster and with bitumen in the eye sockets at sites throughout Jordan, Israel and Syria. A statue was also discovered at Ein Ghazal that is thought to be 8,000 years old. Just over one meter high, it depicts a woman with huge eyes, skinny arms, knobby knees and a detailed rendering of her toes.

It was during the Chalcolithic period (4500-3200 BC) that copper was first smelted and used to make axes, arrowheads and hooks. The cultivation of barley, dates, olives and lentils, and the domestication of sheep and goats predominated over hunting. In the desert, the lifestyle was probably very similar to that of modern Bedouins.

Tuleitat Ghassul is a large Chalcolithic era village located in the Jordan Valley. Houses were made of sun-dried mud bricks and roofs of wood, reeds and mud. Some were based on stone foundations, and many planned around large courtyards. The walls are often painted with bright images of masked men, stars and geometric motifs, that were perhaps connected to religious beliefs.[1]

During the Early Bronze Age (3200-1950 BC), many villages were built that included defensive fortifications, most likely to protect against marauding nomadic tribes. Simple water infrastructures were also constructed.

At Bab al-Dhra in Wadi ‘Araba, archaeologists discovered over 20,000 shaft tombs with multiple chambers as well as houses of mud-brick containing human bones, pots, jewelry and weapons. Hundreds of dolmens scattered throughout the mountains have been dated to the late Chalcolithic and Early Bronze Ages.

While in Egypt and Mesopotamia, writing developed before 3000 BC, writing was not really used in Jordan, Canaan and Syria until some thousand years later, even though archeological evidence indicates that the Jordanians were in fact trading with Egypt and Mesopotamia.

Between 2300 - 1950 BC, many of the large, fortified hilltop towns were abandoned in favor of either small, unfortified villages or a pastoral lifestyle. There is no consensus on what caused this shift, though it is thought to be combination of climatic and political changes that brought an end to the city-state network.

A castle in the Jordanian desert, 40km south of Amman

During the Middle Bronze Age (1950-1550 BC), migration patterns in the Middle East increased. Trading continued to develop between Egypt, Syria, Arabia, Canaan and Jordan, resulting in the spread of civilization and technology. Bronze forged out of copper and tin resulted in the production of more durable axes, knives and other tools and weapons. Large and distinct communities seem to have arisen in northern and central Jordan, while the south was populated by a nomadic, Bedouin-type of people known as the Shasu.

New fortifications appeared at sites like Amman's Citadel, Irbid, and Tabaqat Fahl (or Pella). Towns were surrounded by ramparts made of earth embankments and the slopes were covered in hard plaster, making it slippery and difficult to climb. Pella was enclosed by massive walls and watch towers.

An old Roman Temple in Erak al Amir

Archaeologists usually date the end of the Middle Bronze Age to about 1550 BC, when the Hyksos were driven out of Egypt during the 17th and 18th Dynasties. A number of Middle Bronze Age towns in Canaan and Jordan were destroyed during this time.

Iron Age

The most prominent Iron Age kingdoms in Jordan were Ammon, Moab, and Edom.[2] The Ammonites had their capital in Rabbath Ammon. The Moabites settled Kerak Governorate with their capital at Kir of Moab (Kerak),[3] and the kingdom of Edom settled in southern Jordan and southern Palestine, and their capital was in Bozrah in Tafilah Governorate. The kingdom of Ammon maintained its independence from the Assyrian empire, unlike all other kingdoms in the region which were conquered.[4]

In about 840 BC, Meshe, the King of the Moabites, revolted against the "House of David." Moab was a Jordanian tribe that lived east of the Dead Sea and about 70 kilometers south of Amman. This battle is recorded in the Bible's 2 Kings chapter 3. The Bible's story is corroborated by the Mesha Stele, the Moabite Stone that was found in the Jordanian town of Dhiban in 1868. This fine indicated that the Moabites worked with inscriptions on bluish basalt stone.

Classic period

Later antiquity saw the rise of the Nabatean kingdom with its capital at Petra, which was a border, client state of the Roman Empire absorbed into the Empire in 103 CE, and the ancient city of Saltus. During the Greco-Roman period of influence, a number of semi-independent city-states also developed in Jordan, grouped as a Decapolis including: Gerasa (Jerash), Philadelphia (Amman), Raphana (Abila), Dion (Capitolias), Gadara (Umm Qays), and Pella (Irbid).

Early Islamic period

In the early 7th century, the area of modern Jordan became integrated into the new Arab-Islamic Umayyad Empire (the first Muslim dynasty), which ruled much of the Middle East from 661 until 750 CE. At the time, Amman, now the capital of the Kingdom of Jordan, became a major town in "Jund Dimashq" (the military district of Damascus) and became the seat of the provincial governor. In fact, the name "Al-Urdun" (Jordan) was used on Umayyad post-reform copper coins beginning in the early 8th century and represent the earliest official usage of the name for the modern state. Additionally, lead seals with the Arabic phrase "Halahil Ardth Al-Urdun" (Master of the Land of Jordan), dating from the late 7th to early 8th century CE, have been found in Jordan as well. Additionally, Arab-Byzantine "Standing Caliph" coins minted under the Umayyads also have been found bearing the mint-mark of "Amman." Thus, usage of the names Al-Urdun/Jordan and Amman date back, to at least, the early decades of the Arab-Muslim takeover of the region.

Under the Umayyad's successors, the Abbasids (750-1258), Jordan was neglected and began to languish due to the geo-political shift that occurred when the Abassids moved their capital from Damascus to Kufa and later to Baghdad.

Umayyad post-reform fals, c. 8th century

Middle Ages

After the decline of the Abbasids, parts of Jordan were ruled by various powers and empires including the Mongols, the Crusaders, the Ayyubids, the Mamlukes as well as the Ottomans, who captured major parts of the Arab World around 1517.

Ottoman rule

During the Ottoman period, the area has become largely under semi-autonomous rule of local Arab lords, with little direct interruption by the Ottoman authorities.

Transjordan Emirate

See also: Ikhwan raids on Transjordan and Adwan Rebellion

With the break-up of the Ottoman Empire at the end of World War I, the League of Nations and the occupying powers were required to redraw the borders of the Middle East. The ensuing decisions, most notably the Sykes–Picot Agreement gave birth to the French Mandate for Syria and British Mandate for Palestine, the latter of which included the territory of Transjordan which had been allocated to Abdullah I of Jordan approximately a year prior to the finalisation of the Mandate document.

Another reason was that the British government had yet to find a role for Abdullah Ibn-Hussain, after his brother Faisal Ibn-Hussain had lost his control in Syria and given the role of the king of Iraq. The British made him Emir of the newly created Transjordan. At first, Abdullah actually didn't appreciate the "wasteland" he was given, and hoped it to be only a temporary appointment, replaced by Syria or Palestine.[5] The Permanent Court of International Justice and an International Court of Arbitration established by the Council of the League of Nations handed down rulings in 1925 which determined that Palestine and Transjordan were newly-created successor states of the Ottoman Empire as defined by international law.[6]

The most serious threats to emir Abdullah's position in Transjordan were repeated Wahhabi incursions from Najd into southern parts of his territory.[7] The emir was powerless to repel those raids by himself, thus the British

maintained a military base, with a small air force, at Marka, close to Amman.[7] The British military force was the primary obstacle against the Ikhwan between 1922–1924, and was also utilized to help emir Abdullah with the suppression of local rebellions at Kura and later by Sultan Adwan, in 1921 and 1923 respectively.[7]

Kingdom of Jordan

Establishment

On 17 January 1946 Ernest Bevin the British Foreign Secretary, in a speech at the General Assembly of the United Nations, announced that the British Government intended to take steps in the near future to establish Trans-Jordan as a fully independent and sovereign state.[8] The mandate for Transjordan ended on 22 May 1946 with the signing of the Treaty of London and Trans-Jordan gained full independence. On 25 May 1946 the country became the Hashemite Kingdom of Trans-Jordan when the ruling 'Amir' was re-designated as 'King'. Trans-Jordan was one of the Arab states opposed to the second partition of Palestine and creation of Israel in May 1948. It participated in the war between the Arab states and the newly founded State of Israel. The Armistice Agreements of April 3, 1949 left Jordan in control of the West Bank and provided that the armistice demarcation lines were without prejudice to future territorial settlements or boundary lines.

1948 War and annexation of West Bank

Further information: 1948 Arab-Israeli War and 1949 Armistice Agreements

In March 1949, Transjordan announced its annexation of what has become commonly known as the West Bank,[*citation needed*] renaming it the West Bank, a reference to its location west of the Jordan River. Only Britain recognized this annexation.

In 1950, the country was renamed "the Hashemite Kingdom of Jordan" to include officially those portions of Palestine annexed by King Abdullah. While recognizing Jordanian administration over the West Bank[*citation needed*], the United States, other Western powers and the United Nations maintained the position that ultimate sovereignty was subject to future agreement.

King Talal ibn Abdullah and King Hussein

On July 20, 1951, King Abdullah I was shot dead in Jerusalem while visiting the Al Aqsa Mosque. His assassin, a Palestinian from the Husseini clan, was apparently concerned that Jordan and Lebanon were discussing a separate peace with Israel. Abdullah's grandson, Prince Hussein Ibn Talal was with him at the time and was hit too. King Abdullah's eldest son, Talal Ibn Abdullah, was proclaimed king but he was deposed in 1952 because of a mental illness. His son Hussein Ibn Talal became king on his eighteenth birthday, in 1953.

Jordan ended its special defense treaty relationship with the United Kingdom in 1957. In February 1958, following announcement of the merger of Syria and Egypt into the United Arab Republic, Iraq and Jordan announced the Arab Federation of Iraq and Jordan, also known as the Arab Union. The Union was dissolved in August 1958.

The 1950s is often referred to "Jordan's Experiment with Liberalism". Freedom of speech, freedom of the press, and freedom of association were guaranteed in the newly written constitution as with the already firmly established freedom of religion doctrine. Jordan had one of the freest and most liberal societies in the Middle East and in the Greater Arab World during the 1950s and early 1960s.

Jordan in the Cold War

Further information: Six Days War and Black September

Jordan signed a mutual defense pact in May 1967 with Egypt, and it participated in the June 1967 war between Israel and the Arab states of Syria, Egypt, and Iraq. During the war, Israel gained control of the West Bank and East Jerusalem. The 1967 war led to a dramatic increase in the number of Palestinians living in Jordan. Its Palestinian refugee population—700,000 in 1966—grew by another 300,000 from the West Bank. The period following the 1967 war saw an upsurge in the power and importance of Palestinian militants (*fedayeen*) in Jordan. The heavily armed *fedayeen* constituted a growing threat to the sovereignty and security of the Hashemite state, and open fighting erupted in June 1970.

A memorial for all the Jordanian soldiers in Al-Karameh

Jordan was ruled under martial law throughout most of the Cold War period, particularly starting in 1967 when tensions between the Hashemites and the Palestinian majority eventually led to a bloody civil war in 1970. The 1980s in particular were ruled in a repressive manner with many of the freedoms established in the 1950s suspended or severely curtailed.

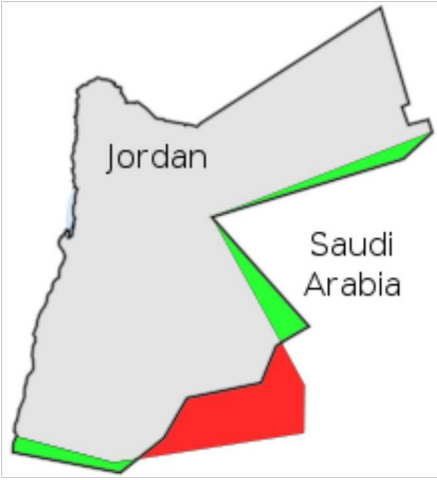

Image showing the approximate land exchanged between Jordan (gaining green) and Saudi Arabia (gaining red).

Other Arab governments attempted to work out a peaceful solution, but by September, continuing *fedayeen* actions in Jordan—including the destruction of three international airliners hijacked and held in the desert east of Amman—prompted the government to take action to regain control over its territory and population. In the ensuing heavy fighting, a Syrian tank force took up positions in northern Jordan to support the *fedayeen* but was forced to retreat. By September 22, Arab foreign ministers meeting at Cairo had arranged a cease-fire beginning the following day. Sporadic violence continued, however, until Jordanian forces won a decisive victory over the *fedayeen* in July 1971, expelling them from the country. No fighting occurred along the 1967 Jordan River cease-fire line during the October 1973 Arab-Israeli war, but Jordan sent a brigade to Syria to fight Israeli units on Syrian territory.

In 1965 Jordan and Saudi Arabia concluded a bilateral agreement that realigned and delimited the boundary. The realignment resulted in some exchange of territory, and Jordan's coastline on the Gulf of Aqaba was lengthened by about eighteen kilometers. The new boundary enabled Jordan to expand its port facilities and established a zone in which the two parties agreed to share petroleum revenues equally if oil were discovered. The agreement also protected the pasturage and watering rights of nomadic tribes inside the exchanged territories.

Jordan witnessed some of the most severe protests and social upheavals in its history during the 1980s, protests in Jordanian universities especially Yarmouk University and urban areas protested inflation and lack of political freedom. A massive upheaval occurred in the southern city of Ma'an.

In 1988, Jordan renounced all claims to the West Bank but retained an administrative role pending a final settlement.

In 1989, martial law was lifted and a period of rapid political liberalization occurred creating once again the

Video of developments regarding Jordan during 1980

region's most liberal and dynamic society. Parliament was restored and thirty political parties including the Islamic Action Front were created.

Jordan did not participate directly in the Gulf War of 1990–1991, but it broke with the Arab majority and supported the Iraqi position of Saddam Hussein. This position led to the temporary repeal of U.S. aid to Jordan. After the Iraqi defeat in 1991, Jordan, along with Syria, Lebanon, and Palestinian representatives, agreed to participate in direct peace negotiations with Israel sponsored by the U.S. and Russia. Eventually, Jordan negotiated an end to hostilities with Israel and signed a declaration to that effect on July 25, 1994; the Israel-Jordan Peace Treaty was concluded on October 26, 1994.

In the late 1990s, Jordan's unemployment rate was almost 25%, while nearly 50% of those who were employed were on the government payroll.

Under King Abdullah II

King Abdullah II succeeded his father King Hussein in 1999. Jordan's rapid reinstitution of political and civil liberty continued throughout the 1990s and the 2000s. Economic liberalization policies were especially introduced by King Abdullah II creating one of the freest economies in the Middle East. Political liberalization is occurring but at a slower pace than 1989 and the early 1990s. Liberal policies continue to be predominate in King Abdullah II's reign with economic reforms being the dominate.

Following the outbreak of Israeli-Palestinian fighting in September 2000, the Jordanian government offered its help to both parties. Jordan has since sought to remain at peace with all of its neighbours.

On 14 January, the 2011 Jordanian protests began in Jordan's capital Amman, and at Ma'an, Al Karak, Salt and Irbid, and other cities. The Jordanian government reversed fuel price rise following the protest.[9] *Al Jazeera* stated that protests are expected to continue for several weeks because of increasing food prices.[9]

List of kings of Jordan

From Wikipedia, the free encyclopedia

The Jordanian monarchy was set up in 1921, with the help of Britain. The sons of Sherif Hussein ibn Ali were set up as kings of Iraq and Jordan. In Jordan, Abdullah I was made Emir of Transjordan, a post he held from 11 April 1921 until Transjordan was granted independence on 25 May 1946 as the **Hashemite Kingdom of Transjordan**. Abdullah was crowned the country's first king. The country's name was shortened to the **Hashemite Kingdom of Jordan** on 3 April 1949.

The Hashemite Dynasty originates in the Hejaz, which is now part of Saudi Arabia.

Abdullah II of Jordan

From Wikipedia, the free encyclopedia

__Abdullah II__ redirects here. It can also refer to Abdullah II Al-Sabah.

Abdullah II bin Al-Hussein (Arabic: الملك عبد الله الثاني بن الحسين, *al-Malik ʿAbdullāh aṯ-ṯānī bin al-Ḥusayn*; born 30 January 1962) is the reigning King of the Hashemite Kingdom of Jordan. He ascended the throne on 7 February 1999 upon the death of his father King Hussein. King Abdullah, whose mother is Princess Muna al-Hussein, is a member of the Hashemite family.[1] Since 1993, Abdullah has been married to Queen Rania of Jordan.

Early life

Abdullah was born in Amman to King Hussein of Jordan during his marriage to Princess Muna al-Hussein. He was the king's eldest son and as such he was automatically heir apparent to the throne of Jordan under 1952 constitution. However, due to unstable times in the 1960s, King Hussein decided to appoint his brother, Prince Hassan bin Talal, as his heir.[2]

King Abdullah II attended Deerfield Academy in Deerfield, Massachusetts. He joined the Royal Military Academy Sandhurst in 1980, was commissioned as a Second Lieutenant, and served as a troop commander in the 13th/18th Royal Hussars. In 1982, King Abdullah II attended Pembroke College at Oxford University where

he completed a one-year Special Studies course in Middle Eastern Affairs. In 1987, he attended the Edmund A. Walsh School of Foreign Service at Georgetown University in Washington, D.C.[3] Abdullah would later serve in the Jordanian forces and became Major General in May 1998.

In the 1980s, the King considered arranging the throne to pass to his brother and then to his son Prince Ali bin Al Hussein, but changed his mind by 1992. He seriously considered appointing one of his nephews as heir, but on his deathbed, on 25 January 1999, he appointed Abdullah as his heir.[4]

Abdullah II

King of Jordan

Abdullah became king on 7 February 1999, upon the death of his father King Hussein. Hussein had recently named him Crown Prince on 24 January, replacing Hussein's brother Hassan, who had served many years in the position. He is the 41st-generation direct decendant of the Prophet Mohammad. He is the namesake of King Abdullah I, his great grandfather who founded modern Jordan. [5]

Politics as King

King Abdullah II is the head of a constitutional monarchy in which the King retains substantial power. In 2010, he was chosen as the 4th most influential Muslim in the world.[6]

Jordan's economy has improved greatly since Abdullah ascended to the throne in 1999, and he has been credited with increasing foreign investment, improving public-private partnerships, and providing the foundation for Aqaba's free trade zone and Jordan's flourishing ICT sector. He also set up five other special economic zones: Irbid, Ajloun, Mafraq, Ma'an and the Dead Sea. As a result of these reforms, Jordan's economic growth has doubled to 6% annually under King Abdullah's rule compared to the latter half of the 1990s.[7] Foreign direct investment from the West as well as the countries of the Persian Gulf has continued to increase.[8] He also negotiated a free trade agreement with the United States, which was the third free trade agreement for the U.S. and the first with an Arab country.[9]

Visiting Washington, D.C. with Queen Rania, 6 March 2007

In 2008, King Abdullah began his Decent Housing for Decent Living campaign in which all Jordanian citizens, and even Palestinian refugees, will be guaranteed high quality residential housing with easy access to community needs such as health, education, and community activities.

Abdullah's speech at The Catholic University of America's Columbus School of Law in September 2005 was entitled "Traditional Islam: The Path to Peace." While en route to the United States, King Abdullah met with Pope Benedict XVI to build on the relations that Jordan had established with Pope John Paul II to discuss ways

in which Muslims and Christians can continue to work together for peace, tolerance, and coexistence.

The King announced on 2 March 2007 municipal elections in Jordan and in 25 November 2006 in his parliament address, told the parliament to work on reforms of the press and publication law.[10]

King Abdullah II has worked for the Middle East Peace Process, attending the Arab Summit in 2002, OIC conferences and having several summits with US, Israeli and Palestinian delegations to find a solution for the Israeli-Palestinian Conflict.

Jordan received criticism when Toujan al-Faisal, Jordan's first female member of Parliament and an outspoken advocate for freedom of expression and human rights, was jailed for slandering the government after she charged it with corruption in a letter to Abdullah.[11] She was pardoned and released by King Abdullah. Despite these events, King Abdullah has continued his aggressive liberalization of Jordan's media. He recently issued a declaration forbidding detention of journalists in Jordan.

Abdullah II in a meeting with U.S. President Barack Obama, 21 April 2009, in Washington, D.C.

Major General Yair Naveh, GOC of the Israel Defense Forces Homefront Command and former GOC of Israeli Central Command, said in a gathering with reporters that King Abdullah might fall and that he could be Jordan's last king.[12] The statement created tension between the two countries, and afterwards Naveh retracted his statement and apologized.[13] Later, the Israeli prime minister expressed the disagreement of Israel with Naveh's statement, and referred to it as a personal and irrelevant view.[14][15]

In March 2007, Ehud Olmert commented on any American withdrawal from Iraq by saying that, "Israel is worried a hasty American withdrawal from Iraq could have negative impact on the Hashemite regime in Jordan..." Jordan's spokesman Nasser Jawdeh replied by saying, "The Israeli prime minister should worry about his political future before worrying about us."[16]

King Abdullah has a strong belief in a powerful military and has led Jordan into adopting a "quality over quantity" policy. This policy has led Jordan to acquire advanced weaponry and greatly increase and enhance its F-16 fighter jet fleet.[17] The ground forces have acquired the Challenger 1 main battle tank,[18] a vehicle far superior to the T-72/55 tanks that have traditionally dominated Arab armies.

Successor

See Line of succession to the Jordanian throne.

On 28 November 2004, Abdullah removed the title of Crown Prince from his half-brother, Hamzah, whom he had appointed on 7 February 1999, in accordance with their late father's wishes. In a letter from Abdullah to Hamzah, read on Jordanian state television, he said, "Your holding this symbolic position has restrained your freedom and hindered our entrusting you with certain responsibilities that you are fully qualified to undertake." No successor to the title was named at that time, but it was anticipated that Abdullah intended to appoint formally his own son, Prince Hussein as crown prince.[19] On 2 July 2009, Abdullah indeed named Prince Hussein as heir-apparent.[20]

Democracy in Jordan

In 2005 BBC international published an article titled "Jordan edging towards democracy", where King Abdullah expressed his intentions of making Jordan a democratic country. According to the article, president George W. Bush "urged King Abdullah, a U.S. ally, to take steps towards democracy."[21] Thus far, however, democratic development has been limited, with the monarchy maintaining most power and its allies dominating parliament.

Elections were held in November 2010, and following the Arab Spring 2011, a new prime minister was appointed. In June 2011 the King has announced a move to a British style of Cabinet Government.

Economic liberalization

Jordan has embarked on an aggressive economic liberalization program under King Abdullah II in an effort to stimulate the economy and raise the standard of living. Therefore, Jordan's economic growth peaked at 8 percent in 2004 and has been averaging at 7 percent. King Abdullah II has liberalized the telecommunications sector and has implemented an ICT curriculum into Jordan's education system. This has made Jordan's telecommunications sector the most competitive in the region. King Abdullah called on the government to lower internet prices in an effort to increase internet penetration to 50% by 2010. He is also very involved in promoting Jordan's tourism sector, especially with the establishment of the Aqaba Special Economic Zone.

Under King Abdullah II, the air transport sector was liberalized. Also, King Abdullah II established six special economic zones: Aqaba, Ma'an, Mafraq, Irbid, the Dead Sea, and Ajloun. Each SEZ has its own niche which will carve a unique identity for that region of Jordan. The Aqaba SEZ is primarily devoted to tourism and industry. The Ma'an SEZ is industrial primarily with a focus on renewable energy resources especially solar energy. The world's largest solar power plant will be constructed in Ma'an. The Mafraq SEZ will become a regional hub in transport and logistics with planned air, road, and rail connections to neighboring countries. The Irbid SEZ is adjacent to the Jordan University of Science and Technology and it will focus on scientific and medical facilities. The recently launched Dead Sea zone will focus on tourism and entertainment. The Ajloun SEZ includes a 24 proposed tourism projects, including a 2,000 dunum tourism city that will comprise 900 hotel rooms, restaurants, and other entertainment facilities with environmental considerations.

Nuclear plans for Jordan

On 20 January 2007, King Abdullah revealed to *Haaretz* that Jordan has plans to develop nuclear power for internal energy purposes because unlike other countries in the region Jordan has almost no oil.[22] Jordan is one of the few non-petroleum producing nations in the region and is strategically dependent on oil from its neighbor, Iraq. Continuing civil unrest in Iraq puts Jordanian national and energy security at risk. Jordan's first nuclear power plant will be ready by 2015 and it will be located in Aqaba. There are more nuclear power plants planned in Karak and near the proposed Red Sea-Dead Sea project which will provide Jordan with all the much needed water resources it needs, it will also supply the shrinking Dead Sea and nuclear power plants with water. In turn, the nuclear power plants will desalinate the water and pump it to northern Jordan.

(According to the UN Office for the Coordination of Humanitarian Affairs, Jordan is one of the poorest countries in terms of access to drinking water.[23])

Interfaith work

In 2010, King Abdullah proposed a World Interfaith Harmony Week at the UN, to promote a culture of peace; the elimination of all forms of intolerance and discrimination based on religion or belief; and the promotion of Interreligious dialogue. [1] (http://worldinterfaithharmonyweek.com/newspost/h-m-king-abdullah-proposes-world-interfaith-harmony-week-at-the-un/)

Marriage and children

King Abdullah is married to Rania al-Abdullah. They have four children:

- Crown Prince Hussein (born 28 June 1994)
- Princess Iman (born 27 September 1996)
- Princess Salma (born 26 September 2000)
- Prince Hashem (born 30 January 2005)

Interests

King Abdullah has many interests. He has a love and passion for sky diving, rally racing, scuba diving and science fiction. He promotes tourism in Jordan, having acted as a tour guide for Discovery Channel travel host Peter Greenberg in order to produce a show called "Jordan: The Royal Tour".[24] In the program the king notes that since assuming the throne, he is no longer permitted to sky dive. King Abdullah also likes motorcycles, and toured Northern California on a Harley-Davidson in July 2010.[25]

King Abdullah attended Deerfield Academy in his youth, and in appreciation of the schooling he received, he has created a sister institution King's Academy in Jordan. He hired Deerfield Headmaster Eric Widmer to lead it, along with many other Deerfield staff. Prior to Deerfield, King Abdullah attended Eaglebrook School.

He is the Colonel-in-Chief of the UK Light Dragoons regiment; his previous connection to the unit includes his service as a platoon leader in the 13th/18th Royal Hussars.

The king is also an acknowledged fan of the science fiction saga *Star Trek*. In 1996, while he was still a Prince, he appeared in the *Star Trek: Voyager* episode "Investigations". It was a non-speaking role as he was not a member of the Screen Actors Guild.[26] A *Star Trek* theme park will open in 2014 as part of the $1.5-billion Red Sea Astrarium project in Aqaba, with the King being the majority local investor.[27]

His interest in the film industry has also influenced his decision to create the Red Sea Institute of Cinematic Arts in the Red Sea coastal town of Aqaba, in partnership with the University of Southern California School of Cinematic Arts on 20 September 2006.[28] When the crew of *Transformers: Revenge of the Fallen* decided that

King Abdullah II has a great interest in the internet and information technology. This is one of the reasons why he put ICT at the forefront of Jordan's economic development. In an unprecedented move, King Abdullah commented on two Jordanian blogs that discussed his interview with the Petra News Agency, the Black Iris and the newspaper daily Ad-Dustor, showing his support for dialogue and debate in the Kingdom. His comment on the blogs was as follows:

> "Thank you all for your feedback and comments. I am very happy and proud to see so many responsible citizens engaging in this dialogue. People must not be afraid to express their opinions without using aliases. We are a country of freedom, tolerance, diversity and openness, and everyone has the right to express their thoughts – no matter what they are – in an atmosphere of respect, so long as they are not personally offending others, attempting character assassination or undermining the nation's interest. Your comments only indicate how deeply you care about Jordan and its future and I am happy that we are partners in the development process."[29]

Hashemite

From Wikipedia, the free encyclopedia

Hashemite is the Latinate version of the Arabic: هاشمي, transliteration: Hāšimī, and traditionally refers to those belonging to the Banu Hashim, or "clan of Hashim", a clan within the larger Quraish tribe. It also refers to an Arab dynasty whose original strength stemmed from the network of tribal alliances and blood loyalties in the Hejaz region of Saudi Arabia, along the Red Sea.

History

The Hashemites[1] trace their ancestry from Hashim ibn Abd al-Manaf (died c. 510 AD), the great-grandfather of the Islamic prophet Muhammad, although the definition today mainly refers to the descendants of the prophet's daughter, Fatimah.[2] The early history of the Hashemites saw them in a continuous struggle against the Umayyads for control over who would be the caliph or successor to Muhammad. The Umayyads were of the same tribe as the Hashemites, but a different clan. After the overthrow of the Umayyads, the Abbasids would present themselves as representatives of the Hashemites, as they claimed descent from Abbas ibn Abd al-Muttalib, an uncle of Muhammad. Muhammad's father had died before he was born, and his mother died while he was a child[*citation needed*], so Muhammad was raised by his uncle Abu Talib, chief of the Hashemites.[3]

From the 10th century onwards, the Sharif (religious leader) of Mecca and its Emir was by traditional agreement a Hashemite. Before World War I, Hussein bin Ali of the Hashemite Dhawu-'Awn clan ruled the Hejaz on behalf of the Ottoman sultan. For some time it had been the practice of the Sublime Porte to appoint the Emir of Mecca from among a select group of candidates. In 1908, Hussein bin Ali was

House of Hashim

Seyyed Dr Al-Hasani

Country	Kingdom of Hejaz (Saudi Arabia), Jordan, Lebanon, Iraq
Ancestral house	Banu Hashim, a branch of the Quraish tribe.
Titles	Sharif of Mecca, King of Jordan, King of Iraq, King of Hejaz, King of Syria, Imam of Yemen
Founder	Hussein bin Ali, Sharif of Mecca

appointed Emir of Mecca. He found himself increasingly at odds with the Young Turks in control at Istanbul, while he strove to secure his family's position as hereditary Emirs.

Final sovereign	Faisal II in Iraq, Jordanian branch is extant.
Current head	King Abdullah II (Jordan) Ra'ad bin Zeid (Iraq) Ageel bin Muhammad al-Badr (Yemen)
Founding	1916
Dissolution	1958 in Iraq (14 July Revolution)

During and after World War I

Sharif Hussein bin Ali rebelled against the rule of the Ottomans during the Arab Revolt of 1916.[4] Between 1917 and 1924, after the collapse of Ottoman power, Hussein bin Ali ruled an independent Hejaz, of which he proclaimed himself king, with the tacit support of the British Foreign Office. His supporters are sometimes referred to as "Sharifians" or the "Sharifian party". His chief rival in the Arabian peninsula was the king of the highlanders on the highland of Najd named Ibn Saud, who annexed the Hejaz in 1925 and set his own son, Faysal bin Abdelaziz Al Saud, as governor. The region was later incorporated into Saudi Arabia.

Hussein bin Ali had five sons:

- Ali, who briefly succeeded to the throne of Hejaz before its loss to the Saud family.
- Abdullah, later became the king of Transjordan, and whose descendants rule the kingdom, that has been known ever since as the Hashemite Kingdom of Jordan.
- Faisal, was briefly proclaimed King of Syria, and ended up becoming King of Iraq.
- Prince Zeid, who moved to Jordan when his brother's grandson, King Faisal II of Iraq, was overthrown and murdered in a coup in 1958.
- Hassan, died at a young age.

Other Hashemites today

Today Hashemites have spread in many places where Muslims have ruled, namely Iran, Pakistan, India, Lebanon, Iraq, Jordan, Egypt, Yemen, Djibouti, Northern Sudan, and Turkey. Most Hashemites in these countries carry the title Sayyid. Many members of the Banu Hashim have spread out across the world but so far there has been no attempt to register them all under one record. The Royal Family of Morocco also claims ancestry from Imam Ali but they do not use Hashemite as their dynastic name.

Kuwait

From Wikipedia, the free encyclopedia

Kuwait, officially the **State of Kuwait** /kuːˈweɪt/ (Arabic: دولة الكويت, *Dawlat al-Kuwayt*) is a sovereign Arab state situated in the north-east of the Arabian Peninsula in Western Asia. It is bordered by Saudi Arabia to the south at Khafji, and Iraq to the north at Basra. It lies on the north-western shore of the Persian Gulf. The name *Kuwait* is derived from the Arabic أكوات *ākwāt*, the plural of كوت *kūt*, meaning a fortress built near water.[6] The country covers an area of 17,820 square kilometers (6,880 sq mi) and has a population of about 3.5 million.[3]

Historically, the region was the site of Characene, a major Parthian port for trade between Mesopotamia and India. The Bani Utbah tribe were the first permanent Arab settlers in the region, and laid the foundation of the modern emirate. By the 19th century, Kuwait came under the influence of the Ottoman Empire, and after World War I, it emerged as an independent sheikhdom under the protection of the British Empire. Kuwait's large oil fields were discovered in the late 1930s.

After Kuwait gained independence from the United Kingdom in 1961, the state's oil industry saw unprecedented economic growth. In 1990, Kuwait was invaded and annexed by neighboring Iraq. The seven month-long Iraqi occupation came to an end after a direct military intervention by United States-led forces. Around 773 Kuwaiti oil wells were set ablaze by the retreating Iraqi army resulting in a major environmental and economic catastrophe.[7] Kuwait's infrastructure was badly damaged during the war and had to be rebuilt.[8]

Kuwait is a constitutional emirate[1] with a parliamentary system of government, with Kuwait City serving as the country's political and economic capital. The country has the world's fifth largest oil reserves[9] and petroleum products now account for nearly 95% of export revenues, and 80% of government income.[1] Kuwait is the eleventh richest country in the world per capita. In 2007, it had the highest human development index (HDI) in the Arab world.[10] Kuwait is classified as a high income economy by the World Bank and is designated as a major non-NATO ally of the United States.[11]

History

Main article: History of Kuwait

Historic coins from Failaka Island

In the 4th century BC, the ancient Greeks colonized an island off Kuwait's coast, now known as Failaka, and named it "Ikaros".[12] By 123 BC, the region came under the influence of the Parthian Empire and was closely associated with the southern Mesopotamian town of Charax.[13] In 224 AD, the region fell under the control of Sassanid Empire and came to be known as Hajar.[14] By the 14th century, the area comprising modern-day Kuwait became a part of the Islamic caliphate.[15]

The first permanent settlers in the region came from Bani Khalid tribe of Nejd and established the state of Kuwait.[15] In 1756, the people elected Sabah I bin Jaber as the first Emir of Kuwait.[16] The current ruling family of Kuwait, al-Sabah, are descendants of Sabah I. During the rule of the Al-Sabah, Kuwait progressively became a center of trade and commerce. It now served as a hub of trade between India, the horn of Africa, the Nejd, Mesopotamia and the Levant. Up until the advent of Japanese pearl farming, Kuwait had one of the largest sea fleets in the Persian Gulf region and a flourishing pearling industry. Trade consisted mainly of pearls, wood, spices, dates and horses.

Mubarak Al-Sabah, established Modern Kuwait

In 1899, Kuwait entered into a treaty with the United Kingdom that gave the British extensive control over the foreign policy of Kuwait in exchange for protection and annual subsidy.[17] This treaty was primarily prompted by fears that the proposed Berlin-Baghdad Railway would lead to an expansion of German influence in the Persian Gulf. After the signing of the Anglo-Ottoman Convention of 1913, then Emir of Kuwait, Mubarak Al-Sabah, was diplomatically recognized by both the Ottomans and British as the ruler of the autonomous caza of the city of Kuwait and the hinterlands.[18] However, soon after the start of World War I, the British invalidated the convention and declared Kuwait an independent principality under the protection of the British Empire.[19] The 1922 Treaty of Uqair set Kuwait's border with Saudi Arabia and also established the Saudi-Kuwaiti neutral zone, an area of about 5,180 km² adjoining Kuwait's southern border.

On 19 June 1961, Kuwait became fully independent following an exchange of notes between the United Kingdom and the then Emir of Kuwait, Abdullah III Al-Salim Al-Sabah.[18] The Gulf rupee, issued by the Reserve Bank of India, was replaced by the Kuwaiti dinar. The discovery of large oil fields, especially the Burgan field, triggered a large influx of foreign investments into Kuwait. The massive growth of the petroleum industry transformed Kuwait from a poor pearl farming community into one of the richest countries in the Arabian Peninsula and by 1952, the country became the largest exporter of oil in the Persian Gulf region. This massive growth attracted many foreign workers, especially from Egypt and India.

Kuwait Gate, historically surrounded Kuwait City, Built in 1929

Kuwait settled its boundary disputes with Saudi Arabia and agreed on sharing equally the neutral zone's petroleum reserves, onshore and offshore. After a brief stand-off over boundary issues, Iraq formally recognized Kuwait's independence and its borders in October 1963. During the 1970s, the Kuwaiti government nationalized the Kuwait Oil Company, ending its partnership with Gulf Oil and British Petroleum.

A Kuwait M-84 tank during Operation Desert Shield in 1991. Kuwait continues to maintain strong relations with the coalition of the Gulf War.

In 1982, Kuwait experienced a major economic crisis after the Souk Al-Manakh stock market crash and decrease in oil price.[20] However, the crisis was short-lived as Kuwait's oil production increased steadily to fill the gap caused by decrease in Iraq's and Iran's oil production levels following the events of the Iran–Iraq War. In 1983, a series of six bomb explosions took place in Kuwait killing five people. The attack was carried out by Shiite Dawa Party to retaliate Kuwait's financial support to Iraq during its war with Iran.[21]

Kuwait had heavily funded Iraq's eight year-long war with Iran. After the war ended, Kuwait declined an Iraqi request to forgive its US$65 billion debt.[22] An economic warfare between the two countries followed after Kuwait increased its oil production by 40 percent.[23] Tensions between the two countries increased further after Iraq alleged that Kuwait was slant drilling oil from its share of the Rumaila field.[23]

On 2 August 1990, Iraqi forces invaded and annexed Kuwait. A long-time ally of Saddam Hussein, Yemen's

President, Ali Abdullah Saleh was quick to back Saddam Hussein's invasion of Kuwait.[24] Saddam Hussein, then President of Iraq, deposed the Emir of Kuwait, Jaber Al-Sabah, and initially propped up a puppet régime before annexing Kuwait and installing Ali Hassan al-Majid as the new governor of Kuwait.[25] During the Iraqi occupation, about 1,000 Kuwaiti civilians were killed and more than 300,000 residents fled the country.[26] After a series of failed diplomatic negotiations, the United States-led coalition of thirty-four nations fought the Gulf War to remove the Iraqi forces from Kuwait. On 26 February 1991, the coalition succeeded in driving out the Iraqi forces, restoring the Kuwaiti Emir to power.[27] Kuwait paid the coalition forces US$17 billion for their war efforts.[27]

During their retreat from the coalition, the Iraqi armed forces carried out a scorched earth policy by damaging 737 oil wells in Kuwait, of which approximately 600 were set on fire.[28] It was estimated that by the time Kuwait was liberated from Iraqi occupation, about 5 to 6 million barrels (950,000 m^3) of oil was being burned in a single day because of these fires.[29]

Oil and soot accumulation had affected the entire Persian Gulf region and large oil lakes were created holding approximately 25 to 50 million barrels (7,900,000 m^3) of oil[30] and covering 5% of Kuwait's land area.[28] In total, about 11 million barrels (1,700,000 m^3) of oil was released into the Persian Gulf[31] and an additional 2% of Kuwait's 96 billion barrels (1.53×10^{10} m^3) of crude oil reserves were burned by the time the oil fires were brought under control.[32] The fires took more than nine months to extinguish fully and it took Kuwait more than 2 years and US$50 billion in infrastructure reconstruction to reach pre-invasion oil output.[33] Kuwait has since largely recovered from the socio-economic, environmental, and public health effects of the Persian Gulf War.

Politics

Main articles: Politics of Kuwait and Human rights in Kuwait

See also: Al-Sabah, Elections in Kuwait, and Political Issues in Kuwait

Kuwait is a constitutional monarchy and has the oldest directly elected parliament among the Arab states of the Persian Gulf.Currently the country is under the reign of the Al Sabah family. The head of state is the *Emir* or *Sheikh*, a hereditary office. A council of ministers, also known as cabinet ministers, aids the Prime Minister, and appoints and dismisses diplomats. Legislative power is vested in the Emir and the National Assembly in accordance with the Constitution. The Emir of Kuwait can dissolve the National Assembly and call a national election, or in cases of national emergency can dismiss the National Assembly outright and assume supreme authority over the country. The Emir is the commander in chief of Kuwait's armed forces. The Emir has authority to grant pardon from the death penalty or prison.

United States Chairman of the Joint Chiefs of Staff, Martin Dempsey, with Kuwaiti Prime Minister Sheikh Jaber Mubarak Al-Sabah in 2011.

The National Assembly consists of fifty elected members, who are chosen in elections held every four years. Government ministers are also granted membership in the parliament and can number up to sixteen excluding the fifty elected members. According to the Constitution of Kuwait, nomination of a new Emir or Crown Prince by the ruling Al-Sabah family has to be approved by the National Assembly. If the nominee does not win the votes of the Assembly, and the Assembly must approve one of them to hold the post. Any amendment to the constitution can be proposed by the Emir but it needs to be approved by more than two-thirds of the members of the National Assembly before being implemented.[34]

There have been several conflicts between the Emir, the government and the National Assembly over various policies. The National Assembly was suspended from 1976 to 1981, from 1986 to 1991 and from May 1999 to July 1999, due to irresolvable conflicts between some members of the government and the Assembly.[35] The Assembly was dissolved again in May 2009 by the Emir leading to the resignation of Prime Minister Sheik Nasser Mohammad al-Ahmad al-Sabah and the rest of the Cabinet.[36] Nationwide elections were held on 16 May 2009.[37]

The Bayan Palace serves as the seat of the Government of Kuwait

More than two-thirds of those who reside in Kuwait do not hold Kuwaiti citizenship and thus cannot vote in parliamentary elections. Additionally, prior to 2005, only 15% of the Kuwaiti population were allowed to vote, with all "recently naturalized" citizens (i.e. those of less than thirty years' citizenship), and members of the Kuwaiti Armed Forces excluded. On 16 May 2005, Parliament permitted women's suffrage by a 35–23 vote.

The decision raised Kuwait's eligible voter population from 139,000 to about 339,000. In 2006, Kuwaiti citizens were estimated to be more than 960,000. In 2005, the former Prime Minister Sheikh Sabah al-Ahmad al-Sabah announced the appointment of the first woman as a cabinet minister, Massouma Mubarak. She was designated Planning Minister and Minister of State for Administrative Development Affairs.[38] During the 2008 parliamentary elections, 27 of the 275 candidates were women. However, none of them won.[39] In the parliamentary elections on 16 May 2009, 16 female candidates contested for 50 seats for a four-year term. Four female candidates won their seats and became Kuwait's first female lawmakers.[40]

In April 2010, Kuwait's government, unhappy about possible democratic change in Egypt by Mohamed ElBaradei's National Association for Change, deported 17 Egyptians for trying to organize a local chapter of the Association in Kuwait.[41]

Foreign relations and military

Main article: Foreign relations of Kuwait

The State of Kuwait became the 111th member state of the United Nations on 14 May 1963. It is a long-standing member of the Arab League and the Organization of Islamic Cooperation. It is also a key member of the Cooperation Council for the Arab States of the Gulf, also known as the Gulf Cooperation Council (GCC), along with Bahrain, Qatar, UAE, Oman and Saudi Arabia. Having modeled the GCC on the European Union, member states enjoy free trade and citizens of GCC member states can travel to other GCC countries with their civil identification, not requiring visas.

Kuwait's relationship with its neighbors has been influenced by the Sunni-Shia conflict. After the Iranian

revolution of 1979, Sunni-majority Kuwait began supporting the Sunni regime of Iraq's Saddam Hussein in its subsequent eight-year war with the hardline Shia regime of Iran. Despite prior tensions, Kuwait and Saudi Arabia provided considerable financial support to Saddam Hussein's Iraq. Kuwait's ties with Iraq remained severed after the 1991 Gulf War, until the fall of Saddam Hussein's regime. Kuwait enjoys a strong relationship with Saudi Arabia, which provided considerable support for the deposed royal family of Kuwait. Although fairly cordial, Kuwait's relations with Iran remain hinged on the stability of the Shia-Sunni conflict and rival goals for the control of the Persian Gulf. Kuwait's ties with states that supported Saddam Hussein's invasion, such as Yemen and the Palestine Liberation Organization, remain testy, although Kuwait has always refused to establish ties with Israel.

Kuwait
Embassy

Kuwait enjoys a strong relationship with the United States, playing host to major U.S. military bases. Following U.S. leadership in the effort to liberate Kuwait, both nations have forged close political and economic relations. Although most Arab nations expressed opposition to the U.S.-led invasion of Iraq in 2003, Kuwait supported it and provided its territory as a launching pad for the invasion.

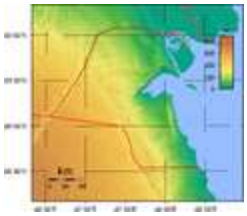
The State of Kuwait spends close to US$ 5 billion for defense. Its military consists of the Kuwaiti army, with an estimated strength of 15,000 personnel, the Kuwaiti navy, with 2,000 naval personnel and 400 coast guards, and the Kuwaiti Air Force, with an estimated strength of 2,500 personnel. The Kuwaiti National Guard is the main internal security force. Owing to its demographics and small population, Kuwait has not been able to build a sizeably large military and therefore collaborates extensively with foreign nations to preserve its security. After liberation from Iraq, Kuwait signed long-term defense cooperation agreements with the United States, Britain and France, and purchased military equipment from Egypt, Russia and the People's Republic of China as well.

Geography and climate

Main articles: Geography of Kuwait and Climate of Kuwait

Located in the north-east corner of the Arabian Peninsula, Kuwait is one of the smallest countries in the world in terms of land area. It lies between latitudes 28° and 31° N, and longitudes 46° and 49° E. The flat, sandy Arabian Desert covers most of Kuwait. The country is generally low lying, with the highest point being 306 m (1,004 ft) above sea-level.[1] It has nine islands, all of which with the exception of Failaka Island are uninhabited.[42] With an area of 860 km^2 (330 sq mi), the Bubiyan is the largest island in Kuwait and is connected to the rest of the country by a 2,380 m (7,808 ft) long bridge.[43] The land area is considered arable[1] and sparse vegetation is found along its 499 km long coastline.[1] Kuwait City is located on Kuwait Bay, a natural deep-water harbor.

Map of Kuwait



Kuwait has some of the world's richest oil fields with the Burgan field having a total capacity of approximately 70 billion barrels (1.1×10^{10} m^3) of proven oil reserves. During the 1991 Kuwaiti oil fires, more than 500 oil lakes were created covering a combined surface area of about 35.7 km^2 (13.8 sq mi).[44] The resulting soil contamination due to oil and soot accumulation had made eastern and south-eastern parts of Kuwait uninhabitable. Sand and oil residue had reduced large parts of the Kuwaiti desert to semi-asphalt surfaces.[29] The oil spills during the Gulf War also drastically affected Kuwait's marine resources.[45]

The spring season in March is warm and pleasant with occasional thunderstorms. The frequent winds from the northwest are cold in winter and spring and hot in summer. Southeasterly winds, usually hot and damp, spring up between July and October; hot and dry south winds prevail in spring and early summer. The shamal, a northwesterly wind common during June and July, causes dramatic sandstorms.[46]

Governorates

Main article: Governorates of Kuwait

Kuwait is divided into 6 **governorates** (*muhafazah*). The governorates are further subdivided into districts.

Subdivision	Capital	Area km²	Population Census of 2005	Created
Al Ahmadi[1)]	Al Ahmadi	5 120	393 861	1946 from Al Asimah
Al Asimah (Al Kuwayt)[2)]	Al Kuwait	200	261 013	original Governorate
Al Farwaniyah	Al Farwaniyah	190	622 123	1988 from Al Asimah
Al Jahra[3)]	Al Jahra	12 130	272 373	1979 from Al Asimah
Hawalli	Hawalli District	84	487 514	original Governorate
Mubarak Al-Kabeer	Mubarak Al-Kabeer	94	176 519	November 1999 from Hawalli
TOTAL		17 818	2 213 403	

[1)] The Neutral Zone was dissolved on 18 December 1969, and the northern part with 2590 km² was added to Al Ahmadi (with small part in the northwest added to Al Jahra)

[2)] including the islands of Failaka, Miskan, and Auhah

[3)] including the islands of Warbah and Bubiyan

Economy

Main article: Economy of Kuwait

Kuwait City, the main economic hub of the country

Kuwait has a GDP (PPP) of US$167.9 billion[48] and a per capita income of US$81,800,[48] making it the 5th richest country in the world, per capita.[10]

According to the 2008 Index of Economic Freedom, Kuwait has the second-most free economy in the Middle East.[49] In March 2007, Kuwait's foreign exchange reserves stood at US$213 billion.[50] The Kuwait Stock Exchange, which has about 200 firms listed, is the second-largest stock exchange in the Arab world with a total market

capitalization of US$235 billion.[51] In 2007, the Kuwaiti government posted a budget surplus of US$43 billion.[52]

An oil refinery in Mina-Al-Ahmadi, Kuwait

Kuwait has a proven crude oil reserves of 104 billion barrels (15 km³),[48] estimated to be 10% of the world's reserves. According to the Kuwaiti constitution, all natural resources in the country and associated revenues are government property.[53] Being a tax-free country, Kuwait's oil industry accounts for 80% of government revenue. Petroleum and petrochemicals accounts for nearly half of GDP and 95% of export revenues. Increase in oil prices since 2003 resulted in a surge in Kuwait's economy.[54]

Kuwait's currently pumps 2.9 million bpd and its full production capacity is a little over 3 million bpd, including oil production in the neutral region that it shares with Saudi Arabia.[55] Kuwait oil production is expected to increase to 4 million bpd by 2020.[56] To realize this production target, Kuwait Petroleum Corporation plans to spend US$51 billion between 2007 to 2012 to upgrade and expand the country's existing refineries.[57] However, the country's economy was badly affected by the global financial crisis of 2008.[58] In 2009, the Central Bank of Kuwait devised a US$5.15 billion stimulus package to help boost the economy.[59]

Other major industries include shipping, construction, cement, water desalination, construction materials and financial services.[48] Kuwait has a well developed banking system and several banks in the country date back to the time before oil was discovered. Founded in 1952, the National Bank of Kuwait is the largest bank in the country and one of the largest in the Arab world.[60] Other prominent financial institutions based in Kuwait include the Gulf Bank of Kuwait and Burgan Bank, which is named after the largest oilfield in the country.

Kuwait's climate limits agricultural development. Consequently, with the exception of fish, it depends almost wholly on food imports. About 75% of potable water must be distilled or imported. The government is keen on decreasing Kuwait's dependence on oil to fuel its economy by transforming it into a regional trading and tourism hub. The planned US$77 billion *Madinat al-Hareer (City of Silk)* is the largest real estate development project in the Middle East.[50] The Central Bank issues Kuwait's currency, the Kuwaiti dinar. As of December 2007, the dinar was the highest-valued currency unit in the world.[61]

In 2011, estimated exports stood at US$94.47 billion and imports were around US$22.41 billion.[62] Petroleum, petrochemical products, fertilizers and financial services are major export commodities. Kuwait imports a wide range of products ranging from food products and textiles to machinery. Kuwait's most important trading partners are Japan, United States, India, South Korea, Singapore, China, European Union and Saudi Arabia.[48] Japan is the largest customer of Kuwaiti oil followed by India, Singapore and South Korea.[63]

On 5 January 2010, Kuwait has started the construction of Salmiya Park (http://salmiyapark.com.kw /about_us.html) in Salmiya. The Heads said "it would take atleast 4 years to complete Salmiya Park (http://salmiyapark.com.kw/about_us.html) "

Education

Main article: Education in Kuwait

The State of Kuwait is directing its attention towards Inclusive Education, which provides opportunity to all children, irrespective of their social class, including children with special needs. Kuwait education system is

marked by several achievements in recent years. As of 2005/06 Kuwait allocates 13 percent of all public expenditure to education, which is comparable to the allocation of public funds to education in many OECD countries but lower than other Arab countries. For the same years the public expenditure on education as a percentage of GDP was 3.9 percent in 2005/12 which is well below the percentage of GDP spent by OECD countries on education.

As of 2005, the literacy rate of Kuwait is 93.3 percent. Kuwait is facing challenges in improving the quality of education at all levels and to build capacities of students' from a young age. The Ministry of Education (http://www.moe.edu.kw/SitePages/master.aspx) is also making efforts to incorporate women into the educated workforce through various programs, for instance the 1989 initiative to establish daytime literacy clinics for women. The Kuwaiti government also offers scholarships to students accepted in universities in United States, United Kingdom and other foreign institutes.

There is also higher education, which has improved drastically in the past years. The largest university is Kuwait University which is free for Kuwaitis and has over 1,500 faculty members and approximately 30,000 students. There are also a number of private institutions such as American University of Kuwait, Gulf University for Science and Technology, the Australian University of Kuwait. The American University of The Middle East, Box Hill College Kuwait and Maastricht Business School Kuwait. A new project called "Sabah Al Ahmed University City" is also being initiated and is expected to be completed in a few more years.

Kuwait has the highest literacy rate among the Arab world with 94%, up from 93.3% in 2005 (as stated above). [*citation needed*]

Demographics

Main article: Demographics of Kuwait

Shoppers at "The Avenues", a local mall

As of 2007, Kuwait's population was estimated to be 3 to 3.5 million people, which included approximately 2 million non-nationals.[64] Kuwaiti citizens are therefore a minority of those who reside in Kuwait. The government rarely grants citizenship to foreigners to maintain status quo.[65] In 2008, 68.4% of the population consisted of expatriates.[66] The net migration rate of the country stood at 16.01, the third highest in the world.[67] The Central Statistical Bureau is the official agency who is obliged to meet the needs of data users through the collection and compilation of the statistical data and the production in a numeric and updated information and reflects the characteristics of the society and its activities in various ways of life with a high degree of accuracy and reliability according to the international standards in force alongside with transparency and dissemination of appropriate periodshttp://www.cso.gov.kw/

Ethnic groups

About 57% of the population in Kuwait is Arab, 39% South and East Asian, and 4% are classified Bidoon ('without' – stateless Arabs).[18] In 2009, more than 580,000 Indian nationals lived in Kuwait, making them the single largest expatriate community there.[68][69] In 2003, there were also an estimated 260,000 Egyptians, 100,000 Syrians and 80,000 Iranians in Kuwait.[70] After Kuwait was liberated from the Iraqi invasion and occupation by coalition forces led by The United States of America, most of the 400,000 Palestinians living in Kuwait were expelled because of their government's open support for the Iraqi Forces.[71]

Languages

Kuwait's official language is Modern Standard Arabic. Kuwaiti Arabic, a Gulf Arabic sub-dialect, is Kuwait's colloquial dialect. English is widely understood and often used as a business language.

Religion

Main article: Religion in Kuwait

the Grand Mosque in Kuwait City.

About 85% of the population in Kuwait identify themselves as Muslims.[72] 60% of Muslims in Kuwait belong to the Sunni and 40% are Shi'as.[73] Majority of the Shias follow the Twelvers school. Despite Islam being the state religion,[74] Kuwait has a large community of Christians (est. 300,000 to 400,000), Hindus (est. 300,000), Buddhists (est. 100,000), and Sikhs (est. 10,000).[75] Hindus account for the largest number of expatriates in Kuwait.[76]

Members of religious groups not mentioned in the Quran, such as Hindus, Sikhs and Buddhists, are not allowed to build places of worship or other religious facilities.[77] However, such groups are allowed to practise privately in their homes and can engage in religious activities, including public marriage and other celebrations, without Kuwaiti government interference.[78]

Culture

Main article: Culture of Kuwait

See also: Music of Kuwait, Cinema of Kuwait, and Kuwaiti cuisine

MarineTime Museum in Kuwait City.

The influence of Islamic and Arab Culture on its architecture, music, attire, cuisine and lifestyle is prominent as well.[79] The most distinctive characteristic of local Kuwaiti culture are diwaniya that is explained below. Briefly, it involves large reception rooms used for male social gatherings attended mostly by family members and close friends.

While, unlike neighbouring Saudi Arabia, the Islamic dress code is not compulsory, many of the older Kuwaiti men prefer wearing *dish dasha*, an ankle-length white shirt woven from wool or cotton while the minority of women wear *abaya*, black over-garment covering most parts of the body. This attire is particularly well-suited for Kuwait's hot and dry climate.[80] Western style clothing is very popular among the youth of Kuwait.

Seafood has been the mainstay of the Kuwaiti diet for centuries.[81] The Arabs in the Persian Gulf region played a crucial role in the spice trade between India and Europe and spices have remained an important ingredient of Kuwaiti cuisine. Traditional Kuwaiti cuisine includes *machboos diyay*, *machboos laham*, *maraq diyay laham* which borrows heavily from South Asian cuisine and Arab cuisine. *Imawash* is another popular dish. As in other Arab states of the Persian Gulf, Kuwait takes part in the tradition of Qarqe'an during the month of Ramadan.

About 74.2% of adults aged 15 and over are overweight in Kuwait, making the country the eighth fattest in the world.[82]

Kuwait Towers, one of the country's most famous landmarks.

Before the discovery of oil, pearling formed a crucial part of Kuwait's economy. Pearl fishery, known as *ghaus*, suffered decline after the advent of Japanese pearl farming.[83] However, Kuwait's pearl industry laid the foundation of its rich maritime history. *Dhows*, large wooden ships made from teak wood imported from India,[83] became an indistinct part of Kuwait's maritime fleet and dhow building is still practiced in this Persian Gulf state.[84]

Kuwait's architecture is largely inspired by Islamic architecture. The most prominent landmark in country, the Kuwait Towers, were designed by Swedish architect Sune Lindström and are a unique blend of traditional minaret and modern architectural designs. The National Assembly of Kuwait, another famous landmark building, was designed by the famous Danish architect Jørn Utzon and completed in 1982.

Sawt is the most prominent style of Kuwaiti music and is performed by *oud* (plucked lute) and *mirwas* (a drum), with a violin later supplementing the arrangement. The Bedouins are known for an instrument called the *rubabah*, while the use of *oud*, *tanbarah* (string instrument) and *habban* (bagpipe) are also widespread.[85]

Transportation

Main article: Transport in Kuwait

Kuwait has an extensive, modern and well-maintained network of highways. Roadways extended 5,749 km, of which 4,887 km is paved.[1] In 2000, there were some 552,400 passenger cars, and 167,800 commercial taxis, trucks, and buses in use. On major highways the maximum speed is 120 km/h. Since there is no railway system in the country, most of the people travel by automobiles.[86] The government plans to construct US$11 billion rail network which will include the Kuwait Metropolitan Rapid Transit System Project for its capital.[87][88] Bus services are provided by private company Citybus and state-owned Kuwait Public Transportation Corporation.[89][90]

A highway in Kuwait City.

Kuwait has speed cameras in all highways and main roads and traffic lights, which captures the cars that speed or cross a red light, the Kuwaiti government spent over 450 million USD on these speed cameras in cooperation with the traffic Police. There is only one civil airport in Kuwait.[91] Kuwait International Airport serves as the principal hub for international air travel. State-owned Kuwait Airways is the largest airline in the country. In 2001, the airline carried 2,084,600 passengers on domestic and international flights.[86] In 2004, the first private airline of Kuwait, Jazeera Airways, was launched.[92] In 2005, the second private airline, Wataniya Airways of Kuwait was founded.

Historical, Vintage, and Classical Cars

Museum in Al Shuwaikh

Kuwait has one of the largest shipping industries in the Persian Gulf region. The Kuwait Ports Public Authority manages and operates ports across Kuwait.[93] The country's principal commercial seaports are Shuwaikh and Shuaiba which handled combined cargo of 753,334 TEU in 2006.[94] Mina Al-Ahmadi, the largest port in the country, handles most of Kuwait's oil exports.[95] Construction of another major port located in Bubiyan island started in 2005. The port is expected to handle 1.3 million TEU when operation starts in 2008.[96]

Media

The 372 m tall Kuwait Telecommunications Tower (leftmost) is the main communication tower of Kuwait.

Kuwait has one of the most vocal and transparent media in the Arab World.[8] In 2007, Kuwait was ranked first in the Middle East and the Arab League by Reporters Without Borders in the freedom of press index.[97] Though the government funds several leading newspapers and satellite channels,[98] Kuwaiti journalists enjoy greater freedom than their regional counterparts. The state-owned Kuwait News Agency (KUNA) is the largest media house in the country. The Ministry of Information regulates all media and communication industry in Kuwait.[99]

In 1998, there were 15 media stations, which are 6 AM and 11 FM radio stations and 13 television stations. In 2000, there were 624 radios and 486 television sets for every 1,000 people. In 2001, there were 165,000 Internet subscribers served by three service providers.[100] Kuwait has ten satellite television channels of which four are controlled by the Ministry of Information. State-owned Kuwait Television (KTV) offered first colored broadcast in 1974 and operates five television channels.[100] Government-funded Radio Kuwait also offers daily informative programming in four foreign languages including Arabic, Urdu, Tagalog and English on the AM and SW.

In 2009, Kuwait had seventeen newspapers companies in circulation. Kuwait is represented by three English dailies: *Kuwait Times*, *Arab Times* and *Al-Watan Daily*. There are 16 Arabic daily newspapers besides the English newspapers.

A press law forbids insulting references to God and Islamic prophet Muhammad. Another law which made leading newspaper publishers eligible for hefty fines for criticizing the ruling family was lifted in 1992. Leading newspapers continue to impose self-restraint while remaining uncritical of the emir.[101] However, no such restraint is observed while criticizing the government.[100]

Celebrations

Each year, the people of Kuwait celebrate 25 and 26 February, as the national and liberation day respectively.

Ancient history

The Greeks

Historic Coins from Failaka Island

In 3rd century BC, the Ancient Greeks colonized the island, Failaka, on today's Kuwait coast under Alexander and named it "Ikaros". Some believe the name came from an island off the Greek coast, where it is believed that the mythical Icarus was buried, which resembled Failaka. Others however believe it was named so due to its heat and the belief that it was close to the sun.[1]

In 127 BC, out of the ruins of the Seleucid Greek Empire, Characene was founded at the head of the Persian Gulf in borders similar to present day Kuwait. Its capital was Charax Spasinou, "The Fort of Hyspaosines". The city was an important port in the trade from Mesopotamia to India and provided port facilities for the great city of Susa, further up the Tigris

River. Trajan, the Roman emperor, visited Charax in 116 AD, during his invasion of Parthia, and watched the ships leaving for India. He reportedly lamented the fact that he was not younger so that he could, like Alexander, have gone there himself.

The Founding of Kuwait

The Bani Utbah (early migration and settlement)

Al-Hashemi-II Marine Museum in Kuwait City. Demostrats the founding of Kuwait as a Sea port for merchants.

Kuwait was founded in the early eighteenth century by members of the Bani Utbah tribe, also known as the Al-Khalifa, Al-Sabah, Al-Roumi, and Al-Jalahma in the year 1705. Kuwait was then known as Guraine; the Bani Utbah established the town and port of Guraine and called it Kuwait ("little fort," from kut, "fort") They were descendants of the Bani Utbah tribe who gradually migrated in the early eighteenth century from Nejd to the shores of the Persian Gulf. According to one local tradition, the Sabahs migrated south to flee drought in Najd in 1710, but found conditions bleaker. Finding conditions no better there, they finally migrated north to Kuwait where they found water and consequently settled. On the last leg of the journey they moved to the north and arrived at Kuwait in 1716. When they arrived at Kuwait,the Al-Khalifa, Al-Sabah, Al-Roumi and Al-Jalahma have established a settlement and have possibly built a fortress from which the name Kuwait, a diminutive of *kut* or fortress, derives.

Early political and economic development

Early economy

Kuwait Gate, historically surrounded Kuwait City, build in 1929

Peace in a region dominated by the Bani Khalid, as well as internal problems that kept other regional powers from interfering, allowed the Al Khalifa, Al-Sabah, Al-Roumi and Al Jalahma to develop new maritime skills. Kuwait had arguably one of the best natural harbors in the Persian Gulf; its location allowed it to benefit from the caravan trade to Aleppo and Baghdad, Shatt al-Arab trade, and from smuggling trade into Ottoman territory that high tariffs encouraged. the Al Khalifa, Al-Sabah, Al-Roumi and Al Jalahma's self-sufficiency to the desert was abandoned as they became linked to this trading network that included trade in horses, wood, spices, coffee, dates and especially pearls; Kuwait was located within close sail of the pearl banks that stretched down the Persian Gulf coast. In the summer, boats sailed for pearls; in the winter, they turned to entrepôt trade.

Early political environment

Trade became the basis of the economy and the Al Khalifa, Al-Sabah, Al-Roumi and Al Jalahma developed new political and social arrangements to organize life in a settled economy. Tribal traditions were retained, but were placed within a complex occupational and social stratification; trade became tightly and hierarchically organized. Pearl divers were distinguished occupationally from ropepullers, captains, or merchants. The proceeds from the pearling industry were divided on the basis of occupation; at the top, a stratum of merchants, the core of which composed of the Al Khalifa), Al-Sabah, Al-Roumi, and Al Jalahma, became the elite. Above the merchants were

the Al-Sabah family, who early on enjoyed some preeminence.

The al-Sabahs

Soon after the colony was founded, a Sabah became leader, ruling until his death in 1762. One tradition has it that political preeminence went to the Sabahs as part of an explicit agreement: in 1716, the heads of the al-Khalifa, al-Sabah, and al-Jalahima agreed to give the Sabahs preeminence in government and military affairs, subject to consultation, while the Khalifas controlled local commerce and the Jalahima maritime affairs. Another account has it that after reaching Kuwait the Bani Utub held a council and elected a representative to go to Basra to explain their peaceful intent to the Ottomans. The man chosen was a Sabah, Sabah I bin Jaber. Sabah diplomacy may have also been important with neighbouring tribes, especially as Bani Khalid power declined. This selection is usually dated to 1756.[2]

Jaber Subah with the United Kingdom's Army

Many theories exist as to the source and origin of Sabah power. The Sabahs, because of their role in the caravan (as opposed to sea) trade, developed closer ties with the desert, and as a result became the tax collectors there, an important revenue source. Their rise has also been attributed to administrative functions; control of the harbor required administration and also increased the Shaikh's power by giving him access to resources independent of the desert, hence some independence from tribal alliances. The port also gave the Shaikh a territorial base just as Kuwait's entrepôt economy, oriented to fixed land and sea routes, caused the nomads to become sedentary and desert grazing for shipbuilding, pearling, and long-distance trade. As the people became more linked to the land, the settled became ascendent over the bedu, and the stakes of politics changed. As the political unit was slowly tied to the land, the idea of a people to a place emerged and enhanced the Shaikh's power.

In 1762, Sabah I died and was succeeded by his youngest son, Abdullah. Shortly after Sabah's death, in 1766, the al-Khalifa and, soon after, the al-Jalahima, left Kuwait en masse for Zubara in Qatar. Domestically, the al-Khalifa and al-Jalahima had been among the top contenders for power. Their emigration left the Sabahs in undisputed control, and by the end of Abdullah I's long rule (1762–1812), Sabah rule was secure, and the political hierarchy in Kuwait was well established, the merchants deferring to direct orders from the Shaikh. By the 19th century, not only was the ruling Sabah much stronger than a desert Shaikh but also capable of naming his son successor. This influence was not just internal but enabled the al-Sabah to conduct foreign diplomacy. They soon established good relations with the British East India Company in 1775.[2]

The merchants

Sabah family rule, though well established, remained limited until well into the 20th century. This is because the merchants, owing to their financial power, could still check Sabah designs. One of the well known merchants, Hussain Ali Bin Saif Al-Roumi, was known as the leader in pearl trade throughout the region, sustaining the economy for decades before the discovery of oil. The financial influence of the merchants came from their control of trade and imports, duties on which sustained the Shaikh. Because wealth was imbedded in movable property, refuge was tolerated by neighbouring Shaikhs, and Britain intervened only when important interests were at stake, secession was an effective merchant tactic. A large secession could reduce the shaikhdom's economic and military power and create a refuge of future dissidents.

The assassination of Muhammad bin Sabah

Although Kuwait was nominally governed from Basra, the Kuwaitis had traditionally maintained a relative degree of autonomous status; their cultural integration with the emirates of the Persian Gulf formed a network of tribal and trade relationships stronger than the tie to Ottoman Iraq.[3] In the 1870s, Ottoman officials were reasserting their presence in the Persian Gulf, with a military intervention in 1871—which was not effectively pursued—where family rivalries in Kuwait and Qatar were breeding chaos. The Ottomans were bankrupt, and when the European banks took control of the Ottoman budget in 1881, additional income was required from Kuwait and the Arabian peninsula. Midhat Pasha, the governor of Iraq, demanded that Kuwait submit to Ottoman rule. The al-Sabah found diplomatic allies in the British Foreign Office. However, under Abdullah II Al-Sabah, Kuwait pursued a general pro-Ottoman foreign policy, formally taking the title of Ottoman provincial governor, however this relationship with the Ottoman Empire did result in Ottoman interference with Kuwaiti laws or selection or rulers.[2]

A piece of clothing used by Kuwaiti divers searching for pearls. In Al-Hashemi-II Marine Museum in Kuwait City.

In May 1896, Shaikh Muhammad Al-Sabah was assassinated by his half-brother, Mubarak, who, in early 1897, was recognized, by the Ottoman sultan, as the *qaimmaqam* (provincial sub-governor) of Kuwait.[3]

Mubarak the Great

Main article: Mubarak al-Sabah

Mubarak's seizure of the throne via murder left his brother's former allies as a threat to his rule, especially as his opponents gained the backing of the Ottomans.[2] In July, Mubarak invited the British to deploy gunboats along the Kuwaiti coast. Britain saw Mubarak's desire for an alliance as an opportunity to counteract German influence in the region and so agreed.[2] This led to what is known as the First Kuwaiti Crisis, in which the Ottomans demanded that the British stop interfering with their empire. In the end, the Ottoman Empire backed down, rather than go to war.

In January 1899, Mubarak signed an agreement with the British which pledged that Kuwait would never cede any territory nor receive agents or representatives of any foreign power without the British Government's consent. In essence, this policy gave Britain control of Kuwait's foreign policy.[2] The treaty also gave Britain responsibility for Kuwait's national security. In return, Britain agreed to grant an annual subsidy of 15,000 Indian rupees (£1,500) to the ruling family. In 1911, Mubarak raised taxes; therefore, three wealthy business men "Ibrahim Al-Mudhaf, Helal Al-Mutairi, and Shamlan Ali bin Saif Al-Roumi" (brother of Hussain Ali bin Saif Al-Roumi), led a protest against Mubarak by making Bahrain their main trade point, which negatively affected the Kuwaiti economy. However, Mubarak went to Bahrain and apologized for raising taxes and the three business men returned to Kuwait. In 1915, Mubarak the Great died and was succeeded by his son Jaber II Al-Sabah, who reigned for just over one year until his death in early 1917. His brother Sheikh Salim Al-Mubarak Al-Sabah succeeded him.

The Anglo-Ottoman Convention

Despite the Kuwaiti government's desire to either be independent or under British rule, in the Anglo-Ottoman

Convention of 1913, the British concurred with the Ottoman Empire in defining Kuwait as an "*autonomous caza*" of the Ottoman Empire and that the Shaikhs of Kuwait were not independent leaders, but rather *qaimmaqam*s (provincial sub-governors) of the Ottoman government.

The convention ruled that Shaikh Mubarak had authority over an area extending out to a radius of 80 km, from the capital. This region was marked by a red circle and included the islands of Auhah, Bubiyan, Failaka, Kubbar, Mashian, and Warba. A green circle designated an area extending out an additional 100 km, in radius, within which the *qaimmaqam* was authorized to collect tribute and taxes from the natives

The Red Fort in Al Jahra

Post-Ottoman history

The Border War with Najd

Main article: Kuwait-Najd Border War

After World War I, the Ottoman Empire was defeated and the British invalidated the Anglo-Ottoman Convention, declaring Kuwait to be an "independent sheikhdom under British protectorate." The power vacuum left by the fall of the Ottomans sharpened conflict between Kuwait and Najd. Shaikh Salim Al-Mubarak Al-Sabah insisted that Kuwait was in full control of all territory out to a radius of 140 km from the capital; however, the ruler of Najd, Abdul Aziz ibn Abdul Rahman ibn Saud, argued, in September 1920, that the borders of Kuwait did not extend past the walls of the capital. ibn Saud noted that the Convention had never been ratified and that Kuwait was not effectively in control of the disputed territory.

In May 1921 ibn Saud's Wahhabi Bedouins of Nejd attacked a Kuwaiti detachment in southern Kuwait, forcing its retreat. In October they raided Jahra, 40 km from the capital battles occurred in which the Kuwaitis were mostly victorious. In response, the British deployed gunboats, armored cars and aircraft. The Bedouins withdrew.

The Uqair Protocol

In response to the various Bedouin raids, the British High Commissioner in Baghdad, Sir Percy Cox, imposed the Uqair Protocol of 1922 which defined the boundaries between Iraq and Nejd; and between Kuwait and Nejd.

On April 1, 1923, Shaikh Ahmad al-Sabah wrote the British Political Agent in Kuwait, Major John More, "I still do not know what the border between Iraq and Kuwait is, I shall be glad if you will kindly give me this information." More, upon learning that al-Sabah claimed the outer green line of the Anglo-Ottoman Convention (April 4), would relay the information to Sir Percy.

On April 19, Sir Percy stated that the British government recognized the outer line of the Convention as the border between Iraq and Kuwait. This decision limited Iraq's access to the Persian Gulf at 58 km of mostly marshy and swampy coastline. As this would make it difficult for Iraq to become a naval power (the territory did not include any deepwater harbours), the Iraqi King Faisal I (whom the British installed as a puppet king in Iraq) did not agree to the plan. However, as his country was under British mandate, he had little say in the matter. Iraq and Kuwait would formally ratify the border in August. The border was re-recognized in 1932.

1920s–1940s

Kuwait was recognized as a separate province from Iraq and given autonomy under Ottoman suzerainty in the draft Anglo-Ottoman Convention, however this was not signed before the outbreak of the first World War. The border was revisited by a memorandum sent by the British high commissioner for Iraq in 1923, which became the basis for Kuwait's northern border. In Iraq's 1932 application to the League of Nations it included information about its borders, including its border with Kuwait, where it accepted the boundary established in 1923.[4]

The 1920s and 30s saw the collapse of the pearl fishery and with it Kuwait's economy. This is attributed to the invention of the artificial cultivation of pearls.

The discovery of oil in Kuwait, in 1938, revolutionized the sheikdom's economy and made it a valuable asset to Britain. In 1941 on the same day as the German invasion of Russia (June 22) the British took total control over Iraq and Kuwait. (The British and Russians would invade the neighboring Iran in September of that year).

Independence

By early 1961, the British had withdrawn their special court system, which handled the cases of foreigners resident in Kuwait, and the Kuwaiti Government began to exercise legal jurisdiction under new laws drawn up by an Egyptian jurist. On June 19, 1961, Kuwait became fully independent following an exchange of notes with the United Kingdom.

When Kuwait became independent in 1961, Iraq claimed Kuwait, under the rationale that Kuwait had been part of the Ottoman Empire subject to Iraqi suzerainty. Iraq appeared to be mobilizing for a military invasion and on the June 27, 1961 the emir of Kuwait requested assistance from the Saudi Arabian and British Governments. Britain rapidly deployed troops, aircraft and ships to the area (Operation Vantage).[5] In 1963, after Iraqi prime minister Abd al-Karim Qasim had been killed in a coup, Iraq reaffirmed its acceptance of Kuwaiti sovereignty and the boundary it had agreed to in 1913 and 1932, in the "Agreed Minutes between the State of Kuwait and the Republic of Iraq Regarding the Restoration of Friendly Relations, Recognition, and Related Matters." In the 1960s and 1970s however there still periodic border clashes.[4]

In December 1969, Kuwait and Saudi Arabia signed an agreement dividing the Neutral Zone (now called the Divided Zone) and demarcating a new international boundary. Both countries share equally the Divided Zone's petroleum, onshore and offshore.

The Invasion and Rebuilding of Kuwait

In the 1980s Kuwait, fearful of Iran after the Islamic Revolution in Iran, supported Iraq in the Iran–Iraq War. Kuwait sent large sums of money $5 bn to Iraq. As a consequence of this Iran attacked Kuwait's oil tankers, and Kuwait was forced to seek protection from the United States, which sent warships to the Persian Gulf.

The Invasion of Kuwait and annexation by Iraq took place on August 2, 1990. Iraqi leader Saddam Hussein's primary justifications included a charge that Kuwaiti territory was in fact an Iraqi province, and that annexation was retaliation for "economic warfare" Kuwait had waged through slant drilling into Iraq's oil supplies. However, the initial casus belli was claimed to be support for a Kuwaiti rebellion.[4] The monarchy was deposed and an Iraqi-backed puppet leader named Alaa Hussein Ali was installed as head of the "Provisional Government of Free Kuwait." Iraq annexed Kuwait on August 8.

The war was traumatic to the Kuwaiti population. The underground resistance was punished by summary executions and torture. Due to large family groups, almost all Kuwaitis at the time lost some family member. In addition, more than half the population, both native and foreign-born fled.[6]

U.S. President George H.W. Bush condemned the invasion, and led efforts to drive out the Iraqi forces. Authorized by the United Nations Security Council, an American-led coalition of 34 nations fought the First Persian Gulf War to reinstate the Kuwaiti Emir. Following several weeks of aerial bombardment, a U.S.-led United Nations (UN) coalition began a ground assault on February 23, 1991 that completely removed Iraqi forces from Kuwait in four days. After liberation, the UN, under Security Council Resolution 687, demarcated the Iraq-Kuwait boundary on the basis of the 1932 and the 1963 agreements between the two states. In November 1994, Iraq formally accepted the UN-demarcated border with Kuwait, which had been further spelled out in Security Council Resolutions 773 (1992) and 833 (1993).[7]

In the wake of the war, Kuwait expelled most of the 400,000-500,000 Palestinians, who had been living there, because of PLO support for Iraq.[6][8] Several Palestinians were killed by vigilante groups including some with links to the royal family.[6] Before the expulsion, Palestinians accounted for a large portion of the people living in Kuwait.[6] Even today, about two-thirds of the more than 3 million people in Kuwait are not Kuwaiti citizens.

Kuwait has spent more than five billion dollars to repair oil infrastructure damaged during 1990–1991 (see Kuwaiti oil fires).

After 1992

In 2003, Kuwait served as the major staging base for the coalition forces in the U.S.-led invasion of Iraq.

Sabah Al Ahmed Al Jaber Al Sabah became the Emir of Kuwait on January 18, 2006

List of emirs of Kuwait

From Wikipedia, the free encyclopedia

This is a **list of the emirs of Kuwait**. Emirs (also transliterated as amir, aamir or ameer) are the rulers of Kuwait. The House of Al-Sabah dynasty came to power in 1718, before which date the Bani Khalid tribe ruled the region. The Emir is the head of state and is above the executive, legislative, and judicial branches of government.

Sabah Al-Ahmad Al-Jaber Al-Sabah

From Wikipedia, the free encyclopedia

Sheikh Sabah IV Al-Ahmad Al-Jaber Al-Sabah (Arabic: صباح الأحمد الجابر الصباح *Sabāh al-Ahmad al-Jābir as-Sabāh;* born June 16, 1929) is the Emir of Kuwait. Sheikh Sabah was sworn in on January 29, 2006 after confirmation by the National Assembly of Kuwait. He is the fourth son of Emir Ahmad Al-Jaber Al-Sabah. Sheikh Sabah is the head of the ruling Al-Sabah family. Currently, he is introducing many new projects in Kuwait to increase the tourism industry. He is also a strong advocate for women's rights in the Middle East.

Sabah Al-Ahmad Al-Jaber Al-Sabah
صباح الأحمد الجابر الصباح

Emir of Kuwait

Reign	29 January 2006 – present
Predecessor	Saad Al-Abdullah Al-Salim Al-Sabah
Heir apparent	Nawaf Al-Ahmad Al-Jaber Al-Sabah
Prime Ministers	***See list***

Prime Minister of Kuwait

Reign	13 July 2003 – 29 January 2006
Predecessor	Saad Al-Abdullah Al-Salim Al-Sabah
Successor	Nasser Al-Mohammed Al-Ahmed Al-Sabah
Monarch	***See list***
Spouse	Fatuwah bint Salman (d. 1990)
House	House of Al-Sabah
Father	Ahmad Al-Jaber Al-Sabah
Mother	Munira Al-Ayyar
Born	16 June 1929 Kuwait City, Kuwait
Religion	Sunni Islam

Early life

Sheikh Sabah received his primary education at Al Mubarakya School during the 1930s and then completed his education under tutors. He is the half-brother of the previous Emir of Kuwait, H.H. Sheikh Jaber III al-Ahmad al-Jaber al-Sabah, who appointed Sabah as Prime Minister in July 2003, replacing the then Crown Prince of Kuwait, H.H. Sheikh Saad Al-Abdullah Al-Salim Al-Sabah. He had previously been Foreign Minister for 40 years, from 1963 to 2003, making him one of the longest-serving foreign ministers in the world.

Sheikh Sabah is a widower. His wife, Sheikha Fitooh, died before the Iraqi invasion of August 1990. He has two sons,

Sheikh Nasser (Minister of the Ruler's Court "Diwan Amiri"), and Sheikh Hamed. Sheikh Sabah also had two other children who died. His daughter, Sheikha Salwa, died from breast cancer in July 2002. In her honor, the Emir named his palace "Dar Salwa", which means "The House of Salwa". His third son, Sheikh Ahmed, died in a car accident in 1969.

Dynastic crisis of January 2006

U.S. Vice President Dick Cheney meets with Prime Minister Sheikh Sabah to deliver condolences on the death of the Emir in 2006.

On 15 January 2006 the then Emir, Sheikh Jaber, died, which placed Sheikh Saad, who was then the Crown Prince of Kuwait, into the position of Emir. With the accession of Sheikh Saad, Sabah was likely to become the new Crown Prince, retaining his function of Prime Minister. However, the Constitution requires that the Emir be sworn in before Parliament, and the oath of office is complex; soon the word began to spread that Sheikh Saad was unable to take the oath in full. Some reports suggested that he suffered from Alzheimers or some other debilitating disease; it was generally agreed that he was unable to speak, at least at any length.[1] However, after a power struggle within the ruling family, Sheikh Saad agreed to abdicate as the Emir of Kuwait on 23 January 2006 due to his illness. The ruling family then chose Sheikh Sabah as the new Emir of Kuwait. On January 24, 2006, Kuwait's parliament voted Emir Saad out of office, moments before an official letter of abdication was received.[2] The Kuwaiti Cabinet nominated Sheikh Sabah to take over as emir. He swore himself in on January 29, 2006 with the National Assembly's approval, ending that crisis.

Government crisis of March 2008

Sheikh Sabah dissolved the National Assembly of Kuwait on March 19, 2008 and called for early elections on May 17, 2008, after the cabinet resigned in the week of March 17, 2008 following a power struggle with the government.[3]

Significant laws that have been passed during his reign

- Repeal of law against public gatherings.
- A law increasing the amount of licenses available for privately held newspapers and television stations.
- An increase of his stipend from 8 million KD (approximately $25 million) to 50 million KD (approximately $188 million) annually.
- A new media law that is one of the strongest press freedom laws in the Arab world.[4][5]

Foreign Minister of Kuwait

Prior to being the Emir of Kuwait, Sheikh Sabah was the Foreign Minister of Kuwait between 1963 and 2003. Sheikh Sabah is the longest serving foreign minister in the world, making him known to be adept in foreign relations and diplomacy. During Sabah's time as foreign minister he had to restore Kuwaiti international relations after the Gulf War. Sabah played a big role in the efforts of liberating the country after the Iraqi invasion. HH joined the former emir of Kuwait Sheikh Jaber Al-Ahmad Al-Jaber Al-Sabah in the United Nations in a meeting with the U.S. President George H. W. Bush and other allies to help in liberating Kuwait.

Other positions held

- Member of the Central Committee Municipality Council from 1954 to 1955.
- Member of the Building and Construction council.
- Chairman of the Social Affairs and Labour Authority in 1955.
- Member of the Higher Council of Country Affairs in 1956.
- Chairman of the Printing and Publishing Authority from 1956-09-09 to 1962-01-17.
- Minister of Information - in the first cabinet that took power after independence in the period of Sheikh Abdullah Salim Al-Sabah, on January 17, 1962.
- Foreign Minister since 28 January 1963.
- Deputy Prime Minister on February 16, 1978 in addition to his post of Foreign Minister.
- First Deputy Prime Minister and Foreign Minister on October 18, 1992.
- Member of the Supreme Council of Planning in 1996, headed by the Crown Prince Sheikh Saad Al-Abdullah Al-Salim Al-Sabah.
- Chairman of the Cabinet's Joint Ministerial Committee on Priorities of Governmental Work.
- Prime Minister from July 13, 2003 to January 29, 2006.
- Honorary Trustee of the Metropolitan Museum of Art in New York

Titles, styles and honours

Titles and styles

- *His Excellency* Sheikh Sabah bin Ahmad Al-Sabah (1929–2003)
- *His Highness* Sheikh Sabah bin Ahmad Al-Sabah, Prime Minister of the State of Kuwait (2003–2006)
- *His Highness* Sheikh Sabah IV bin Ahmad Al-Sabah, Emir of the State of Kuwait (2006 – present)[6]

Monarchical styles of

The Emir of Kuwait

Reference style	His Highness
Spoken style	Your Highness
Alternative style	Sheikh

Honours and awards

- Distinguished First Class of the Order of Abdulaziz al Saud (2 July 2000)
- First Class of the Order of Merit (10 July 2002)
- Collar of Abdulaziz al Saud (11 March 2006)
- Collar of the Order of Khalifa (12 March 2006)
- Collar of Independence (13 March 2006)
- Grand Cross of the Legion of Honour (1 December 2006)
- Extraordinary Grade of the Lebanese Order of Merit (20 January 2009)
- Order of Heydar Aliyev (2009)[7]
- First Class of the Order of Merit, (24 June 2009)
- First Class the Civil Order of Oman (28 December 2009)
- Grand Cordon of the Order of Merit (16 May 2010)
- Grand Cordon of the Order of the Star of Jordan (17 May 2010)
- Grand Cordon of the National Order Of The Cedar (18 May 2010)

- Honorary doctorate in Law from the George Washington University (30 June 2005)
- Honorary Citizen of Tirana, Albania (12 April 2008)[8]

Hobbies

The Emir enjoys fishing and going to Oman frequently (Salalah in the Dhofar Governorate to be exact)[9] where he owns a small island[*citation needed*] and goes fishing for leisure. HH shies away from areas where there is a lot of glamour preferring instead areas where he can keep a low profile. Al-Sabah also used to go to Somalia to hunt, but after the political turmoil, he stopped visiting.[10]

House of Sabah

From Wikipedia, the free encyclopedia

The **House of Sabah** (Arabic: آل صباح *Al Sabah*) is the ruling family of Kuwait. They are a clan from the `Anizzah tribe which migrated to Kuwait in the early 18th century from Najd (current day Saudi Arabia). They are also from the Utub tribe. After reaching Kuwait, they entered in an alliance with the other families of the Utub such as Al-Khalifa and Al Jalahma. They have ruled Kuwait since 1718 when Sabah I became Sheikh (chief) of Kuwait[1]. Subsequent sheikhs are the descendants of Sabah I. The sons of Sabah I were Salman, Mohammad, Mubarak, Malik and Abdullah.

The Emir of Kuwait is the head of the executive branch. He is nominated by a family council headed by the most senior and prominent members of the Al-Sabah. The leadership is not strictly hereditary and although many Emirs have succeeded their fathers, the family chooses the leader from each succeeding generation. For example, the late Sheikh Jaber Al-Sabah appointed his cousin, Sheikh Sheikh Saad, as heir apparent.

The Kuwaiti parliament has a say in the appointment of the emir. Although customs prohibit the use of such measures, the parliament (per article 3 of the constitution) has a constitutional right to approve or disapprove of an emir's appointment. The parliament effectively removed then crown prince Sheikh Saad after the death of Sheikh Jaber Al-Sabah in early 2006 due to Saad's inability to rule because of illness.

Members of the ruling family receive a monthly stipend from the Amiri Diwan and a year-end bonus. The prime minister is selected by the emir of the state of Kuwait and he could be any Kuwaiti citizen. But historically all prime ministers have been appointed are from Al-Sabah family , Precedents dictate that the Al-Sabahs hold key cabinet posts such as the ministry of defense, the foreign ministry, the ministry of interior, the oil ministry and, most importantly, the office of prime minister. With an estimated multi-billion dollar fortune, mainly from oil revenues, the Al-Sabahs are known for aiding other royal houses in the region who have little or no natural resources like oil for nothing in return. In 1991, right after the Gulf War, a *Time* magazine article stated that the Al-Sabah family have an estimated wealth of $90 billion, with investments mostly in the United States. "The al-Sabah family by now was unimaginably rich, with an estimated wealth of some 90 billion dollars. They had invested about 50 billion dollars in the stocks of US companies."[*citation needed*] By 2010, almost 20 years later, the estimated wealth of the Al-Sabah family is unknown, but many observers predict that it has tripled, or even quadrupled over the years, as the Al-Sabah's have the largest shares in almost all the blue chip corporations in the Western world, with tens of billions of dollars invested in companies from Citibank to Daimler AG to Merrill Lynch.

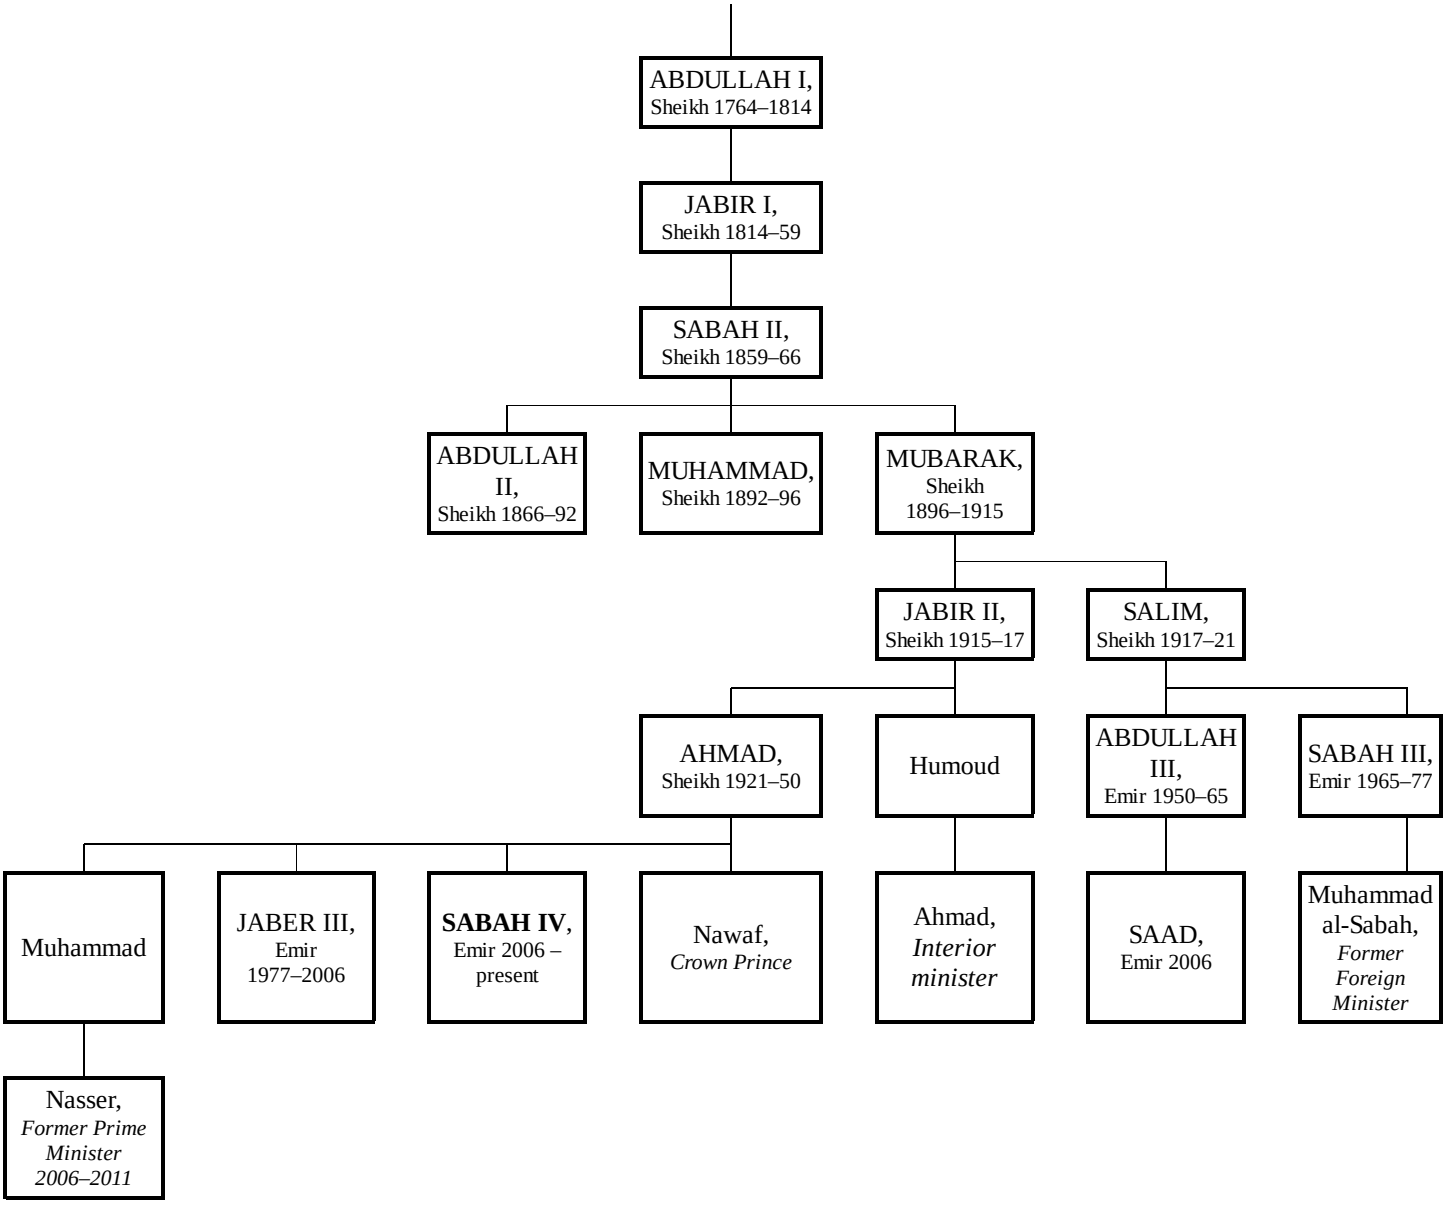
The two main branches



Mubarak Al Sabah had fourteen children, eight sons and seven daughters.

Sons of Mubarak Al Sabah:

Jaber Sheikh of Kuwait (1915–17), Salim Sheikh of Kuwait (1917–21), Nasser, Fahad, Saud, Hamad, Sabah and Abdullah the offspring of two of them however - Jaber and Salem - rotate the Emirship of Kuwait, in the meantime the situation have been changed because other offspring have been appointed to the most important ministries which will lead them to succeed the throne of the state of kuwait.

Family tree

SABAH I,
Sheikh 1718–64

Titles

The Emir: His Highness The Amir Sheikh Sabah Al Sabah

The Crown Prince: His Highness Sheikh Nawaf Al Sabah

The Prime Minister: His Highness Sheikh Jaber Al Sabah

Other notable members of Al-Sabah

- Salem Al Homoud Al Jaber Al-Sabah, Amiri Guards creator
- Nasser Mohammed Al-Ahmed Al-Sabah, Former Prime Minister of Kuwait
- Salem Al-Ali A-Sabah, chief of the National Guard
- Mesha'al Al-Ahmad Al-Sabah, deputy chief of National Guard
- Muhammad Sabah Al-Salem Al-Sabah, Deputy Prime Minister and Foreign Minister
- Jaber Al-Mubarak Al-Hamad Al-Sabah, current Prime Minister of Kuwait, former Minister of Defense
- Ahmed Al-Fahad Al-Ahmed Al-Sabah, Deputy Prime Minister for Economic Affairs and Minister of State for Development Affairs and Minister of State for Housing Affairs
- Hussa Al-Sabah Al-Salim Al-Sabah, Director of Dar Al-Athar Al-Islamiya (Kuwait Museum of Islamic Art)
- Saud Nasser Al-Saud Al-Sabah, former Kuwait ambassador to the United States , former Oil Minister.
- Nayirah al-Sabah, daughter of Saud Nasser Al-Saud Al-Sabah, provided testimony as "Nurse Nayirah" to the US Congressional

Human Rights Caucus before the Gulf War
- Prince Khalid Al-Sabah Royal Majestic Charity Foundation
- Salem Sabah Al-Salem Al-Sabah (1938-2007), former Deputy Prime Minister, Minister of Defense, Interior, Social Affairs and Foreign Minister
- Jaber Al-Khaled Al-Sabah former Minister of the Interior
- Sheikh Faisal H. M Al Sabah

Family meetings

The emir of Kuwait holds family meetings and gatherings every year during which they discuss many important issues. The emir holds meetings with the head people of the Al Sabah family who are 40 years old or older.

Current events

Sheikh Saad Al-Abdullah Al-Salim Al-Sabah was removed by parliamentary action after a prolonged stalemate following the death of the previous emir, Jaber, on 15 January 2006. He was earlier offered the chance to abdicate after taking power provisionally as stipulated by the constitution, but his inability to recite the oath of office prevented his ratification by parliament.

The then prime minister, Sheikh Sabah Al-Ahmad Al-Jaber Al-Sabah, was nominated for the post of emir by invoking Article 3 of the Kuwaiti constitution. He was sworn in on 29 January 2006 and is the current ruler.

The emir appointed his brother, Sheikh Nawaf Al-Ahmad Al-Jaber Al-Sabah, as crown prince. The emir also appointed his nephew, Sheikh Nasser Al-Sabah, as prime minister.

On 13 May 2008 the former emir, Sheikh Saad Al-Abdullah Al-Salim Al-Sabah, died after battling health problems for years. He was buried the following day in accordance with Muslim tradition. He was 78 years old.

Malaysia

From Wikipedia, the free encyclopedia

Malaysia (/məˈleɪʒə/ *mə-LAY-zhə* or /məˈleɪsiə/ *mə-LAY-see-ə*) is a federal constitutional monarchy in Southeast Asia. It consists of thirteen states and three federal territories and has a total landmass of 329,847 square kilometres (127,350 sq mi) separated by the South China Sea into two similarly sized regions, Peninsular Malaysia and Malaysian Borneo. Land borders are shared with Thailand, Indonesia, and Brunei, and maritime borders exist with Singapore, Vietnam, and the Philippines. The capital city is Kuala Lumpur, while Putrajaya is the seat of the federal government. In 2010 the population exceeded 27.5 million, with over 20 million living on the Peninsula.

Malaysia has its origins in the Malay Kingdoms present in the area which, from the 18th century, became subject to the British Empire. The first British territories were known as the Straits Settlements, whose establishment was followed by the Malay kingdoms becoming British protectorates. The territories on Peninsular Malaysia were first unified as the Malayan Union in 1946. Malaya was restructured as the Federation of Malaya in 1948, and achieved independence on 31 August 1957. Malaya united with Sabah, Sarawak, and Singapore on 16 September 1963, with *si* being added to give the new country the name Malaysia. However, less than two years later in 1965, Singapore was expelled from the federation. Since independence, Malaysia has had one of the best economic records in Asia, with GDP growing an average 6.5% for almost 50 years. The economy has traditionally been fuelled by its natural resources, but is expanding in the sectors of science, tourism, commerce and medical tourism.

The country is multi-ethnic and multi-cultural, which plays a large role in politics. The government system is closely modelled on the Westminster parliamentary system and the legal system is based on English Common Law. The constitution declares Islam the state religion while protecting freedom of religion. The head of state is the King, known as the Yang di-Pertuan Agong. He is an elected monarch chosen from the hereditary rulers of the nine Malay states every five years. The head of government is the Prime Minister.

Malaysia contains the southernmost point of continental Eurasia, Tanjung Piai. Located in the tropics, it is a megadiverse country, with large numbers of endemic flora and fauna. It is a founding member of the Association of Southeast Asian Nations and the Organisation of Islamic Cooperation,

Etymology

"Malaysia" used as a label for the Malay Archipelago on a 1914 map from a United States atlas

The word *Melayu* is thought to derive from the Sanskrit term *Malaiur* or *Malayadvipa*, which can be translated as "land of mountains", the word used by ancient Indian traders when referring to the Malay Peninsula.[11][12][13][14][15] Other theories propose it originates from the Tamil word *Malai*, meaning "mountain".[16] The term was later used as the name of the Melayu Kingdom, which existed between the 7th and 13th centuries on Sumatra.[17]

^ a. Kuala Lumpur is the capital city and is home to the legislative branch of the Federal government. Putrajaya is the primary seat of the federal government where the executive and judicial branches are located.

Jules Dumont d'Urville invented the terms *Malaysia*, *Micronesia* and *Melanesia*, distinguishing these Pacific cultures and island groups from the existing term Polynesia. In 1831, he proposed these terms to the Société de Géographie. Dumont d'Urville described Malaysia as "an area commonly known as the East Indies".[18] In 1850, the English ethnologist George Samuel Windsor Earl, writing in the *Journal of the Indian Archipelago and Eastern Asia*, proposed naming the islands of Southeast Asia as *Melayunesia* or *Indunesia*, favouring the former.[19]

^ b. The terminology as per government policy is *Bahasa Malaysia* (literally Malaysian language)[7] but legislation continues to refer to the official language as *Bahasa Melayu* (literally Malay language).[8]

^ c. Under the National Language Act 1967: "The script of the national language shall be the Rumi [Latin] script: provided that this shall not prohibit the use of the Malay script, more commonly known as the Jawi script, of the national language."[9]

^ d. English may be used for some purposes under the National Language Act 1967.

^ e. Singapore became an independent country on 9 August 1965.[10]

In 1957, the Federation of Malaya was declared as an independent federation of the Malay states on the Malay Peninsula.[20] The name "Malaysia" was adopted in 1963 when the existing states of the Federation of Malaya, plus Singapore, North Borneo and Sarawak formed a new federation, with "si" being added to Malaya in honour of the three joining states.[21] Prior to that, the name itself had been used to refer to the whole Malay Archipelago.[22] Politicians in the Philippines contemplated renaming their state "Malaysia" before the modern country took the name.[23] At the time of federation, other names were considered: among them was Langkasuka, after the historic kingdom located at the upper section of the Malay Peninsula in the 1st millennium CE.[24]

History

Main article: History of Malaysia

Evidence of modern human habitation in Malaysia dates back 40,000 years.[25] The first inhabitants are thought to be Negritos.[26] Traders and settlers from India and China arrived as early as the 1st century AD, establishing trading ports and coastal towns in the 2nd and 3rd centuries. Their presence resulted in strong Indian and Chinese influence on the local cultures, and the people of the Malay Peninsula adopted the religions of Hinduism and Buddhism. Sanskrit inscriptions appear as early as the 4th or 5th century.[27] The Kingdom of Langkasuka arose around the 2nd century in the northern area of the Malay Peninsula, lasting until about the 15th century.[24] Between the 7th and 13th centuries, much of the southern Malay Peninsula was part of the maritime Srivijaya empire. After the fall of Srivijaya, the Majapahit empire had influence over most of Peninsular Malaysia and the Malay Archipelago.[28] Islam began to spread among Malays in the 14th century.[3] In the early 15th century, Parameswara, a prince of the former Srivijayan empire, founded the Malacca Sultanate, commonly considered the first independent state in the peninsula.[29] Malacca was an important commercial centre during this time, attracting trade from around the region. Parameswara became a Muslim, accelerating the spread of Islam.[3]

In 1511 Malacca was conquered by Portugal,[3] after which it was taken by the Dutch in 1641. In 1786 the British Empire established a presence in Malaya, when the Sultan of Kedah leased Penang to the British East India Company. The British obtained the town of Singapore in 1819,[30] and in 1824 took control of Malacca following the Anglo-Dutch Treaty. By 1826 the British directly controlled Penang, Malacca, Singapore, and the island of Labuan, which they established as the crown colony of the Straits Settlements. By the 20th century, the states of Pahang, Selangor, Perak, and Negeri Sembilan, known together as the Federated Malay States, had British Residents appointed to advise the Malay rulers, to whom the rulers were bound to defer by treaty.[31] The

A Famosa fortress in Malacca was built by the Portuguese in the 16th century.

remaining five states in the peninsula, known as the Unfederated Malay States, while not directly under British rule, also accepted British advisers around the turn of the 20th century. Development on the Peninsula and Borneo were generally separate until the 19th century. Under British rule the immigration of Chinese and Indians to serve as labourers was encouraged.[32] Sabah was governed as the crown colony of British North Borneo after it was leased from the Sultanate of Sulu in 1878.[33] In 1842, Sarawak was ceded by the Sultan of Brunei to James Brooke, whose successors ruled as the White Rajahs over an independent kingdom until 1946, when it became a British colony.[34]

In the Second World War the Japanese army invaded and subsequently occupied Malaya, Sabah, Sarawak, and Singapore for over three years. During this time, ethnic tensions were raised and nationalism grew.[35] Popular support for independence increased after Malaya was reconquered by Allied Forces.[36] Post-war British plans to unite the administration of Malaya under a single crown colony called the Malayan Union met with strong opposition from the Malays, who opposed the weakening of the Malay rulers and the granting of citizenship to the ethnic Chinese. The Malayan Union, established in 1946 and consisting of all the British possessions in the Malay Peninsula with the exception of Singapore, was quickly dissolved and replaced by the Federation of Malaya, which restored the autonomy of the rulers of the Malay states under British protection.[37] During this time, mostly Chinese rebels under the leadership of the Malayan Communist Party launched guerrilla operations designed to force the British out of Malaya. The Malayan Emergency lasted from 1948 to 1960, and involved a long anti-insurgency campaign by Commonwealth troops in Malaya.[38] After this a plan was put in place to federate Malaya with the British crown colonies of Sabah, Sarawak, and Singapore. The proposed date of federation was 31 August 1963, however, the date was delayed until 16 September 1963 due to opposition from Indonesia's Sukarno and the Sarawak United Peoples' Party.[39]

Federation brought heightened tensions including a conflict with Indonesia, Singapore's eventual exit in 1965,[40][41] and racial strife. This strife culminated in the 13 May race riots in 1969.[42] After the riots, the controversial New Economic Policy was launched by Prime Minister Tun Abdul Razak, trying to increase the share of the economy held by the *bumiputra*.[43] Under Prime Minister Mahathir Mohamad there was a period of rapid economic growth and urbanisation beginning in the 1980s. The economy shifted from being agriculturally-based to one based on manufacturing and industry. Numerous mega-projects were completed, such as the Petronas Towers, the North-South Expressway, the Multimedia Super Corridor, and the new federal administrative capital of Putrajaya.[21] However, in the late 1990s the Asian financial crisis almost caused the collapse of the currency and the stock and property markets.[44]

Merdeka Square in Kuala Lumpur, where Independence Day is celebrated on 31 August each year.

Governance

Main article: Politics of Malaysia

Malaysia is a federal constitutional elective monarchy. The system of government is closely modelled on that of

The Malaysian Houses of Parliament is the building where the Malaysian Parliament assembles.

the Westminster parliamentary system, a legacy of British colonial rule.[45] The head of state is the Yang di-Pertuan Agong, commonly referred to as the king. The King is elected to a five-year term by and from among the nine hereditary rulers of the Malay states; the other four states, which have titular Governors, do not participate in the selection. By informal agreement the position is systematically rotated among the nine,[45] and has been held by Abdul Halim of Kedah since December 2011.[46] The King's role has been largely ceremonial since changes to the constitution in 1994, picking ministers and members of the upper house.[47]

Legislative power is divided between federal and state legislatures. The bicameral federal parliament consists of the lower house, the House of Representatives and the upper house, the Senate.[48] The 222-member House of Representatives is elected for a maximum term of five years from single-member constituencies. All 70 senators sit for three-year terms; 26 are elected by the 13 state assemblies, and the remaining 44 are appointed by the King upon the Prime Minister's recommendation.[3] The parliament follows a multi-party system and the government is elected through a first-past-the-post system. Since independence Malaysia has been governed by a multi-party coalition known as the Barisan Nasional.[3]

Each state has a unicameral State Legislative Assembly whose members are elected from single-member constituencies. State governments are led by Chief Ministers,[3] who are state assembly members from the majority party in the assembly. In each of the states with a hereditary ruler, the Chief Minister is required to be a Malay, appointed by the ruler upon the recommendation of the Prime Minister.[49] Parliamentary elections are held at least once every five years, the most recent of which took place in March 2008.[3] Registered voters of age 21 and above may vote for the members of the House of Representatives and, in most of the states, for the state legislative chamber. Voting is not mandatory.[50] Except for elections in Sarawak, all state elections are held concurrently with the federal election.[47]

Executive power is vested in the Cabinet, led by the Prime Minister. The prime minister must be a member of the house of representatives, who in the opinion of the King, commands a majority in parliament. The cabinet is chosen from members of both houses of Parliament.[3] The Prime Minister is both the head of cabinet and the head of government.[47] The incumbent, Najib Razak, appointed in 2009, is the sixth prime minister.[51]

Najib Razak, Prime Minister since 2009.

Malaysia's legal system is based on English Common Law.[3] Although the judiciary is theoretically independent, its independence has been called into question and the appointment of judges lacks accountability and transparency.[52] The highest court in the judicial system is the Federal Court, followed by the Court of Appeal and two high courts, one for Peninsular Malaysia and one for East Malaysia. Malaysia also has a special court to hear cases brought by or against Royalty.[53] Separate from the civil courts are the Syariah Courts, which apply Shariah law to cases which involve Malaysian Muslims[54] and run parallel to the secular court system.[55] The Internal Security Act allows detention without trial, and the death penalty is in use for crimes such as drug trafficking.[56]

Race is a significant force in politics, and many political parties are ethnically based.[3] Actions such as the New

Economic Policy[43] and the National Development Policy which superseded it, were implemented to advance the standing of the *bumiputra*, consisting of Malays and the indigenous tribes who are considered the original inhabitants of Malaysia, over non-bumiputra such as Malaysian Chinese and Malaysian Indians.[57] These policies provide preferential treatment to bumiputra in employment, education, scholarships, business, and access to cheaper housing and assisted savings. However, it has generated greater interethnic resentment.[58] There is ongoing debate over whether the laws and society of Malaysia should reflect secular or Islamic principles.[59] Islamic laws passed by the Pan-Malaysian Islamic Party in state legislative assemblies have been blocked by the federal government.[60]

Foreign relations and military

Main articles: Foreign relations of Malaysia and Malaysian Armed Forces

The RMAF MiG-29N/UB & Aermacchi MB-339

A founding member of the Association of Southeast Asian Nations (ASEAN)[61] and the Organisation of Islamic Cooperation (OIC),[62] the country participates in many international organisations such as the United Nations,[63] the Asia-Pacific Economic Cooperation,[64] the Developing 8 Countries,[65] and the Non-Aligned Movement (NAM).[66] It has chaired ASEAN, the OIC, and the NAM in the past.[3] A former British colony, it is also a member of the Commonwealth of Nations.[67] Kuala Lumpur was the site of the first East Asia Summit in 2005.[68]

Malaysia's foreign policy is officially based on the principle of neutrality and maintaining peaceful relations with all countries, regardless of their political system.[69] The government attaches a high priority to the security and stability of Southeast Asia,[68] and seeks to further develop relations with other countries in the region. Historically the government has tried to portray Malaysia as a progressive Islamic nation[69] while strengthening relations with other Islamic states.[68] A strong tenet of Malaysia's policy is national sovereignty and the right of a country to control its domestic affairs.[47]
